The interaction between Islamic beliefs about angels and their Jewish and Christian counterparts is complex. Many commentators have simply argued that Islamic angelology has its origins in Judaism and Christianity. When looking at the Qur'ān, the influence of Judaism and Christianity is certainly unmistakable, but surely this is not surprising. However, the influence of Judaism and Christianity appears to diminish during the formative period of Islamic theology and Qur'ānic exegesis. Above all, Islamic angelology always remains distinctly *Islamic* and this distinctiveness cannot be attributed to Jewish and Christian influences. The two other Abrahamic faiths may have provided some basic core beliefs, imagery and conceptualisations, but the Muslim community developed them in their own unique way.

The Angelic World of *Al-Ḥabā'ik fī*

akhbār al-malā'ik

3. The Angelic World of *al-Ḥabā'ik fī akhbār al-malā'ik*³⁵⁵

Jalāl al-Dīn al-Suyūṭī's *Al-Ḥabā'ik fī akhbār al-malā'ik* is unusual when compared to other mediaeval *ḥadīth* collections concerned with visions of the heavenly world, such as al-Ghazālī's (alleged) work, *Al-Durra al-fakhīra*,³⁵⁶ ʿAbd al-Raḥīm al-Qāḍī's, *Daqā'iq al-akhbār fī dhikr al-janna wa- 'l-nār*,³⁵⁷ other apocalyptic or eschatological works,³⁵⁸ and the accounts of Muḥammad's ascension (*miʿrāj*) collected by scholars such as Ibn Ishāq in his *Sīrat Rasūl Allāh*.³⁵⁹ These eschatological and *miʿrāj* works usually act as a warning against certain modes of behaviour by describing the future rewards of heaven and the punishments of hell, as Vuckovic comments: 'Through these descriptive tales, the scholars establish narratives that reiterate the moral code of the Qur'ān and convey a careful set of expectations, warnings, and exhortations for the members of Muḥammad's community.'³⁶⁰ Al-Suyūṭī's *Al-Ḥabā'ik* uses

similar supra-mundane material, but approaches it from a different angle.³⁶¹ The purpose of *Al-Ḥabā'ik* is to describe the function of the angels in the universe and their intermediation between God and humans. The aim is to present an angelic world, not of the potential future (as in the eschatological and *mi'rāj* works), but of the contemporary world, to the extent that narratives about both past and future events are used to illustrate what the angels are doing in the present. For example, Isrāfīl, the angel responsible for blowing the trumpet on the Last Day, is not described as actually blowing the trumpet, but is portrayed as kneeling, waiting for the command from God to do it.³⁶² This *angelic present* is used to explain how God interacts with the human world, how humans are judged, how they die, how revelation is given and how ritual actions should be performed. This is a very different way of presenting the heavenly world and its inhabitants.

This section will comprise two main sections: the first will look at the angels' roles in the life-cycle of a human, from birth to death and beyond; and the second will look at the angels' roles in ritual law. The principal aim of this section is to present the material contained in Jalāl al-Dīn al-Suyūṭī's collection and to highlight its main trends.

³⁶¹ Other larger works occasionally include sections on the angels, which bear a resemblance to al-Suyūṭī's *Al-Ḥabā'ik*, such as al-Bayhaqī, Aḥmad ibn al-Ḥusayn, *Al-Jāmi' shu'ab al-īmān* (Bombay: Al-Dār al-Salfiyyah, 1986) vol. 1, pp. 407 – 446. However, to my knowledge, *al-Ḥabā'ik* is the only ḥadīth collection devoted to angels.

³⁶² E.g. §85.

3.1 The Angels' Roles in Human Life

In *Al-Ḥabā'ik fī akhbār al-malā'ik* angels play a role in a human's life from conception in the womb until death. There are four main groups of angels that need to be considered: (i) the angels of the womb; (ii) the scribes (*al-hāfīzān al-kātibān*); (iii) the Angel of Death and (iv) various post-mortem angels. These four groups of angels amount to 207 *ḥadīth* (c. 28%). This is a significant portion, especially when a large number of the remaining *ḥadīth* play similar roles.³⁶³

3.1.1 The Angels of the Womb

The interaction between angels and humans begins before birth and al-Suyūṭī includes nine *ḥadīth* (§436 – 444) about one particular ante-natal event. Soon after conception, God sends an angel to the mother's womb, which then forms the foetus and records what God has ordained for that child. The *ḥadīth* do not provide a strict consensus about when this happens precisely, but it is said to happen at some stage between forty and seventy-two days.³⁶⁴ The majority of the *ḥadīth* say that only one

³⁶³ For example, there is an angel that records the names of those that say '*ṣalā allāh 'alayhi wa-sallam*' – which is a role similar to, but separate from, that of the scribes (*al-hāfīzān*). See §445 – 447 & 449 – 457; for more on this, see Mālik, *Muwaṭṭa'* vol. 1, pp. 137 - 138; Bewley, *al-Muwaṭṭa'* §9.22.69 – 71, p. 62; Padwick, Constance E., 'The Language of Muslim Devotion I' *MW* 47 (1957) pp. 5 – 21 and de la Puente, Christina, 'The Prayer Upon the Prophet Muhammad (Tasliya): A Manifestation of Islamic Religiosity' *ME* 5 (1999) pp. 121 – 129.

³⁶⁴ 40 Days: §437, 440 & 442; 42 Days: §439; 72 Days: §441. Forty days is also an important time period in Greek Medicine (cf. Hippocratic Treatises, *On the Nature of the Child*, §18 – 19; see Lonie, Iain M., (tr. & commentary), *The Hippocratic Treatises "On Generation", "On the Nature of the Child", "Diseases IV"* (Berlin: Walter de Gruyter, 1981) pp. 9 – 11 & 190 – 194); forty days is also important in rabbinic law (probably a result of the influence of Greek medicine); for example, a woman who miscarries before forty days have passed does not have to perform the rites of ritual purity associated with miscarriages and birth, as it is not considered an embryo before forty days; see Bek. §21b, p. 140.

angel is sent to the womb,³⁶⁵ but one *ḥadīth* (§436) states that: ‘God, Most High, has made an angel responsible for the womb; [he said] that is, one responsible for the sperm, one responsible for the clot and one responsible for the embryo.’ The *ḥadīth* discuss two important ideas: the first provides an account of traditional embryology and the second concerns the issue of predestination.

Five of the nine *ḥadīth* included describe the early stages in the growth of the embryo in basic terms.³⁶⁶ These *ḥadīth* are similar to the Qur’ānic accounts, especially Q 23:12 – 14³⁶⁷ and reflect a ‘...further development of the thought found already in some Koranic passages dealing with the stage of the development of the embryo.’³⁶⁸ Here is a representative example from the *ḥadīth*: ‘...When forty-two nights have passed by the semen, God sends an angel to it, and it shapes it, and creates its ears, its eyes, its skin, its fat and its bones.’³⁶⁹ The development of the embryo and the stages outlined in this example played an important part in the classical Islamic law of torts, especially in attempting to rule when compensation is

³⁶⁵ §437 – 443.

³⁶⁹ §439; Cf. Abū ‘Abd Allāh Muḥammad ibn Aḥmad ibn ‘Uthmān al-Dhahabī (attr.), *Tibb al-Nabbi* §23; see Elgood, Cyril (tr.), *Tibb-ul-Nabbi or Medicine of the Prophet* (Bruges: Ex Officina “De Tempel”, 1962) pp. 165 – 175. This work has been attributed incorrectly to al-Suyūṭī, and it is believed to have been compiled by al-Dhahabī; see Savage-Smith, Emilie, ‘Attitudes to Dissection in Medieval Islam’ *JHMAS* 50 (1995) pp. 67 – 110, p. 73, n. 14.

liable in cases of injury that subsequently induce a miscarriage.³⁷⁰ However, whilst the scientific understanding behind these texts is interesting in and of itself, there are greater theological points being made; birth and ante-natal development are all driven by God. The creation of human life, as well as creation more generally, only occur as a result of God's will, as Dirk Bakker comments: 'Allah's power manifested in the creation of man is not restricted to divine initiative, but is active in each stage of development. There is no phase in the process of man's origin in which Allah is not concerned creatively.'³⁷¹

God's will is equally important in the concept of predestination alluded to in these few *ḥadīth*.³⁷² The most important aspect of the Angel of the Womb is that in the womb, God preordains certain aspects of the foetus' life; take the two following *ḥadīth*:

'...The [the angel] says: 'Lord, it is male or female?' And your Lord decrees what He wills, and the angel writes. Then he says: 'Lord, what will his sustenance be?' Your Lord decrees what He wills, and the angel writes. Then the angel leaves the page on his hand, and never ceases from the command nor shakes it off.'³⁷³

³⁷⁰ See Katz, Marion Holmes, 'The Problem of Abortion in Classical Sunni *fiqh*' in Brockopp, Jonathan E. (ed.), *Islamic Ethics of Life: Abortion, War and Euthanasia* (Columbia: University of South Carolina Press, 2003) pp. 25 – 50; see especially pp. 30 – 34; for a modern Islamic perspective on these issues see, Bowen, Donna Lee, 'Abortion, Islam and the 1994 Cairo Population Conference' *IJMES* 29 (1997) pp. 161 – 184.

³⁷¹ Bakker, *Man in the Qur'an*, p. 18; the importance of birth and death is also reflected in Jewish literature, in which it is said that: 'Three keys are in the hands of the Holy One, Blessed be He! - the Keys of burial [i.e. resurrection], rain and the womb.' *GenR*. 73:4, p. 670, cf. *DeutR* 7:6, p. 137.

³⁷² Edward Salisbury's early article on predestination and freewill in Islam contains a useful survey of these themes in pre-Islamic poetry, the Qur'ān, *ḥadīth* and *kalām*; see Salisbury, Edward E., 'Materials for the History of the Muhammadan Doctrine of Predestination and Free Will; compiled from original sources' *JAOS* 8 (1866) pp. 105 – 182; for *ḥadīth*, see pp. 122 – 147.

³⁷³ §439.

‘And [the angel] says: ‘Lord, is it male or female? Lord will it be wretched or happy?’ And God decrees what He wills. Then the one responsible says: ‘What is its time?’ And God decrees what He wills. Then he closes the book and it is not opened until the Day of Resurrection.’³⁷⁴

These two *ḥadīth* show that some aspects of a human’s life are preordained: gender, sustenance (*rizq*), happiness or wretchedness,³⁷⁵ and life-span (*ajal*). Montgomery Watt calls this type of predestination ‘modified fatalism’, because the elements that are predestined for the individual are limited in scope: ‘Here not everything a man does is predetermined, but only the date of his death and the outcome or general effect of his activity.’³⁷⁶ Some of these preordained elements of life, such as the *ajal* can be found in pre-Islamic religion (cf. *dahr*),³⁷⁷ but as Smith and Haddad note, ‘...the emphasis is not on an impersonal determinism but on divine prerogative; God ascertains the life-spans of persons and of communities, and in His hands lies the fate of all that He has brought into being.’³⁷⁸ There is a strong focus on God and the juxtaposition of the statements about embryogenesis and this modified determinism seek to place God at the centre of human existence. Although Montgomery Watt doubts that the types of *ḥadīth* seen above were originally intended to be interpreted

³⁷⁴ §440.

³⁷⁵ The meaning intended here is not necessarily referring to the individual’s final destiny (i.e. Heaven or Hell), but rather to the type of life that the individual will have.

³⁷⁶ Watt, W. M., ‘Free Will and Predestination in Early Islam’ *MW* 36 (1946) pp. 124 – 152, p. 131; see also Smith and Haddad, *Death and Resurrection*, p. 5; Ringgren, *Arabian Fatalism*, pp. 117 – 121 and Watt, W. Montgomery, *Islamic Philosophy and Theology (Second Edition)* (Edinburgh: Edinburgh University Press, 1995) pp. 25 – 31.

³⁷⁷ William Thomson argues that Muslim tradition appropriated pre-Islamic ideas into its belief system, and he concludes: ‘The characteristics of Time became in due season the characteristics of God as the Lord of Time and the Controller of History...’ Thomson, William, ‘The Concept of Human Destiny in Islam’ *MW* 35 (1945) pp. 281 – 299, p. 299; for more on pre-Islamic concepts of *dahr*, see Bravmann, M. M., *The Spiritual Background of Early Islam* (Leiden: Brill, 1972) pp. 288 – 295 Goldziher, Ignaz (tr. S. M. Stern), *Muslim Studies* (repr. London: Aldine Transaction, 2006) vol. 1, pp. 209 – 238.

³⁷⁸ Smith and Haddad, *Death and Resurrection*, p. 5.

so forcefully,³⁷⁹ predestinationist *ḥadīth* such as these became important in the subsequent theological disputes over the issue,³⁸⁰ with whole chapters on *qadar* appearing in the canonical *ḥadīth* collections³⁸¹ and whole works devoted to the subject.³⁸² Above all, the *modified determinism* of these *ḥadīth* highlight God's control of and power over creation, as well as the role of the angels in the process. The angels act as God's emissaries and act on his behalf, revealing the close relationship between God, man and angels, even from the very beginnings of life.

3.1.2 The Scribes

Having been born, every human is accompanied by (two) angels (*al-hāfīzān*), usually called the 'Watchers' or the 'Scribes' in English. The function of these angels is given simply in §313: '...They record against you your livelihood (*rizq*), your deeds (*ʿamal*) and your time (*ajal*).'³⁸³ The Scribes are associated with four verses of the Qur'ān in particular: 6:61; 13:11; 50:17 – 18 and 82:10 – 12. The majority of the information about the Scribes in the mediaeval Islamic exegeses is found in the entry for Q 13:11,³⁸⁴ although more detail can be found on specific issues in the *tafsīrs* of

³⁷⁹ 'It is hardly conceivable that the words "whether he is to be miserable or happy" were originally interpreted in the way in which a Muslim would normally interpret them, as referring to Hell and Paradise.' Watt, W. Montgomery., *Free Will and Predestination in Islam* (London: Luzac, 1948) p. 25

³⁸⁰ Cf. van Ess, Josef, *Zwischen Ḥadīth und Theologie: Studien zum Entstehen prädestinationischer Überlieferung* (Berlin: De Gruyter, 1975), pp. 16 & 24 – 25.

³⁸¹ E.g. al-Bukhārī, Abū ʿAbd Allāh Muḥammad ibn Ismāʿīl; Abū Ṣuhayb al-Karmī (ed.), *Ṣaḥīḥ al-Bukhārī* (Riyadh: Bayt al-Afkār al-Dawliyya, 1998) *Kitāb al-qadar*, §6594 – 6620, pp. 1261 - 1265; for a collection of different ḥadīth on the subject, see de Vlieger, A., *Kitāb al-qadr: Matériaux pour servir à l'étude de la doctrine de la prédestination dans la théologie musulman* (Leiden : Brill, 1902).

³⁸² E.g. Ibn Qayyim al-Jawziyyah, Muḥammad ibn Abī Bakr, *Kitāb shifā' al-ʿalīl fī masā'il al-qadā' wa'l-qadar wa'l-ḥimah wa'l-ta'līl* (Riyadh : Maktabat al-Riyād al-Ḥadītha, 1323 / 1905).

³⁸³ Similar 'recording angels' can be found in Jewish and Christian texts: e.g. 2En. 19:5, *OTP* vol. 1, pp. 132 – 133; *ApZeph.* 3:1 – 9 & 7:1 – 8, *OTP* vol. 1, pp. 510 – 511 & 513; *ApPaul* 7, *NTA* vol. 1, p. 718.

³⁸⁴ Cf. Al-Ṭabarī, Abū Jaʿfar Muḥammad ibn Jarīr, *Jāmiʿ al-bayān ʿan ta'wīl al-Qur'ān* (Cairo: s.n., 1388/1968) vol. 7, pp. 216 – 218; vol. 13, pp. 114 – 123; vol. 26, pp. 157 – 160 and vol. 30, p. 88 and

the other three passages. The *ḥadīth* included in al-Suyūṭī's collection (§312 – 406)³⁸⁵ and the *tafsīrs* agree that the *ḥafīẓān* are angels and are responsible for writing down the actions that humans take. The Scribes are the angels most closely associated with humans and the *ḥadīth* show that angels are integrated into everyday life. Despite the fact that the deeds recorded by these Scribes will affect the human's eschatological future, al-Suyūṭī presents the *ḥafīẓān* as being very much part of the present throughout his collection.

The *ḥadīth* (in both the exegeses and *al-Ḥabā'ik*) differ from the Qur'ānic presentation of the material in the descriptions of the technical and practical ways in which the Scribes behave. For example, a number of *ḥadīth* state there are two sets of angels, two for the day and two for the night.³⁸⁶ The development of such technicalities can be seen particularly clearly in the exegeses of Q 50:17 – 18. The Qur'ānic verse states there are two angels 'sitting one on the right and one on the left.'³⁸⁷ The *ḥadīth* in *al-Ḥabā'ik* and the exegeses³⁸⁸ add that: 'The one on his right writes down the good deeds and the one on his left writes down the sins...'³⁸⁹ This moral distinction between left and right is not explicit in the original Qur'ānic verse; but the notion that the left is bad (and so the angel that writes down bad deeds is on the left) is a very traditional and ancient distinction that is mentioned frequently in the Qur'ān.³⁹⁰

Al-Qurṭubī, Abī ʿAbd Allāh Muḥammad ibn Aḥmad al-Anṣārī, *Al-Jāmiʿ li-aḥkām al-Qurʾān* (Cairo: Maṭbaʿat Dār al-Kutub al-Miṣriyya, 1357–1369/1938–1950) vol. 7, p. 6; vol. 9, pp. 291 – 295; vol. 17, pp. 8 – 13 and vol. 19, pp. 245 – 246.

³⁸⁵ This is the longest chapter on a named angel in *al-Ḥabā'ik*.

³⁸⁶ E.g. §314, 315, 318, 319, 331.

³⁸⁷ Arberry, *Koran*, p. 540.

³⁸⁸ e.g. al-Qurṭubī, *al-Jāmiʿ*, vol. 17, p. 9.

³⁸⁹ See §319.

³⁹⁰ *yamīn* appears 16 times in the Qurʾān – see ʿAbd al-Bāqī, Muḥammad Fuʿād, *Al-Muʿjam al-mufahras li-alfāz al-Qurʾān al-karīm* (Cairo: Dār al-Ḥadīth, 1417/1996) p. 862. The opening of Sura 56 is a good example of the discourse of left and right; see Arberry, *Koran*, pp. 560 – 561. For more

The actions of the angelic scribes are further expanded by the *ḥadīth* to show God's mercy to his creations. In §335 the Scribes are said not to record any transgressions for six hours after a sin has been committed and 'If [the person] repents and seeks forgiveness from God, Most High, then He casts [the sin] away from him...' ³⁹¹ This *ḥadīth* attests to God's mercy and also encourages repentance. This same emphasis on God's mercy is repeated in §336 with a slight difference in that: 'If a servant does a good act, he writes it down ten times...' ³⁹² Here good actions are given extra weight, thereby making entrance into Paradise, technically at least, a little easier. Despite the fact that these two *ḥadīth* are different in some specific details, the general theme of the *ḥadīth* – that God is merciful and allows time for repentance – is common to a great many included in *al-Ḥabā'ik*. To a certain extent these *ḥadīth* could be described as being contradictory, ³⁹³ but the differences in detail are not problematic; rather, the underlying aim of these *ḥadīth* is to encourage repentance after the committing of a sin, as well as encouragement to act righteously in the first place. The focus on the ethical value of righteous and unrighteous actions can be seen particularly clearly in another *ḥadīth* that states: '...When a servant tells a lie, the angel [of good deeds] is separated from him by a mile from the stench which comes from him.' ³⁹⁴ Here, an unrighteous action is manifested by a (physical) smell. ³⁹⁵ In this way, the *ḥafīẓān* are no longer simply

on the left-right distinctions in Islam and religion generally, see Hertz, R., 'La prééminence de la main dextre: étude sur la polarité religieuse' *RP* 68 (1909) pp. 553 - 558 and Chelhod, J., 'Contribution au problème de la prééminence de la droite, d'après le témoignage arabe' *Anthropos* 59 (1964) pp. 529 – 545.

³⁹¹ §335.

³⁹² §336.

³⁹³ Some exegetes include a *ḥadīth* that combines these two positions; e.g. al-Qurṭubī, *al-Jāmi'*, vol. 17, p. 10 [on Q 50:17].

³⁹⁴ §349.

³⁹⁵ For a discussion of the concept of smell in religious thought, see Evans, Suzanne, 'The Scent of Martyr' *Numen* 49 (2002) pp. 193 - 211.

angelic ‘by-standers’ or ‘witnesses’ dispassionately recording a human’s deeds; the Scribes are being used to condition human behaviour, urging both the pursuit of righteous deeds in the first instance and repentance for those who commit unrighteous actions in the second.³⁹⁶

The *ḥadīth* in both al-Suyūṭī’s collection and the exegetical literature seen above have expanded the Qur’ānic concept of the angelic Scribes in minor and logical ways. However, some *ḥadīth* seem to move away from the Qur’ānic descriptions of the Scribes a great deal; for example, §345 says that ‘When God puts a servant to the test during an illness; he says to the companion on the left: ‘Go away!’ And He says to the companion on the right: ‘Write down for my servant the good deeds that he does.’ Not only is this further evidence of divine mercy, but it can also be viewed in terms of a legal response to a question of ethical and jurisprudential concern: is one culpable of acts committed whilst ill, including any resultant sins of omission? Are the actions of the insane counted against them? In Islamic criminal law for an individual to be culpable of a crime, the person must ‘have had the power to commit or not to commit the act (*qudra*); he must have known (*‘ilm*) that the act was an offence; and he must have acted with intent (*qaṣd*).’³⁹⁷ The same applies to ritual law and to the judgement that God gives on the Last Day, with the result that during illness (and logically by extension, madness) unrighteous ritual (and criminal) actions, as well as sins of omission are not counted against an individual.

³⁹⁶ There are further *ḥadīth* that give different details but the same concepts: e.g. ‘...when a man goes to bed virtuously, the angel anoints him.’ §373; p. 101.

³⁹⁷ Peters, Rudolph, *Crime and Punishment in Islamic Law* (Cambridge: Cambridge University Press, 2005) p. 20; see also Dols, Michael W., *Majnūn: The Madman in Medieval Islamic Society* (Oxford: Clarendon Press, 1992) p. 442ff. and Powers, Paul R., *Intent in Islamic Law: Motive and Meaning in Medieval Sunnī Fiqh* (Leiden: Brill, 2006).

The *ḥadīth* also include information which at first sight does not appear to be the primary intention of the Qur'ān. For example, §371 says: 'whoever uncovers his genitals, the angel [of good deeds] has turned away from him.'³⁹⁸ This is not implied by any of the descriptions of the Scribes in the Qur'ān discussed above, to the extent that Q 13:11 says: 'he has attendant angels, before him and behind him, watching over him by God's command...'³⁹⁹ and Q 50:18 says of a human '...not a word he utters but by him is an observer ready.'⁴⁰⁰ According to these verses of the Qur'ān, the Scribes are ever-present with a human, but this particular *ḥadīth* states that they are absent when a human is naked: is this contradictory? Not necessarily so; the Qur'ān does also say: 'Successful indeed are the believers.... who guard their private parts.'⁴⁰¹ Q 23:5 clearly prohibits exposing the genitals and this *ḥadīth* uses the concept of the Scribes to emphasize this position: i.e. if one exposes oneself, any good actions performed cannot be recorded; and so, it is clearly in the interest of an individual not to let his or her genitals be revealed. Although the Scribes are not referred to in the various *tafsīrs* on Q 23:5,⁴⁰² al-Qurṭubī does include a brief discussion about angels and nakedness, including a *ḥadīth* stating that: 'If a servant enters a bath without an *izār*, then his angel will curse him.'⁴⁰³ In these *ḥadīth* about nudity there is a slight difference in the way that the Scribes are employed: rather

³⁹⁸ §371; Yedida Stillman highlights the differences in attitude to nakedness between the pre-Islamic and Islamic societies: 'The new Islamic sensibilities which were in marked contrast to Jāhili society's easygoing attitude to nudity and very much in line with the biblical notions of propriety (cf. Exodus 20:23) would not permit the exposure of a man's genitalia...' Stillman, Yedida Kalfon, *Arab Dress: A Short History* (Leiden: Brill, 2000) p. 11.

³⁹⁹ Arberry, *Koran*, p. 240.

⁴⁰⁰ Arberry, *Koran*, p. 540.

⁴⁰¹ Arberry, *Koran*, p. 343.

⁴⁰² The *tafsīrs* on Q 23:1 – 5 are chiefly concerned with the question of nudity and marriage; see al-Tabarī, Abū Ja'far Muḥammad ibn Muḥammad, *Jāmi' al-bayān 'an ta'wīl al-Qur'ān* [*Tafsīr*] (Cairo: Muṣṭafā al-Bābī al-Ḥalabī, 1968), vol. 18, p. 4 and Al-Qurṭubī, Muḥammad ibn Aḥmad, *Al-Jāmi' li-ahkām al-Qur'ān* (Cairo: Dār al-Kutub al-Miṣriyya, 1948), vol. 12, pp. 102 – 111.

⁴⁰³ Al-Qurṭubī, *al-Jāmi'*, vol. 19, p. 246.

than the *ḥadīth* being used to expand and explain the roles of the Scribes, the Scribes are used to enforce and interpret a specific legal injunction against nudity. Again, the exposure of the genitals could be projected into an eschatological punishment in the future, but these *ḥadīth* are firmly rooted in the present and the habitual actions of the Scribes.

The *ḥadīth* included in al-Suyūṭī's *Al-Ḥabā'ik* regarding the Scribes are used in different ways to describe similar concepts. The main ideas contained in the *ḥadīth* are (i) the specific details regarding their location and their functions; (ii) God's mercy towards the repentant; (iii) answers to specific questions of theological and legal concern; and (iv) the use of angels in matters of (ritual) law. The *ḥadīth* show that the Scribes were not simply recorders of human deeds, but are used to encourage certain modes of righteous behaviour. The stress on the intimacy of the angels with individuals is great, as is their place in the human world. The final result of these angels' work will send the individual to Paradise or the Fire, but al-Suyūṭī's *Al-Ḥabā'ik* focuses on the present and what these angels are doing in this world, at this very moment.

3.1.3 The Angel of Death

The portrayal of 'Death' in anthropomorphic or angelomorphic terms is common to a number of belief systems and Islam is no exception.⁴⁰⁴ Despite the fact the death is an important theme of the Qur'ān,⁴⁰⁵ there is only one reference to the *Angel of*

⁴⁰⁴ See Brandon, 'Personifications of Death' and Lonetto, Richard, 'Personifications of Death' *ED* pp. 205 – 206.

⁴⁰⁵ See O'Shaughnessy, *Muhammad's Thoughts on Death*; Muhammad Abdul Haleem also comments: 'The after-life is not treated in the Qur'an in a separate chapter at the end of the book, or as

Death.⁴⁰⁶ In Islamic tradition, however, the Angel of Death became very important and was recognized as one of the four Islamic archangels (*ru'ūs al-malā'ika*).⁴⁰⁷ This is reflected in al-Suyūṭī's *al-Ḥabā'ik*, with the chapter on the Angel of Death being one of the longest, containing sixty-five *ḥadīth* (c. 9%).⁴⁰⁸ The *ḥadīth* included give a wide range of information about the angel, which can be divided into three different categories: (i) physical descriptions of the Angel of Death; (ii) the function and processes of the Angel of Death and (iii) narratives about the Angel of Death meeting various prophets. Running throughout these *ḥadīth* is the sense that death is imminent and that death is part of human existence, with eight explicitly stating that '...the Angel of Death studies every person, without exception, twice a day.'⁴⁰⁹ Death is an inescapable, inevitable and ever-present part of this world.

There are relatively few physical descriptions of the Angel of Death in *al-Ḥabā'ik*. The angel is said to have been visible in the times before the Prophet Moses, until, for various reasons, the angel became invisible and disease was 'invented' (§146 – 148); other *ḥadīth* describe the angel in human terms (e.g. §150, 168); one describes the angel as having 'two eyes in his face and two eyes on the back of his head';⁴¹⁰ the angel is also said to hold a spear (§158, 159); and some describe the angel as being huge.⁴¹¹ Three related *ḥadīth* (§120 – 122) also describe the angel as

something on its own, for its own sake, but always in relations to life in this world.' Abdel Haleem, Muhammad, 'Life and Beyond in the Qur'an' in Dan Cohn-Sherbok and Christopher Lewis (eds.), *Beyond Death: Theological and Philosophical Reflections on Life After Death* (London: MacMillan, 1995) pp. 66 - 79, p. 66.

⁴⁰⁶ Q 32:11; 'Say: "Death's angel, who has been charged with you, shall gather you, then to your Lord you shall be returned."' Arberry, *Koran*, p. 424.

⁴⁰⁷ For a basic survey see Wensinck, A. J., 'Izrā'īl' *ET* vol. 4, pp. 292 – 293.

⁴⁰⁸ §107 – 171.

⁴⁰⁹ §111; the number of times varies, cf. §109 – 113, 115 – 119. Other *ḥadīth* in this section make similar statements, but in less explicit terms.

⁴¹⁰ §123; p. 42; another *ḥadīth* states that the angel has multiple eyes in the back and front of his head, see §120.

⁴¹¹ E.g. §126, 131 – 133 & 135.

having two forms (one for believers and one for non-believers) and one of these three (§122) gives more detail. For believers, the Angel of Death is described as looking like ‘...a young man, the most beautiful of face, the most fragrant and [wearing] a white gown;’ and for non-believers: ‘...[he was] a black man, his head reaching the sky, and flames of fire were coming out of his mouth...’⁴¹² These descriptions of the Angel of Death lack much detail, which is quite surprising as graphic descriptions of the angel can be found in other works with similar themes.⁴¹³ The absence of extended descriptions of the Angel of Death reflects the collection’s focus on the angel’s *function*, rather than the *form* of the angel.

Occasionally the Angel of Death is caricatured, for example in §118 the Angel of Death states that: ‘...if the servant, to whom he has been sent, laughs, then he says: ‘Wonderful! I have been sent to take his soul while he is laughing!’⁴¹⁴ Above all, this stresses the inescapable nature of death; even when someone is laughing, if the appointed time (*ajal*) comes, the person will die. In §112 the Angel of Death appears almost arrogant, saying to a grieving family: ‘There is no sin for me [in doing this] against you! I am one with orders. By God! I have not eaten your food (*rizq*), I have not reduced your age, and I have not shortened your appointed time (*ajal*). I am going to return to you, and I will return to you again and again until there is none of you left!’⁴¹⁵ These *ḥadīth* emphasise the nature of the angel’s work and the lack of compassion reflects the impersonality of ‘Death’ and its inevitability. Above all, the Angel of Death is not a judge, only a functionary of God and cannot act independently.

⁴¹² §122.

⁴¹³ Cf. Wolff, M., *Muhammedanische Eschatologie*, p. 20ff. and al-Qāḍī, *Daqā’iq*, pp. 32 – 35.

⁴¹⁴ §118.

⁴¹⁵ §112; notice that these are the components of Watt’s ‘modified fatalism’, and are written down by the Angel of the Womb; see above.

Many of the *ḥadīth* ask the practical question: just how does the Angel of Death collect everybody's souls? What, asks one *ḥadīth*, does the Angel of Death do '...when there is a war in the East and a famine in the West?'⁴¹⁶ The *ḥadīth* have three answers. The first is that the Angel of Death is huge, and that '...[The earth] was made like a bowl, and he takes out of it when he wants.'⁴¹⁷ The second answer is that God created helpers for the Angel of Death, who collect people's souls and then hand them over to the Angel of Death (§127). The third answer is that the Angel of Death 'calls it and the soul comes to him.'⁴¹⁸ Although each *ḥadīth* tends to suggest one way or another, these answers are sometimes combined (e.g. §125). On the actual process of death, the only descriptions in the Qur'ān are in Q 56:82, in which the soul is described as moving to the throat of the deceased and Q 6:93, which talks of the '*ghamarāt al-mawt*...' which Arberry translates as 'the agonies of death'.⁴¹⁹ However, the actual process of death is not described in great detail by the *ḥadīth* included in this particular collection and often the Angel of Death simply 'takes the soul' (*qabaḍa al-rūḥ*).⁴²⁰ As noted above, there are also two *ḥadīth* that say that the angel has a spear and that 'he cuts the vein of life with it.'⁴²¹ Again, this lack of information is quite unexpected as many texts go into great detail about the actual physical process of death.⁴²²

There are a number of *ḥadīth* that describe the way in which the Angel of Death is informed who is to be killed and when. There are two main theories: firstly,

⁴¹⁶ §123; cf. §126, 132, 133, 158 & 159.

⁴¹⁷ §123.

⁴¹⁸ §135.

⁴¹⁹ Arberry, *Koran*, p. 132.

⁴²⁰ E.g. §152.

⁴²¹ §158 – 159.

⁴²² Cf. Al-Ghazālī, Abū Ḥamīd Muḥammad ibn Muḥammad ibn Muḥammad, *Kitāb iḥyā' 'ulūm al-dīn* (Cairo: Maṭba'at 'Isā al-Bābī al-Ḥalabī, 1348/1929-30) vol.4, pp. 421 – 426; Winter, T. J. (tr.), *The Remembrance of Death and the Afterlife* (Cambridge: Islamic Texts Society, 1989) pp. 121 – 132.

that God instructs the Angel of Death who is to be killed at the moment before death;⁴²³ or, the Angel of Death is informed about the deaths that are to occur during the whole year during the month of Sha^cbān.⁴²⁴ Despite these two positions, both stress the idea that it is God, and God only, who decides when an individual's life is to come to an end, as Smith and Haddad write: 'It is clear in these eschatological materials that the angel of death himself, as God's instrument, has no responsibility for determining the moment of the individual's death.'⁴²⁵ This emphasises that the Angel of Death is not acting independently, which also means that the Qur'ānic statement in Q39:42 that 'Allah takes the souls at the time of their death'⁴²⁶ remains valid. Obedience to God is a key characteristic of all angels, in all monotheist religions and disobedience is often perceived as the origin of evil.⁴²⁷ As Awn comments: '[The angels] act only in accordance with God's will, and function as His instruments. For them to rebel is unimaginable, and in fact, impossible...'⁴²⁸ This idea that the Angel of Death does not act independently is also found in Judaism, in which '...God is regarded as ultimately responsible for the individual's death, since Hebrew monotheism could not allow for the existence of an evil principle or a death-god that operated among men, contrary to the will of God.'⁴²⁹

The *ḥadīth* are, however, more explicit when it comes to a description of the differences between the Angel of Death's treatment of believers and non-believers;

⁴²³ E.g. '...the Angel of Death does not know when the appointed time of a person's death is going to happen until he is ordered to take it.' §139.

⁴²⁴ E.g. '...On the middle night of Sha^cbān, God reveals to the Angel of Death regarding the taking of every soul that he wants to be taken during that year.' §144.

⁴²⁵ Smith and Haddad, *Death and Resurrection*, p. 35.

⁴²⁶ Arberry, *Koran*, p. 476.

⁴²⁷ In Islam the obedience of angels presented a problem for understanding the failure of Iblīs to bow to Adam. If all angels obey God by their nature, why did Iblīs not bow down? These issues are discussed in Awn, *Satan's Tragedy*, pp. 24 – 33.

⁴²⁸ Awn, *Satan's Tragedy*, p. 27.

⁴²⁹ Brandon, 'Personification of Death' p. 325.

take this *ḥadīth*: ‘When the Angel of Death comes to take the soul of a believer, he says: “Your Lord says to you: Peace!”’⁴³⁰ This seems to be a reference to Q 16:32 in which God says to the *winners* on the Day of Judgement: ‘Peace be on you! Enter Paradise for that you were doing.’⁴³¹ A similar statement can be found in §134:

‘...angels from amongst the angels of mercy and angels from amongst the angels of suffering are with him; when he receives a good soul, he gives it to the angels of mercy, and when he receives a wicked soul, he gives it to the angels of suffering.’⁴³²

These *ḥadīth* suggest some form of pre-figured punishment or reward for the individual, exacted before the formal judgement of the Last Day. Souls of the believers are also said to be subsequently handed over to an angel called Ramyā’īl and the souls of the unbelievers to an angel called Dūma.⁴³³

Sixteen of the *ḥadīth* about the Angel of Death included in al-Suyūṭī’s *Al-Habā’ik* are part of the *Qīṣaṣ al-anbiyā’* tradition. These *ḥadīth* are all comparatively long and form two narrative groups: (i) the Angel of Death and its role in the creation of humans and (ii) the Angel of Death’s interaction with various prophets.⁴³⁴ These mythic tales are important for two reasons: firstly, they show Islamic interaction with the wider Judeo-Christian mythic tradition;⁴³⁵ and secondly, they reveal some important information about the role and function of the Angel of Death.

⁴³⁰ §165.

⁴³¹ Arberry, *Koran*, p. 261.

⁴³² §134; the Angel of Death is also seen to act compassionately to believers, and in one *ḥadīth* the angel says: ‘Be of good cheer and feel consoled, for I am friend to every believer.’ See §119.

⁴³³ See §300 & 301; Duma is a Jewish angel (meaning ‘silence’); in *Hag* 5a, the Angel of Death states: ‘I, have charge over them till they have completed the generation [i.e. their life] and then I hand them over to Dumah’ *Hag* 5a, p. 18; see also *San* 94a, *Shab.* 152b and *Ber.* 18b.

⁴³⁴ Creation: §107 – 108; Prophets: Enoch (§149), Abraham (§120 – 123; 150), Moses (§146), Solomon (§ 137 – 138, 167 – 168), David (§151) and Muḥammad (169 – 170).

⁴³⁵ For more on the interaction between *ḥadīth* and rabbinic literature, see Rosenblatt, Samuel, ‘Rabbinic Legends in Hadith’ *MW* 35 (1945) pp. 237 – 252.

The first two *ḥadīth* in the section on the Angel of Death do not, as one may expect, give descriptions of how the Angel of Death takes the souls of humans or how the angel looks, but begin with a story about the creation of Adam. In this story, God commands various angels to collect some mud from the Earth, out of which Adam is created. Various angels fail in their mission and only the Angel of Death succeeds.⁴³⁶ This story is important because it establishes a link between the birth and death of human life. The Angel of Death was involved in the creation of Adam and is likewise responsible for the ‘termination’ of Adam and his children; or as Haim Schwarzbaum notes ‘...at the very moment of his birth man already carries within himself the germs of death.’⁴³⁷ This narrative was very popular in both Jewish and Muslim tradition and testifies to the high degree of interaction between Judaism and Islam in this particular mythic narrative.⁴³⁸

In Judaism and Christianity, the characterization of ‘death’ or the ‘Angel of Death’ in works such as the *Testament of Abraham* marks a further development in the personification of *Death*, in which prophets interact directly with an anthropomorphic or angelomorphic version of Death and attempt to challenge it.⁴³⁹

⁴³⁶ §107 – 108; Al-Thaʿlabī includes a version of this ḥadīth, but begins the chapter acknowledging that: ‘*qāla al-mufasssirūna bi-alfāzi mukhtalafati wa-maʿānin mutafaqati*’ (‘The commentators have said in different words but similar meanings’); Al-Thaʿlabī, *Qisas al-anbiyā* p. 26; Brinner, *Lives*, p. 43. The narrative was a popular one and is frequently included in Islamic histories; e.g. al-Ṭabarī, Abū Jaʿfar Muḥammad ibn Jarīr (ed. Muḥammad Abū ʿl-Faḍl Ibrāhīm), *Taʾrīkh al-rusul wa-malūk* (Cairo: Dār al-Maʿarif bi-Miṣr, 1960) vol. 1, pp. 89 - 90; Rosenthal, Franz (tr.), *The History of Al-Ṭabarī: Volume 1 – From the Creation to the Flood* (Albany: State University of New York Press, 1989) pp. 258 – 259 and al-Masʿūdī, *Murūj al-dhahab*, vol. 1, pp. 35 – 36. For a fuller list of references to this narrative in Arabic literature see Jeffery, A., ‘Ibn al-ʿArabī’s *Shajarat al-Kawn* (Continued)’ *SI* 11 (1959) pp. 113 – 160, p. 113, n. 1; and for references in Jewish and Christian literature see Chipman, ‘Mythic aspects’ pp. 10 – 13.

⁴³⁷ Schwarzbaum, Haim, ‘The overcrowded earth’ *Numen* 4 (1957) pp. 59 – 74, p. 65.

⁴³⁸ See Schwarzbaum, Haim, ‘Jewish and Moslem Sources of a Falasha Creation Myth’ in Raphael Patai (ed.) *et. al.*, *Studies in Biblical and Jewish Folklore* (Bloomington: Indiana University Press, 1960) pp. 41 – 58 and Ullendorf, Edward, ‘The “Death of Moses” in the Literature of the Falashas’ *BSOAS* 24 (1961) pp. 419 – 443.

⁴³⁹ *TestAbr.*, *OTP*, vol. 1, pp. 871 – 902; for a commentary on the text see Allison, Dale, C., *The Testament of Abraham* (Berlin: Walter de Gruyter, 2003). See Allison, *Testament*, pp. 53 – 54 for

This challenge ultimately fails and the prophet succumbs to the authority of God and dies. This narrative theme is also prominent in Islamic tradition.

Hadīth §120 – 122 describe the Angel of Death appearing to Abraham in two different forms:⁴⁴⁰ the first, for the believers in which the Angel of Death ‘...[was] made of light and radiance, of a kind that only God, Most High knows.’⁴⁴¹ The second form for the unbelievers was, as has been seen above, terrifying; even ‘Abraham was so afraid that he trembled and his stomach clung to the Earth, and his soul was about to leave.’⁴⁴² Here, the narrative of Abraham’s meeting with Death (or rather the *Angel of Death*) is used to describe a wider ethical dimension: ease in the death for the faithful and pain in death for the unfaithful – a common idea in earlier Judaism.⁴⁴³

One common theme in these stories is the attempt by various prophets and people to escape death: Enoch, Moses, Abraham and a friend of Solomon all attempt to evade the Angel of Death and prolong their appointed time (*ajal*). Enoch and Abraham both seek confirmation from God that they are supposed to die; Moses challenges the angel directly by slapping him and gouging out his eye and Solomon’s friend asks Solomon to transport him to India, so that the Angel of Death does not know where he is.⁴⁴⁴ All these attempts are futile, as all are taken by the Angel of Death at their appointed time (*ajal*). This is part of a wider theological position in

editions of the text in its various extant languages (Greek, Coptic, Arabic, Ethiopic, Slavic and Romanian).

⁴⁴⁰ These two images are also found in the *Testament of Abraham* 17:12 – 13: ‘Then Death put off all his beauty and loveliness and all his glory and his sun-like form that he had worn. And he put on a robe of tyranny, and he made his face gloomy, more fierce than all wild beasts and more unclean than all uncleanness.’ Allison, *Testament*, p. 334; see also Ludlow, Jared W., *Abraham Meets Death: Humor in the Testament of Abraham* (Sheffield: Sheffield Academic Press, 2002) pp. 95 – 118.

⁴⁴¹ §121.

⁴⁴² §121.

⁴⁴³ Cf. *Ket.* 104a, pp. 664 – 665; Cf. §134 – 135 & 163 – 166.

⁴⁴⁴ Enoch: §149; Abraham: §150; Moses §146; Solomon’s friend: §167 – 168.

which the moment of death and the length of a human's appointed time are conceived as being immovable and unchangeable. Montgomery Watt comments: 'Both [*ajal* and *rizq*] are thought as determined by God, but, once they have been determined, they seem to have a certain fixity and there is no question of God's altering them.'⁴⁴⁵

If the *ḥadīth* on wine-drinking is disregarded,⁴⁴⁶ the last two *ḥadīth* of the section on the Angel of Death describe the events surrounding the death of Muḥammad. Some elements of these two *ḥadīth* can be found in the other prophets' meetings with the Angel of Death. When the Angel of Death takes Abraham's soul, the angel says: 'Your Lord has ordered me to take your soul in the most peaceful way that I have taken the soul of a believer.'⁴⁴⁷ Likewise, in the story of Muḥammad's death, the Angel of Death seeks permission to enter the Prophet's house, and the *ḥadīth* concludes: 'It reached me that the Angel of Death did not greet anyone before him, and will not greet anyone after it.'⁴⁴⁸ Although different in detail, the two *ḥadīth* use similar expressions to describe the honour in which the prophets are held. This honour is made even more explicit in §167 in which the Angel of Death is made an actual servant of Solomon.⁴⁴⁹ However, the main difference between the encounters of Muḥammad and the other prophets with the Angel of Death is that the death of Muḥammad is treated with a great deal more emotion,

⁴⁴⁵ Watt, W. Montgomery, 'Suffering in Sunnite Islam' *SI* 50 (1979) pp. 5 – 19, p. 15.

⁴⁴⁶ The section on the Angel of Death ends with a *ḥadīth* (§171) already included in the section on Michael (§84), which simply contains the *matn*: 'The one addicted to wine is an idolater.' The *ḥadīth* is included in the section on the Angel of Death, because the Angel of Death features in the *isnād*; see §84 & 171.

⁴⁴⁷ §150.

⁴⁴⁸ §168; cf. the death of Moses in Pseudo-Philo, in which the angels do not sing their heavenly hymn after his death: '...nor was there such a day from the one on which the LORD made man upon the earth, nor shall there be such forever, that the hymn of the angels should stop on account of men; because he loved him very much. And he buried him with his own hands on a high place and in the light of all the world.' *Ps.-Philo* 19:16, *OTP* vol. 2, p. 323

⁴⁴⁹ §167; cf. *Ket.* 77b, pp. 488 – 489.

where the pain and suffering of the Prophet are stressed.⁴⁵⁰ Muḥammad, when asked by Gabriel how he feels, replies: ‘Gabriel, I find myself distressed, and I find myself scared.’⁴⁵¹ Muḥammad is also one of the only prophets (save David)⁴⁵² not to challenge the Angel of Death in an attempt to live a longer life. In §170, the Angel of Death says to Muḥammad:

‘God has sent me to you, and has commanded me to obey you; if you command me to take your soul, then I will take it; but if you do not want [me to], then I will leave it.’ [Muḥammad] said: ‘Do [it], Angel of Death.’ He said: ‘Yes, as you command.’

In the *ḥadīth* there is juxtaposition between the honouring of Muḥammad as a prophet and his depiction as an ordinary human being, fearing death. In this way, Muḥammad becomes an example of human behaviour: accepting of God’s will, yet simultaneously fearful of it. Even the Prophet, the exemplar of human submission to God, experiences pain and fear of death itself; as al-Ghazālī writes:

‘Did you think that the office of Prophethood would ward off from him that which was destined? Did the Angel respect his family and relations for his sake? ...Absurd! Rather he followed that which he found inscribed upon the Tablet.’⁴⁵³

The importance of these narratives of the prophets is particularly evident in the fact that a quarter of the *ḥadīth* about the Angel of Death are in this form. What is

⁴⁵⁰ Other pseudepigraphical, apocryphal and hagiographical works also treat death with great emotion: e.g. *The History of Joseph the Carpenter* §14ff; Cowper, B. Harris (tr.), *The Apocryphal Gospels* (London: David Nutt, 1897) pp. 99 – 127, pp. 111 ff.

⁴⁵¹ §170.

⁴⁵² §151; In Jewish and Muslim tradition, David is believed to have been very pious and devout, see Pomykala, Kenneth E., *The Davidic Dynasty Tradition: Its History and Significance for Messianism* (Atlanta: Scholars Press, 1995) and Xeravits, Géza, ‘The Figure of David in the Book of Ben Sira’ *Henoch* 23 (2001) pp. 27 – 38, especially pp. 30 – 32.

⁴⁵³ Al-Ghazālī, *Ihyā’*, vol.4, p. 399; Winter, *Remembrance of Death*, p. 58.

most interesting about the use of these mythic narratives is that many of them are not simply graphic descriptions of death and its processes. The *ḥadīth* make important statements about the subject within a rich narrative framework, allowing important concepts about death to be made more subtly.

As a whole, the section on the Angel of Death in al-Suyūṭī's *Al-Ḥabā'ik* focuses on four main areas: (i) the imminence of death; (ii) the fixed nature of the *ajal*; (iii) the treatment of humans by the Angel of Death based on belief; and (iv) the practical question of how the Angel of Death can take everyone's souls. This section is one of the longest sections in al-Suyūṭī's *Al-Ḥabā'ik fī akhbār al-malā'ik* and it contains much information in a variety of different formats: exegeses of the Qur'ān, simple statements, longer narratives, etc. However, much information has not been included. The *ḥadīth* do not give much detail about the physical appearance of the Angel of Death or about the physical process of death and the time spent in the grave.

3.1.4 The Post-Mortem Angels

After burial, there are a number of angels that interact with an individual after death and in the afterlife; namely, the *fattān al-qabr* (*Tempters of the Grave*, §302 – 311) and the guardians of Heaven and Hell, *Riḍwān* and *Mālik* (§229 – 242), along with their subordinates.

Soon after someone has been buried, they are visited by angels and their faith is tested; if they have been believers, they are rewarded and if they are not, they are

punished.⁴⁵⁴ Although it should be noted, as F. E. Peters comments, that ‘...the events following an individual Muslim’s death unfold in a somewhat confused fashion in the literature on the subject.’⁴⁵⁵ In Islamic tradition the two angels that come to the deceased are normally named as Munkar and Nakīr. However, some other names are given in *al-Ḥabā’ik*: Ankar, Nākūr, Rūmān⁴⁵⁶ and they are also referred to more generally in §308 as ‘...two angels from the Angels of Mercy, and one angel from the Angels of Torment.’ These angels do not appear in the Qur’ān, but became an important part of traditional Islamic beliefs about the afterlife.⁴⁵⁷ The angels are described as having a terrifying form, having blue or black skin (§302 & 305) and that:

‘Their voices are like roaring thunder, and their glance is like a flash of lightning; they walk on their hair, and they dig with their fangs; the two of them have a rod of iron; if the people of Mina were to gather together, they would not be able to lift it up.’⁴⁵⁸

⁴⁵⁴ For a basic summary, see Halevi, Leor, *Muhammad’s Grave: Death Rites and the Making of Islamic Society* (New York: Columbia University Press, 2007) pp. 197 – 233 and Wensinck, A. J., ‘*Adhāb al-kabr*’ *EF*² vol. 1, pp. 186 – 187.

⁴⁵⁵ Peters, F. E., *Islam: A Guide for Jews and Christians* (Princeton: Princeton University Press, 2003) pp. 256 – 257.

⁴⁵⁶ Cf. §309: ‘Abū Nu‘aym from Ḍamra ibn Ḥabīb; he said: There are three Angels of the Grave: Ankar, Nākūr and Rūmān.’ And §310: ‘Abū ‘l-Ḥassan al-Qaṭṭān in *al-Tawālāt* from Ḍamra ibn Ḥabīb; he said: There are four Angels of the Grave: Munkar, Nakīr, Nākūr and their master, Rūmān.’ It should be noted that these other names appear to be very rare, and that both §309 & §310 are attributed to the same source, Ḍamra ibn Ḥabīb.

⁴⁵⁷ Cf. *Al-Fiqh al-akbar II* §23: ‘The interrogation of the dead in the tomb by Munkar and Nakir is a reality and the reunion of the body with the spirit is a reality. The pressure and punishment in the tomb are a reality that will take place in the case of all infidels and a reality that may take place in the case of some sinners belonging to the faithful’ Wensinck, A. J., *The Muslim Creed: Its Origin and Historical Development* (Cambridge: Cambridge University Press, 1932) pp. 195 – 196. Ibn Qayyim al-Jawziyya also devotes much of his *Kitāb al-rūḥ* to a discussion of the trial of the grave, possibly in reaction to groups (such as the *Kharijites* and some *Mu’tazilites*) who denied the existence of Munkar and Nakīr; Ibn Qayyim al-Jawziyya, Muḥammad ibn Abī Bakr, *Kitāb al-rūḥ* (Ḥaydarābād: Maṭba‘at Majlis Dā’irat al-Ma‘ārif al-‘Uthmāniya, 1357 / 1939). Birgit Krawietz comments that: ‘[*Kitāb al-rūḥ*] was written in response to requests for clarification, since the question of the createdness and essence of the soul, etc., had always stirred discussions.’ Krawietz, Birgit, ‘Ibn Qayyim al-Jawziyyah: His Life and Works’ *MSR* 10 (2006) pp. 19 – 64, p. 35.

⁴⁵⁸ §307; cf. §303 & 305 where there are similar images.

This terrifying image has something in common with both the form that the Angel of Death takes for unbelievers (see above) and the forms of the anti-Christ, *al-Dajjāl*.⁴⁵⁹ Despite their form, Munkar and Nakīr are not ‘evil’ angels, nor are they devils. Their function is to test the soul of the deceased by asking simple, basic questions of the individual’s beliefs, e.g. §303: ‘The two will sit with him and ask him what he used to worship, and who his prophet was.’ These are fundamental questions, relating directly to the beliefs of the *shahāda*, rather than a judgement based on an individual’s actions. The responses to the questions asked by the two angels receive either a punishment or reward; in §302 the reward and punishment is related directly to Heaven and Hell: ‘...the door to the Garden is opened for him, and it is roomy for him in his grave’ and ‘...the door to the Fire is opened for him.’

The implication is that the period of questioning in the grave acts as a preliminary stage of judgement during which those who can never enter heaven are separated from those that can. Those that pass the test will subsequently be judged on the Day of Resurrection according to their actions, as collected by the Scribes. This would seem to highlight the primacy of belief and the punishment of disbelief; i.e. *kufīr* automatically results in punishment in Hell. However, this is not at all clear and statements such as ‘...his torment does not end until God calls him from that bed of his...’ in §302, suggest that the individual is not immediately consigned to Hell during this period, but it would seem extremely unlikely that he or she could gain admittance to Heaven.

The guardians of Heaven and Hell are also named in Islamic tradition as Mālik and Ridwān, and, although their names are derived from the Qur’ān, they are

⁴⁵⁹ See Saritopak, Z., ‘The Legend of Al-Dajjāl (Anti-Christ): The Personification of Evil in the Islamic Tradition’ *MW* 93 (2003) pp. 291 - 307 and Halperin, D. J., ‘The Ibn Sayyad Traditions and the Legend of al-Dajjāl’ *JAOS* 96 (1976) pp. 213 – 225.

not fully developed until the *ḥadīth* literature.⁴⁶⁰ They also both figure fairly prominently in the *miʿrāj* literature.⁴⁶¹ Of the few *ḥadīth* in *al-Ḥabāʾik* about post-mortem events, only §237 and §242 are explicitly about Ridwān, and only §241 about the guardians of Heaven. The majority are descriptions of the individuals responsible for Hell: (i) Mālik, the angel in charge of Hell; (ii) the guardians who punish hell's inhabitants; and (iii) the *zabāniyya*, another group of angels who are also responsible for punishments. Like the Angel of Death and Munkar and Nakīr, they are described as having a terrifying form:

[229] God, may he be praised and glorified, created Mālik, and he created as many fingers as the numbers of people in the Fire for him, no-one in the Fire is tortured without Mālik torturing him with his fingers; and by God! if Mālik were to place one of his fingers in heaven, then it would melt it.

[234] There are nineteen angels, and in the hand of every one of them is an iron rod, with two prongs, and he beats [people] vigorously with it, with it coming down on seventy thousand [people].

These descriptions are designed to make individuals aware of the consequences of their actions in this world. Such descriptions are common in both Jewish and Christian apocalyptic and eschatological texts.⁴⁶²

The *ḥadīth* included in Jalāl al-Dīn al-Suyūṭī's collection concerning the post-mortem angels are actually very few, only amounting to twenty-four *ḥadīth* (3%).

⁴⁶⁰ Mālik: Q 43:77; Arberry, *Koran*, p. 511; Ridwān: Q 3:15; Arberry, *Koran*, p. 47.

⁴⁶¹ Cf. Wolff, *Muhammedanische Eschatologie*, p. 134ff. Vuckovic comments: '...Malik is a character that Muhammad meets occasionally, and he is the one, when asked who shows Muhammad hell.' Vuckovic, *Heavenly Journeys*, p. 37.

⁴⁶² See Himmelfarb, *Tours of Hell*, pp. 68 – 105.

This is quite surprising as both the angels Mālik and the two tempters of the grave were extremely popular in Islamic tradition.⁴⁶³ Being angels, al-Suyūṭī could not exclude them from this collection, but their actions in the post-mortem world, that of the eschatological future, appear to jar with the immediacy and everyday focus of the rest of the *ḥadīth* in the collection.

The role of the angels in the everyday lives of humans is an important theme in Islamic tradition and many of the *ḥadīth* in *al-Ḥabā'ik fī akhbār al-malā'ik* deal with this issue. The *ḥadīth* show that angels are continually in contact with humans from the very beginnings of life. One *ḥadīth* shows this with particular clarity:

[304] ‘...when God, may He be praised and glorified, wanted to create him, He said to an angel: ‘Write down his blessings (*rizq*)! Write down his report (*athar*)! Write down his allotted time (*ajal*)! Write him down as damned or blessed!’ Then that angel ascends and God sends an angel, and it sustains him until he reaches puberty, then that angel ascends. Then God assigns two angels to him, who write down his good deeds and his misdeeds. When he is in the presence of death, those two angels ascend, and the Angel of Death comes to him to take his soul. When he enters his grave, the spirit returns to his body, and the two Angels of the Grave come to him and test him. Then the two ascend. When the Hour comes, the Angel of Good Deeds and the Angel of Misdeeds come down to him and they untie the bound books on his neck. Then the two are with him and one drives him and the other bears witness.’

⁴⁶³ E.g. al-Ghazālī, *Iḥyā’*, vol. 4, pp. 426 – 430; Winter, *Remembrance of Death*, pp. 135 – 147; see also Smith and Haddad, *Death and Resurrection*, pp. 41 – 49.

There has been a tendency in Islamic (as well as Biblical and Jewish) Studies to focus on the angels' roles in eschatology. Christopher Rowland has argued that Jewish and Christian apocalyptic literature is not simply about the future, but is also concerned with the present: 'Such elements point to apocalyptic being not merely a movement which was concerned primarily with the future of the world but with the world above, its secrets and its glory.'⁴⁶⁴ But it is not simply apocalyptic texts that are interested in angels and the divine world, Jalāl al-Dīn al-Suyūṭī's *Al-Ḥabā'ik fī akhbār al-malā'ik* is a case in point. The compilation is clearly not apocalyptic, far from it in fact; yet it is deeply interested in the angelic world. *Al-Ḥabā'ik* is not simply concerned with, as Rowland puts it, the secrets and glory of heaven, but with the interaction of the divine with the human; the relationship between the angels and people, at all times. This relationship is reciprocal: whilst the angels constantly supervise and note down human actions, a close link is also established between the human and the divine worlds and along with it a sense of protection. Whilst it is angels that are the celestial beings that interact with God, there is a constant stress in the *ḥadīth* that they are mere functionaries. All of the angels' actions originate from God.

⁴⁶⁴ Rowland, C., 'The Visions of God in Apocalyptic Literature' *JSJ* 10 (1979) pp. 138 – 154, p. 138.

3.2 Angels and Ritual

So far, angels have been seen to watch over human activity on behalf of God, recording human actions in readiness for the Day of Judgment. The angels do, however, also relate to the contemporary world (that is, the world of the *now*) in a different way. Rather than perceiving angels as coming down to the earthly realm, humans can also look up to the angels in heaven to seek guidance in the ways and forms of ritual.

The idea that the earth is a replica of the divine is an important and common concept in the ancient world and the temple in Near Eastern religion marked a place of direct connection between the human and divine realms.⁴⁶⁵ As Nicholas Wyatt comments: ‘The point of the junction is communication between the two, allowing the benefits of cult to reach the god (they were seen as being fed by their servants, like great lords), and for their power to be transmitted downwards as a blessing...’⁴⁶⁶ Associated with the precise *locus* of this divine place on earth (the *holy of holies* in the Jewish Temple) and its environs were a number of rites and rituals concerning how it should be engaged with by humans. Jewish ritual law (as well as much criminal and civil law) is associated with these regulations and came to have a profound effect on the daily lives of both the priestly and non-priestly classes. After the destruction of the two Jewish temples, but particularly after that of the Second

⁴⁶⁵ E.g. *Enûma Elish* VI:107 – 122; Heidel, Alexander (tr.), *The Babylonian Genesis: The Story of the Creation* (Chicago: University of Chicago Press, 1942) p. 39.

⁴⁶⁶ Wyatt, Nicholas, *Space and Time in the Religious Life of the Near East* (Sheffield: Sheffield Academic Press, 2001) p. 161; see also Wensinck, A. J., ‘The Significance of Ritual in the Religion of Israel’ in H. Kraemer, P. A. H. de Boer and W. C. van Unnik (eds.), *Semietische Studiën uit de Nalatenschap van Prof. Dr. A. J. Wensinck* (Leiden: A. W. Sijthoff’s Uitgeversmaatschappij NV, 1941) pp. 51 – 60.

Temple, the *locus* of this divine-human interaction was lost, but the ritual laws and the means of approach to God remained.⁴⁶⁷

In the literature of the inter-testamental and post-biblical periods the concept of heaven as the template for human action on earth became important in the description and performance of certain rituals. Texts such as the *Testament of Levi* portray earthly ritual actions being performed in heaven by angels.⁴⁶⁸ The role of the angels in these texts is to act as an exemplar for human behaviour; the way in which the angels worship God, should be how humans worship God. In these works the visionary ascends to heaven and *brings down* revelation to the rest of humanity concerning God and the rituals associated with His worship. There is also, however (as seen above with the Scribes), a movement in the opposite direction: angels are also used to deliver prayers of the faithful to God and to keep information about the ritual actions of individual humans. This movement is seen particularly clearly in the mediaeval *Exodus Rabbah*: ‘When they have all finished [praying], the angel appointed over prayers collects all the prayers that have been offered in all the Synagogues, weaves them into garlands and places them upon the head of God...’⁴⁶⁹

Ritual also forms the basis of Islamic spiritual life, and there has been much literature written about the history and development of Islamic ritual.⁴⁷⁰ However, the role of angels in ritual law and belief has yet to be tackled, which is somewhat surprising as the use of angels to encourage and discourage certain actions is neither obscure, nor solely the domain of popular, folkloric material. For example, Mālik ibn

⁴⁶⁷ See Stone, Michael E., ‘Reactions to the Destructions of the Second Temple: Theology, Perception and Conversion’ *JSJ* 12 (1981) pp. 195 – 204.

⁴⁶⁸ For a discussion of these themes, see Himmelfarb, *Ascent to Heaven*.

⁴⁶⁹ *ExodR* 21:4, pp. 262 – 263.

⁴⁷⁰ E.g. Katz, Marion Holmes, *Body of Text: The Emergence of the Sunnī Law of Ritual Purity* (Albany: State University of New York Press, 2002).

Anas includes a number of *ḥadīth* that use angels for these purposes in his *Muwattā'*.⁴⁷¹

There are 224 *ḥadīth* (around 30%) included in *Al-Ḥabā'ik*, which relate to ritual issues. This is a significant proportion and therefore the subject needs to be addressed comprehensively. This section will look at the roles that angels play in ritual behaviour, looking at the topic from two directions: (i) humans looking *up* towards heaven for templates of ritual action,⁴⁷² and (ii) heavenly beings coming *down* to earth, covering both the effects of certain human actions on angels⁴⁷³ and the angelic encouragement of correct behaviour.⁴⁷⁴

3.2.1 Heaven as a Template for the Performance of Ritual

One of the most important roles for angels is to show believers how they should behave, both in general terms and in specific ritual contexts. The importance of angels outside Islam is best seen in the Qumran community and their liturgical work, *Songs of the Sabbath Sacrifice*.⁴⁷⁵ At Qumran human worship replicates the angelic community and both humans and angels pray and worship simultaneously. Martha

⁴⁷¹ Cf. Mālik, *Muwattā'*; vol. 1, pp. 72, 82 – 85, 134, 141 – 142, 165 – 166 and vol. 2 p. 241; Bewley, *Al-Muwattā'* §3.2.14; 3.11.47 – 50; 9.18.54; 9.24.85; 15.7.25; 54.3.6; 54.3.8; pp. 11, 26, 47 – 50, 60, 64, 80 & 407.

⁴⁷² 62 *ḥadīth*: §7, 21, 22, 24, 34, 39, 83, 100, 101, 102, 196, 212, 275, 282, 289 – 290, 458 – 470, 475 – 477, 486, 489; 518 – 528, 549, 566, 567, 575, 609, 625, 683 – 685, 687 – 690, 708 & 736.

⁴⁷³ 69 *ḥadīth*: §58, 60 – 63, 84, 120 – 122, 145, 171, 229, 248 – 255, 302, 312, 319, 349, 355 – 361, 364 – 368, 371, 372, 386, 387, 391, 503, 512, 574, 582 – 597, 624, 650, 658, 691, 693 – 695, 698 & 715.

⁴⁷⁴ 124 *ḥadīth*: §59 – 62, 65, 119 – 122, 212, 302, 312, 319, 329, 330, 333 – 336, 341, 344 – 347, 351 – 354, 369, 370, 373, 375, 376, 382, 387, 391, 430, 445 – 470, 474 – 477, 503, 568 – 573, 576, 578 – 580, 598, 599, 604, 609, 614, 615, 617, 618, 621 – 623, 628, 634, 644, 645, 653, 665, 666, 671, 673, 676, 682, 695, 696, 698 – 701, 708, 710 – 722, 738 – 730, 732.

⁴⁷⁵ 4Q400 – 4Q407 and *MasIk*; for a translation of these texts with a commentary, see Davila, James R., *Liturgical Works* (Grand Rapids & Cambridge: William B. Eerdmans Publishing Company, 2000) pp. 83 – 167.

Himmelfarb comments that: ‘The recitation of the *Sabbath Songs* with their description of the liturgy in the heavenly temple was intended to create a feeling of participation in the service on high.’⁴⁷⁶ As will be seen, this is also a key part in the understanding of the role of angels in Islamic ritual.⁴⁷⁷

Before looking at the role of angels in specific ritual actions, it is important to highlight the way in which angels are held to be exemplars of faith. In *Al-Ḥabā’ik* the angels are said to be continually praising and worshipping God. There are a number of *ḥadīth* that state: ‘There is no place in heaven without an angel, be it bowed down in worship or standing upright until the Hour comes.’⁴⁷⁸ Here Heaven is described as a world crammed full of angels, constantly praising God.⁴⁷⁹ This is seen further in another *ḥadīth*:

[22] ‘God, Most High, divided the angels into ten parts, nine parts are the Cherubim, and they are the angels who bear the Throne, and they are also those who worship God night and day, without rest. He said: The remaining angels are for God’s orders and messages.’

Of all the angels that are in existence the great majority praise and worship God, with a mere ten percent given specific tasks – the roles normally associated with angels.⁴⁸⁰ In one of the *ḥadīth* it says explicitly that the main purpose of the angels is to worship:

⁴⁷⁶ Himmelfarb, *Ascents to Heaven*, p. 49; see also Gzella, H., ‘Beobachtungen zur Angelologie der Sabbatopferlieder im Spiegel ihrer theologiegeschichtlichen Voraussetzungen’ *EphThL* 78 (2002) pp. 468 – 481.

⁴⁷⁷ See also Roff, William R., ‘Pilgrimage and the History of Religions: Theoretical Approaches to the Hajj’ in Martin (ed.), *Approaches to Islam*, pp. 78 – 86.

⁴⁷⁸ §7; cf. §8 – 12, 18, 21 and 22 – 25.

⁴⁷⁹ In *1En* 60:1, there are said to be ‘ten thousand times a million and ten million times ten million’ angels; cf. *1En* 71:8, 13; *OTP* vol. 1, pp. 40 & 50; *2En*. 18 – 19 *OTP* vol. 1, pp. 130 – 134 ; *3En*. 17 – 40 *OTP* vol. 1, pp. 269 – 292 *QuesEzra*. 27 – 30, *OTP* vol. 1, p. 598 and *LamR* 3:23, §8, p. 201

⁴⁸⁰ E.g. Andrea Pires defines angels in this way: ‘...the word “angel” applies to ranks of spiritual or heavenly beings which serve as intermediaries between the earthly and divine worlds...’ Pires, Andrea (tr. Paul Ellis), ‘Angels’ *ER*² vol. 1, pp. 343 – 349, p. 343.

[549] ‘I said to Ka‘b: ‘What is your opinion about the Word of God: ‘glorifying Him by night and in the daytime and never failing’⁴⁸¹ - particularly regarding those that are occupied with [delivering] messages and those that are occupied with [seeing to people’s] needs?’ He said: God gave them worship, just as [he gave] you souls. Have you not eaten and drunk, and stood up and sat down, and come and gone, and talked while you breathed? In that way, He created worship for them.’

The worship and praise of God is a natural function of the angel. The actual words of the angels are also important and often reflect invocations used commonly in Muslim ritual, again something seen in Jewish and Christian contexts.⁴⁸² The most important of these is the saying of the *tasbīḥ*,⁴⁸³ which is an integral part of Muslim devotional practices: ‘Muslim prayer-manuals show that for the Muslim worshipper too, his act of praise is a sharing in the worship of “angels and men in a wonderful order”’.⁴⁸⁴ This perpetual worship and glorification of God are personified particularly strongly in the angel *al-Rūḥ*:

‘The Spirit is an angel. It has seventy thousand faces, and every face has seventy thousand tongues, and every tongue has seventy thousand languages, which praise God in all of those languages; God creates an

⁴⁸¹ Q 21:20; Arberry, *Koran*, p. 324.

⁴⁸² For example, ‘3 Enoch represents the celebration of God’s holiness through the recitation of the Qeduššah (the Sanctus) as the central act of heavenly worship. 3 Enoch 35-40 is devoted entirely to this subject.’ Alexander, P., ‘3 (Hebrew Apocalypse of) Enoch: Introduction’ *OTP* vol. 1, p. 245.

⁴⁸³ *Tasbīḥ* normally refers to the phrase: ‘*subḥān allāh*’ (cf. Muslim, *Ṣaḥīḥ*, K. *al-dhikr*; B. 18 (*Subḥān allāh*) §6575 - 6580) but according to S. M. Zwemer in relation to the Muslim ‘rosary’, ‘[The *tasbīḥ*] generally consists in saying *subḥān Allāh* thirty-three times, *al-hamdu-lillāhi* thirty-three times, and *Allāhu akbar* thirty-three times.’ Zwemer, S. M., ‘The Rosary in Islam’ *MW* 21 (1931) pp. 329 – 343, p. 330 and Goldziher, I., ‘Le rosaire dans l’Islam’ *GS* vol. 2, 374 – 379. For more on its use during the ritual prayers see Padwick, Constance E., *Muslim Devotions: A Study of Prayer-Manuals in Common Use* (London: SPCK, 1961) pp. 65 – 74.

⁴⁸⁴ Padwick, *Muslim Devotions*, p. 67.

angel from every praise, which flies with the angels until the Day of Resurrection.⁴⁸⁵

The image here shows the multitude of praises from one being towards one object and it is no surprise that such an image should be included by Ibn Ṭufayl in his *Ḥayy ibn Yaqzān* as the ultimate goal for all those who wish to worship God.⁴⁸⁶ At a basic level, the angels are beings created to worship God and do so naturally. Indeed, many theologians saw obedience and worship of God as such an innate part of the angels' being that Iblīs' refusal to prostrate to Adam had to be reinterpreted.⁴⁸⁷ As worship of God, as well as obedience and submission to God, are part of the angelic nature, the angels then become the epitome of the way in which Muslims should worship.

Thus far, the *ḥadīth* have just outlined two basic principles: firstly, that praise and worship of God should be constant and, secondly, that certain expressions and devotions are used by the angels. However, the angels also play important roles in more technical aspects of the worship of God, especially the ritual prayers and the rites of the *ḥajj*.

One of the most important themes in Islamic tradition is the idea that there is a heavenly counterpart to the *Ka'ba*, often called the *bayt al-ma'mūr* (the 'inhabited house'). W. McKane comments that in Islamic visions of heaven, 'There is a doctrine of heavenly prototypes and earthly copies; thus a heavenly *Ka'aba*, a heavenly *mu'addin* and an angel in the form of a cock who regulates the crowing and

⁴⁸⁵ §212; see also §213 – 216.

⁴⁸⁶ Ibn Ṭufayl, Abū Bakr Muḥammad ibn ʿAbd al-Malik, *Risālat Ḥayy ibn Yaqzān* (Beirut: Al-Maṭbaʿat al-Kāthūlikīya, 1963) p. 85.

⁴⁸⁷ See al-Zamakhsharī, Abū ʿI-Qāsim Jārr Allāh Maḥmūd ʿUmar, *Al-Kashshāf ʿan ḥaqāʾiq al-tanzīl wa-ʿuyūn al-aqāwīl fī wujūh al-taʾwīl* (Cairo: Maṭbaʿa al-Kubrā, 1318 – 1319) vol. 3, p. 18 and al-Baydawī, ʿAbd Allāh ibn ʿUmar (ed. W. Fell), *Commentarius in Coranum* (Leipzig: Vogel, 1878), vol. 2, pp. 191 - 192 [both on Q 38:75] and the discussion of these themes by Ibrahim, 'Superiority of Angels'.

silence of all earthly cocks.’⁴⁸⁸ This heavenly prototype is believed to be directly above the earthly *Ka‘ba*, or as one *ḥadīth* puts it: ‘...if it were to come down, then it would come down on top of it.’⁴⁸⁹ The Temple was the primary focus of the cult in ancient religion, generally, and particularly in Judaism because of the direct link between the one temple and God.⁴⁹⁰ Likewise, in *al-Ḥabā’ik* the earthly *Ka‘ba* is a representation of a heavenly version.⁴⁹¹ The traditions often use the *bayt al-ma‘mūr* to describe the great number of angels that worship in it, for example:

‘...It is called *The Inhabited House* because seventy thousand angels pray in it every day; then they come down, when they have spent the night [there], they circumambulate the *Ka‘ba*, then they bless the Prophet (God bless him and grant him salvation), then they leave and they do not have another turn until the coming of the Hour.’⁴⁹²

This does not, at first, appear to establish a model of any particular rite of the *ḥajj*; the *ḥajj* is not performed every day. However, this *ḥadīth* and others like it place the *bayt al-ma‘mūr*, and by extension the earthly *Ka‘ba*, at the heart of angelic worship. The angels are not instituting any particular rite, but are stressing the holiness and sanctity of the location.⁴⁹³ Of course, in Islam the *locus* of the ‘temple’ as the house

⁴⁸⁸ McKane, ‘Manuscript on the Mi‘raj’ p. 375; for more on the history of the *Ka‘ba*, see Rubin, Uri, ‘The *Ka‘ba*: Aspects of its ritual function and position in pre-Islamic and early Islamic times’ *JSAI* 8 (1986) pp. 97 – 131.

⁴⁸⁹ §21; see also §498 & 522. §685 states that there are fifteen ‘houses’, one for each of the seven heavens and earths, and one for God and that if one of the houses were to fall, ‘... then it would fall one of them on top of the other until the borders to the lowest earth.’

⁴⁹⁰ See Wyatt, *Space and Time*, pp. 159 – 182.

⁴⁹¹ As James Davila has commented on the heavenly temple in the Dead Sea Scrolls: ‘The Songs of the Sabbath Sacrifice envisions a macrocosmic Temple conceived on the model of the earthly Tabernacle and the Temple in Jerusalem. (Of course, the composers of the work would see it the other way around: the cosmic Temple is the archetype and model for the earthly sanctuaries.)’ Davila, James R., ‘The Macrocosmic Temple, Scriptural Exegesis and the Songs of the Sabbath Sacrifice’ *DSD* 9 (2002) pp. 1 – 19, p. 1.

⁴⁹² §489; cf. §21, 519 – 521.

⁴⁹³ Gustave von Grunebaum comments: ‘The cosmological sanctity of Muḥammad’s birth-place is underpinned, as it were, by its soteriological sanctity as the cradle of Islam.’ Von Grunebaum,

of God is a key component of the worship of God as the *qibla* is directed to the *Ka'ba*: 'The central gesture of this body language is the facing of the direction of prayer, in Arabic, *tawliyat al-wujh*, the turning of one's face (to the house of God).'⁴⁹⁴ As the angels focus their activities of worship on the *bayt al-ma'mūr*, the Muslim community looks in the same direction.⁴⁹⁵

The *Inhabited House* is also used explicitly as the template for the earthly *Ka'ba* in §519 and §687:

[519] '...The Angel took me up into the Seventh Heaven, until we reached a building. I said to the angel: 'What is that?' And he said: 'This building is His building. God has angels, seventy thousand, who enter it every day. They glorify God and praise Him, and they do not come back to it.'

[687] 'When God sent Adam down from the Garden, he said: "Adam, I have built a house for me, opposite my house which is in heaven. You can worship me in it, and your children, just as my angels worship around my Throne." So the angels came down to him, and he dug until

Gustave E., 'The Sacred Character of Islamic Cities' in Dunning S. Wilson (ed.), *Islam and Medieval Hellenism: Social and Cultural Perspectives* (London: Variorum Imprints, 1976) §5, p. 34. However, it should also be noted that Jerusalem still remained an important site in Islam, with many *faḍā'il* works written about it; cf. al-Suyūṭī, *Kitāb ithāf al-khaṣā bi-faḍā'il al-masjid al-aqṣā*; tr. Reynolds, James, *The History of the Temple of Jerusalem* (London: A. J. Valpy, 1836).

Stroumsa (eds.), *Self, Soul and Body in Religious Experience* (Leiden: Brill, 1998) pp. 298 – 312, p. 302; see also Ashraf, Syed Ali, 'The Inner Meaning of the Islamic Rites: Prayer, Pilgrimage, Fasting, Jihād' in Nasr (ed.), *Islamic Spirituality*, pp. 111 – 130 and Wensinck, A. J., 'Qibla: Ritual and Legal Aspects' *ET* vol. 5, pp. 82 – 83.

⁴⁹⁵ There are a number of works about Mecca and its merits, see Wüstenfeld, Ferdinand, *Geschichte der Stadt Mekka* (Leipzig: F. A. Brockhaus, 1861); Wüstenfeld's work includes an edition of Al-Azraqī, Abū Walīd Muḥammad ibn 'Abd Allāh, *Kitāb akhbār Makka*; Rudi Paret comments: 'Die Gebetsrichtung nach Mekka, die Qibla, symbolisiert seither die Eigengesetzlichkeit des Islam. Mekka mit seinen Heiligtümern ist das geistige Zentrum, der Richtpunkt der betenden Gemeinde.' Paret, Rudi, *Symbolik des Islam* (Stuttgart: Anton Hiersemann, 1958) pp. 16 – 17.

he reached the Seventh Earth, and the angels threw the rock down until it towered over the face of the earth.’⁴⁹⁶

These two *ḥadīth* both establish a direct link between the earthly and heavenly *Kaʿbas*, but they are quite different in approach. The first (§519) is part of the *mīʿrāj* genre; during Muḥammad’s ascension he sees God’s ‘house’. It is not described, but Muḥammad’s failure to understand the building that he is shown is quite unusual. Had the building been a direct replica of the earthly *Kaʿba* one would expect him to know, or at least recognise, what he has seen. Nonetheless, the building is clearly the *inhabited house*. Why does Muḥammad not recognise it? The answer probably lies in the fact that it is part of the *mīʿrāj* genre, in which the unknown is made known. The importance is not the fact that it is in the form of the earthly *Kaʿba*, but that the building is revealed to be *God’s* building. The focus is on the association of the *locus* with the divine, not on the physical form of the building. Likewise the location of the building is important in §687, in which the *Kaʿba* is associated with Adam. In his recent monograph, Brandon Wheeler comments that: ‘Adam’s role in instituting the rituals of the pilgrimage, and in particular the boundaries of the sanctuary, establishes a link between Mecca and the lineage of the prophets. The observance of the pilgrimage rites and prohibitions of the sanctuary by the prophets reiterates the association of Mecca and Eden.’⁴⁹⁷ Whilst the association with Eden (and ‘heaven’

⁴⁹⁶ See also §523 & 524; for this and other stories associated with the Kaʿba, see Alexander, Grant, ‘The Story of the Kaʿba’ *MW* 28 (1938) pp. 43 – 53; Zwemer, Samuel S. M., ‘Al-Haramain: Mecca and Medina’ *MW* 37 (1947) pp. 7 – 15; Wheeler, Brandon M., *Mecca and Eden: Ritual, Relics and Territory in Islam* (Chicago: University of Chicago Press, 2006) pp. 82 – 87; Campo, Juan Eduardo, ‘Authority, Ritual and Spatial Order in Islam’ *JRS* 5 (1991) pp. 65 – 91; Lazarus-Yafeh, Hava, ‘The Religious Dialectics of the Hadjdj’ in Hava Lazarus-Yafeh, *Some Religious Aspects of Islam* (Leiden: Brill, 1981) pp. 17 – 37 and Pavlovitch, Pavel, ‘*Qad kunna lā naʿbudu ʾIlāha wa-lā naʿrifuhu*. On the Problem of the Pre-Islamic Lord of the Kaʿba’ *JALS* 2 (1998 – 1999) pp. 49 – 74.

⁴⁹⁷ Wheeler, *Mecca and Eden*, p. 85; Marion Katz argues that the association of Adam with the Kaʿba, gives the pilgrimage a role in the Islamic notion of salvation history, Katz, Marion, ‘The Ḥajj and Islamic Studies of Ritual’ *SI* 98/99 (2004) pp. 95 – 129, pp. 111 – 112. In Judaism myths associated

more generally) is important, it is the building's specific relationship with God and the fact that the *Ka'ba* / *bayt al-ma'mūr* is God's dwelling that is more important: the focus is on God, rather than Heaven. The *Ka'ba* is not 'heaven on earth' but 'God's dwelling on earth'.

The *ḥadīth* do not only describe the *bayt al-ma'mūr* in general terms, but they also show the angels performing or supporting specific rituals associated with the *Ka'ba*. The angels are said to have been the first to perform a circumambulation (*tawwāf*) of the *Ka'ba*:

'Adam (peace be upon him) circumambulated the Holy House, and the angels said: 'Your piety obeys [God], Adam, we have circumambulated this House before you, for two thousand years.'⁴⁹⁸

Adam, as the first man and the first to come into contact with the *Ka'ba*, is associated with its rituals. However, there is also a deeper sense that the *Ka'ba* is a form of recompense for Adam's expulsion from paradise, as Adam is not left abandoned by God. Another *ḥadīth* (§624) establishes a link between the practice of *tawwāf* in heaven and on earth:

'And [Adam] walked around it, just as he had walked around the Throne, and he performed the prayers by it, just as he had performed them by the Throne.'⁴⁹⁹

with early prophets are also used to explain rituals, for a discussion of this theme see, Weitzman, Steven, 'Revising Myth and Ritual in Early Judaism' *DSD* 4 (1997) pp. 21 – 54.

⁴⁹⁸ §609; see also §683, 684 & 688.

⁴⁹⁹ Note that this *ḥadīth* uses 'throne': in this case the *Ka'ba* is a representation of God's Throne, rather than the *bayt al-ma'mūr*. However, in §684 it is said that 'God, may he be praised, placed a House under the Throne, on four pillars made of green jewels, and he covered them in rubies, and he called the House "The Remote Place" (*al-dirāḥ*). Then God said the angels: "Circumambulate around this House and pray to the Throne." The angels circumambulated the House, and they left the Throne...'

The angels are also said to wear the *izār* (§625), to protect the *jimār* (§461) and to circumambulate in the air above the earthly *Ka'ba* during Ramaḍān (§736), bless those who say a prayer as they pass the Yemeni column of the *Ka'ba* (§458 – 460) and surround the tomb of the prophet (§488). These *ḥadīth* validate the use of these specific ritual and devotional acts by the Muslim community.

Given the infrequency with which most Muslims have the opportunity to perform the *ḥajj*, the role of the angels in the performance of the ritual prayers is, perhaps, more important. One of the overarching themes in the *ḥadīth* is that the angels are present whenever a Muslim prays and that they support the community. The idea of God sending angels to help and support the Muslim community is an early one, found both in the Qur'ān and in *ḥadīth*.⁵⁰⁰ For example, during the Battle of Badr God sent a contingent of angels to help the outnumbered Muslims:

‘...and God most surely helped you at Badr....“Is it not enough for you that your Lord should reinforce you with three thousand angels sent down upon you? Yea if you are patient and godfearing, and the foe come against you instantly, your Lord will reinforce you with five thousand swooping angels.”’⁵⁰¹

The idea that angels support a community both in military,⁵⁰² but especially ritual and liturgical affairs, is not new and is an extremely important concept in the *Dead*

⁵⁰⁰ For early *ḥadīth* on angelic support in prayer, cf. Mālik, *Muwattā'*, pp. 72, 82 – 85, 134, 141 – 142; Bewley, *Al-Muwatta'*, 3.12.14; 3.11.47 – 50; 9.18.54; 9.24.85, pp. 11, 26, 47 – 50, 60, 64, 80 & 407.

⁵⁰¹ Q3:123 – 124; Arberry, *Koran*, p. 61; cf. Ibn Ishāq, *Sīra*, pp. 303ff.; for a discussion of the historiographical issues, see Booth, Newell S., ‘The Historical and Non-Historical In Islam’ *MW* 60 (1970) pp. 109 – 122, pp. 110 – 113.

⁵⁰² E.g. 4Q491 (*War Scroll*) l. 10: ‘Each man who is not [clean in regard to his genitals] that [nig]ht [shall] no[t g]o out with them to battle. For the holy angels are with their battle lines to[gether].’ See also Davidson, *Angels at Qumran* pp. 212 – 234 and Gleason, Randall G., ‘Angels and the Eschatology in Heb 1 – 2’ *NTS* 49 (2003) pp. 99 – 107.

Sea Scrolls.⁵⁰³ In both the Judaism of the Qumran community and in Islam the angels' participation and support of the community are crucial to understanding the relationship between God and his creations.

In *al-Habā'ik* there are a number of *ḥadīth* that reflect these themes. Some *ḥadīth* state the ritual prayers are performed in heaven, e.g.: 'When Isrāfīl glorifies God, he cuts off the ritual prayers and the hearing of all the angels in heaven.'⁵⁰⁴ There are also more specific *ḥadīth* that give the role of *angelic imām* and *angelic mu'adhdhin* to specific angels: §39 states that Gabirel is *imām*, whereas in §83 Michael is *imām* and Gabriel is the *mu'adhdhin* and in §102 Isrāfīl is the *mu'adhdhin*. These contradictions are not important, rather the fact that there is an *imām* and a *mu'adhdhin* in heaven shows that the earthly practices of the Muslims are a copy of those performed in heaven.⁵⁰⁵ The idea that earthly practice is a mirror of the heavenly, is seen most clearly in §83:

[83] 'The *mu'adhdhin* of the heavenly host is Gabriel, and Michael is their Imam, who leads them in the prayers in the inhabited house, and the angels of the heavens congregate and circumambulate the *Inhabited*

⁵⁰³ For a discussion of the role of angels in Qumran liturgical works, see Davidson, *Angels at Qumran*, pp. 235 – 254; Fletcher-Lewis, Crispin H. T., *All the Glory of Adam: Liturgical Anthropology in the Dead Sea Scrolls* (Brill: Leiden, 2002); Chazon, Esther G., 'Liturgical Communion with the Angels at Qumran' in Daniel K. Falk et. al. (eds.), *Sapiential, Liturgical and Poetical Texts from Qumran: Proceedings of the Third Meeting of the International Organization for Qumran Studies, Oslo 1998* (Leiden: Brill, 2000) pp. 95 – 105 and Chazon, Esther G., 'Human and Angelic Prayer in the Light of the Dead Sea Scrolls' in Esther G. Chazon (ed.), *Liturgical Perspectives: Prayer and Poetry in Light of the Dead Sea Scrolls, Proceedings of the Fifth International Symposium of the Orion Center for the Study of the Dead Sea Scrolls and Associated Literature, 19 – 23 January 2000* (Leiden: Brill, 2003) pp. 35 – 47. For similar ideas in the *Hekhalot* literature, see Eilior, Rachel, 'From Earthly Temple to Heavenly Shrines: Prayer and Sacred Song in the Hekhalot Literature and Its Relation to Temple Traditions' *JSQ* 4 (1997) pp. 217 – 267.

⁵⁰⁴ §100; see also §101 & 102 which contain the same idea.

⁵⁰⁵ There are a number of *ḥadīth* that describe the angelic *adhān*, usually witnessed by Muḥammad during his *mi'rāj*; these are often used in the arguments between different Muslim groups, especially Twelver and Sunnī *fiqh*, concerning the wording of the *adhān*; cf. Howard, I. K. A., 'The Development of the *Adhān* and *Iqāma* of the *Ṣalāt* in Early Islam' *JSS* 26 (1981) pp. 219 – 228, especially pp. 226 – 227. For the role of an angel leading the heavenly worship of God in Judaism, see Orlov, Andrei A., 'Celestial Choirmaster: The Liturgical Role of Enoch-Metatron in 2 Enoch and the Merkebah Tradition' *JSP* 14 (2004) pp. 3 – 29.

House, and they perform the prayers and pray for forgiveness. God gives their reward, their forgiveness and their praise of God to the community of Muḥammad (God bless him and grant him salvation).’

Here a whole number of Muslim ritual practices can be seen: the *ṣalāt*, the direction of the *qibla* and the circumambulation of the *house*. Furthermore, the Muslim community actually benefits from these angelic actions. The *ḥadīth* associated with the celestial cockerel (*al-Dīk*; §280 – 294) also locate the origin of the earthly *adhān* in heaven:

[§282] ‘God has a cockerel; its feet are on the Seventh Earth and its head passes through the Seven Heavens, and it praises God at the times of prayer; there is no cockerel on Earth that does not reply to it.’

The words of the angels are also important, as they often form the template of Islamic prayers and devotions. This is seen clearly in §275:

‘Dhū ‘l-Qarnayn (peace be upon him) had a friend from amongst the angels, and it is said he was Riyāfīl. He used to come to him, and visit him, and he said to him: ‘Tell me, how do you serve [God] in heaven?’ He said: ‘In heaven angels stand upright, and they never sit down; and among them [are those that are] prostrating, and they never raise their heads, and there [are those that are] kneeling down, and they never stand upright. However, there is one who raises his face, but he never looks astray. He says: ‘Praise be [to God], the King, the All-Holy,⁵⁰⁶ the Lord

⁵⁰⁶ Cf. ‘He is God; there is no god but He. He is the King, the All-holy, the All-peaceable...’ Q 59:23; Arberry, *Koran*, p. 576. The words of the angels are the basic form of the *taṣbīḥ* and ‘The last two nouns are a Qur’ānic couplet, and the *quddūs* is one of the Ninety-nine Names, but no one has traced the origin of this constantly recurring and haunting phrase.’ Padwick, *Muslim Devotions*, p. 66

of the Angels and the Spirit, Lord, we have not worshiped you, as
worship of you demands. ’

In the *ḥadīth* concerned with ritual the angels are used to legitimise set forms of worship. The earthly and divine rituals are identical and performed simultaneously. This creates a sense of harmony and a deep relationship between heaven and earth in the performance of ritual. Esther Chazon has highlighted three different ways in which the angels and the community of Qumran interact: (i) humans invite angels to praise God, because of their inability to praise God as well as the angels; (ii) humans pray *like* angels, using their words and (iii) humans join the angels, and they become one choir praising God.⁵⁰⁷ All three of these positions can be seen in the *ḥadīth*: (i) prayer and worship are innate characteristics of angels, but not of humans; (ii) specific rites and invocations of the Muslim community were established by the angels; (iii) the heavenly and earthly communities praise God simultaneously. This testifies to the different types of relationship that exist between humans and angels in the sphere of ritual. Much of this is concerned with the ‘correctness’ of ritual: the correct forms of worship are those performed in heaven.

3.2.2 Commanding Right and Forbidding Wrong?

Muslims’ lives are constantly regulated by the principle of *sharīʿa*, the divine law, which the *fuqāhā*’ strive to interpret and understand. *Sharīʿa* does not simply govern criminal, civil and ritual law, but it also addresses ethical and moral concerns more

⁵⁰⁷ Chazon, ‘Human and Angelic Prayer’ pp. 46 – 47. Esther Chazon implies that these three positions are discrete, but it would seem feasible for a community to hold these positions simultaneously.

generally.⁵⁰⁸ In *Al-Ḥabā'ik* there are a number of *ḥadīth* that attempt to discourage certain types of behaviour in a whole range of different situations and circumstances, ranging from people's bad habits during the ritual prayer to questions of purity. In this collection angels are used to warn believers of the consequences of certain practices in a number of ways: (i) stating that it offends the angel that writes down good deeds (with the implication that this may affect the individual's own record of good deeds); (ii) by stating that angels do not come into the presence of certain things; and (iii) stating that the angels curse individuals for certain actions.

Ritual purity is an important part of both Jewish and Islamic religious life. In Judaism the ritual purity laws of Leviticus (especially Lev. 11 – 16) were primarily directed at the priestly class, because the priests were required to be ritually clean before coming into contact with the divine in the Holy of Holies.⁵⁰⁹ However, as Judaism developed, there was an increasing trend for the laity to adopt the same, or, at the very least, similar purity regulations; as Eyal Regev has concluded: 'Purity is necessary in order to achieve holiness. Thus, we conclude that those who voluntarily observed purity in order to eat, pray and read Scripture were seeking holiness in their everyday life, outside the realm of the Temple and the priestly system.'⁵¹⁰ Impurity, or uncleanness, is derived from a whole range of different things, but the principal sources of impurity are corpses and bodily discharges (including urine, faeces and

⁵⁰⁸ There have been a number of works on Islamic ethics (both philosophical and Qur'anic), e.g. Fakhry, Majid, *Ethical Theories in Islam (Second Edition)* (Leiden: Brill, 1994); Izutsu, Toshihiko, *Ethico-Religious Concepts in the Quran* (Montreal: McGill University Press, 1966) and Cook, Michael, *Commanding Right and Forbidding Wrong in Islamic Thought* (Cambridge: Cambridge University Press, 2000).

⁵⁰⁹ See any commentary on Leviticus for a discussion of these issues, e.g. Porter, J. R., *Leviticus: A Commentary* (Cambridge: Cambridge University Press, 1971) and Noth, Martin, *Leviticus: A Commentary* (London: SCM Press Ltd., 1965); see also Neusner, Jacob, *Purity in Rabbinic Judaism: A Systematic Account* (Atlanta: Scholars Press, 1994) pp. 27 – 50.

⁵¹⁰ See Regev, Eyal, 'Pure Individualism: The Idea of Non-Priestly Purity in Ancient Judaism' *JSJ* 31 (2000) pp. 176 – 202, p. 187.

menstrual blood).⁵¹¹ After coming into contact with these polluting substances ritual cleansing (in Islam *wuḍūʾ*, *ghusl* or *tayammum*) is required before performing ritual actions.⁵¹² Islamic notions of ritual impurity are believed to be related to either Rabbinic or Zoroastrian ideas;⁵¹³ however, what is important to note is that Islamic purity regulations are usually deemed to be less rigorous than those of Judaism and Zoroastrianism. For example, ritual impurity can be derived from both physical substances and through contact with an unclean person or place; but in Islam, impurity is derived solely from substances.⁵¹⁴ In Judaism and Zoroastrianism, ritual impurity is of major spiritual importance and the notions of purity and holiness became *sacralised*; but the concept of purity in Islam is much more basic, as Janina Safran suggests: ‘The Islamic system of purity is focused on ritual worship and treats the defilement of the body, often by bodily acts and substances, as a regular circumstance of the human condition.’⁵¹⁵ It should also be stressed that the concept of purity in Islamic law is *ritual* and not *hygienic*.⁵¹⁶

⁵¹¹ Neusner, *Purity*, pp. 53 – 82 and Harrington, Hannah K., *The Impurity Systems of Qumran and the Rabbis* (Atlanta: Scholars Press, 1993).

⁵¹² For a discussion of these terms in relation to the Qurʾān, see Burton, John, ‘The Qurʾān and the Islamic Practice of *Wuḍūʾ*’ *BSOAS* 51 (1988) pp. 21 – 58 and Maghen, Zeʾev, ‘Close Encounters: Some Preliminary Observations on the Transmission of Impurity in Early Sunnī Jurisprudence’ *ILS* 6 (1999) pp. 348 – 392.

⁵¹³ Cf. Wensinck, A. J., ‘Die Entstehung der muslimischen Reinheitsgesetzgebung’ *Der Islam* 5 (1914) pp. 62 – 80; Goldziher, Ignaz, ‘Islamisme et Parsisme’ *GS* vol. 4, pp. 232 – 260 and Katz, *Body of Text*, pp. 3 – 13.

⁵¹⁴ ‘Sunnī Islam has in fact constructed what may be the only religious purity code extant which *does not recognize – let alone emphasize – the category of ceremonially contagious or contaminating human beings...*’ Maghen, ‘Close Encounters’ p. 350.

⁵¹⁵ Safran, Janina M., ‘Rules of Purity and Confession Boundaries: Maliki Debates about the Pollution of the Christian’ *HR* 42 (2002) pp. 197 – 212.

⁵¹⁶ The idea that ritual purity laws were based on hygiene regulations was popular in the nineteenth and early twentieth centuries, but this has largely been discredited; see Douglas *Purity and Danger: An Analysis of the Concept of Pollution and Taboo* (Repr. London: Routledge, 2002) pp. 36 – 50; Reinhart, ‘Impurity / No Danger’ *HR* 30 (1990) pp. 1 – 24, p. 6; Wheeler, Brandon, ‘Touching the Penis in Islamic Law’ *HR* 44 (2004) pp. 89 – 119; Reinhart, Kevin A., ‘Ṭahāra’ *EF* vol. 10, p. 99 and Maghen, Z. ‘Ablution’ *EF*³; for an analysis of some modern approaches to Islamic purity, see Gauvain, Richard, ‘Ritual Rewards: A Consideration of Three Recent Approaches to Sunni Purity Law’ *ILS* 12 (2005) pp. 333 – 393.

What, then, do the *ḥadīth* in *al-Ḥabā'ik* add to the subject of ritual purity? The *ḥadīth* in the collection are mostly concerned with individuals in a state of ritual impurity and the effects of that pollution on human interaction with angels. Take the following *ḥadīth*: ‘...Angels do not stay in the presence of someone in a state of ritual impurity (*junub*), nor [are they in the presence of someone who has been] anointed with *khalūq* until both [types] have been washed.’⁵¹⁷ At first, this *ḥadīth* may not appear to be of great concern; however, the absence of angels does have profound effects on the person concerned. If angels are driven away from an individual, any righteous acts that the Scribe of good deeds would normally record cannot be included in the person’s ‘book’. This *ḥadīth* essentially denies those in a state of *junub* the ability to perform credited righteous actions. It is also made clear in other *ḥadīth* (e.g. §365) that this applies to only ‘one of your angels which is with you’⁵¹⁸ (i.e. the angel of good deeds); consequently, bad actions are still recorded during this state of impurity.

In *Al-Ḥabā'ik* the absence of angels is attributed to a whole range of different things, including:

- i. urine / bowls of stagnant urine (§588 & 589)
- ii. excrement (§368 & 567)
- iii. nakedness (§364 – 366; 371, 372 & 388)
- iv. those who are *junub* (§368, 592 & 595)
- v. those who have had sexual intercourse (§367 & 368)
- vi. houses with dogs (§584, 586 & 595)
- vii. houses with idols (§582 – 585 & 595)

⁵¹⁷ §592.

⁵¹⁸ §365: ‘...One of your angels which is with you gets embarrassed, just as someone gets embarrassed in front of two virtuous neighbours, who are both with him night and day.’

- viii. houses with tambourines (§590 & 591)
- ix. men anointed with *khalūq* (§592)
- x. the funerals of unbelievers (§593)
- xi. the funerals of individuals remaining *junub* (§593)
- xii. the funerals of those who have been anointed with saffron (§593)
- xiii. animals with bells (§512, 585 – 587, 596 & 597)
- xiv. those people who have severed ties from the community (§594).

There are a number of important points raised by these *ḥadīth*. Firstly, in his article on touching the penis in Islamic law, Brandon Wheeler emphasises the point that to many of the jurists simply touching the penis did not necessitate *wuḍūʾ*, nor was *wuḍūʾ* necessary, except before ritual actions.⁵¹⁹ The idea behind this is that ritual purity is only obligatory before ritual actions, such as the *ṣalāt*, are actually performed. Reinhart has also shown that *tahāra* (ritual purity) is a negative concept; someone who is in a state of *tahāra* is someone that does not have to perform an ablution. In theory, ablutions are not necessary to perform the *ṣalāt* if the individual is already in *tahāra*.⁵²⁰

The *ḥadīth* cast Islamic notions of ritual impurity in a different light, for not only is someone made impure by coming into contact with a polluting substance, but the substance can also affect the ritual purity of an entire dwelling.⁵²¹ This is at odds with the standard understanding of ritual impurity, as discussed by scholars such as

⁵¹⁹ Wheeler, 'Touching the Penis' p. 119.

⁵²⁰ See Reinhart, 'Purity / No Danger' pp. 5 – 6.

⁵²¹ In both Judaism and Zoroastrianism pollution can occur around a pollutant and through intermediaries. For example, in both religions, to remain ritually clean a set distance must be kept from a menstruating woman; cf. *Shayāst lā-Shayāst, III:1 – 35* (especially v. 13), in West, E. W., *Pahlavi Texts: The Bundahisn-Bahman Yast and Shāyast lā-Shāyast* (Oxford: Oxford University Press, 1860) pp. 217 - 221. For a thorough discussion of these issues in Judaism, see Neusner, Jacob, *A History of the Mishnaic Law of Purities: Part 22 – The Mishnaic System of Uncleaness* (Leiden: Brill, 1977).

Katz and Reinhart. For example, the consequences of pollution by urine would not be met until a ritual action was performed; these *ḥadīth* say otherwise, since the individual (as well as any guests and family members) are gravely affected prior to the performance of any ritual action. Being in a state of *junub*, for example, does not only mean that failure to perform the *ghusl* before a ritual makes that action invalid, it also prevents the individual from obtaining merit for any righteous deeds performed from the moment of pollution.

Whilst the absence of angels is usually associated with impure bodily substances, such as urine, semen, menstrual blood etc., animals and other objects (e.g. idols and tambourines) and certain actions (such as being naked) are *quasi*-polluting, as they have consequences for the individuals concerned equal to the angels' reactions to ritual impurity. Although in these cases, the removal of the offending item or the cessation of the action will allow the angels to return without the performance of any ritual cleansing; i.e. if an individual is naked, he is not ritually impure, but needs to be covered before the angels will return; but if an individual has had sexual intercourse, then ritual purification is required.

Some of these 'prohibitions' are quite easily understood: for example, the ritual impurity of dogs in Islam has often been seen to be a *shibboleth* to their favour in Zoroastrian culture;⁵²² the ownership of idols is clearly prohibited as *shirk*, and so on.⁵²³ The ban against playing tambourines is more obscure, but the prohibition of

⁵²² Cf. Miller, Geoffrey David, 'Attitudes to Dogs in Ancient Israel: A Reassessment' *JSOT* 32 (2008) pp. 487 – 500 and Moazami, Mahnaz, 'The dog in Zoroastrian religion: *Vidēvdād* Chapter XIII' *IJJ* 49 (2006) pp. 127 – 149. However, there are Arabic works that praise the dog, e.g. al-Jāhīz, Abī 'Uthmān 'Amr ibn Baḥr, *Kitāb al-ḥayawān* (Cairo: Muṣṭafā al-Bābī al-Ḥalabī, 1939 – 1945) and Ibn al-Marzūbān, *Kitāb faḍl al-kilāb 'alā kathīr mimman labisa 'l-thiyāb*; Smith, G. R. & Abdel Haleem, M. A. S. (eds. & trs.), *The Book of the Superiority of Dogs over many of those who wear clothes* (Warminster: Aris & Philips Ltd., 1978).

⁵²³ Cf. Mālik, *Muwāṭṭa'* vol. 2, p. 241; Bewley, *al-Muwāṭṭa'* §54.3.6 – 8, p. 407.

dancing and tambourines was debated in Islamic jurisprudence.⁵²⁴ Whilst saffron plays an important role in Islamic society and is not normally considered to be ‘impure’, Jamsheed Choksy notes that: ‘...[the use of saffron-dyed shrouds] was intended to prevent a Muslim’s corpse from being confused with that of a non-Muslim (Zoroastrians, Christians and Jews in particular were required by Islamic governments to wear a yellow coloured cloth during medieval and premodern times to distinguish them from the Muslim socio-political majority)...’⁵²⁵ The statement that angels do not accompany people travelling with animals with bells attached to them seems a little strange, especially as none of the *ḥadīth* provide much context. Take §512 as an example: ‘God has angels, which descend every night to experience the weariness of a cavalry horse, except a riding animal which has a bell around its neck.’ The ‘prohibition’, however, has quite a simple origin that had practical implications for the nascent Muslim community. Edward Lane includes a translation of §585 in his lexicon, with the comment: ‘...the reason is said to be, because it guides others to them; for Moḥammad liked not to let the enemy know of his approach until he came upon them suddenly.’⁵²⁶

⁵²⁴ Ibn Taymiyya is one scholar to prohibit men playing the tambourine: ‘...*rakḥaṣa li-l-nisā’ an yuḍrabna bi-l-daff fi al-’a’rās wa-l-’afrāh wa-ammā al-rijāl ‘alā ‘ahdihi, fa-lam bakan ahad minhum bi-darab bi-daff wa-lā yaṣfaqu bi-kaff*’ [...it was permitted for women to beat a tambourine at weddings and parties, but as for men during [the Prophet’s] time, they did not beat a tambourine or clap their hands]. Ibn Taymiyya, Taqī al-Dīn Abū ‘l-’Abbās Aḥmad ibn ‘Abd al-Halīm ibn ‘Abd al-Salām, ‘Mā taqūlu al-sāda al-a’lām’ in *Majmū‘ fatāwa Shaykh al-Islām Aḥmad ibn Taymīyya* (Mecca & Riyadh: Maṭābi‘ al-Riyāḍ, 1961 – 1967) vol. 11, pp. 558 - 586, p. 565. ⁵²⁶ Lane, *AELex*, p. 409.

Thus far, angels have been seen to react negatively to certain circumstances and objects, and will remain absent until the offending item has been removed. At first sight, this may appear to be simply a device to correct and regulate human behaviour; however, there is an important ethical aspect that needs to be considered. Brandon Wheeler discusses aspects of purity in Eden, concluding that: ‘Urination, defecation, bleeding, and other natural bodily functions require *wuḍū*’ because Adam’s and Eve’s bodies did not produce impure substances in the Garden of Eden.’⁵²⁷ It was only after their expulsion from the Garden that impurity became a concern. By extension, the divine world, of which the Garden was a part, does not come into contact with impurities. This explains the behaviour of the angels in the human world, if angels are unable to come into contact with pollutants. Similar ideas can be found in Jewish texts, such as *Jubilees*, in which Adam and Eve are created outside of paradise; Martha Himmelfarb comments that: ‘One reason that *Jubilees* delays Adam and Eve’s entrance into the Garden is its discomfort with the idea of sexual relations in the Garden, which...it understands as a holy place, equivalent to the sanctuary.’⁵²⁸ The behaviour of the angels in *al-Ḥabā’ik* can be understood in this sense: angels cannot morally and physically come into the presence of certain actions and substances because of their innate nature.

The angels are not, however, just used to discourage certain behaviour by their absence, the angels are also said to be affected by individuals’ actions in other ways. There are some *ḥadīth* that describe actions as hurting or embarrassing angels.

⁵²⁷ Wheeler, ‘Touching the Penis’ p. 103; the idea that the Garden was ritually clean can be seen in al-Ṭabarī’s *Ta’rīkh* in which it is stated that: ‘It was a tree which made whoever ate from it defecate. He continued. But there must be no faeces in Paradise.’ Rosenthal (tr.), *From the Creation to the Flood*, p. 279; al-Ṭabarī, *Ta’rīkh*, vol. 1, p. 110.

⁵²⁸ Himmelfarb, Martha, ‘Sexual Relations and Purity in the Temple Scroll and the Book of *Jubilees*’ *DSD* 6 (1999) pp. 11 – 36, p. 27.

The majority of these *ḥadīth* in *al-Ḥabā'ik* are concerned with ritual prayer. Fiddling with stones, placing sandals on the ground, spitting and resting on the *qibla* are all addressed.⁵²⁹ There is no consensus on how these misdemeanours affect the angels; for example, regarding fiddling with stones during the ritual prayer, §359 states that: ‘Fiddling with stones in the mosque [causes] pain to an angel.’ And §361: ‘Do not fiddle with stones during the ritual prayers, for that [habit] is from the devil.’ These two *ḥadīth* clearly indicate that those praying should concentrate on their actions, albeit expressed in different ways.

The *ḥadīth* discussed so far have looked at events and substances that cause a reaction from the angels. However, generally, the discouragement of certain actions is usually done in less explicit ways. The story of *Hārūt and Mārūt* is a good example of a narrative that is used to warn of the consequences of certain behaviour, particularly drinking alcohol. It is only after the angels have become drunk that they worship Zuhara’s idols, fornicate with her and commit murder. Whilst the Qur’ān focuses on the two angels and their introduction of magic,⁵³⁰ the stories of Hārūt and Mārūt are more concerned with human propensity to sin and the dangers of alcohol. Their story is used as an example of how not to behave, as Annemarie Schimmel writes: ‘The traditional Sufi leaders recognised seven gates to hell: pride, cupidity, lust, anger, envy, avarice, and hatred, and the story of the two fallen angels, Hārūt and Mārūt, as told in the Koran (Sura 2:96f.), could well illustrate the danger of followings one’s own sexual desires.’⁵³¹ The two angels are not inherently ‘evil’ (as

⁵²⁹ Stones: §359 & 361; Sandals: §356; Spitting: §355, 357, 358 & 360; Qibla: §574.

⁵³⁰ Cf. Bauckham, ‘Fall of the Angels’.

⁵³¹ Schimmel, Annemarie, “‘I take off the dress of the body’: Eros is Sufi Literature’ in Sarah Coakley (ed.), *Religion and the Body* (Cambridge: Cambridge University Press, 1997) pp. 262 – 288, p. 265.

Jacques Waardenburg seems to suggest),⁵³² they simply fall foul to the problems and difficulties of human life.

The consequences of ritual impurity have often been viewed as less important in Islam than in other religions (especially Zoroastrianism and Judaism). This notion is based primarily on the fact that impurities, or more correctly, substances that cause pollution, do not cause a person to be immediately impure. The Islamic jurists also stress the fact that impurity is confined to the impure individual and that the pollution is not transferable. These *ḥadīth*, however, paint a rather different picture. Although impurity is still not transferred by contact with the polluted, anyone who comes into contact with the polluted individual *does* still suffer, albeit technically remaining clean.⁵³³ Pollution and polluting substances such as urine and excrement, therefore, do have a significant effect on others. The effect is manifested in the alienation of the angel that records the good actions of an individual: essentially, when an individual comes into contact with polluting substances or individuals, any good action that is performed cannot be recorded. The deepest effect, however, is on the polluted individual. Anyone who does not cover himself or herself, leaves urine to stagnate, or does not perform the *ghusl* after intercourse cannot perform any good actions. Whilst the individual is not *legally* impure until he or she performs a ritual action that requires ablutions (such as the *ṣalāt*), the individual remains *eschatologically disadvantaged*, as the state of pollution has clear consequences in the life to come.

There is also a clear purpose to these *ḥadīth*; they attempt to dissuade individuals from remaining in a state of ritual purity, as it not only affects their own

⁵³² ‘Among the angels only Hārūt and Mārūt (S. 2:102), because of their action in Babel, are bad...’; Waardenburg, ‘Changes of Belief’ p. 280.

⁵³³ i.e. if an individual enters a house in which there is a man in the state of *junub*, his angel would depart, but the individual remains clean when he has left the presence of the other person.

judgement, but the judgement of those that come into contact with them. The notion of *forbidding the wrong* is well known in Islam, but in these circumstances there is not necessarily any direct wrong. It is not illegal to be ritually unclean until the performance of the *ṣalāt* or other rites, but these *ḥadīth* imply that ritual impurity is morally or ethically *wrong*, or, at the very least, has negative consequences, encouraging the individual to avoid them.

If the angels are used to discourage certain types of negative behaviour, they are also used to encourage positive actions performed by a human. For example, the angel of good deeds writes down righteous deeds more often and the angel of misdeeds allows time for repentance.⁵³⁴ There are a number of other specific actions that generate a positive response from the angels, either the individual's scribes or other angels. The angels bless: pious young men (§604); those who wear turbans on Friday (§621 & 628); those that seek knowledge (§622 – 623) ; those who say 'the Lord of the Two Worlds' after someone sneezes (§634 & 635); those who perform the fast in Ramaḍān (§665 & 718); those who remember God (§666); those who put on a sword for the *jihād* (§672); those who make their way to Mecca for the *ḥajj* on foot (§676); those who pray for the deceased (§712); those who attend the Friday prayers and hear the sermon (§719 – 722 & 728); and those who circumambulate the *Ka'ba* (§671). The role of the angels is also to encourage certain positive actions through praise, support or blessing.

⁵³⁴ See §312, 319, 333 – 336, 341, 369, 382, 387, 391 & 445, as well as the discussion of this theme above; cf. §59 – 63, 503. §445 shows that it is not just the scribes that give preference to good actions, e.g. the angel that is responsible for noting who blesses Muḥammad: 'Gabriel came to me and said: 'Muḥammad, whoever blesses you from your community, God, Most High, writes a blessing for him, in it are ten good deeds, and it cancels out ten misdeeds,...'

On more specific issues there are a number of *ḥadīth* that encourage Muslims to recite the Qur'ān in its entirety or on set occasions.⁵³⁵ The recitation of the Qur'ān was an important part of the ritual of the early Muslim community and there are numerous *ḥadīth* describing the merits of the Qur'ān (*faḍā'il al-Qur'ān*).⁵³⁶ The reading and recitation of the Qur'ān is important as it is the word of God, and as Frederick Denny comments: 'Reciting the Qur'ān is akin to a sacramental act in that divine power and presence are brought near.'⁵³⁷ This divine presence is made particularly manifest in *al-Ḥabā'ik* with the presence of the angels, who are seen to aid the believers in their recitation or memorisation of the Qur'ān, e.g. §708: 'The house in which the Qur'ān is recited comes into the view of the people of heaven, just as the stars come into the view of the people of earth.'⁵³⁸ This *ḥadīth* and others like it attempt to show a reward for reciting the Qur'ān, but whilst this just refers to the recitation of the Qur'ān in the home, §713 states that: 'If the servant finishes the Qur'ān, sixty thousand angels pray for him...' If there is intention to memorise the Qur'ān and an individual dies before being able to do so, §696 says that: '...an angel comes to him, and teaches it to him in his grave, and so he meets God, Most High, and he knows it by heart.' An angel is also responsible for 'correcting' any

⁵³⁵ §692, 695, 696, 698 – 701, 708 & 713; there is also an angel that is responsible for correcting an individual who mispronounces something in the Qur'ān, §462 – 465.

⁵³⁶ Cf. al-Nawawī, Abū Zakārīyya Yaḥyā ibn Sharaf, *Al-Tibyān fī adāb ḥamalāt al-Qur'ān*; Furber, Musa (tr.), *Etiquette of the Qur'ān: Al-Tibyān fī adāb ḥamalāt al-Qur'ān* (Illinois: Starlatch, 2003) and al-Ghazālī, Abū Ḥamīd Muḥammad ibn Muḥammad, *Iḥyā 'ulūm al-dīn* (Cairo: Maṭba'at 'Īsā al-Bābī al-Ḥalabī, 1348/1929-30) vol. 1, pp. 244 - 247; Abul Qaseem, Muhammad, *The Recitation and Interpretation of the Qur'ān: Al-Ghazālī's Theory* (Kuala Lumpur: University of Malaya Press, 1979). See also Juynboll, G. H. A., 'The Position of Qur'ān Recitation in Early Islam' *JSS* 19 (1974) pp. 240 – 251 and Afsarrudin, Asma, 'The Excellences of the Qur'ān: Textual Sacrality and the Organisation of Early Islamic Society' *JAOS* 122 (2002) pp. 1 – 24. Qur'ān recitation remains an important part of Muslim devotional piety and is encouraged by the religious community through events such as Qur'ānic recitation competitions; cf. Gade, Anna M., 'Motivating Qur'anic Practice in Indonesia by "Competing in Goodness"' *JRS* 18 (2004) pp. 24 – 42.

⁵³⁷ Denny, Frederick M., 'Islamic Ritual: Perspectives and Theories' in Martin (ed.), *Approaches to Islam* pp. 63 – 77, p. 76; the story of Usayd ibn Ḥudayr and his experience of the *Sakīna* is an extreme example of this; see §297 and Muslim, *Ṣaḥīḥ*, vol. 5, pp. 82 – 83 for a fuller account.

⁵³⁸ §708; cf. §692 & 698.

misreading that a Qur'ānic reciter may make (§462 – 495), showing that the intention of reciting the Qur'ān is more important than necessarily achieving a perfect vocalisation of the text. There are also a number of *ḥadīth* that refer to specific verses and *suras* of the Qur'ān being particularly associated with angels, e.g. §699: 'The [Sura of the] Cow is the hump of the Qur'ān, and its climax. He sent down eighty angels with every verse.'⁵³⁹ All these *ḥadīth* help to encourage Muslims to read and recite the Qur'ān, by highlighting the benefits of doing so and the angels act as the mediators of these blessings.

Just as Qur'ānic recitation and knowledge of the Qur'ān are an important part of Islamic spirituality, the performance of the ritual prayers plays a central role. The prayers act as a '...bridge between the human being and God. In their essential form, the canonical prayers in Islam are an affirmation, as indeed all faith is, of God's mercy and majesty.'⁵⁴⁰ It has already been seen that the angels are used in *Al-Ḥabā'ik fī akhbār al-malā'ik* as a template for the pattern and form of earthly ritual and that individuals need to be ritually clean before performing the prayers. The angels are also seen in this collection to bless and support Muslims in the *ṣalāt*. In *Al-Ḥabā'ik*, the majority of the *ḥadīth* on this subject are positive, showing angelic support or praise for reciting the Qur'ān,⁵⁴¹ although §695 does say that: '...if he does not finish [the ritual prayers], the two [scribes] hit him on his face.' The main manifestation of this support is the presence of angels with Muslims as they pray:

'When a man stands up to perform the prayers in the desert of the Earth,
he performs the prayers with two angels behind him. If he is called to

⁵³⁹ See also §700 & 701, which say much the same about Q6 (Cattle).

⁵⁴⁰ Ayoub, Mahmoud, 'Thanksgiving and Praise in the Qur'ān and in Muslim Piety' *Islamochristiana* 15 (1989) pp. 1 – 10, p. 2.

⁵⁴¹ See §568 – 573, 576, 578 – 580, 598, 599, 614, 615, 617, 618, 716 & 717.

prayer, and stands up to perform the prayers, angels like the mountains are behind him.’⁵⁴²

The angels are also said to continue praying for an individual who has performed the ritual prayers,⁵⁴³ and to say ‘Amen’.⁵⁴⁴ One *ḥadīth* also states that the angels say ‘O God forgive him! O God, have mercy upon him’ for ‘as long as [he] is in his place of prayer’;⁵⁴⁵ encouraging Muslims to spend more time at prayer. The *ḥadīth* also praise other supererogatory acts of devotion and piety, including: blessing the Prophet;⁵⁴⁶ saying a prayer whilst passing the Yemeni corner of the Ka’ba (§458 – 460); saying ‘The Most Merciful of those that are Merciful’ (§466); and praying for the dead (§467 – 470). The idea behind all of these *ḥadīth* is not simply to encourage adherence to the prescribed regulations of ritual law (i.e. the performance of the ritual prayers), but to add to the religious and spiritual development of the individual. Above all, these actions play a key role in the daily remembrance of God (*dhikr*): ‘As long as man is occupied with the remembrance (*dhikr*) of God, he is free from worldly concerns, and thus there is little chance for Satanic insinuation and temptation (*waswās*).’⁵⁴⁷

Angels, therefore, play an important role in the encouragement and support of the community to perform both obligatory and supererogatory prayers and worship. The angels pray and worship with humans on earth, which creates harmony between divine and human devotions. Angels encourage certain types of behaviour by stating

⁵⁴² §568; see also §569 – 572; although the number of angels differs from four thousand (§571) to seventy thousand (§569), or just ‘many’ (§570).

⁵⁴³ §576, 578 – 580, 598.

⁵⁴⁴ §614, §615, 617 & 618.

⁵⁴⁵ §716.

⁵⁴⁶ §446, 447, 449 – 457; e.g. §447 ‘...Gabriel came to me and said: ‘God said: “Whoever blesses you, I will bless him, I and my angels tenfold; whoever wishes you peace, I and my angels will wish him peace tenfold.”’ See also Robson, J., ‘Blessings on the Prophet’ *MW* 26 (1936) pp. 365 – 371.

⁵⁴⁷ Nakamura, Kojiro, *Ghazali on Prayer* (Tokyo: University of Tokyo, 1973) p. 11.

that if humans behave in a certain way, the angels will pray for them. Other *ḥadīth* state that good actions are given more weight in the individual's *book*. All these indicate that certain actions give individuals a sense of *baraka*.

The notion of *commanding right and forbidding wrong* is an important and well-known concept in Islam, and the *ḥadīth* included in al-Suyūṭī's *Al-Ḥabā'ik fī akhbār al-malā'ik* go to some lengths to describe what behaviour should be encouraged and discouraged. The performance of ritual and the role of angels as the template or archetype for human ritual is an obvious example of *commanding right*. The visions of the heavenly world seek to authenticate the proper modes of ritual worship. The *ḥadīth* establish the sanctity of the *Ka'ba* as God's house, the necessity to constantly worship God and specific rituals associated with the pilgrimage.

If the *Ka'ba* is the *House of God*, then Muslims need to understand how they should approach it. When approaching God, it is necessary that the individual is in a state of *tahāra* and a number of different 'events' require an individual to cleanse himself or herself in preparation for encountering the divine. The rules that govern this approach to God are also applicable to the angels; the angels cannot come into contact with certain substances and states. The concept of *tahāra* has traditionally been seen as only important for the performance of the ritual prayers, but the *ḥadīth* in *al-Ḥabā'ik* clearly show that individuals are affected negatively before this. Whether or not being in a state of ritual impurity is 'wrong' (technically it is not until *tahāra* is obligatory), the *ḥadīth* clearly imply that it could be equated with a 'wrong'. The *ḥadīth* do not 'forbid' these actions or states, but they do firmly discourage them.

Just as angels are used to discourage particular actions, they are also used to encourage others. All of the actions that the angels encourage are those that focus the individual on God: recitation of the Qur'ān, the performance of the *ṣalāt*, listening to the Friday sermon, saying particular invocations *etc.* The performance of these actions generates blessings and prayers from the angels, which have clear benefits for the individual in his or her individual eschatological future.

3.3 The Purpose and Function of *Al-Ḥabā'ik fī akhbār al-malā'ik*

The main focus of this chapter is the concept of time (or more specifically the notion of temporality) in the collection, in an attempt to understand the function of the work. Jalāl al-Dīn al-Suyūṭī's *Al-Ḥabā'ik fī akhbār al-malā'ik* is quite different to other eschatological works of mediaeval Islam and the reason why needs to be addressed.

The first section of this chapter has looked at the roles of the angels in the lives of every human and the second at their roles in Islamic ritual. The underlying theme is that the collection is concerned with everyday life. The work could be called *eschatological* in the sense that it is concerned with the final judgement, but it is not *eschatological* in the normal understanding. In Biblical Studies, Christopher Rowland has argued that eschatology is not simply concerned with the future, but can reflect contemporary events.⁵⁴⁸ However, even in Rowland's understanding of eschatology, the eschatology of the present still remains *eschatological*. Willem Bijlefeld, who applies the notion of eschatology in Biblical Studies to an Islamic context, comments that: 'Most scholars in this field reject this narrow interpretation of the term and see it as applicable to statements regarding the world to come and the last day(s) as well as to pronouncements regarding decisive turning points at a future date with the ongoing history of this world.'⁵⁴⁹ Even with a modified understanding of eschatology, Al-Suyūṭī's *Al-Ḥabā'ik* still remains quite distinct and cannot really be considered to be *eschatological*, despite being concerned with the divine world.

⁵⁴⁸ Rowland, 'Visions of God'.

⁵⁴⁹ Bijlefeld, 'Eschatology', p. 36.

What is important to consider is the fact that simply describing the divine world or divine creatures does not necessarily mean that a text is eschatological or apocalyptic.

This compilation is primarily focused on what angels are doing *now*, looking at what could be called the *angelic present*. This shifts the temporality of the compilation from an eschatological future to a contemporary reality. The work is not interested in the *angelic future*; there are no descriptions of the *eschaton* or the Final Day and even the post-mortem world of Munkar and Nakīr, heaven and hell *etc.* are limited to only a few *ḥadīth*. Similarly, the work is not concerned with the *angelic past*, and any references to the past, such as the creation of Adam, are cited because of their relevance to what angels do now.

What does this mean for the function of the work? Al-Suyūṭī seems to be aware of the importance of angels in human action and the work attempts to understand the angelic world and its relation to the human realm. The interaction between humans and angels occurs in a number of different ways, but is seen most clearly in the use of angels in ritual. The angels are both physically and contemporaneously *present* with the Muslim community as they perform ritual actions; the angels pray at the same time, the angels worship with individuals and so on. The collection also discusses how humans should behave given this continual contact with the angelic world. The angels react to certain types of human behaviour, both positively and negatively, and humans need to know about these, as they have important ramifications for an individual's future judgement.

It is misleading to suggest that *Al-Ḥabā'ik fī akhbār al-malā'ik* is not at all concerned with the eschatological future, as much of the information provided in the

ḥadīth is related to an individual's *eschatological future*.⁵⁵⁰ However, the compilation continually contextualises this *eschatological future* in terms of the interaction of humans and angels at this very moment in time. The *tours of hell* genre (including the *miʿrāj* literature) tend to use Heaven and Hell generally – warning Muslims of the consequences of right and wrong actions, and exhorting them to follow the *true path*. Vuckovic comments: ‘These stories of reward and punishment play an integral role in the *miʿraj* narratives and in the ongoing dialogue regarding appropriate morality, behaviour and even political allegiance.’⁵⁵¹ *Al-Ḥabāʾik* and the *miʿrāj* literature are both didactic, in that they attempt to teach and inform their readership, but they differ in their approaches. The *miʿrāj* literature tends to be parabolic; the descriptions of heaven and hell, although a future reality, are used to describe a *potential* future to which the reader must respond in order to avoid the punishments described. *Al-Ḥabāʾik* is not parabolic; rather it is *descriptive* of the current realities of *this world*, with the belief that certain actions will affect the individual's *personal eschatology*. Essentially, *al-Ḥabāʾik* informs its readers that the angels are ever present with humans in this life, at this very instant, and that human actions affect their relationship with the angels.

This chapter has focused on the interaction between humans and angels, but much of the information provided by the *ḥadīth* is encyclopaedic, explaining who the angels are, what they do, what they are called, what they look like and so on. This helps individuals to understand the angels and to identify with them, which is not the aim of the *miʿrāj* and eschatological works.

⁵⁵⁰ Cf. ‘That in the Qurʾān, and in general in Islam, the emphasis lies on individual or personal eschatology is undeniable.’ Bijlefeld, ‘Eschatology’ p. 36.

⁵⁵¹ Vuckovic, *Heavenly Journeys*, p. 120.

Jalāl al-Dīn al-Suyūṭī's *Al-Ḥabā'ik fī akhbār al-malā'ik* draws together *ḥadīth* from a number of different areas of Islamic thought and practice (e.g. purity, folklore, science, law and visions of heaven and hell), seeking to understand the celestial world and the functions that the various angels perform. Beyond the specific details of the interactions between humans and angels, the *ḥadīth* make clear that the angels are intermediaries and that all of their actions are performed on behalf of God and not independently. This is essential, as the creation of individual, free angels would threaten Islamic monotheism. This focus on the *angelic present* is the main purpose and function of the work, distinguishing it from other *ḥadīth* collections about the divine world and attesting to the originality of al-Suyūṭī's approach to *ḥadīth* and their compilation.

 كما دفعهم الا وابل والثالث الاعتراض بانهم حملة العرش منهم الصافون ومنهم
 خزنة الجنة ومنهم خزنة النار ومنهم كتبة الاعمال ومنهم الذين يسوفون الحساب فقد
 ورد القرآن بذلك كله اوباكثره وروى عن ابن عمر عن النبي صلى الله عليه وسلم عن
 سبل عن الاعمال فقال انه تومن بالله وملائكته وكتبه ورسله من احق
 الملائكة والاله على انهم احسن خلقا خلقا للخلق سبعة اخرج
 عن عائشة قالت قال رسول الله صلى الله عليه وسلم خلقت الملائكة من نور وخلق
 الجن من نار وخلق آدم مما وصفكم واخرج ابو الشيخ في كتابه العظمة
 عن ابن عمر عن النبي صلى الله عليه وسلم قال خلقت الملائكة من نور واخرج ابو الشيخ في كتاب العظمة عن
 عمر بن الخطاب قال خلقت الملائكة من نور العزة واخرج ابو الشيخ عن زبيري وروى
 انه بلغه ان الملائكة خلقت من روح الله كثر الملائكة خلقا قال تعالى
 وما يعلم جنود ربك الا هو واخرج البزار في البوارق والشيخ في الزمعة في كتابه اورد
 على الطهارة عن ابن عمر عن النبي صلى الله عليه وسلم قال خلقت الملائكة من نور وسفينة ذلك ثم يقول
 ليس منكم الله الفاك فان من الملائكة خلقا اصغر من الدخان وليس في الترمذي
 الملائكة واخرج البيهقي في الشعب عن ابن مسعود قال قال في السما سماءها موضع
 لا عليها جهة ملك او قدامه ثم قرأوا النسخ الصافون واخرج ابو الشيخ عن سعيد
 بن جبير قال قال في السما موضع الا وعليه ملك اما ساجدا اما قائما ثم قال في السما
 لماعة واخرج احمد في الترمذي وابن ماجه والطحاوي عن ابن عمر عن النبي صلى الله عليه وسلم قال
 رسول الله صلى الله عليه وسلم اطلت السما وحملها ان تنطأ سماءها موضع اربعة
 مقام الا وعليه ملك واضم جهته واخرج ابو الشيخ عن عائشة قالت قال
 النبي صلى الله عليه وسلم ما في السما موضع فذكر الا وعليه ملك ساجدا وقائم فذكر

قوله

4.1 A Note on the Supporting Manuscript

University of Leiden, Or. 474(28) fol 187v – 245r (*Legatum Warnerarium*)⁵⁵²

The manuscript is a collection of forty-one texts, of which forty are attributed to Jalāl al-Dīn al-Suyūfī and they are all dated to 987 AH / 1579 – 1580 CE. The manuscript has had a relatively stable history, being collected by Levinus Warner (1619 - 1665), an ambassador of the Dutch Republic at the Ottoman court and held by the University of Leiden since 1669.⁵⁵³ This makes this manuscript of *Al-Ḥabā'ik fī akhbār al-malā'ik* a suitable basis for an *Urtext*.⁵⁵⁴ The Leiden MS and the modern edition edited by Abū Hājir Muḥammad al-Saʿīd ibn Basyūnī Zaghlūl are largely similar, with occasional exclusions, additions and use of synonyms.⁵⁵⁵

The text is written in a clear *nakhsh* with a text box containing thirty-one lines per folio. The text is written in black ink, with titles and the opening of each *ḥadīth* (i.e. *akhraja*) usually written in coloured ink. Throughout the text *hamza* is never written over a *kursī* but is simply marked by the long vowel, or, very occasionally, not at all. *Alif maqṣūra* is also usually written as a final-*yā'*. Most of

⁵⁵² I have been unable to study the MS personally, and the summary of the MS made below is based on observations of a facsimile copy of the text and on the information provided by Jan Just Witkam in his *Inventory of the Oriental Manuscripts of the University of Leiden - Volume I – Manuscripts Or. 1 - Or. 1000* (Leiden: Ter Lugt Press, 2007) pp. 208 – 210. As a result, I am unable to provide details about the dimensions of the manuscript.

⁵⁵³ See Witkam, *Inventory*, p. 110; Witkam, Jan Just, 'The Oriental Manuscripts of the University of Leiden' *BJMES* 8 (1981) pp. 60 – 64.

⁵⁵⁴ The MS held by the Mingana Collection in Birmingham [MS Ar. 651i] is much later, dating to 1666 – 1667 CE; The MS held in the British Library [Or. 9026/1] is earlier than the Leiden MS and dates to 973 AH / 1566 CE; however, I have been unable to attain a facsimile of the MS and as the text dates to roughly the same period as the Leiden MS, I have principally used the Leiden MS as my *Urtext*.

⁵⁵⁵ This is referred to throughout as the 'DKI Edition'. A list of textual variants has been included in the Appendix.

the lines are justified, but occasionally the titles of some sections (but not all) are centrally justified with indentations. There are also occasionally added notes referring to the chapter headings in the margins, although these are fairly rare and were added later. There are no miniatures or ornamentations, apart from the occasional addition of text-stops.

Please also note the following:

(*Arabic text*) Arabic terms are occasionally added to clarify the translation.

[]^N Textual variants are shown in square brackets, with a footnote.

[] Square brackets (without a footnote) indicate phrases that have been added to clarify the translation.

.....(?) A dotted line with a question mark is used to mark places where the text appears to be corrupt.

[Nb] The numbering system of the DKI Edition has been followed. Any *ḥadīth* inserted by the Leiden MS have been marked with a ‘b’; i.e. §2b is inserted by the MS after *ḥadīth* §2 in the DKI Edition.

Jalāl al-Dīn ʿAbd al-Raḥmān ibn Abī Bakr
 al-Suyūṭī al-Shāfiʿī

Al-Ḥabāʾik fī akhbār al-malāʾik
(The Arrangement of the Traditions
About Angels)

4.2.1 Preface

In the Name of God, the Compassionate, the Merciful.⁵⁵⁶

‘Praise belongs to God, who appointed the Angels to be messengers, having wings, two, three and four...’⁵⁵⁷ Blessings and peace upon our lord Muḥammad, and upon the House, the Companions and the Successors. I have put together this small compilation of traditions about the righteous angels. I have included in it those traditions and narrations which mention them, and I have ended it with a useful lesson, which will make those who see it glad. I have called it: *The Arrangement of the Traditions About Angels*.⁵⁵⁸ By God, the Helper!⁵⁵⁹ Trust is in him!

4.2.2 The Necessity of Belief in Angels⁵⁶⁰

God, Most High, says: ‘The Messenger believes in what was sent down to him from his Lord, and the believers; each one believes in God and His angels’⁵⁶¹ Al-Bayhaqī⁵⁶² says in *Shu‘ab al-īmān*:⁵⁶³ Belief in angels incorporates [the following] ideas: firstly, faith in their existence; secondly, [that] their being sent down [by God]

⁵⁵⁶ This introduction follows a standard format employed by al-Suyūṭī in his ḥadīth collections, consisting of: a relevant Qur’ānic quotation, laudations, a description of the work’s contents, its title and a prayer or oath; cf. his *al-Hay’a al-sanīya fī-‘l-haya’ al-sunnīya*; Heinen, *Islamic Cosmology*, p. 1.

⁵⁵⁷ Q 35:1; Arberry, *Koran*, p. 444.

⁵⁵⁸ For a discussion of the title, see Section 1.3 above.

⁵⁵⁹ cf. Q 12:18; Arberry *Koran*, p. 227.

⁵⁶⁰ The section is given the full title: *dhukira wujūb al-īmān bi-‘l-malā’ika* = What is mentioned [concerning] the necessity of belief in angels.

⁵⁶¹ Q 2:285; Arberry *Koran*, p. 43

⁵⁶² See the Appendix for notes on each of al-Suyūṭī’s sources.

⁵⁶³ The text that starts here and ends after the first ḥadīth in the collection is lifted directly from al-Bayhaqī’s *Shu‘ab al-īmān*; see al-Bayhaqī, Aḥmad ibn al-Ḥusayn ibn ‘Alī, *Al-Jāmi‘ al-shu‘ab al-īmān* (Bombay: Dār al-Salifiyya, 1986) vol. 1, pp. 405 - 406.

is their status [in the universe] and a proof that they are servants of God. He created them like humans and jinn, ordered and entrusted [with a task]. They have no authority, save that over which God gives them authority and it is right that they should die;⁵⁶⁴ but God, Most High, has given them an end in distant time; indeed, he will not receive them until they reach it.⁵⁶⁵ They are not described by anything that would, through describing them by it, lead to them being associated with God, Most High; and so they are not called *gods*, as the ancients called them.⁵⁶⁶

Thirdly: recognition that from amongst [them are messengers, which he sends to whichever human he wishes, and it is also allowed that he sends some of them to some;]⁵⁶⁷ from recognition of that, it follows that among them are the Bearers of the Throne, the Rangers, the Guardians of Paradise, the Guardians of Hell, the Recorders of Deeds, and the Cloud Drivers; indeed the Qur'an shows all of it or most of it.

[1] We related⁵⁶⁸ from Ibn 'Umar [from 'Umar]⁵⁶⁹ from the Prophet (God bless him and grant him salvation), when he was asked about faith; he said: Believe in God, His angels, His Book and His messengers.⁵⁷⁰

⁵⁶⁴ Lit: 'death is upon them rightly...'

⁵⁶⁵ i.e. the *ajal* of the angels is, like that of humans, fixed and immovable.

⁵⁶⁶ In the Qur'ān, the Meccans are told that their deities are not divine, but are merely angels; cf. Q 34:40 & 43:19; Arberry, *Koran*, pp. 442 & 506. See also Hawting, *The Idea of Idolatry* and Welch, 'Allah and Other Supernatural Beings' pp. 733 – 758.

⁵⁶⁷ Omitted in the Leiden MS; fol. 187v, l. 12.

⁵⁶⁸ Almost all of the ḥadīth begin with the Arabic *akhrāja* to introduce each ḥadīth; this has not been translated, but its absence is noted. In this case the ḥadīth is preceded by *wa-rawaynā*.

⁵⁶⁹ Omitted in the Leiden MS; fol. 187v, l. 14.

⁵⁷⁰ cf. Q 2:285 & 4:136; this is the end of the quotation from al-Bayhaqī's *Shu'ab al-īmān*.

4.2.3 The Origin of the Creation of the Angels and the Proof that their Substance is in Contradiction to the Philosophers⁵⁷¹

[2] [Muslim]⁵⁷² from ʿĀʾisha; she said: The Messenger of God (God bless him and grant him salvation) said: The angels were created out of light, the Father of the Jinn⁵⁷³ was created out of a mixture of fire and Adam was created out of what characterizes you.

[2b]⁵⁷⁴ Abū ʿl-Shaykh in his *Kitāb al-ʿaẓama*⁵⁷⁵ from ibn ʿAmr; he said: God created the angels out of light.

[3] Abū ʿl-Shaykh in *Kitāb al-ʿaẓama* from ʿIkrima; he said: The angels were created from the light of the Glorious One.

[4] Abū ʿl-Shaykh⁵⁷⁶ from Zayd ibn Rūmān; that he heard that the angels were created from the spirit of God.

⁵⁷¹ In Islamic philosophy, angels were believed to be Intellects and were incorporeal; for a discussion of this see Corbin, Henry (tr. W. R. Trask), *Avicenna and the Visionary Recital* (London: Routledge & Kegan Paul, 1961) pp. 46 – 122 and Netton, *Allah Transcendent*, pp. 162 – 172.

⁵⁷² Omitted in the Leiden MS; fol. 187v, l. 16.

⁵⁷³ *al-Jānn*; this can be used as the collective noun for *jinn*, or as a reference to Iblīs. See Lane, *AELex* pp. 462 & 2704; al-Zabīdī, *TA* vol. 34, pp. 370 – 371 and Zbinden, Ernst, *Die Djinn des Islam und der altorientalische Geisterglaube* (Bern: Verlag Paul Haupt, 1953) pp. 3 – 8.

⁵⁷⁴ Added in the Leiden MS; fol. 187v, ll. 18 – 19.

⁵⁷⁵ Sezgin says that the *Kitāb al-ʿaẓama* is ‘ein mystisches Buch, in dem er sich auf den *ṣaḥabī* ʿAlī b. Salām beruft, dem die Schriften des Propheten Daniel in die Hände gefallen sein sollen.’ Sezgin, *GAS* vol. 1, p. 201.

⁵⁷⁶ Al-Suyūṭī does not cite the book from which the *ḥadīth* is taken again, unless two books have been used (as will be seen later). This *ḥadīth* is from the *Kitāb al-ʿaẓama*.

4.2.4 The Great Abundance of the Angels

[God] Most High said: ‘And none knows the hosts of the Lord but He.’⁵⁷⁷

[5] al-Bazzār, Abū ‘l-Shaykh and Ibn Mandah in *Kitab al-radd ‘alā al-jahamiyyah* from Ibn ‘Amr; he said: God created the angels out of light and He brought them to life out of it. Then He said: ‘Let there be a thousand thousands of you.’ A single angel is smaller than a fly⁵⁷⁸ and there is nothing more numerous than the angels.

[6] al-Bayhaqī in *Al-Shu‘ab* from Ibn Mas‘ūd; he said: There is no place in the heavens without a face of an angel or its two feet; then he recited: ‘we are the rangers (*ṣāfūna*).’⁵⁷⁹

[7] Abū ‘l-Shaykh from Sa‘īd ibn Jubayr; he said: There is no place in heaven without an angel, be it bowed down in worship or standing upright⁵⁸⁰ until the Hour comes.

[8] Aḥmad, al-Tirmidhī, Ibn Mājah, and al-Ḥākim from Abū Dharr; he said: The Messenger of God⁵⁸¹ (God bless him and grant him salvation) said: Heaven groaned

⁵⁷⁷ Q 74:3; Arberry *Koran*, p. 617.

⁵⁷⁸ Flies are used as the generic term for something incredibly small, e.g. Q 22:73; ‘Surely those upon whom you call, apart from God, shall never create a fly...’ Arberry, *Koran*, p. 341.

⁵⁷⁹ Q 37:165; Arberry, *Koran*, p. 462.

⁵⁸⁰ This and the following ḥadīth with the same phrase could be an allusion to Q 22:26 or 39:9; Arberry *Koran*, pp. 336 and 472.

⁵⁸¹ The Leiden MS reads ‘al-nabī’; fol. 187v, l. 31.

– and it could do nothing but groan!⁵⁸² There is no place in [heaven] to set four fingers except upon the place of an angel’s forehead.⁵⁸³

[9] Abū ‘l-Shaykh from ‘Ā’isha; she said: the Messenger of God (God bless him and grant him salvation) said: There is nowhere to place a foot in heaven, except upon an angel prostrating or standing upright – and so the Word [of the Most High]:⁵⁸⁴ ‘None of us is there, but has a known station; we are the rangers’.⁵⁸⁵

[10] Ibn Abī Ḥātim, al-Ṭabarānī, al-Ḍiyā’ in *al-Mukhtāra*, and Abū ‘l-Shaykh from Ḥakīm ibn Ḥizām; he said: While the Messenger of God (God bless him and grant him salvation) was with his friends, he said to them: ‘Did you hear what I heard?’ They said: ‘We have not heard anything.’ He said: ‘Indeed, I heard the creaking of the heavens, and it is not to blame for its creaking; there is no place in it [for a foot],⁵⁸⁶ except upon an angel bowed down in worship or standing.’

[11] al-Ṭabarānī from Jābir ibn ‘Abd Allāh; he said: the Messenger of God (God bless him and grant him salvation) said: There is no place for a foot in the Seven Heavens,⁵⁸⁷ nor a hand outstretched, nor a palm of the hand, without an angel standing or an angel prostrating in [that place]; when it is the Day of Resurrection,

⁵⁸² *attat / ta’ittat* [’-T-T]. This is a relatively rare root meaning to groan or creak, often with particular reference to camels (be it the camel itself or a saddle &c.). This particular *ḥadīth* is usually cited as an example in the lexicons – see Ibn Manẓūr, *LA*, vol. 19, pp. 164 – 165 and Lane, *AELex*, p. 66.

⁵⁸³ This same *ḥadīth* also appears in al-Tha’labī, *QA*, p. 17; Brinner, *Lives*, p. 28.

⁵⁸⁴ Added in the Leiden MS; fol. 188r, l. 1.

⁵⁸⁵ Q 37:164 – 165; Arberry, *Koran*, p. 462.

⁵⁸⁶ Omitted in the Leiden MS; fol. 188r, l. 4.

⁵⁸⁷ The concept of ‘Seven Heavens’ is also important in Judaism and Christianity; see Collins, Adela Yarbo, ‘The Seven Heavens in Jewish and Christian Apocalypses’ in Collins and Fishbane, *Other Worldly Journeys*, pp. 59 - 93.

they will say [together].⁵⁸⁸ ‘We worship you! We have only worshipped You in a manner worthy of You. We have not associated anything with You.’⁵⁸⁹

[12] al-Dīnawārī in *al-Mujālasa* from ‘Abd al-Raḥmān ibn Zayd ibn Aslam; he said: There is nothing more numerous in God’s creation than the angels: [for] none of the sons of Adam are without two angels,⁵⁹⁰ the driver who drives him, and the watcher, who watches him;⁵⁹¹ therefore, there are twice the number of the sons of Adam; then in addition to that, the heavens [and the earth]⁵⁹² are crammed full, and beyond the heavens are yet still [more]: those around the Throne⁵⁹³ are more numerous than those which are in the heavens.

[13] Abū ‘l-Shaykh from Abū Sa‘īd from the Messenger of God (God bless him and grant him salvation), he said: In the Garden [there is] a river⁵⁹⁴ and Gabriel does not enter it, get out and shake himself, without God creating an angel from every drop that falls from him.⁵⁹⁵

[14] Abū ‘l-Shaykh from Wahb ibn Munnabih; he said: God has a river in the air, covering the earths, all of them. Seven times [a day] God sends into that river an

⁵⁸⁸ Omitted in the Leiden MS; fol. 188r, l. 6.

⁵⁸⁹ cf. al-Tha‘labī, *QA*, p. 14; Brinner, *Lives*, p. 23.

⁵⁹⁰ § 312 – 406 deal with the Scribes in more detail.

⁵⁹¹ Cf. Q 50:21: *wa-jā’at kullu nafsin ma‘ahā sā’iqun wa-shahīdun*; ‘And every soul shall come, and with it a driver and a witness.’ Arberry, *Koran*, p. 540.

⁵⁹² Omitted in the Leiden MS; fol. 188r, ll. 9 – 10.

⁵⁹³ These angels are presumably additional to the *ḥamlat al-‘arsh* (Bearers of the Throne).

⁵⁹⁴ In the pre-Islamic pantheon *Allah* was both the creator of the world and the rain-god; the Qur’ān emphasises the supremacy of *Allah* as the creator and the life-sustainer, as it is He and He alone that provides humans with water, and by extension life: ‘[Water] reveals aspects of the dependence of creation on him, his dealings with it, and its duty to serve him.’ Johns, Anthony H., ‘Water’ *EQ* vol. 5, p. 462.

⁵⁹⁵ Although containing a few ḥadīth that locate the origins of rain in heaven, al-Suyūṭī’s *al-Hay’a* does not include this ḥadīth (nor any others included in this collection); see Heinen, *Islamic Cosmology*, pp. 160 – 164.

angel from heaven, and it gets into it, immersing the whole of its body, then it washes in it; when it gets out, rain [falls] from it; rain is from light, and from every raindrop emanates⁵⁹⁶ an angel, which praises God; all of creation praises God.⁵⁹⁷

[15] Abū 'l-Shaykh from al-Awzā'ī; he said: Moses (peace be upon him) said: 'Lord, who is with you in heaven?' He said: 'My angels.' He said: 'How many are there, Lord?' He said: 'Twelve tribes.' He said: 'How many does each tribe add up to?' He said: 'The sum of the dust [of the earth].'

[16] Abū 'l-Shaykh from Ka'b; he said: Nothing trickles from an angel's eye unless there is an angel flying from the fear of God.⁵⁹⁸

[17] Abū 'l-Shaykh from al-'Alā' ibn Hārūn; he said: Every day, Gabriel is immersed in the al-Kawthar,⁵⁹⁹ and then he shakes himself; and so every raindrop is created from an angel.

⁵⁹⁶ The Leiden MS reads '*fa-khalāqa min kulla qatra malakan*' ['He creates an angel from every raindrop or An angel is created (*fa-khuliqa*) from every raindrop']; fol. 188r, l. 14.

⁵⁹⁷ See also §172 – 177 for ḥadīth on the Angel of the Rain. Rain was believed to come from angels, e.g. al-Shahrastānī, Abū 'l-Faṭḥ Muḥammad ibn 'Abd al-Karīm, *Al-Milāl wa-l-nihāl* (Tūfīq, M. (ed)), (Cairo: Maṭba'at Hijāzī bi-'l-Qāhira, 1948), vol. 2, p. 111; for secondary material, see Lawrence, Bruce B., 'Shahrastānī on Indian Idol Worship' *SI* 38 (1973), pp. 61 – 73, p. 67 and for this belief in modern practice, see: Başgöz, İlhan, 'Rain-Making Ceremonies and Seasonal Festivals' *JAOS* 87 (1967) pp. 304 – 306, p. 305. The Angel of the Rain is named as *Ridya* in the Babylonian Talmud; see *Ta'* 25b, p. 133 and *Yom.* 21a, p. 90. A similar ḥadīth to this appears in Al-Tha'labī, *QA* p. 16 - 17; Brinner, *Lives*, p. 23. However, the ḥadīth is attributed to Abū Hurayrah, and Gabriel immerses himself in a *baḥr min nūr* (a sea of light). Ibn Khaldūn also includes similar imagery when describing Jesus' return at the end of time, see Ibn Khaldūn, 'Abd al-Raḥmān ibn Muḥammad al-Maghribī (ed. Muṣṭafā Fahmī al-Kutbī), *al-Muqaddima min al-kitāb al-'ibar* (Cairo: Maṭba'at al-Taḥaddam bi-Sharḥ Muḥammad 'Alī, n.d.) p. 259; Rosenthal, Franz (tr.), *The Muqaddimah: An Introduction to History (Second Edition)* (Princeton: Princeton University Press, 1967) vol. 2, p. 194.

⁵⁹⁸ In the Qur'ān and the ḥadīth weeping is generally not discouraged; cf. Chittick, William C., 'Weeping in Classical Sufism' in Kimberley Christine Patton and John Stratton Hawley (eds.), *Holy Tears: Weeping in The Religious Imagination* (Princeton: Princeton University Press, 2005) pp. 132 – 144, pp. 132 – 134.

⁵⁹⁹ A river in paradise, also shown to Muḥammad during the *Mi'rāj*. See Alvarado, Salustio, 'Sobre al-Kawthar y Otros Ríos del Paraíso en la Eschatología Islámica y Cristiana' *BAEO* 41 (2005) pp. 247

[18] Abū 'l-Shaykh through the intermediary of Mujāhid from Ibn 'Abbās from the Prophet (God bless him and grant him salvation); he said: There is no creation of God more numerous than the angels; there is nothing that grows without an angel being responsible for it.

[19] Abū 'l-Shaykh from al-Ḥakam; he said: I heard that He sends down with the rain [such and such]⁶⁰⁰ from the angels, more numerous than the sons of Adam and the sons of Iblīs. [The angels] record every raindrop, where it falls and who is sustained by that plant.

[20] Abū 'l-Shaykh from Wahb; he said: The Seven Heavens are filled with angels; if you measured a hair,⁶⁰¹ you would not be able to compare it with something you had already measured;⁶⁰² amongst them one is standing still, one prostrated and one worshipping, terrified and shaking their wings in fear⁶⁰³ of God. Not even the blink of an eye disobeys him. The distance between the back and the head of one of the Bearers of the Throne is a journey of a hundred years.

– 253; Horovitz, J [-Gardet, L.], 'Kawthwar' *EF*² vol. 4, pp. 805 – 806; and El-Zein, Amira, 'Water of Paradise' *EQ* vol. 5, pp. 466 – 467; cf. *GenR* 78:1, p. 714 – 715 and *LamR* 3:2 §8, pp. 201 – 202.

⁶⁰⁰ This has been inserted on the basis of an extremely similar ḥadīth which appears in al-Suyūṭī's *Al-Ḥay'a al-sanīya*. The ḥadīth reads: '...wayanzilu ma'a kadhā wa-kadhā min al-malā'ika yatukbūna ḥaythu yaqa'u dhālika 'l-maṭar wa-man yarzuquhu wa-mā yakhruju minhu ma'a kulla qatra.' §VI:27; Heinen, *Islamic Cosmology*, p. 26.

⁶⁰¹ cf. al-Tha'labī, *QA*, p. 13; Brinner, *Lives*, p. 22.

⁶⁰² i.e. the angel's hair is immeasurable.

⁶⁰³ The Leiden MS uses the slightly stronger '*faraqan*' (*terrified*); fol. 188r, l. 25.

[20b]⁶⁰⁴ Ibn Abī Ḥātim from Kaʿb; he said: There is no place [the size] of the eye of a needle⁶⁰⁵ without an angel being responsible for it, raising knowledge about it up to God and the angels of heaven; [the angels] are more numerous than the number of specks of dust and as small.

[21] Ibn al-Mundhir in his *Tafsīr* from ʿAbd Allāh ibn ʿAmr; it was attributed to [Muḥammad]; he said: The angels are in ten parts: nine parts are Cherubim, who glorify God night and day, without rest; and one part is responsible for everything that is hidden. There is no place in the heavens without a worshipper or an angel bowing; and the sacred place is around the Throne, and the Inhabited House⁶⁰⁶ is around the Kaʿba; if it were to come down, then it would come down on top of it. Every day seventy thousand angels pray in it;⁶⁰⁷ then they do not come back to it.

[22] Ibn al-Mundhir from ʿAmr al-Bakālī; he said: God, [Most High],⁶⁰⁸ divided the angels into ten parts, nine parts are the Cherubim, and they are the angels who bear the Throne, and they are also those who worship God night and day, without rest. He said: The remaining angels are for God's orders and messages.⁶⁰⁹

⁶⁰⁴ The Leiden MS inserts this ḥadīth; fol. 188r, ll. 26 – 28.

⁶⁰⁵ A common metaphor in Islam; cf. Q 7:40; Arberry, *Koran*, p. 147 (although the phrase is *samm al-khiyāṭ*); much has been written about this Qur'ānic phrase: cf. Bishop, Eric F. F., 'The Eye of the Needle' *MW* 31 (1941) pp. 354 – 359 and Rippin, A. 'Qur'ān 7:40: «Until a Camel Pases through the Eye of the Needle»' *Arabica* 27 (1980) pp. 107 – 113.

⁶⁰⁶ Q. 52:4; the *bayt al-ma'mur* is thought to be the seventh heaven and it is said to be located directly above the Kaʿba. See Porter, 'Muhammad's Journey' p. 77 and Morris, 'The Spiritual Ascension of Ibn ʿArabī' *JAOS* 107 (1987) pp. 636, n. 35 & *JAOS* 108 (1988) p. 69 n. 169; cf. also Al-Thaʿlabī, *QA* p. 16 - 17; Brinner, *Lives*, p. 27.

⁶⁰⁷ 70,000 is a traditional number in Islamic tradition for the size of an angelic army; cf. Al-Thaʿlabī, *QA* p. 14; Brinner, *Lives*, p. 23.

⁶⁰⁸ Omitted in the Leiden MS; fol. 188v, l. 2

⁶⁰⁹ There is a scribal error in the Leiden MS with a repetition of 'and they are the angels who bear the Throne, and they are also those who worship God night and day, without rest...'; fol. 188v, ll. 4 – 5.

[23] Ibn Abī Hātim through the intermediary of Khabīb⁶¹⁰ ibn ʿAbd al-Raḥmān ibn Salmān Abū ʿl-Aʿīs from his father; he said: Humans and jinn are in ten parts, humans form one part and jinn nine parts; the jinn and the angels are in ten parts, the jinn are one part, the angels nine; the angels and the Spirit are ten parts, the angels are one part, the Spirit nine; the Spirit and the Cherubim are ten parts, the Spirit forms one part of it, the Cherubim are nine parts.⁶¹¹

[24] Abū ʿl-Shaykh, al-Bayhaqī in *Shuʿab al-īmān*, al-Khaṭīb and Ibn ʿAsākir thorough the intermediary of ʿUbbād ibn Maṣṣūr from ʿĀdī ibn Aṭṭā from one of his worthy friends - ʿUbbād said: I have forgotten his name - from the Messenger of God (God bless him and grant him salvation); he said: God has angels which tremble [in fear of Him].⁶¹² There is no angel from amongst them that does not shed a tear from its eyes, except an angel found standing, praising God. Angels were prostrating when God created the heavens and the earth and they did not raise their heads,⁶¹³ and they will not raise them until the Day of Resurrection; angels were bowing, and they did not raise their heads, and they will not raise them until the Day of Resurrection; and those that were posted, they have not left their posts, and they will not leave them until the Day of Resurrection. Thus, when it is the Day of Resurrection, it will be made manifest to them by their Lord (may He be praised and glorified) and they will look at Him, and they will say, ‘Praise be to You, we have served You just as we should.’

⁶¹⁰ Given in the Leiden MS as ‘Ibn Khabīb ibn ʿAbd al-Raḥmān...’; fol. 188v, l. 6.

⁶¹¹ If these numbers were read as ‘for every one human there are ten jinn’ the final number of Cherubim would be 10,000 (a myriad - which is a traditional number for counting angels, cf. Deut. 33:2 and Rev. 5:11) for every human; however, as read, the total number are 6,561 cherubim for every human.

⁶¹² Omitted in the Leiden MS; fol. 188v, l. 10.

⁶¹³ cf. Al-Thaʿlabī, *QA* p. 14; Brinner, *Lives*, p. 23.

[25] Ibn Mandah in *al-Maʿrifa* and Ibn ʿAsākir from ʿAbd al-Raḥmān ibn al-ʿĀlāʾ from Banū Sāʿada from his father al-ʿĀlāʾ ibn Saʿd, from someone who submitted on the Day of Victory⁶¹⁴ that the Prophet (God bless him and grant him salvation) said one day at a social gathering, ‘Did you hear what I heard?’ They said: ‘What have you heard, Messenger of God?’ He said, ‘I heard the sky groan, and it could do nothing but groan! There is no place for a foot in it without an angel standing or bowing down or prostrating in [that place]; then he recited: ‘We are the rangers,’⁶¹⁵ We are they that give glory.’⁶¹⁶

[26] Ibn Jarīr from al-Rabīʿ ibn Anas concerning His Word: ‘And he taught Adam the names, all of them’⁶¹⁷ he said: The names of the angels.

4.2.5 The Four Archangels⁶¹⁸ who are in charge of the command of the World

[27] [Ibn Abī Shayba],⁶¹⁹ Ibn Abī Ḥātim, Abū ʿl-Shaykh in *al-ʿAzama*, al-Bayhaqī in *al-Shuʿab* from Ibn Sābīt; he said: Four are in charge of the command of this world:

⁶¹⁴ Namely, the conquest of Mecca – see *AELEX* (1984) p. 2328; cf. Ibn Ishāq, *Sīra*; Guillaume, *Life of Muhammad*, p. 533.

⁶¹⁵ Added in the Leiden MS; fol. 188v, l. 18.

⁶¹⁶ Q 37:166; Arberry, *Koran*, p. 462.

⁶¹⁷ Q 2:31; Arberry, *Koran*, p. 5.

⁶¹⁸ Although there is no designation of ‘archangel’ in Islamic angelology as such, the Greek *αρχαγγελος* is translated into Arabic as *raʿīs malāʾika*; cf. 1Th. 4:16; *UBS* p. 703; and the Mount Sinai Codex 151 (dated to 867 C.E.), Staal, H. (ed.), *Mt. Sinai Codex 151 – I: Pauline Epistles* (Louvain: E. Peeters, 1983) p. 173. This is also the standard translation in modern translations of the Bible into Arabic: see *Kitāb al-ʿahd al-jadīd* (Cambridge: Jamʿīyyat al-tawrā al-brīṭānīyya wa-ʿl-ajnaḥīyya, 1917) p. 233.

⁶¹⁹ Added in the Leiden MS; fol. 188v, ll. 20 – 21.

Gabriel, Michael, the Angel of Death and Isrāfīl.⁶²⁰ As for Gabriel, he is responsible for the winds and the army;⁶²¹ Michael⁶²² is responsible for the rain and the plants;⁶²³ the Angel of Death is responsible for the taking of the souls; and Isrāfīl, he is sent down to them with the command [of God].

[28] Abū 'l-Shaykh from Ibn Sābīt; he said: 'In the *Umm al-Kitāb*, everything will be in existence until the Day of Resurrection, and three of the angels are responsible for preserving [existence]: Gabriel is responsible for the Book, which he brings down to the Messengers, and Gabriel is also responsible for the acts of destruction when God has willed [Gabriel] to annihilate peoples; and he is responsible for victory in battle.⁶²⁴ Michael is responsible for preservation [of life], rain and the plants of the earth. The Angel of Death is responsible for the taking of the souls. When this world comes [to an end], they [will compare] what they have preserved to the *Umm al-Kitāb* (?),⁶²⁵ and they will find it to be the same. Ibn Abī Shayba narrated it.⁶²⁶

[29] Al-Bayhaqī, al-Ṭabarānī and Abū 'l-Shaykh from Ibn 'Abbās; he said: While the Messenger of God (God bless him and grant him salvation) was with Gabriel, who

⁶²⁰ Gabriel is mentioned three times in the Qur'ān (Q 2:97, 98 and 64:4), Michael once (Q 2:98); the Angel of Death once (Q 32:11) and Isrāfīl is not mentioned.

⁶²¹ Gabriel has a similar role in the Talmud; cf. *BB* 74b, p. 297 and *San.* 19b, p. 99 & 95b, p. 644.

⁶²² The Leiden MS reads 'Isrāfīl' in error; fol. 188v, l. 22.

⁶²³ In Islamic tradition, Michael is frequently associated with nature and the sustenance of humans, cf. al-Qazwīnī, *Ajā'ib*, p. 37.

⁶²⁴ Cf. the Battle of Badr; Ibn Ishāq, *Sīra*, pp. 303ff.; Al-Wāqidī, *Kitāb al-Maghāzī* vol. 1, pp. 56 – 57, 79 and 113.

⁶²⁵ The Leiden MS reads: '....*al-dunyā jam' bayn huḏẓihim wamā fī umm al-kitāb fa-yajidūnahu siwā*' fol. 188v, l. 23. However, both the Arabic of the Leiden MS and the DKI edition are unclear, and the ḥadīth appears to be corrupted.

⁶²⁶ Ibn Abī Shayba is mentioned at the start of the ḥadīth in the Leiden MS; fol. 188v, l. 20.

was confiding in him;⁶²⁷ suddenly, the highest heaven was split open and Gabriel began to become smaller and [an angel]⁶²⁸ drew close and came nearer to the earth, and there was an angel standing directly in front of the Messenger of God (God bless him and grant him salvation), he said: ‘Muḥammad, your Lord greets you; and He gives you the choice between becoming an angelic prophet or a human prophet.’⁶²⁹ The Messenger of God (God bless him and grant him salvation) said: Then Gabriel beckoned to me with his hand that I should be humble,⁶³⁰ and I knew that he was my guide, so I said: ‘A human prophet.’

Then that angel ascended into heaven, and I said: ‘Gabriel, I have wanted to ask you about this, but seeing your form⁶³¹ distracted me from my asking the question. Who is this, Gabriel?’ He said: ‘This is Isrāfīl. On the day of his creation, God created him with his feet lined up directly in front of him; he does not look up; between him and the Lord are Seventy Lights; and from these there is no light close to Him, save it being consumed by fire; between his hands is the *Preserved Tablet*,⁶³² when God allows anything in heaven or in earth, that tablet ascends, [descends]⁶³³ and it hits [Isrāfīl] on the forehead. Then [Isrāfīl] sees and if there is anything for me to do, he orders me to do it; and if there is anything for Michael to do, he orders him to do it; and if there is anything for the Angel of Death to do, he orders him to do it.’

⁶²⁷ In Islamic tradition Muḥammad is often alone when he encounters Gabriel, e.g. in the narrative of the first revelation, Muḥammad seeks seclusion on Mount Ḥirā’ before meeting the angel; see al-Bukhārī, Muḥammad ibn Isma‘īl, *Ṣaḥīḥ* (Riyadh: Bayt al-Afkār al-Dawliyya, 1998), §3, pp. 3 – 4.

⁶²⁸ As Gabriel is already with Muḥammad, it must be the other angel (Isrāfīl) who is approaching.

⁶²⁹ Lit.: ‘servant prophet’.

⁶³⁰ Lit.: ‘you should be humble’ – but this does not make sense.

⁶³¹ Lit.: ‘state’ or ‘condition’ – i.e. when Gabriel became small.

⁶³² This is generally considered to be above the Seventh Heaven. Daniel Madigan notes that, ‘Taken literally, [these images of writing] are difficult to read as a whole. Alternatively, they can be read, and often are in the Islamic tradition, as complementary, symbolic representations of God’s knowledge and will.’ Madigan, Daniel A., ‘Preserved Tablet’ *EQ* vol. 4, p. 262.

⁶³³ This is not included in the text, but the Tablet needs to come back down to Isrāfīl.

I said: ‘Gabriel, What are you responsible for?’ He said: ‘For the winds and the army.’ I said: ‘What is Michael responsible for?’ He said: ‘For the plants and the rain.’ I said: ‘What is the Angel of Death responsible for?’ He said: ‘For the taking of the souls.’ [Muḥammad said]: ‘And I do not think that [Isrāfīl] will descend [to earth] until the coming of the Hour. What you have seen [in the way of my behaviour] is nothing but fear of the coming of the Hour.’

[30] Abū ‘l-Shaykh in *al-ʿAzama* from Jābir ibn ʿAbd Allāh; he said: the Messenger of God (God bless him and grant him salvation) said: The creations closest to God are Gabriel, Michael and Isrāfīl; the distance between them and God is a journey of fifty thousand years.⁶³⁴ Gabriel is on his right and Michael on the other, with Isrāfīl between them.

[31] Abū ‘l-Shaykh from Wahb; he said: These four are angels:⁶³⁵ Gabriel, Michael, Isrāfīl and the Angel of Death; [they were] the first of the creations of God, [and they will be] the last whom God will cause to die; [and] the first of those whom God will bring to life; they are the ones who organize a command,⁶³⁶ and they are the ones who carry out an order.⁶³⁷

⁶³⁴ The Leiden MS reads ‘five thousand years’; fol. 189r, l. 12.

⁶³⁵ *Amlāk*: the plural of paucity (*jumʿ al-qilla*) for *malak*— i.e. referring to 3 – 10 angels. Elsewhere in the text no number is given, as it is here. For more on these plurals see Ratcliffe, Robert R., *The Broken Plural Problem in Arabic and Comparative Semitic* (Amsterdam : J. Benjamins, 1998) p. 69f. and ʿAbbās Abū ‘l-Suʿūd, *Al-Fayṣal fī alwān al-jumʿ* (Cairo: Dar al-Maʿārif bi-Miṣr, 1971) pp. 33 – 44.

⁶³⁶ Cf. Q 79:5 and al-Ṭabarī, *Tafsīr* vol. 30, pp. 30 - 31; the *mudabbirāt* are said to be angels.

⁶³⁷ Cf. Q 51:4 and al-Ṭabarī, *Tafsīr* vol. 26, pp. 187 – 188; the *muqassimāt* are said to be angels.

[32]⁶³⁸ Abū 'l-Shaykh from Khālid ibn Abī 'Imrān; he said: Gabriel is the agent of God to His messengers, and Michael receives the Book which is sent up concerning the deeds of the people; and Isrāfīl is in the role of the gatekeeper.

[33] Abū 'l-Shaykh from 'Ikrima ibn Khālid that a man said: 'Messenger of God, which angel is the dearest to God?' He said: 'I do not know.' Gabriel came to him, so he said: 'Gabriel, which of the creations is dearest to God?' He said: 'I do not know.' So Gabriel ascended, then descended and said: 'Gabriel, Michael, Isrāfīl and the Angel of Death. As for Gabriel, he is responsible for war and the messengers; as for Michael, he is responsible every raindrop that falls, every leaf that grows and every leaf that falls; as for the Angel of Death, he is responsible for the taking of the soul of every servant on land and sea; and as for Isrāfīl, he is the intermediary of God between Him and between them.'

[34] al-Ṭabarānī and al-Ḥākim from Abū 'l-Malīḥ from his father, that he was performing the two ritual prostrations of the morning prayers with the Prophet (God bless him and grant him salvation), and he was praying near him; and the Prophet (God bless him and grant him salvation) performed two lively prostrations, and I heard him say three times: 'O God, the Lord of Gabriel, Michael, Isrāfīl and Muḥammad, I take refuge in you from the Fire.'⁶³⁹

⁶³⁸ This ḥadīth is omitted in the Leiden MS; fol. 189r, l. 15.

⁶³⁹ This is said as part of the prayers said during the circumambulation of the Ka'ba during the hajj; see Kamal, Ahmad, 'The Sacred Journey' in A. de L. Rush (ed.), *Records of the Hajj – Vol. 1: Prayer, Invocations and Rites* (London: Archive Editions), p. 159; it is also reminiscent of Q 11:47; 23:97 and 23:98; Arberry, *Koran*, pp. 216 and 350.

[35] Aḥmad in *al-Zuhd* from ʿĀ'isha that the Prophet (God bless him and grant him salvation) fainted while his head was in her lap,⁶⁴⁰ and she began to stroke his face and pray for him to be cured. When he came to, he said: 'No! Do not ask God! The highest companion is with Gabriel, Michael, Isrāfīl - peace be upon them.'

4.2.6 Gabriel (peace be upon him)⁶⁴¹

[36] Ibn Jarīr and Abū 'l-Shaykh from ʿAlī ibn Ḥusayn; he said: Gabriel's name [means] 'Servant (ʿabd) of God', Michael's name [means] 'Servant (ʿubayd)⁶⁴² of God', and Isrāfīl [means] 'Servant (ʿabd) of the Merciful'; Everything derives from *Īl*, that is the temple of God⁶⁴³ – may He be praised and glorified.

[37] Ibn Jarīr from Ibn ʿAbbās; he said: Gabriel [means] 'the Servant of God'; Michael [means] 'the Servant of God'; every name has *Īl* in it, and this means 'the Temple of God.'

[38] Ibn Abī Ḥātim and Abū 'l-Shaykh from ʿAbd al-Azīz ibn ʿUmayr; he said; Gabriel's name amongst the angels is 'Servant of His Lord' – may He be praised and glorified.

⁶⁴⁰ cf. al-Bukhārī, *Saḥīḥ* §2, p. 3.

⁶⁴¹ This and almost all of the chapters that follow, begin with the phrase '*mā jā'a fī...*' = 'what is said / found concerning...'. This has not been translated.

⁶⁴² *ʿUbayd* is the diminutive of *ʿabd* (see Lane, *AELex*, p. 1935); the use of the diminutive may be being used to lower the status of Michael, who is the dominant angel in Judaism (cf. Hag 12b & Ber 4b) and promote Gabriel. This trend can be seen in other Islaimc eschatological texts, see Bowman, 'Eschatological Fragment' pp. 203 – 204.

⁶⁴³ From the Hebrew '*el*' which is the standard word for 'God' not 'temple of God'; see *BDB*, p. 41. The *TA* does not contain any of these temple etymologies, and simply states that it is a name of God; see al-Zabīdī, *TA* vol. 28, pp. 45 – 46.

[39] Abū 'l-Shaykh from Mūsā ibn Abī 'Ā'isha; he said; I heard that Gabriel is the Imām of the people of Heaven.

[40] Al-Ṭabarānī from Ibn 'Abbās; he said: the Messenger of God (God bless him and grant him salvation) said: Indeed, I tell you that the best of the angels is Gabriel.

[41] Muslim from Ibn Mas'ūd; he said: the Messenger of God (God bless him and grant him salvation) saw Gabriel, in a green⁶⁴⁴ robe; he filled the space between Heaven and Earth.

[42] Abū 'l-Shaykh from 'Ā'isha that the Messenger of God (God bless him and grant him salvation) said: I saw Gabriel descending and he filled the space between East and West, wearing a silk gown⁶⁴⁵ encrusted with pearls and rubies.⁶⁴⁶

[43] Abū 'l-Shaykh from 'Ā'isha (God be pleased with her);⁶⁴⁷ she said: the Messenger of God (God bless him and grant him salvation) said to Gabriel: 'I would

⁶⁴⁴ *khadrā'* can also indicate blue: 'Das Wort bezeichnet die den ganzen dunklen Farbbereich umfassende Grundfarbe, sowohl 'grün' als auch 'blau'.' Fischer, Wolfdietrich, *Farb- und Formbezeichnungen in der Sprache der altarabischen Dichtung* (Wiesbaden: Otto Harrassowitz, 1965) p. 306. It would seem more likely to be green as in the Qur'ān green is closely associated with God and paradise – see Rippin, Andrew, 'Color' *EQ* vol. 1, pp. 361 – 365. Ibn Khaldūn also includes a ḥadīth in which Khadījah says: '...green and white are the colours of goodness and the angels.' Ibn Khaldūn, *Muqaddima*, p. 74; Rosenthal, *Muqaddimah*, vol. 1, p. 186.

⁶⁴⁵ Silk was very expensive and in the Qur'ān it is associated with the paradise and redemption: 'Clearly referring to the cultural context of the qur'ānic revelation, a recurrent image presents the redeemed as garbed in silk or other fine fabrics and wearing valuable jewels.' Golnald, V., 'Silk' *EQ* vol. 5, p. 11. Being described in this way, Gabriel is firmly rooted in the divine world. For more on silk and the development of the silk-trade in early Islamic history see: Lombard, Maurice, *Les textiles dans le monde musulman: VII^e – XII^e siècle* (Paris: Mouton Editeur, 1978) pp. 79 – 104.

⁶⁴⁶ Rubies, pearls and coral are the only precious stones mentioned in the Qur'ān and they are only used in passages about paradise; see Troupeau, Gérard, 'Metals and Minerals' *EQ* vol. 3, pp. 383 – 384. Pearls are also associated with the First and Seventh Heavens – see MacDonald, John, 'Paradise' *IS* 5 (1966), p. 344.

⁶⁴⁷ Omitted in the Leiden MS; fol. 189v, l. 16.

like to see you in your image.’ He said: ‘You would like that?!’ He said: ‘Yes.’ He said: ‘Your appointed time is on such and such a night at Baqī^c al-Gharqad.’⁶⁴⁸ So he met him at the appointed time, and he spread out one of his wings,⁶⁴⁹ and it blotted out the horizon until he could not see anything in the sky.

[44] Abū ‘l-Shaykh from Ibn Mas‘ūd concerning His Word: ‘Indeed he saw him another time.’⁶⁵⁰ He said: The Messenger of God (God bless him and grant him salvation) saw Gabriel hanging in the air, on his feet were pearls, like raindrops on the grass.

[44b]⁶⁵¹ Al-Ṭabarānī from Ibn ‘Abbās from Waraqa al-Anṣārī; he said: I said: ‘Muḥammad, how does the creature, [which comes to you],⁶⁵² come to you?’ – meaning Gabriel; He said: ‘He comes to me from the sky, his two wings are pearls and the soles of his feet are green.

[45] Abū ‘l-Shaykh and Ibn Mardawayh from Anas; he said: The Messenger of God (God bless him and grant him salvation) said to Gabriel: ‘Do you see your Lord?’ He said: ‘Between me and Him there are seventy veils⁶⁵³ of fire and light, if I were to see the lowest of them, I would be consumed by fire.’

⁶⁴⁸ The oldest cemetery in Medina in the South-East of the town; for more information, see Wensinck, A. J. [-Bazmee Anasri, A. S.], ‘Baqī^c al-Gharqad’ *EF*² vol. 1, pp. 957 – 958.

⁶⁴⁹ Gabriel is also believed to have six hundred wings; cf. al-Rabghūzī, Naṣīr al-Dīn ibn Burhān al-Dīn; Boeschoten, H. E., O’Kane, J. & Vandamme, M., *Al-Rabghūzī: The Stories of the Prophets – Qışaş al-anbiyā’ – An Eastern Turkish Version* (Leiden: Brill, 1995) vol. 2, p. 596.

⁶⁵⁰ Q 53:13; Arberry, *Koran*, p. 550.

⁶⁵¹ The DKI edition includes two ḥadīth with the number 44; so as to maintain the DKI numbering, the second 44 has been labelled 44b; it is not an edition of the Leiden MS.

⁶⁵² Omitted in the Leiden MS; fol. 189v, l. 12.

⁶⁵³ Here, as in the Qur’ān, *hijāb* refers to a dividing curtain as opposed to a face veil; see Toorawa, Shawkat M., ‘Clothing’ *EQ* vol. 1, pp. 346 – 347.

[46] Abū 'l-Shaykh from Shurayḥ ibn 'Abd Allāh that the Prophet (God bless him and grant him salvation) when he ascended into Heaven, saw Gabriel in [his] true form,⁶⁵⁴ his wings strung with chrysolites, pearls and rubies; he said: 'It seemed to me that the space between his eyes filled the horizon, but I used to see him before that in a different form and more often I used to see him in the form of Diḥya al-Kalbī,⁶⁵⁵ and sometimes I used to see him just as a man sees his friend through the bottom of a sieve.⁶⁵⁶

[47] Aḥmad, Ibn Abī Ḥātim and Abū 'l-Shaykh from Ibn Mas'ūd that the Messenger of God (God bless him and grant him salvation) only saw Gabriel in his true form twice; as for the first time, he asked to see his soul, and he saw his soul, and it filled the horizon; as for the other, it was on the Night Journey 'by the Lote-Tree.'⁶⁵⁷

[48] Abū 'l-Shaykh the intermediary of⁶⁵⁸ 'Aṭā' from Ibn 'Abbās from the Prophet (God bless him and grant him salvation) said: The space between Gabriel's shoulders is a [journey of]⁶⁵⁹ five hundred years for a quick-flying bird.

[49] Abū 'l-Shaykh through the intermediary of Ishāq al-Hāshimī⁶⁶⁰ from Ibn 'Abbās from the Prophet (God bless him and grant him salvation); he said: Gabriel has six

⁶⁵⁴ This is a common theme of the *mī'rāj* literature: cf. al-Rabghūzī, *QA*, vol. 2, pp. 595 – 596.

⁶⁵⁵ Diḥya al-Kalbī is said to have been of 'such outstanding beauty that the Angel Gabriel took his features.' Lammens, 'Diḥya' p. 274; cf. Al-Rabghūzī, *QA*, vol. 2, p. 595.

⁶⁵⁶ *Ghirbāl* can also mean a tambourine (see *TA* vol. 30, pp. 87 – 89), but the haziness of looking through the bottom of a sieve is the main idea here.

⁶⁵⁷ Q 53:14; Arberry, *Koran*, p. 550; according to Al-Tha'labī this is the abode of Gabriel, see Al-Tha'labī, *QA* p. 17; Brinner, *Lives*, p. 28.

⁶⁵⁸ A number of the ḥadīth include the phrase '*min tarīq...*' = 'through the intermediary of...'; see Appendix E for more information on these intermediaries.

⁶⁵⁹ Omitted in the Leiden MS; fol. 189v, l. 23.

hundred wings [adorned] with pearls and he spread them out like peacocks' feathers.⁶⁶¹

[50] Ibn Jarīr from Ḥudhayfa, Ibn Jurayj⁶⁶² and Qatāda – the Tradition came from amongst them: Gabriel has two wings, and he has a belt strung with pearls;⁶⁶³ his front teeth shine like a bald forehead; his head is platted tightly like small pearls, and the pearls are like snow; his feet are greenish.

[51] Abū 'l-Shaykh from Wahb ibn Munabbih that he was asked about the creation of Gabriel; he reported that the space between his shoulders, from this one to that one, is [a journey]⁶⁶⁴ of seven hundred years for a bird.

[52] Ibn Sa'd and al-Bayhaqī in *al-Dalā'il* from 'Ammār ibn Abī 'Ammār that Ḥamza ibn 'Abd al-Muṭṭalib said: 'Messenger of God, show me Gabriel in his true form.' He said: 'You are not able to see him.' He said: 'Yes, but show him to me.' He said: 'Sit down!' So he sat down; [then] Gabriel [came down and]⁶⁶⁵ was on a piece of wood in the Ka'ba. The Prophet (God bless him and grant him salvation)

⁶⁶⁰ The Leiden MS gives the fuller name; fol. 189v, l. 24.

⁶⁶¹ The *Yezīdīs* (a Kurdish sect) venerated a peacock angel (*malak ta'ūs*); see Ebeid, R. Y., and Young, M. J. L., 'An Account of the History and Rituals of the Yazīdīs of Mosul' *Le Muséon* 85 (1972) pp. 481 – 522; see also Ahmed, Sami Said, *The Yazidis: Their Life and Beliefs* (Miami: Field Research Projects, 1975). For more general information on the Yezīdīs see Kreyenbroeck, Philip G., 'Religion and Religions in Kurdistan' in Philip G. Kreyenbroeck and Christine Allison (eds.), *Kurdish Culture and Identity* (London: Zed Books Ltd, 1996) pp. 85 – 110. However, the more likely influence is Byzantine / Christian, as peacocks were associated with heaven and paradise and appropriated into Islamic iconography, see al-Khamis, Ulrike, 'An early Islamic bronze ewer examined' *Muqarnas* 15 (1998) pp. 9 – 19, particularly p. 12.

⁶⁶² Given as Ibn Jarīr in the Leiden MS, but this appears to be an error; fol. 189v, l. 26.

⁶⁶³ A belt is referred to once in the Talmud, *Men.* 29a, p. 188.

⁶⁶⁴ *khafq al-tayr* = the beating of (the wings of) the bird.

⁶⁶⁵ Added in the Leiden MS; fol. 190r, l. 1.

said: 'Raise your eyes and look!' So he raised his eyes and looked and he saw his feet, like green chrysolite; and he fell down unconscious.

[53] Ibn al-Mubārak in *al-Zuhd* from Ibn Shihāb that the Messenger of God (God bless him and grant him salvation) asked Gabriel to show himself to him in his true form. Gabriel said, 'You will never be able to bear it.' He said, 'I would like you to do it.' So the Messenger of God (God bless him and grant him salvation) went to pray on a moonlit night and Gabriel came to him in his true form. And the Messenger of God (God bless him and grant him salvation) fainted as soon as he saw him, then he came round while Gabriel supported him, placing one of his hands upon his chest and the other between his shoulder blades, and the Messenger of God (God bless him and grant him salvation) said: 'I did not think that there could be a creation like that!' Gabriel said: 'Just imagine what it would have been like if you had seen Isrāfīl! He has twelve wings, of which one is in the East and one is the West; the Throne is on the nape of his neck, and sometimes, for the glory of God, he makes himself smaller until he has become like a small sparrow⁶⁶⁶ so that only [God's] glory can carry His Throne.⁶⁶⁷

[54] Ibn Mardawayh from Ibn ʿAbbās that the Prophet (God bless him and grant him salvation) said: Gabriel came to me just as a man comes to his friend in a white gown,⁶⁶⁸ hemmed with pearls and precious stones, his head is like a mountain⁶⁶⁹ and

⁶⁶⁶ *Al-waṣṣ* or *al-waṣaʿ*; a small bird, like a sparrow (*ʿuṣfūr*); see Ibn Manẓūr, *LA*, vol. 10, p. 276; Ibn Manẓūr also cites this ḥadīth.

⁶⁶⁷ This ḥadīth is also in the short section on Gabriel in al-Qazwīnī's *ʿAjāʾib*, p. 37.

⁶⁶⁸ This is a motif carried through into Islamic tradition from Judeo-Christian imagery: cf. Ezekiel 9:3; 10:2; Daniel 7:9; John 20:12 &c.

his hair like small pearls, and he is the colour of snow,⁶⁷⁰ [he has a] bald forehead [which] is [like] the glistening of the front teeth, and he [wears] two belts made of strung pearls, and his two wings are green and his feet are immersed in green, and the form which he takes fills the horizon. [The Prophet] (God bless him and grant him salvation) said: ‘I wanted to see you in your true form, Spirit of God.’⁶⁷¹ Then he transformed himself and filled the horizon.

[55] Ibn ʿAsākir in a weak chain of authority⁶⁷² from ʿĀʾisha; she said: the Messenger of God (God bless him and grant him salvation) said: God created Gabriel’s skull as large as the oasis of al-Ghūta.⁶⁷³

[56] al-Ṭabarānī from Ibn ʿAbbās; he said: the Messenger of God (God bless him and grant him salvation) visited a man from among the *Ansār*; when he came near to his home, he heard him talking in the doorway. After he had sought permission [to enter], he entered, but he did not see anyone. The Messenger of God (God bless him and grant him salvation) said to him: ‘I heard someone other than you talking.’ He said: ‘Messenger of God, [I entered, worried by [the sound] of someone talking, which I sought sanctuary from]’⁶⁷⁴ and he came to me. I have never seen a more noble man after you sitting there and there is no better narrator than him.’ He said: ‘That is

⁶⁶⁹ The Leiden MS reads ‘*ka-l-ḥubk*’ (cf. Q 51:7), but the meaning is unclear; the DKI reading is more suitable; fol. 190r, l. 12.

⁶⁷⁰ Lit.: ‘his colour is like snow...’

⁶⁷¹ Gabriel is frequently identified with the *ruh al-qadūs*; see Griffith, Sidney H., ‘Holy Spirit’ *EQ* vol. 2, pp. 442 - 444 and Webb, Gisela, ‘Gabirel’ *EQ* vol. 2, pp. 278 – 280.

⁶⁷² The ḥadīth scholar Ibn al-Ṣalāḥ defines a weak ḥadīth simply as one which is neither sound (*ṣaḥīḥ*) nor fair (*ḥasan*) i.e. any ḥadīth in which there are questions concerning the veracity of one of the authorities in the *isnād*; see Ibn al-Ṣalāḥ al-Shahrazūrī (tr. E. Dickinson), *An Introduction to the Science of the Ḥadīth – Kitāb maʿrifat anwāʿ ʿilm al-ḥadīth* (Reading: Garnet Publishing, 2005) p. 25.

⁶⁷³ An area of orchards and gardens in Damascus fed by the Baradā; thought to be one of the four earthly paradises; see Elisséeff, N., ‘*Ghūta*’ *EF* vol. 2, pp. 1104 – 1106.

⁶⁷⁴ Added in the Leiden MS; fol. 190r, l. 20.

Gabriel. From amongst you there is a man; if one of them swears an oath by God, then [Gabriel] will fulfil it.⁶⁷⁵

[57] Abū Nuʿaym in *al-Hilya* from ʿIkrima; he said: Gabriel (peace be upon him) said: ‘If my Lord sends me to do something, and I then go to it; I find the being, but He has arrived there before me.’

[58] Al-Ṭabarānī from Maymūna bint Saʿd; she said: I said: ‘Messenger of God, can someone in a state of ritual impurity⁶⁷⁶ go to sleep?’ He said: I do not like him to go to sleep until he has performed the ritual ablutions, for I fear that if he dies, then Gabriel will not be with him.

[59] Abū ʿl-Shaykh from Wahb; he said: The angel closest to God is Gabriel, then Michael. If God singled out a servant for a very good action that he did; He says so-and-so has done such-and-such a pious act, My blessings are upon him; then Michael asks Gabriel: ‘What did our Lord say?’ And he says: ‘So-and-so was singled out for a very good action that he did, and the blessings of God are upon him.’ Then Michael asks: ‘Which of the people of heaven can see him?’ They say: ‘What did our Lord say?’ And he says: ‘So-and-so was singled out for a very good action that he did, and the blessings of God are upon him.’ And it continues to descend from heaven to heaven until it reaches the earth. If God singled out a servant for a very bad action that he did; he says: ‘My servant, so-and-so, has done such-and-such a disobedient act, my curse is upon him.’ Then Michael asks Gabriel: ‘What did our Lord say?’

⁶⁷⁵ In the DKI Edition, this is marked as a Qurʾānic quotation, but it is not.

⁶⁷⁶ Particularly ritual impurity after sexual intercourse, after which ablutions are necessary; for more on ritual purity laws see Burton, ‘Practice of *wuḍūʿ*’.

And he says: ‘So-and-so was singled out for a very disobedient action that he did, and the curse of God is upon him.’ And it continues to descend from heaven to heaven until it reaches the earth.⁶⁷⁷

[60] al-Ṣābūnī in *al-Miʿatayn* and al-Bayhaqī in *Shuʿab al-īmān* from Jābir ibn ʿAbd Allāh, from the Prophet (God bless him and grant him salvation); he said: Gabriel is responsible for the human desires. If a believer prays, then [God]⁶⁷⁸ says: ‘Gabriel withhold from my servant what he wants,⁶⁷⁹ for I love him and I love his voice.’ If a non-believer prays, God says: ‘Gabriel, give my servant what he wants, for I hate him and I hate his voice.’

[61] al-Bayhaqī from Thābit, he said; we heard that God, Most High, made Gabriel (peace be upon him) responsible for the needs of the people. When a believer asks for something, He says: ‘Gabriel, withhold from my servant what he wants, for I love his prayer.’ If a non-believer asks for something, God says: ‘Gabriel, give my servant what he wants, for I hate his prayer.’ Al-Bayhaqī said this is how it was given [to me] (*maḥfūẓ*).

[62] Ibn Abī Shayba through the intermediary of Thābit from ʿAbd Allāh ibn ʿUmar;⁶⁸⁰ he said: Gabriel is responsible for needs; if a believer asks his Lord for something, He says: ‘Hold back! Hold back out of love for his prayer, so that [his

⁶⁷⁷ A similar ḥadīth to this appears in the *Qīṣaṣ al-anbiyyāʾ* – see Al-Thaʿlabī, *QA* p. 153 - 154; Brinner, *Lives*, p. 255.

⁶⁷⁸ Omitted in the Leiden MS; fol. 190v, l. 5.

⁶⁷⁹ Lit.: ‘Hold back the need of my servant’ and ‘Fulfill the need of my servant’. In Islamic belief, having ones needs fulfilled can lead to faithlessness in God; cf. ‘Sometimes He gives while depriving you, and sometimes He deprives you in giving.’ Ibn ʿAtāʾ Allāh, Aḥmad ibn Muḥammad, *Kitāb al-Hikām*; Victor Danner (tr.), *Ibn ʿAtāʾ illāh’s Sūfī Aphorisms* (Leiden: Brill, 1973) §83, p. 36.

⁶⁸⁰ Given as ʿAbd Allāh ibn ʿUmayr in the Leiden MS; fol. 190v, l. 10.

prayer] may increase.’ If an unbeliever asks for something, He says: ‘Give it [to him]! Give it [to him] out of hatred for his prayer.’

[63] al-Ḥakīm al-Tirmidhī from Abū Dharr; he said; When God says: ‘Gabriel, take away from the believing heart of my servant the sweetness which I used to find. He said: ‘The faithful servant has become a confused disciple, whose soul used to be protected. I have sent him misfortune, the like of which had never been sent to him before.’ When God saw him in that state, he said: ‘Gabriel, go back to the heart of my servant. I did not take it away from him. Indeed, I have put him to the test, and I find him truthful, and I will help him increasingly from my heart.

[64] Abū ‘l-Shaykh from ‘Amr ibn Murra; he said: Gabriel is on the South Wind.

[65] Ibn ‘Asākir in his *Ta’rīkh* from ‘Alī; he said: the Messenger of God (God bless him and grant him salvation) said: I did not choose to see Gabriel (peace be upon him) perched on the curtains of the Ka‘ba, as he said: ‘O the one who finds, O illustrious one; you never cease from blessing me; yet you bestow it upon me, without having seen Him.’

[66] Abū ‘l-Shaykh from ‘Abd al-Azīz ibn Abī Ruwād; he said: God looked at Gabriel and Michael, and the two of them were crying; so God said: ‘What has made you cry? You know that I have not committed an outrage.’ The two said: ‘Lord, we

do not feel safe from your devising.’ And He said this, and they were affected by it: ‘The only ones who feel safe from my devising are all the losers.’⁶⁸¹

[67] Imām Aḥmad in *al-Zuhd* from Abū ʿImrān al-Jawni that he heard that Gabriel came to the Prophet (God bless him and grant him salvation) crying and the Messenger of God (God bless him and grant him salvation) said to him: ‘What is making you cry?’ He said: ‘Why should the mouth of God not make me cry? I did not dry my eyes when God created the Fire; for fear that I might disobey him, he threw me into it.’

[68]⁶⁸² al-Bayhaqī in *Shuʿab al-īmān*, Abū Muḥammad ʿAbd Allāh ibn Yūsuf al-Iṣfahānī⁶⁸³ informed us, Abū Bakr Aḥmad ibn Saʿīd ibn Farḍakh al-Akhmīmī informed me in Mecca; al-Walīd ibn Ḥamād told us; [Abū Muḥammad ʿAbd Allāh ibn al-Faḍl ibn ʿĀsim ibn ʿUmar ibn Qatāda ibn al-Nuʿmān al-Anṣārī; Abū ʿl-Faḍl narrated it from his father ʿĀsim from his father ʿUmar from Qatāda ibn al-Nuʿmān; he said: The Messenger of God (God bless him and grant him salvation) said:]⁶⁸⁴ ‘God sent Gabriel (peace be upon him) down in the most beautiful form of what had come to me in form, and he said: ‘God salutes you, Muḥammad, and He says to you: “I revealed to the world, in such a way that [the world] should be bitter, troubling, oppressive and that it should act harshly towards my close associates, so that they

⁶⁸¹ This is almost a direct quotation of Q 6:99 ‘None feels secure against God’s devising but the people of the lost.’ Arberry, *Koran*, p. 155.

⁶⁸² In both the DKI edition and Leiden MS, there is no ‘*akhraja*’ at the beginning of this ḥadīth; fol. 190v, l. 26.

⁶⁸³ Al-Suyūṭī occasionally includes the whole *isnād*, if there is some concern over the *isnād* (see the end of this ḥadīth).

⁶⁸⁴ The Leiden MS gives a slightly different version of the section of the *isnād*: Muḥammad ibn ʿAbd Allāh ibn al-Faḍl ibn ʿĀsim from ʿAmr ibn Qatāda ibn ʿUmar ibn Qatāda ibn al-Nuʿmān al-Anṣārī from his father, Qatāda ibn al-Nuʿmān; he said: the Messenger of God (God bless him and grant him salvation) said...; fol. 190v, ll. 27 – 29.

want to meet me; and that [the world] should be [made comfortable, agreeable, and good for my enemies, so that they are loathe to meet me].⁶⁸⁵ Indeed, I created it as a prison for my friends and a paradise for my enemies.’ Al-Bayhaqī said: We only write it with this *isnād* and there are unknown⁶⁸⁶ things in it(?).⁶⁸⁷

[69] Ibn ‘Asākir from Wāthila ibn al-Asqa^c; he said: the Prophet (God bless him and grant him salvation) came to a curly-haired,⁶⁸⁸ cross-eyed, short-necked, feet-deformed, small-eared,⁶⁸⁹ left-handed, emaciated Yemeni who walked with his legs apart, he said: ‘Messenger of God, explain to me what God has given me.’ When he told him, he said: ‘I swear to God that I will not do any more religious duties.’ He said: ‘Why [do] that?’ He said: ‘Because he created me, and created me deformed.’ Then he ran away. So Gabriel came to [Muhammad] and said: ‘Muhammad, where is the one who rebuked [God]? He rebuked a beautiful Lord, so He has castigated him. [God] said: ‘Say to him: Truly, [Messenger of God],⁶⁹⁰ he should be happy that God will send him in the image of Gabriel on the Day of Resurrection.’ So he said [this] to him; and he said: ‘Yes, Messenger of God, I am rebuking God for not making my body sufficiently strong to do any of the duties that please God except what the deeds

⁶⁸⁵ Omitted in the Leiden MS; fol. 191r, l. 1.

⁶⁸⁶ The validity of a ḥadīth that includes an unknown transmitter (*majhūl*) is disputed in Ḥadīth scholarship; see Ibn al-Ṣalāḥ, *Kitāb ma‘rifāt*, p. 85; however the Arabic text does not appear to be referring to *isnād*.

⁶⁸⁷ This appears to refer to the various *isnāds*, but one would normally expect *–hā* instead of *–hum*.

⁶⁸⁸ Evil is traditionally portrayed by ugliness, for example the Antichrist (*al-Dajjāl*) is described as a human with a number of deformities, so much so that ‘...even a Jewish man named Ibn Sayyād (d. 683) was believed to be the Antichrist and was nearly killed by Omar...’ Saritoprak, ‘Legend of al-Dajjāl’ p. 292. However, this ḥadīth is more likely to simply be describing someone with the most afflictions possible, rather than portraying him as being evil.

⁶⁸⁹ The Leiden MS reads ‘*adjam*’, which according to Lane is ‘...having a nose that inclines towards one side of the face.’ (i.e. a crooked nose), see Lane, *AELex*, p. 1770; fol. 191r, l. 3.

⁶⁹⁰ Added in the Leiden MS; fol. 191r, l. 7.

that I have done for him.’ On this [*ḥadīth*] al-‘Alā ibn Kathir said: al-Bukhārī did not accept this *ḥadīth*.⁶⁹¹

[70]⁶⁹² Abū ‘l-Shaykh from Sa‘īd ibn Jubayr concerning His Word: ‘Save only to such a messenger as He is well-pleased with: then He despatches before him and behind him watchers.’⁶⁹³ He said: He only sends down Gabriel for the Revelation, and with him are four angelic *ḥuḥfaẓa*.

[71] al-Ṭabarānī in a chain of trusted authorities (*bi-‘snād rijālihi thiqāt*)⁶⁹⁴ from Umm Salama that the Prophet (God bless him and grant him salvation) said: In Heaven there are two angels; one of the two is responsible for misery and the other is responsible for tenderness; the appropriate ones responsible are Gabriel and Michael. And there are two Prophets, one of the two is responsible for tenderness and the other is responsible for misery, the appropriate ones are responsible, [and he said that these are Abraham and Noah. I have two companions; one of the two is responsible for tenderness and the other for misery.]⁶⁹⁵ The appropriate one is responsible and he mentioned Abū Bakr and ‘Umar.⁶⁹⁶

⁶⁹¹ *Munkar* is used both of rejected and unfamiliar ḥadīth; many ḥadīth scholars rejected ḥadīth attributed to transmitters designated *munkar*, e.g. Muslim, Ibn al-Ḥajjāj al-Qushayrī, *Ṣaḥīḥ*; *Ṣaḥīḥ Muslim bi-sharḥ al-Nawawī* (Beirut: Dār al-Kitāb al-‘Arabī) vol. 1, pp. 55 - 56; however some ḥadīth scholars did accept these ḥadīth, see Ibn Ṣalāḥ, *Kitāb ma‘rifāt*, p. 59, n. 1. See also, Juynboll, G. H. A., ‘Muslim’s Introduction to his *Ṣaḥīḥ*, Translated and Annotated with an excursus on the chronology of the *fitna* and *bid’a*’ *JSAL* 5 (1984) pp. 263 – 302, p. 269, n. 9.

⁶⁹² In the Leiden MS there is an empty space left between *akhraja* and Abū ‘l-Shaykh, an author’s name may be missing; fol. 191r, l. 9.

⁶⁹³ Q 72:27; Arberry, *Koran*, p. 613.

⁶⁹⁴ *Thiqāt* is the technical term for reliable authorities, as opposed to an unreliable authorities (*ḍu‘afā’*); various ḥadīth scholars collected volumes listing reliable and unreliable authorities, e.g. al-Bukhārī, *Kitāb al-ḍu‘afā’ al-saghīr* (Aleppo: Dār al-Wā‘ī, 1976).

⁶⁹⁵ Omitted in the Leiden MS; fol. 191r, l. 14.

⁶⁹⁶ For a discussion of Abū Bakr and ‘Umar, cf. Al-Suyūṭī (ed. Muḥammad Muḥyī al-Dīn ‘Abd al-Ḥamīd), *Ta’rīkh al-khulafā’* (Cairo: Maktabat al-Tajārīyya al-Kubrā, 1389 / 1969) pp. 44 – 48; Jarret, H. S. (tr.), *History of the Caliphs* (repr. Karachi: Krimsons, 1977) pp. 40 – 41.

[72] Abū ‘l-Shaykh from Ibn Mas‘ūd; he said: Gabriel came to the Prophet (God bless him and grant him salvation) and he said: ‘Gabriel, I think that I have good standing with you.’ He said: ‘Of course – by the One who sent you in Truth! I have not been sent to a prophet whom I have loved more than you.’ He said: ‘I would like you to tell me about my standing with you here.’ He said: ‘I am able to do that.’ He said: ‘By the One who sent you in truth! I was drawn unprecendently close to my Lord [regarding my standing], and I have never approached the like of him before. And He had decreed that I could approach Him. It was a journey of five hundred years. The closest creation of God (may he be praised and glorified) is Isrāfīl. And [Isrāfīl] decreed that [Muḥammad] could approach [Isrāfīl]; the distance [between Isrāfīl and God(?)]⁶⁹⁷ is a journey of seventy years; among them are seventy lights and the lowest light blinds the eyes, so how could I have come to know what is beyond that? But it appeared to me on the Tablet;⁶⁹⁸ then he called us and then sent us away.

[73] Aḥmad in *al-Zuhd* from Rabbāḥ; he said: I narrated that the Prophet (God bless him and grant him salvation) said to Gabriel: ‘You only come to me looking like you are grieving.’⁶⁹⁹ He said: ‘I have not laughed since the Fire was created.’⁷⁰⁰

[74] al-Firyābī⁷⁰¹ and Ibn Mardawayh from Anas; he said: the Messenger of God (God bless him and grant him salvation) said: ‘For the trumpet⁷⁰² shall be blown and

⁶⁹⁷ The text is unclear here.

⁶⁹⁸ i.e. Muḥammad approaches God, but can only go as far as Isrāfīl, the angel nearest to God. Muḥammad is told what exists beyond Isrāfīl by the Tablet.

⁶⁹⁹ See Lane for a discussion of this idiomatic expression, *AELex*, p. 1673.

⁷⁰⁰ This ḥadīth appears again with Michael and Isrāfīl being the angels who do not laugh; see §79 & 97.

whosoever is in the heavens and whosoever is in the earth shall swoon, save whom God wills.’⁷⁰³ They said: ‘Messenger of God, who are these whom God, may he be praised and glorified, will exclude?’ He said: ‘Gabriel, Michael, the Angel of Death, Isrāfīl and the Bearers of the Throne. For when God grasps the souls of the created beings, he will say to the Angel of Death: ‘Who remains?’ And he will say: ‘I praise you, my Lord, and I extol the One of Glory and Generosity. Gabriel, Michael, Isrāfīl and the Angel of Death remain.’ And he will say: ‘Take the soul of Isrāfīl!’ So he will take the soul of Isrāfīl. And God will say to the Angel of Death: ‘Who remains?’ And he will say: ‘I praise you and I bless my Lord and extol the One of Glory and Generosity. Gabriel, Michael and the Angel of Death remain.’ And He will say: ‘Take the soul of Michael!’ So he will take the soul of Michael, and he will fall down like a great mountain. And He will say: ‘Angel of Death, who remains?’ He will say: ‘Gabriel [and]’⁷⁰⁴ the Angel of Death.’ And He will say: ‘Die, Angel of Death!’ and he will die. Then He will say: ‘Gabriel, who remains?’ And he will say: ‘Your eternal and everlasting face remains.’ And Gabriel is about to die and pass away. He said: it was necessary for him to die, and he fell down prostrating, his wings flapping.

He said; the Messenger of God (God bless him and grant him salvation) said that he preferred his creation over the creation of Michael as a great mountain.

⁷⁰¹ This could be either Abū Bakr Jaʿfar ibn Muḥammad ibn al-Ḥassan al-Firyābī (d. 301 / 913) or Abū ʿAlī Muḥammad ibn Yūsuf ibn Wāqid al-Firyābī (d. 212 / 827). Abū Bakr was a ḥadīth collector and Abū ʿAlī was an exegete; as this is an exegetical ḥadīth it is difficult to ascertain which al-Firyābī is meant; See Sezgin, *GAS*, vol. 1, pp. 40 & 166.

⁷⁰² For more on the trumpet that heralds the resurrection see: Smith, Jane I., ‘Eschatology’ *EQ* vol. 2, pp. 47 – 48.

⁷⁰³ Q 39:68; Arberry. *Koran*, p. 479.

⁷⁰⁴ This appears to be an error in the text and ‘wa-’ has been added following earlier examples above.

[75] Ibn Mardawayh and al-Bayhaqī in *al-Ba^cth* from a *ḥadīth* attributed to Anas concerning His Word: ‘For the trumpet shall be blown...’⁷⁰⁵ (and the rest of the verse); he said: From these God, may He be praised and glorified, will exclude three: Gabriel, Michael and the Angel of Death. God, the most knowledgeable, will say: ‘Angel of Death, who remains?’ And he will say: ‘Your eternal and compassionate face remains and your servant Gabriel, and Michael and the Angel of Death.’ He will say: ‘Take the soul of Michael.’ Then God, the most knowledgeable, will say: ‘Angel of Death, who remains?’ And he will say: ‘Your eternal face remains and your servant Gabriel and the Angel of Death.’ He will say: ‘Take the soul of Gabriel.’ Then He, the most knowledgeable, will say: ‘Angel of Death, who remains?’ And he will say: ‘Your eternal and generous face remains and your servant the Angel of Death.’ When he is about to die, he will say: ‘Die!’ Then he will proclaim: ‘I began the creation then I take it back.’

[76] Ibn Abī Ḥātim from ‘Aṭā’ ibn al-Sā’ib; he said: The first among those who are held to account is Gabriel because he is the faith of God to His messengers.

[77] Ibn Jarīr from Ḥudhayfa; he said: The one responsible for the Scales⁷⁰⁶ on the Day of Resurrection is Gabriel (peace be upon him).

⁷⁰⁵ Q 39:68; Arberry, *Koran*, p. 479.

⁷⁰⁶ Cf. Q 42:17 & 55:7-9, Arberry; *Koran*, pp. 500 & 557.

4.2.7 Michael (Peace be upon him)

[78] Ibn al-Mundhir⁷⁰⁷ from ʿIkrima; he said: Gabriel’s name [means] Servant (ʿ*abd*) of God, Michael’s name [means] Servant (ʿ*ubayd*) of God.⁷⁰⁸

[79] Aḥmad and Abū ʿl-Shaykh from Anas that the Messenger of God (God bless him and grant him salvation) said to Gabriel: ‘Why have I never seen Michael laughing?’⁷⁰⁹ He said: ‘Michael has not laughed since the Fire was created.’

[80] al-Ḥakīm al-Tirmidhī in *Nawādir al-uṣūl* from Zayd ibn Rafīʿ; he said: Gabriel and Michael came to the Messenger of God (God bless him and grant him salvation) while he was cleaning his teeth and the Messenger of God (God bless him and grant him salvation) gave Gabriel the toothpick.⁷¹⁰ He said: Gabriel said, ‘God is Great!’ Al-Ḥakīm said: that is, [Muḥammad] gave [it] to Michael and then [Gabriel] said: ‘God is Great!’

[81] al-Ḥakīm from Abū Saʿīd; he said; the Messenger of God (God bless him and grant him salvation) said: My two ministers from the heavenly world are Gabriel and Michael and from the earthly world are Abū Bakr and ʿUmar.⁷¹¹

⁷⁰⁷ Given as Ibn ʿAbd al-Mundhir in the Leiden MS, this seems to be an error; fol. 191v, l. 10.

⁷⁰⁸ See §36 for a discussion of the use of ʿ*abd* and ʿ*ubayd*.

⁷⁰⁹ For the negative attitude to laughing in the Qurʾān and ḥadīth, see Chittick, ‘Weeping in Classical Sufism’ pp. 133 – 134.

⁷¹⁰ Teeth-cleaning is an important part of Islamic ritual purity, cf. al-Bukhārī, *Ṣaḥīḥ* §244 – 245; p. 69; and Mālik, *Muwāṭṭaʾ*, vol. 1, pp. 64 - 65 (Bewley, *Al-Muwāṭṭaʾ*, §2.32.115–117, p. 23). For more secondary sources on this see: Risplet-Chaim, Vardit, ‘The siwāk: A Medieval Islamic Contribution to Dental Care’ *JRAS* 2 (1992) pp. 13 – 20 and Janot, Francis, Vezie, Philippe & Bottero-Cornillac, Marie-Jeanne, ‘Le siwāk (bâtonnet frotte-dents), instrument à usages religieux et médical’ *AI* 32 (1998) pp. 101 – 123.

⁷¹¹ Cf. Al-Rabghūzī, *QA*, vol. 2, pp. 569 – 572.

[82] al-Bazzār, al-Ṭabarānī, and Abū Nuʿaym in *al-Ḥilya* from Ibn ʿAbbās; he said: the Messenger of God (God bless him and grant him salvation) said: God supports me with four ministers: the two from the heavenly world are Gabriel and Michael, the two from earthly world are Abū Bakr and ʿUmar.

[83] al-Daylāmī⁷¹² through the intermediary of al-Sarī ibn ʿAbd Allāh al-Sulamī from ʿAbd al-Ḥamīd ibn Kanāna from Abū Umāma from ʿAlī ibn Abī Ṭālib; ascribing it to the Prophet, [he said]: The muezzin of the heavenly host is Gabriel and Michael is their Imam,⁷¹³ who leads them in the prayers in the *Inhabited House*. The angels of the heavens congregate and circumambulate the *Inhabited House* and they perform the ritual prayers and pray for forgiveness. God gives their reward, their forgiveness and their praise of God to the community of Muḥammad (God bless him and grant him salvation).

[84] Ibn al-Najjār said in his *Taʾrīkh*: I swear by God that Abū ʿAbd Allāh al-Adīb related to me an oral tradition in Isfahan from Abu Ṭāhir ibn Abī Naṣr al-Tājir that ʿAbd al-Raḥmān ibn Muḥammad ibn Ishāq ibn Mandah related to him; he said: I swear by God that Abū ʿAbd Allāh al-Ḥusayn ibn Muḥammad ibn al-Ḥusayn al-Dīnawarī⁷¹⁴ informed him; he said: I swear by God that Abū ʿl-Qāsim ʿAbd Allāh ibn Ibrāhīm al-Jurjānī informed him; he said: Abū ʿl-Ḥassan Muḥammad ibn ʿAlī al-

⁷¹² There are a number of authors with the name al-Daylamī, but the reference to al-Sulamī indicates that this is Shams al-Dīn al-Daylamī, as he made a commentary on al-Sarī ibn ʿAbd Allāh al-Sulamī's *al-Sirr fī anfās al-ṣūfiyya*; see Sezgin, *GAS*, vol. 1, pp. 647 – 648; Brockelmann, *GAL*, vol. 2, p. 207 and Arberry, A. J., 'The Works of Shams al-Dīn al-Daylamī' *BSOAS* 29 (1966) pp. 49 – 56.

⁷¹³ Cf. ḥadīth §39, which says that Gabriel is the Imām of heaven.

⁷¹⁴ Omitted in the Leiden MS; fol. 191v, l. 25.

Ḥusayn ibn al-Qāsim ibn al-Ḥassan ibn Zayd ibn ʿAlī ibn al-Ḥusayn ibn ʿAlī ibn Abī Ṭālib informed him; he said: I swear by God that Aḥmad ibn ʿAbd Allāh al-Shuʿabī al-Baghdādī told him; he said: I swear by God that al-Ḥassan ibn ʿAlī al-ʿAskarī told him; he said: I swear by God that Abū ʿAlī ibn Muḥammad told me; he said: I swear by God that Muḥammad ibn ʿAlī ibn Mūsā [told me; he said: I swear by God that Abū ʿAlī ibn Mūsā]⁷¹⁵ [told me; he said: I swear by God that Abū Mūsā ibn Jaʿfar]⁷¹⁶ told me; he said: I swear by God that Jaʿfar ibn Muḥammad told me; he said: I swear by God that Abū Muḥammad ibn ʿAlī told me; he said: I swear that Abū ʿAlī ibn al-Ḥusayn [told me; he said: I swear by God that Abū ʿAlī ibn Abī Ṭālib]⁷¹⁷ told me; he said: I swear by God that Muḥammad, the Messenger of God (God bless him and grant him salvation) [told me; he said: I swear by God that Gabriel]⁷¹⁸ told me; he said: I swear by God that Michael told me; he said: I swear by God that Israfil told me from the Preserved Tablet that God the Blest and the Most High said: The wine-drinker is like the idolater.

The *ḥafīẓ* Ibn Hajar said in his *Lisān al-mīzān*: This *matn* with this aforementioned *isnād* is [attributed] to ʿAlī ibn Mūsā; Abu Nuʿaym excludes him from his *isnād* in *al-Ḥilya*. Whoever does not know its status [see] al-Ḥasan al-ʿAskarī as well, but he only mentions Gabriel; Muḥammad said: ‘The wine addict is like the idolater.’⁷¹⁹ Ibn Ḥibbān attributed the *matn* in his *Ṣaḥīḥ* to a *ḥadīth* of Ibn ʿAbbās.

⁷¹⁵ Omitted in the Leiden MS; fol. 191v, l. 30.

⁷¹⁶ Omitted in the Leiden MS; fol. 191v, l. 30.

⁷¹⁷ Omitted in the Leiden MS; fol. 191v, l. 32.

⁷¹⁸ Added in the Leiden MS; fol. 191v, l. 32 – fol. 192r, l. 1.

⁷¹⁹ This *ḥadīth* is well-known, although the following *matn* is more common: *wa-man shariba al-khamr fi-ʿl-dunyā, fa-māta, wa-huwa yudumnuhā*; see Wensinck, *CTM*, vol. 2, p. 144. The *matn* found here (and in §171) is found in Ibn Māja, Abu ʿAbd Allāh Muḥammad ibn Yazīd al-Qazwīnī (ed. Muḥammad Fuʿād ʿAbd al-Baqī), *Sunan Ibn Māja* (Cairo: Bābī al-Ḥalabī, s.d.) vol. 2, p. 1120, §3375.

4.2.8 Isrāfīl (peace be upon him)

[85] Abū ‘l-Shaykh from Wahb; he said: God, Most High, created the Trumpet⁷²⁰ out of white pearls with the purity of glass; then he said to the Throne: ‘Take the trumpet and keep hold of it.’ Then He said: ‘Be!’ And Isrāfīl came into being, and He ordered him to take the Trumpet, so he took it and it had a hole for the number of every created soul (*rūh*) and spirit (*nafs*) that is born; two souls do not go through one hole. In the middle of the Trumpet there is an aperture like the roundness of the Heaven and the Earth. And Isrāfīl placed his mouth over that aperture. Then the Lord said to him: ‘I have made you responsible for the Trumpet, and yours is the blowing and the shouting.’⁷²¹ And Isrāfīl came before the Throne, placed his right foot under the Throne and his left foot; he has not looked away since God created him, so that he can wait for what He commands him [to do].

[86] al-Tirmidhī and declared it to be fair (*ḥasan*), al-Ḥākim and al-Bayhaqī in *al-Ba^cth* from Abū Sa‘īd al-Khudrī; he said: the Messenger of God (God bless him and grant him salvation) said: ‘How can I be happy when the possessor of the trumpet has already put the mouthpiece to his mouth, tilted his head and inclined his ear? He will wait until he is commanded to blow it.’ They said: ‘What should we say?’ He

However, the *isnād* is different: Abū Bakr ibn Abī Shayba & Muḥammad ibn al-Sabbāḥ – Muḥammad ibn Sulaymān al-Aṣbahānī - Suhayl – Abū Suhayl – Abū Hurayrah.

⁷²⁰ This is the trumpet that announces the end of the world; it is mentioned ten times in the Qur’ān (Q 6:73; 18:99; 20:102; 23:101; 27:87; 36:51; 39:68; 50:20; 69:13 and 78:18); a description of Isrāfīl can also be found in al-Rabghūzī, *QA*, vol. 2, p. 596.

⁷²¹ Cf. Q 36:50 – 55; Arberry, *Koran*, p. 453.

said: ‘Say: “God is sufficient for us; an excellent Guardian is he”⁷²² “In God have we put our trust.”’⁷²³

[87] al-Ḥākim and he declared it to be sound (*ṣaḥīḥ*), Abū ‘l-Shaykh and Ibn Mardawayh from Abū Hurayra; he said: the Messenger of God (God bless him and grant him salvation) said: The Possessor of the Trumpet looks fixedly whilst he is responsible for it. Prepared, he looks towards the Throne, fearing that [if he were to look away], he would be ordered to let out a cry before he [could] return his gaze; his eyes are two milky stars.⁷²⁴

[88] Ibn Abi Ḥātim from Abū Sa‘īd al-Khudrī;⁷²⁵ he said: the Messenger of God (God bless him and grant him salvation) said: The two Possessors of the Trumpet⁷²⁶ do not stop holding onto the trumpet, waiting until they are ordered [to blow it].

[89] al-Daylāmī from Abū Umāma; he said: the Messenger of God (God bless him and grant him salvation) said: Gabriel’s name [means] servant (*‘abd*) of God;⁷²⁷ Michael’s name [means] servant (*‘ubayd*) of God; and Isrāfīl’s name [means] servant (*‘abd*) of the Merciful.

[90] al-Ṭabarānī, Abū Nu‘aym in *al-Hilya* and Ibn Mardawayh from Abū Hurayra; that a Jew said: ‘Messenger of God, tell me about the angel of God which is near

⁷²² Q 3:173; Arberry, *Koran*, p. 67.

⁷²³ Q 7:89 and 10:85; Arberry, *Koran*, pp. 154 and 207.

⁷²⁴ Milk, like pearls, is used to represent holiness; see Rippin, ‘Color’ *EQ* vol. 1, pp. 361 – 365.

⁷²⁵ Given as ‘al-Khudhrī’ in the Leiden MS; fol. 192r, l. 18.

⁷²⁶ This ḥadīth and others do not explain who the two angels of the trumpet are. Isrāfīl is normally the only angel associated with the Trumpet, but occasionally others are also associated with it – see §99.

⁷²⁷ As before, see §36, 37 & 87 above.

him.’ [He said: ‘The angel which is near Him is] ⁷²⁸ Isrāfīl, then Gabriel, then Michael, then the Angel of Death.’

[91] Aḥmad, al-Ḥākim [and Ibn Mardawayh] ⁷²⁹ from Abu Saʿīd; he said: the Messenger of God (God bless him and grant him salvation) said: Isrāfīl is the Possessor of the Trumpet and Gabriel is on his right and Michael is on his left. ⁷³⁰

[92] Abū ‘l-Shaykh from Abū Bakr al-Hudhalī; he said: No created thing is closer to God than Isrāfīl, and between him and between God are seven veils. And he has a wing in the East, and a wing in the West; a wing on the Seventh Earth and a wing on his head. His head is placed between his two wings. When God gives him an order, the tablets (*alwāḥ*) are lowered down to Isrāfīl with God’s command [written] on them, then Isrāfīl will look at them; Gabriel then calls out and [Isrāfīl] answers him. As none of the angels can hear his voice without being made unconscious, when they come round, they say: ‘What [was that]?’ [Isrāfīl] says: ‘[It was] your Lord.’ They will say: ‘The Truth, and He is the All-High, the All-Great.’ ⁷³¹ The Angel of the Trumpet (who is the one responsible for it) ⁷³² [has] one of his feet on the Seventh Earth, whilst he kneels on his knees, staring fixedly at Isrāfīl. He has not looked up since God made him; he will look when he is given the signal and then he will blow the Trumpet.

⁷²⁸ Omitted in the Leiden MS; fol. 192r, l. 23.

⁷²⁹ Added in the Leiden MS; fol. 192r, l. 23.

⁷³⁰ cf. Al-Thaʿlabī, *QA* p. 29; Brinner, *Lives*, p. 47. In this section of the *Qīṣaṣ al-anbiyyā’* Adam ascends to heaven on the horse al-Maymūn: Gabriel takes the reins, Michael is on the right and Isrāfīl is on the left. This is a different context but it does highlight the fact that these three angels are often mentioned together and that their positions vary. See also Al-Thaʿlabī, *QA* p. 103; Brinner, *Lives*, p. 175.

⁷³¹ Q 34:23; Arberry, *Koran*, p. 440.

⁷³² Note that in this ḥadīth the Angel of the Trumpet is not Isrāfīl, as elsewhere.

[93] Ibn Abī Zamanīn in *al-Sunna* from Ka^cb; he said: The closest of the angels to God is Isrāfīl; he has four wings: a wing in the East, a wing in the West, he is covered⁷³³ by the third [wing] and the fourth is between him and the Preserved Tablet (*al-lawḥ al-maḥfūz*). If God wants to reveal a command, the Preserved Tablet comes down until it slams into Isrāfīl's forehead; and he raises his head and looks; when the command is written, he calls out to Gabriel and he responds. And he says: 'You are commanded to do such and such an order.' Gabriel does not descend from one heaven to another without its people becoming terrified with fear of the Hour, until Gabriel says: 'the Truth is from the Truth!'⁷³⁴ And he descends to the Prophet and gives the revelation to him.

[94] Abū 'l-Shaykh from 'Abd Allāh ibn al-Ḥarīth;⁷³⁵ he said: I was with 'Ā'isha, while Ka^cb was with her and she said: 'Ka^cb, tell us about Isrāfīl.' And he said: 'He is the Angel of God. There is nothing in his presence. He has a wing in the East and he has a wing in the West, and a wing is on the nape of his neck and the Throne is on the nape of his neck.' 'Ā'isha said: 'I heard the Prophet (God bless him and grant him salvation) say the same.' Ka^cb said: 'The Tablet is on his forehead, so when God wants to give a command, he writes it on the Tablet.'

⁷³³ The *sarawīl* is an undergarment used to cover male and female genitalia; see Stillman, *Arab Dress*, pp. 10 – 11, and for pictures of earlier and later *sarawīl* see Scarce, Jennifer, *Women's Costume of the Near and Middle East* (London: RoutledgeCurzon, 2003), pp. 33 & 74 - 75. Although normally referring to 'trousers' specifically, *sarawīl* can have a more general meaning, e.g. the *TA* describes a *sirwāl* as a *qamīṣ*, *darʿ* or '*kulla mā lubisa*' Al-Zabīdī, *TA*, vol. 29, p. 196. The association of the *sarawīl* with personal modesty implies that the wing is being used to cover the Isrāfīl's genitalia, in the same way that the seraphim in Is. 6:3 'cover their feet'. The same ḥadīth, with a slightly different *isnād* and *matn*, appears below (§99), but Isrāfīl's wing is said to be 'clothed' (*tasarbala* [Form II *srbal*]) as opposed to 'trouser-ed' (*tasarwala* [Form II *srwl*]).

⁷³⁴ cf. Q 8:32; Arberry, *Koran*, p. 172.

⁷³⁵ The Leiden MS gives the name as 'Abd al-Ḥarṯh'; fol. 192r, l. 11.

[95] Abū 'l-Shaykh from 'Abd al-Raḥmān ibn al-Ḥārith that Ka'b said to 'Ā'isha: 'Did you hear the Messenger of God (God bless him and grant him salvation) [say anything about Isrāfīl?]' She said: 'Yes, I heard the Messenger of God (God bless him and grant him salvation)]⁷³⁶ saying, "He has four wings, [and] from them are two wings, one of which is in the East, and the other of which is in the West; and the Tablet is between his eyes, so if God wants to write a revelation, He inscribes it between his eyes."'

[96] Abū 'l-Shaykh and Abū Nu'aym in *al-Hilya* from Ibn 'Abbās that the Messenger of God (God bless him and grant him salvation) said: It is said that one of the Bearers of the Throne⁷³⁷ [is Isrāfīl]; and that Isrāfīl has one of the corners of the Throne on the nape of his neck; his feet go down to the lowest part of the Seventh Heaven and his head passes through the highest part of the Seventh Heaven.

[97] Al-Bayhaqī in *Shu'ab al-īmān* from al-Muṭṭalib that the Messenger of God (God bless him and grant him salvation) said: I said to Gabriel: 'Gabriel, why have I not seen Isrāfīl laughing? None of the angels have come to me without me seeing them laughing.' Gabriel said: 'We have not seen that angel laughing since the Fire was created.'⁷³⁸

⁷³⁶ Omitted in the Leiden MS; fol. 192r, l. 12.

⁷³⁷ The Bearers of the Throne are referred to in Q 40:7; Arberry, *Koran*, p. 481; see also Elias, Jamal, 'Throne of God' *EQ* vol. 5, p. 276 – 278.

⁷³⁸ This is almost identical to §79.

[98] Abū ‘l-Shaykh from Ibn ‘Abbās; he said: the Prophet (God bless him and grant him salvation) heard a crash,⁷³⁹ and he said: ‘Gabriel, is the hour coming?’ He said: ‘No, this is Isrāfīl coming to earth.’

[99] ‘Abd ibn Ḥamīd, al-Ṭabarānī in *al-Awsaṭ* and Abū ‘l-Shaykh from ‘Abd Allāh ibn al-Hārith; he said: I was with ‘Ā’isha while Ka‘b al-Ḥabr⁷⁴⁰ was at her house, and he mentioned Isrāfīl. ‘Ā’isha said: ‘Tell me about Isrāfīl.’ Ka‘b said: ‘Feel free to ask.’⁷⁴¹ She said: ‘By all means! So tell me.’ Ka‘b said: ‘He has four wings; two wings are in the air, a wing, with which he is clothed,⁷⁴² and one wing is in the nape of his neck; the Pen is on his ear; when He sends down revelation, the Pen writes, then the angels wipe it off [the Tablet]. The Angel of the Trumpet is lower than him, and he genuflects on one of his knees and he raises the other; and he puts the Trumpet to his mouth, bending his back and his side towards Isrāfīl. When he has been ordered, he will look at Isrāfīl, and when [Isrāfīl’s] two wings are closed, [the Angel of the Trumpet] will blow into the Trumpet. ‘Ā’isha said: I heard the Messenger of God (God bless him and grant him salvation) [talking]⁷⁴³ in this way.

[100] Abū ‘l-Shaykh from al-Awzā‘ī; he said: When Isrāfīl glorifies God, he cuts off the ritual prayers and the hearing of all the angels in heaven.

⁷³⁹ This appears to be related the various ‘I heard the heavens groaning’ ḥadīth above (§10 & 25).

⁷⁴⁰ i.e. Ka‘b al-Aḥbār; *aḥbār* is the plural *ḥibr* / *ḥabr* and is used as a compliment; the word is derived from the Hebrew *ḥāber*, a title of an Jewish scholar below that of Rabbi; see Schmitz, M., ‘Ka‘b al-Aḥbār, Abū Ishāq b. Mātī’ b. Haysu’ / Haynū’” *ET* vol. 4, p. 316; for more on the Jewish *ḥāber*, see Spiro, Solomon J., ‘Who was the *Ḥaber*? A New Approach to an Ancient Institution’ *JSJ* 11 (1980) pp. 186 – 216.

⁷⁴¹ Lit: ‘The knowledge is yours’ – an Arabic idiom.

⁷⁴² cf. §93; see note above.

⁷⁴³ Added in the Leiden MS; fol. 192v, l. 29.

[101] Also from him;⁷⁴⁴ he said: None of God's creations have a better voice than Isrāfīl; when he begins to glorify God, he cuts off the ritual prayers and praising of the people of the Seven Heavens.

[102] [Abū 'l-Shaykh] through the intermediary of al-Layth; Khālīd told me from Sa'īd; he said: I was told that Isrāfīl is the muezzin of the people of heaven,⁷⁴⁵ and he makes the call to prayer [twelve times during the day]⁷⁴⁶ and twelve times at night; and at every hour's proclamation, whoever is in the Seven Heavens and whoever is in the Seven Earths hears his proclamation, except jinn and humans. Then he, the greatest of the angels, goes to the front of them and performs the ritual prayer for them. [Sa'īd] said it reached me that Michael leads the angels in the *Inhabited House*.

[103] Ibn al-Mubārak in *al-Zuhd* from Ibn Abī Jabala in his *Isnād*; he said: The first of those to be called on the Day of Resurrection is Isrāfīl; God will say, 'Have you delivered my covenant?' And he will say, 'Yes, Lord, I delivered it to Gabriel.' And he will summon Gabriel, and it is said: 'Did Isrāfīl deliver my covenant to you?' He will say, 'Yes.' So he will leave Isrāfīl. And he will say to Gabriel, 'What did you do with my covenant?' And he will say, 'Lord, I delivered it to the Messengers.' So he will summon the Messengers, and it will be said to them: 'Did Gabriel deliver my covenant to you?' And they will say, 'Yes.' So he will leave Gabriel.

[104] Abū 'l-Shaykh from Abū Sinān; he said: The created thing closest to God is the Tablet, and it is suspended from the Throne; and if God wants to reveal something,

⁷⁴⁴ i.e. Abū 'l-Shaykh from al-Awzā'ī.

⁷⁴⁵ This is said to be Gabriel in §83.

⁷⁴⁶ Omitted in the Leiden MS; fol. 193r, l. 2.

He writes on the [Preserved] Tablet [and the Tablet moves]⁷⁴⁷, and the Tablet goes [down] until it hits Isrāfīl's forehead;⁷⁴⁸ Isrāfīl covers his head with his wings so that he does not raise his eyes to the majesty of God and looks at [the Tablet]; if it is [a command] for the people of the heaven, then he hands it over [to Michael; if it is [a command] for the people of the earth, then he hands it over]⁷⁴⁹ to Gabriel. The first to be called to account on the Day of Resurrection is the [Tablet. It is called by Him. Its whole body trembles in fear, and it will be said to it: 'Did you send out [my commands]?' It will say: 'Yes.' It will be said: 'Who saw you?' And it will say, 'Isrāfīl.' Then Isrāfīl]⁷⁵⁰ will be called and his body will tremble with fear. And it will be said to him: 'Did the Tablet send [my commands to] you?' When he has said 'yes' the Tablet says: 'Praise be to God, who saved me⁷⁵¹ from evil reckoning.⁷⁵² Then like that.'

[105] Ibn Abī Ḥātim and Abū 'l-Shaykh from Ḍamra; he said: I heard that the first to bow down to Adam⁷⁵³ (peace be upon him) was Isrāfīl; God rewarded him by putting the Qur'ān on his forehead.

[106] al-Ṭabarānī in *al-Awsqāt*, al-Bayhaqī in *al-Asmā' wa-l-ṣifāt* and al-Bazzār from Ibn 'Amr; he said: A group of people came to the Messenger of God (God bless him and grant him salvation) and they said: 'Messenger of God, Abū Bakr claimed that

⁷⁴⁷ Added in the Leiden MS; fol. 193r, l. 10.

⁷⁴⁸ The Leiden MS reads '*wajh*' for '*ra's*'; fol. 193r, l. 11.

⁷⁴⁹ Omitted in the Leiden MS, but is an error; fol. 193r, l. 12.

⁷⁵⁰ Omitted in the Leiden MS; fol. 193r, l. 12.

⁷⁵¹ cf. Q 23:28; Arberry, *Koran*, p. 345.

⁷⁵² Q 13:18; Arberry, *Koran*, p. 242.

⁷⁵³ The principal Qur'anic narratives of the prostration to Adam can be found at Q 2:29 – 34 & 38:71 – 75; Arberry, *Koran*, pp. 5 & 469. See also Jung, *Fallen Angels* for a discussion of the narrative's origins. Some texts say that Gabriel or Michael were the first to bow down – see Tottoli, Roberto 'Muslim Attitudes to Prostration' p. 30, n. 96.

righteous actions are from God and unrighteous actions are from humans, but ʿUmar has said that both righteous actions and unrighteous actions come from God, and a group follows this one and a group follows that one.’⁷⁵⁴ The Messenger of God (God bless him and grant him salvation) said: ‘The judgment between you both is [found] in the judgment of Isrāfīl between Gabriel and Michael: Michael said the words of Abū Bakr; and Gabriel the words of ʿUmar; Gabriel said to Michael: “When the people of the heavens differ, [or] the people of the earth differ, we should seek a legal ruling from Isrāfīl.” And so the two of them went to seek a legal ruling from him and he made a ruling between the two of them concerning the truth about predestination: “His kindness, His wickedness, His sweetness and His bitterness, all of them come from God.” Then [Muḥammad] said: ‘Abū Bakr, if God did not want disobedience then he would not have had created Iblīs.’ Abū Bakr said: ‘God and His Prophet have spoken the truth.’

4.2.9 The Angel of Death⁷⁵⁵ (peace be upon him)

[107] Saʿīd ibn Maṣṣūr, Ibn al-Mundhir and Ibn Abī Ḥātim from Abū Hurayrah; he said: When God, may He be praised and glorified, wanted to create Adam,⁷⁵⁶ He sent an angel from the Bearers of the Throne to fetch some dust from the earth.⁷⁵⁷ When

⁷⁵⁴ This is a famous ḥadīth; see van Ess *Zwischen Ḥadīth und Theologie*, pp. 160 – 178.

⁷⁵⁵ For basic information on the Angel of Death, see Wensinck, ‘ʿIzrāʾīl’ *EF¹* & *EF²*; cf. the short section on the angel in al-Qazwīnī, *ʿAjāʾib*, pp. 37 – 38.

⁷⁵⁶ This and the next ḥadīth have different *mitān* but are essentially the same story. Al-Thaʿlabī includes a different version, but begins the chapter acknowledging that: ‘*qāla al-mufasssirūna bi-alfāzi mukhtalafati wa-maʿānin mutafaqati*’ (‘The commentators have said in different words but similar meanings’); Al-Thaʿlabī, *QA* p. 26; Brinner, *Lives*, p. 43. The narrative was a popular one and is frequently included in Islamic histories; e.g. al-Masʿūdī, *Murūj al-dhahab*, vol. 1, pp. 35 – 36.

⁷⁵⁷ The Qurʾān includes many references to Adam being made of earth: e.g. Q 2:264; 3:59; 16:59; 18:37; 22:5; 30:20; 35:11; 40:67 &c. For an analysis of these narratives and their relation to Jewish and Christian literature see, Chipman, ‘Mythic Aspects’.

[the angel] came down to take [it], the Earth said: ‘I implore you, by the One who sent you, not to take anything from me today, part of which is to be for the Fire tomorrow.’ So [the angel] left it, and when he ascended to his Lord; He said: ‘What prevented you from fetching what I ordered you to fetch?’ He said: ‘The Earth sought Your [protection] and I was worried about bringing back something that had been protected [by You].’ So He despatched another [angel] to [the Earth], and it said the same thing until He had sent all of them;⁷⁵⁸ and so He sent out the Angel of Death and [the Earth] said the same to him; so [the Angel of Death] said: ‘The One who sent me is more deserving of obedience than you.’ So he took [mud] from the face of the whole Earth, from its goodness and its wickedness, and took it to his Lord, and He poured water of the Garden onto it and it became moulded mud⁷⁵⁹ and he created Adam from it.

[108] Ibn Jarīr, al-Bayhaqī in *al-Asmā’ wa-l-ṣifāt* and Ibn ʿAsākir through the intermediary of al-Suddī from Abū Mālik, Abū Sāliḥ, Ibn ʿAbbās, Murra, Ibn Masʿūd and some of the Companions;⁷⁶⁰ they said: God sent Gabriel to the Earth to fetch some clay from it. The Earth said: ‘God protect me from you from [mud] being taken away⁷⁶¹ from me!’ So [Gabriel] returned without taking anything; and he said: ‘O Lord, [the Earth] took your protection, so I respected [the protection that it sought].’ So He sent Michael and it was as before; and so He sent the Angel of Death, and [the Earth] sought protection from him; but he said: ‘I seek God’s protection that I may

⁷⁵⁸ i.e. all of the Bearers of the Throne.

⁷⁵⁹ See Q 15:26, 27 & 33; Arberry translates this as ‘mud moulded’, *Koran*, pp. 254 – 255; Adam is also said to have been made from a clot (ʿ*alaq*) in Q 96:2; Arberry, *Koran*, p. 651. However, the ʿ*alaq* is not prominent in these narratives of Angel of Death and the creation of Adam.

⁷⁶⁰ i.e. this is not an *isnād* but a ḥadīth with multiple narrators.

⁷⁶¹ The Leiden MS reads *yunaqqīṣu* (fol. 193v, l. 2).

return, without not having carried out His command.’ And he took [mud] from the face of the Earth.

[109] al-Daylamī from Zayd ibn Thābit; he said: The Messenger of God (God bless him and grant him salvation) said: If you were to learn of the moment of [your] death (*ajal*),⁷⁶² and know how far it were away, then you would come to hate hope and its deception; there is no-one of any family without the Angel of Death coming to them twice every day; and whoever senses him, then indeed the moment of death has come. He takes his soul (*rūḥ*),⁷⁶³ and if his family cries and mourns, he says: ‘Do not cry and do not mourn! By God! I have not lessened your age, nor have I kept your livelihood from you, and there is no sin⁷⁶⁴ for me [in doing this], and I will return to you again and again, until there are none of you left.’

[110] ʿAbd al-Razzāq, Aḥmad in *al-Zuhd*, Ibn Jarīr, Ibn al-Mundhir, Ibn Abi Ḥātim and Abū ʿl-Shaykh from Mujāhid; he said: There is no tent,⁷⁶⁵ nor any mud-brick house on the surface of the Earth, without the Angel of Death circumambulating it twice a day.

⁷⁶² The concept of *dahr* [fate] was important in the pre-Islamic concept of death; Jacques Waardenburg notes that ‘In the Qur’ān it is not *dahr* [fate] but God who decides the appointed time (*ajal*) of each individual and who causes the person to die...’ Jacques Waardenburg, ‘Death and the Dead’ *EQ* vol. 1, p. 508. See also Goldziher, I., *Muslim Studies*, p. 230; Goldziher, I., ‘*Ajal*’ *EI*¹ Vol 1, p. 140; Watt, ‘Suffering in Sunnite Islam’ pp. 14 – 15; O’Shaughnessy, *Muhammad’s Thoughts on Death* and Smith & Haddad, *Death and Resurrection*; cf. also *MK* 28a, p. 183.

⁷⁶³ *Nafs* and *rūḥ* are usually seen as being synonymous (e.g. Calverly, ‘Doctrines of the Soul’ p. 254 and Tritton, A. S., ‘Man, *Nafs*, *Rūḥ*, *ʿAql*’ *BSOAS* 34 (1971) pp. 491 - 495, p. 491). The ḥadīth in this collection, particularly in this section, uses the terms both as synonyms and as terms applying to different parts of soul (e.g. §124); see also Smith and Haddad, *Death and Resurrection*, pp. 17 – 21.

⁷⁶⁴ For a discussion of the different meanings of Arabic words for ‘sin’, see Padwick, Constance E., ‘The Language of Muslim Devotion III’ *MW* 47 (1957) pp. 194 – 209.

⁷⁶⁵ *Bayt shaʿr* = house of hair; this is a Bedouin tent.

[111] Ibn Abī Shayba in *al-Muṣannaḡ* and ʿAbd Allāh ibn Aḥmad in *Zawāʿid al-Zuhd* from ʿAbd al-ʿAlā al-Tamīmī; he said: There is no inhabitant of a house, without the Angel of Death studying them twice a day.

[112] Ibn Abī ʿl-Dunyā in *Dhikr al-mawt* and Abū ʿl-Shakyh from al-Ḥasan; he said: Every day without exception, the Angel of Death studies every house three times, and if one of them senses him, then his life (*rizq*) has indeed come to an end, and his appointed time of death (*ajal*) has come; [the Angel of Death] takes his soul (*rūḥ*) and [when he has taken his soul],⁷⁶⁶ his family draws near to him wailing and crying; and the Angel of Death takes hold of two posts of the doorframe and says: ‘There is no sin for me [in doing this] against you!’⁷⁶⁷ I am one with orders. By God! I have not eaten your⁷⁶⁸ food (*rizq*), I have not reduced your age, and I have not shortened your appointed time (*ajal*). I am going to return to you, and I will return to you again and again until there are none of you left!’ Al-Ḥasan said: By God! If they were to see his place or hear his words, then they would forget their dead and cry for their own souls.

[113] Ibn Abī ʿl-Dunyā and Abū ʿl-Shaykh from Zayd ibn Aslam; he said: The Angel of Death watches every house five times every day and he studies the face of the sons of Adam every day. He said: And from [this experience] is the terror which hits people, meaning⁷⁶⁹ shaking and shuddering.⁷⁷⁰

⁷⁶⁶ Added by the Leiden MS (fol. 193v, l. 14).

⁷⁶⁷ If read as *dhanab* (dependant) rather than *dhanb* (sin, misdeed) this would mean: ‘Why should I care about your family?’ [Lit: ‘What are your dependents to me?’].

⁷⁶⁸ The Leiden MS reads *la-hā* for *li-kum* throughout; (see fol. 193v, l. 16).

⁷⁶⁹ The Leiden MS reads: *wa-min-hā* instead of *yaʿnī*; see fol. 193v, l. 20.

⁷⁷⁰ The Leiden MS reads: *al-inqibāḡ* (depression, gloom) for *al-intifāḡ*; see fol. 193v, l. 20.

[114] Ibn Abī Ḥātim and Abū ‘l-Shakhyh from ‘Ikrima; he said: Every day without exception, the Angel of Death studies the Book of people’s lives.⁷⁷¹ Some say [‘Ikrima] said three times, and some say he said five times.

[115]⁷⁷² Ibn Abī Ḥātim from Ka‘b; he said: There is no-one in any house,⁷⁷³ without the Angel of Death being at his door seven times every day,⁷⁷⁴ looking to see whether there is anyone in it, whom He has ordered to be taken [up to God].

[116] Sa‘īd ibn Maṣṣūr and Aḥmad in *al-Zuhd* from ‘Aṭā’ ibn Yisār; he said: There is no person in a house, without the Angel of Death studying them five times every day [to see] if he has been commanded to take anyone from among them.

[117] Abū Nu‘aym in *al-Hilya* from Thābit al-Banānī; he said: Night and day, [all] twenty four hours, there is not a single hour that passes one who breathes,⁷⁷⁵ without the Angel of the Death standing over [the soul]; if he has been ordered to take [a soul],⁷⁷⁶ he takes it; otherwise he goes away.

[118] Ibn al-Najjār in his *Ta’rīkh* from a ḥadīth attributed to the Prophet⁷⁷⁷ given by Anas that the Angel of Death looks upon the faces of the servants of God seventy

⁷⁷¹ There are a number of different things to which ‘*al-kitāb*’ can apply, here it is the book of an individual’s deeds, as recorded by the scribes; see Berg, Herbert, ‘Ṭabārī’s Exegesis of the Qur’ānic Term *al-Kitāb*’ *JAAR* 63 (1995) pp. 761 – 724, p. 763.

⁷⁷² In the Leiden MS §115 comes after §116; fol. 193v, ll. 22 – 24.

⁷⁷³ Lit: ‘There is not in any house anyone...’

⁷⁷⁴ The Leiden MS omits *kulla yawm*; fol 193v, l. 25.

⁷⁷⁵ *dhū rūḥ* = ‘one who has *rūḥ*.’

⁷⁷⁶ Or: ‘If He [i.e. God] has ordered the taking of [a soul]...’

⁷⁷⁷ *marfū‘* = ‘raised’. This is a ḥadīth that is attributable to the Prophet; see Ibn Ṣalāḥ, *Ma‘rifat*, p. 31.

times a day; if the servant [of God], to whom he has been sent, laughs, then he says: ‘Wonderful! I have been sent to him to take his soul (*rūḥ*) while he is laughing!’

[119] Al-Ṭabarānī in *al-Kabīr*, Abū Nuʿaym, Ibn Mandah, both of them in their works called *al-Maʿrifā* through the intermediary of Jaʿfar ibn Muḥammad from his father, from al-Ḥārith ibn al-Khazraj [from his father];⁷⁷⁸ he said: I heard the Messenger of God (God bless him and grant him salvation) say, as he looked at the Angel of Death while he was [standing by] the head of one of the *anṣār*: ‘Angel of Death, be kind to my friend, he is a believer.’ The Angel of Death said: ‘Be of good cheer! Be happy! I am kind to every believer, and know, Muḥammad, that I am going to take the soul of [every] son of Adam! If he gives out a great shout; then I come to the house, and his soul (*rūḥ*) is mine. And I say: “What is this cry? By God! We have not wronged him,⁷⁷⁹ and we have not [taken his soul] before his appointed time (*ajal*), nor have we hastened his destiny (*qadar*). There is no sin for us in taking his soul.” If they are pleased by what God has arranged [for them], then they are rewarded; if they are displeased, then they are sinning and transgressing. We will return to you, again and again, so be on your guard! There is no person who lives in a tent, or in a mud house, on the land, or on the plain, or on the mountain, without me studying them every day and night until I know the trivialities and the great things in

⁷⁷⁸ Added by the Leiden MS; fol. 193v, l. 32.

⁷⁷⁹ Cf. Q 7:101; ‘And We wronged them not, they have wronged themselves...’ Arberry, *Koran*, p. 223; in this case the third person plural verb appears to refer to the Angel of Death; the use of plural may indicate the Angel of Death’s helpers (cf. §127), especially considering the Angel of Death has already used the first person singular in this ḥadīth.

their souls; by God! If I wanted to take a soul of a mosquito,⁷⁸⁰ I could not do it until God had let it be – He is the One who orders its taking.’

Jaʿfar ibn Muḥammad said: I heard that when [the Angel of Death] studies [people] during the appointed times for the ritual prayer, if [someone] is about to die,⁷⁸¹ and if he is one of those who remembers the ritual prayers, then the angel approaches him and drives Satan away from him, and the angel whispers the *talqīn*⁷⁸² to him at that great moment: ‘There is no god, but God, and Muḥammad is the Messenger of God.’

[120] Ibn Abī ‘l-Dunyā in his *Kitāb dhikr al-mawt* from ‘Ubayd ibn ‘Umayr; he said: While Abraham (peace be upon him) was in his house one day, suddenly a man of beautiful appearance came into his presence, and [Abraham] said: ‘Servant of God, who admitted you into my house?’ He said: ‘Its Lord admitted me into it.’ He said: ‘Its Lord is the most right [to do] that. Who are you?’ He said: ‘The Angel of Death.’ He said: ‘Things have been described to me about you [that I cannot see in you]’⁷⁸³. [Abraham] said: ‘Turn around.’ And so he turned around, and there were eyes at the front and eyes at the back and every one of his hairs were like people standing on end. So Abraham begged God for protection against that and said: ‘Return to your first form.’ He said: ‘Abraham, when God sends me to someone He wants to meet, He sends me in the form which you saw first.’⁷⁸⁴

⁷⁸⁰ Cf. Q 2:26: ‘God is not ashamed to strike a similitude even of a gnat, or aught above it.’ Arberry, *Koran*, p. 4.

⁷⁸¹ The Leiden MS reads: *fa-idhā naẓara* (see fol. 194r, l. 8); = ‘if he sees Death with him...’

⁷⁸² ‘It was *sunna* to whisper the *shahāda* in the ear of a dying man whose face is turned towards Mecca.’ Tritton, A. S., ‘Djānāza’ *EF* vol. 2, pp. 441 – 442, p. 441.

⁷⁸³ Omitted in the Leiden MS; see fol. 194r, l. 13.

⁷⁸⁴ Al-Suyūṭī also includes other accounts of the death of Abraham in his *Faḍā’il al-masjid al-aqṣā*, pp. 346 – 352.

[121] Ibn Abī 'l-Dunyā from Ka°b; he said: Abraham (peace be upon him) saw a man in his house, and he said: 'Who are you?' He said: 'I am the Angel of Death.' Abraham said: 'If you are right, then show me a sign so that I might know that you are the Angel of Death.' The Angel of Death said: 'I shall appear before you.' And he appeared, then [Abraham] looked and he saw [the Angel of Death] in the form in which he takes the believers; he saw that he was made of light and dazzlement, which only God, Most High, could have told him about. Then [the Angel of Death] said: 'I will appear before you.' And he appeared before him, then [Abraham] looked and the Angel of Death showed him the form in which he takes unbelievers and adulterers; and Abraham was so afraid that he trembled and his stomach clung to the Earth, and his soul (*naḥs*) was about to leave.

[122] [Ibn Abī 'l-Dunyā] from Ibn Mas°ūd and Ibn °Abbās; the two said: When God, Most High, took Abraham as a friend, the Angel of Death asked his Lord for permission to send [Arbraham] the good news [about it].⁷⁸⁵ And so he came to Abraham and gave him the good news about it, and he said: 'Praise be to God!' Then he said: 'Angel of Death, show me how you take the souls of the unbelievers.' He said: 'Abraham, you will not be able to bear it.' He said: 'On the contrary!' He said: 'I will come before you.' And [the Angel of Death] came before him, then [Abraham] looked [and there was] a black man, his head reaching the sky, and flames of fire were coming out of him; there were no hairs on his body, except it being in the form of a man coming out of him, with flames of fire coming out of his ears. Abraham fainted. When he came round, the Angel of Death had changed back

⁷⁸⁵ Omitted in the Leiden MS; see fol. 194r, l. 23.

into his previous form. Then he said: ‘Angel of Death, if an unbeliever, in his grief and distress, saw only your form, then that would be enough for him! Show me how you take the believers.’ [The Angel of Death] said: ‘I will come before you.’ And he came before him, then [Abraham] looked and he was a young man, whose face was very beautiful, the most pleasing of odour, [wearing] a white gown. [Abraham] said: ‘Angel of Death, if a believer at the moment of death saw in the way of happiness and kindness only this face of yours, then that would suffice!’

[123] Ibn Abī ‘l-Dunyā and Abū ‘l-Shaykh in *al-ʿAzama* from Ashʿath ibn Aslam; he said: Abraham (peace be upon him) asked the Angel of Death, whose name is Azrāʾīl,⁷⁸⁶ and who has two eyes in his face and two eyes on the back of his head;⁷⁸⁷ [Abraham] said: ‘Angel of Death, what do you do if there is a soul (*naḥs*) in the East and a soul in the West, whilst a plague⁷⁸⁸ strikes a [particular place on] earth and two armies meet – how do you deal with them?’ He said: ‘I call the spirits (*arwāḥ*), by the permission of God, and they are between these two fingers of mine.’ He said: The earth is flattened for him, it was made like a basin,⁷⁸⁹ and [the Angel of Death] takes out of it when He wants.

[124] Ibn Abī ‘l-Dunyā from al-Ḥakam that Jacob (peace be upon him) said: ‘Angel of Death, is [it right that] from every person’s soul (*naḥs*) without exception, you take

⁷⁸⁶ Both spellings *ʿAzrāʾīl* and *ʿIzrāʾīl* can be found; see al-Zabīdī, *TA*, vol. 13, p. 27 and Lane, *AELex*, p. 2035.

⁷⁸⁷ *qifāhu* – more precisely the ‘back of the neck’. See *AELex*, pp. 2991 – 2292.

⁷⁸⁸ *wabāʾ* is used as a general major epidemic, as opposed to *tāʿūn* which is used for the plague specifically; see Conrad, Lawrence I., ‘*Tāʿūn* and *Wabāʾ*’: Conceptions of Plague and Pestilence in Early Islam’ *JESHO* 25 (1981) pp. 268 – 307, p. 271.

⁷⁸⁹ *ṭast*: a large basin, which is used by al-Kindī for the preparation of musk and according to Lane is used for washing hands before a meal; see al-Kindī, Yaʿqūb ibn Ishāq, *Kitāb fī kīmīyāʾ al-ʿitr wa-ʿl-taṣʿīdāt* (Leipzig: Brockhaus, 1948) p. 5 and Lane, E. W., *Account of the Manners and Customs of the Modern Egyptians* (repr. London: Constable, 1973) pp. 142 – 143.

its spirit (*rūḥ*)?’ He said: ‘Yes.’ He said: ‘How? While you are here with me, souls (*anfus*) are in the outermost parts of the Earth?’ He said: ‘God has flattened the Earth for me, and it is like a bowl placed in front of one of you, and He takes whoever is at its outermost parts [that He] wants.’⁷⁹⁰ That is how the world is for me.’

[125] °Abd al-Razzāq, Aḥmad in *al-Zuhd*, Ibn Jarīr, Ibn al-Mundhir, Abū ‘l-Shaykh in *al-ʿAzama* and Abū Nuʿaym in *al-Ḥilya* from Mujāhid; he said: The Earth was created for the Angel of Death like a bowl; [God] takes from it whenever He wishes, and He created helpers for [the Angel of Death], who receive the souls; then [the Angel of Death] takes [the souls] from [the helpers].

[126] Ibn Jarīr and Abū ‘l-Shaykh from al-Rabīʿ ibn Anas that it was asked of the Angel of Death whether it is he alone who takes the souls (*arwāḥ*). He said he is the one who is responsible for the [fulfilment of the] command of the souls (*arwāḥ*)⁷⁹¹ but he has helpers for that; however, the Angel of Death is in charge and every stride of his [goes] from the East to the West.

[127] Ibn Abī Shayba, Ibn Jarīr, Ibn al-Mundhir, Ibn Abī Ḥātim and Abū ‘l-Shaykh in his *Tafsīr* from Ibn ʿAbbās concerning His Word, Most High: ‘Our messengers take him.’⁷⁹² He said: The helpers of the Angel of Death are from the angels.

⁷⁹⁰ The ḥadīth could either be referring to God or to the metaphorical person (i.e. one of you) with the bowl between his legs.

⁷⁹¹ Note that *arwāḥ* is used both of human ‘souls’ or ‘spirit’ and the (angelic) spirits that aid the Angel of Death.

⁷⁹² Q. 6:61; Arberry, *Koran*, p. 128.

[128] ʿAbd ibn Ḥamīd, Ibn Jarīr, Ibn al-Mundhir, Ibn Abī Ḥātim and Abū ʿl-Shaykh in his *Tafsīr* from Ibrāhīm al-Nakhaʿī concerning His Word: ‘Our messengers take him.’⁷⁹³ He said the angels take the souls (*anfus*), then the Angel of Death takes [the souls] from [the angels] afterwards.

[129] ʿAbd al-Razzāq, Ibn Jarīr and Abū ʿl-Shaykh in *al-ʿAzama* from Qatāda concerning His Word: ‘Our messengers take him.’⁷⁹⁴ He said: The Angel of Death has messengers, and he makes the messengers responsible for taking [the souls] then they hand them over to the Angel of Death.

[130] Abū ʿl-Shaykh in *al-ʿAzama* from Wahb in Munabbih; he said that the angels who are associated with the people⁷⁹⁵ are the ones who receive them and they write their time [of death]; when they take the soul [to God], they hand them over to the Angel of Death, who is like the one who comes after⁷⁹⁶ - meaning the tax collector,⁷⁹⁷ who draws up to himself what is beneath him.

⁷⁹³ Q. 6:61; Arberry, *Koran*, p. 128.

⁷⁹⁴ Q. 6:61; Arberry, *Koran*, p. 128.

⁷⁹⁵ i.e. the Scribes; see §312 – 406.

⁷⁹⁶ *al-ʿĀqib* (in the sense of ‘follower’ or ‘successor’) is a significant title: in a ḥadīth Muḥammad says that it is one of his five names; see Al-Bukhārī, *Sahīh*, §3532, p. 679; the epithet is also used in devotional literature, cf. al-Jazūlī, Muḥammad ibn Sulaymān, *Dalāʾil al-khayrāt* (si.: s. n, s.d) p. 23 and Ebeid, R. Y. and Young, M. J. L., ‘A List of the Appellations of the Prophet Muḥammad’ *MW* 66 (1976) pp. 259 – 262, p. 260.

⁷⁹⁷ The *ʿashār* was the collector of the *ʿushr* land tax, which was paid by Muslims; non-Muslims paid the *kharāj* land tax; see Løkkegaard, Frede, *Islamic Taxation in the Classical Period* (repr. Philadelphia: Porcupine Press, 1978) p. 78; for more details on these two land taxes see Yaḥyā ibn Adām, *Kitāb al-kharāj* (Cairo: al-Maṭbaʿat al-Salafiyya wa-Maktabtumā, 1347 / 1928/9) pp. 24 – 31; and Duri, ʿAbdal ʿAziz, ‘Notes on Taxation in Early Islam’ *JESHO* 17 (1974) pp. 136 – 144. Although the use of this term for the Angel of Death is rare (cf. Wensinck, *CTM*, vol. 4, pp. 224), it is reminiscent the Qurʾānic use of metaphors derived from commerce and daily life; see Rippin, A. J., ‘The Commerce of Eschatology’ in Stefan Wild (ed.), *The Qurʾan as Text* (Leiden: Brill, 1996) pp. 125 – 135.

[131] Ibn Abī ‘l-Dunyā, Abū ‘l-Shaykh and Abū Nu‘aym in *al-Hilya* from Shāhar ibn Ḥawshab; he said: The Angel of Death is sitting and the world is between his knees, and the Tablet is in his hands, on which is [written] the appointed times of death of the sons of Adam; with angels standing in front of him, he studies the Tablet, not raising his eyes. And when he comes to an appointed time of a servant [of God],⁷⁹⁸ he says: ‘Take this one!’

[132] Ibn Abī Ḥātim and Abū ‘l-Shaykh from Ibn ‘Abbās that it was asked about [a situation in which] two souls that came to die in the twinkling of an eye, one in the East and the other in the West; how is the Angel of Death in a position to deal with them both? [Ibn ‘Abbās] said: The ability of the Angel of Death to [deal with] creatures in the East and the West, in darkness, in the air and in the seas is always like a man with a table in front of him, taking from it whatever he wishes.

[133] Ibn Abī Ḥātim from Zuhayr ibn Muḥammad; he said: It was said: ‘Messenger of God, the Angel of Death is alone; but [there are] two armies meeting between the East and the West, and in the area between that there are the fallen and the dead?’ He said: ‘God, may He be praised and glorified, made the Angel of Death able [to cope]: He made [the Earth] like a bowl between one of your hands, and [the Angel of Death] can pass over anything in it.

[134] Juwaybir from Ibn ‘Abbās; he said: The Angel of Death is the one who takes all of the souls [to God]; indeed he has power over what is on the earth, just as one of

⁷⁹⁸ Or: ‘When it comes to an appointed time of a servant [of God]...’

you has power over his leisure; angels from amongst the angels of mercy and angels from amongst the angels of suffering are with him; when he receives a good soul, he gives it to the angels of mercy; when he receives a wicked soul, he gives it to the angels of suffering.

[135] Ibn Abī ‘l-Dunyā and Abū ‘l-Shakyh from Abū ‘l-Muthannā al-Ḥimṣī; he said: The world, with its lowlands and its mountains, is between the thighs of the Angel of Death, and with him are angels of mercy and angels of suffering. When he takes the souls (*arwāḥ*), these hand over to these, and those over to those, meaning the angels of mercy and the angels of suffering. It is said [that] if there is a fierce battle and the sword is like lightning, then [he said], he summons them and the souls come to him.

[136] al-Dīnawarī in *al-Mujālasa* from Abū Qays al-Azdī; he said; It was said to the Angel of Death: ‘How do you take the souls?’ He said: ‘I summon them, and they come to me.’

[137] Ibn Abī Shayba from Khaythama; he said: The Angel of Death came to Solomon, son of David,⁷⁹⁹ while he had a friend with him and Solomon said to him: ‘Why is it that you either come to a household and take them all together, or you go away from a household, leaving them alone, without taking anyone from them?’ He said: ‘I do not know what I take from them, rather I am under the Throne, and He sends down the deeds⁸⁰⁰ on which are the names.

⁷⁹⁹ For the death of Solomon in the *Qīṣaṣ al-anbiya*’ see Al-Tha‘labī, *QA* pp. 326 - 328; Brinner, *Lives*, pp. 544 – 548; a similar story appears in *Shab*. 30a, p. 133.

⁸⁰⁰ *sikāk* (plural of *sakk*) – derived from the Persian *chak* [see Steingass, F., *A Comprehensive Persian-English Dictionary* (London: W. H. Allen & Co., 1892) p. 386] – are normally used in

[138] Ibn ʿAsākir from Khaythama; he said: Solomon, son of David, said to the Angel of Death: ‘When you want to take my soul (*rūḥ*), would you let me know about it?’ He said: ‘I do not know when it is your [time].’⁸⁰¹ It is something written that comes down to me, which names who is going to die.’

[139] Aḥmad in *al-Zuhd* and Ibn Abī ‘l-Dunyā from Maʿmar; he said: It reached me that the Angel of Death does not know when the appointed time of a person’s death is going to happen until he is ordered to take it.

[140] Ibn Abī ‘l-Dunyā from Ibn Jarīr; he said: It reached me that it is said to the Angel of Death: ‘Take so-and-so at a certain time on a certain day!’

[141] Ibn Abī Ḥātim from ʿIkrima concerning His Word, Most High: ‘It is He who recalls you by night...’⁸⁰² He said: He receives souls during sleep; there is no night - by God! - without Him grasping souls – all of them; and He asks every soul about what its owner did during the day, then He calls the Angel of Death, and he says: ‘Take this one! Take this one!’

connection with legal documents and pensions; however Lane notes that the middle of Shaʿbān was also called *laylat al-ṣakk*, and on this day God allots the *rizq* for every human being; see Lane, *AELex*, p. 1709.

⁸⁰¹ *Mā anā uʿlimu bi-dhālika min-ka* = I do not know about that concerning you.

⁸⁰² Q. 6:60; Arberry, *Koran*, p. 128.

[142] Ibn Abī ‘l-Dunyā from ‘Aṭā’ ibn Yisār; he said: When it is the middle night of Sha‘bān,⁸⁰³ He hands over a page to the Angel of Death, and it is said: ‘Take from those on this page!’ If the servant is lying in bed, or couples marry, or someone builds a building,⁸⁰⁴ [he does so] while his name has already been copied into the [book of the] dead.

[143] Ibn Jarīr from ‘Umar Mawlā Ghafara; he said: [The names of] whoever is going to die on the Night of Power⁸⁰⁵ until the following one⁸⁰⁶ is copied to the Angel of Death; and [the Angel] will find the man who has married a woman, and the man who has planted the plant; but [only] when the name is amongst the dead.

[144] al-Dīnawarī in *al-Mujālasa* from Rāshid ibn Sa‘īd that the Prophet (God bless him and grant him salvation) said: On the middle night of Sha‘bān, God reveals to the Angel of Death [information] regarding the taking of every soul that He wants to be taken during that year.

[145] al-Khaṭīb and Ibn al-Najjār from ‘Ā’isha; she said: the Messenger of God (God bless him and grant him salvation) used to abstain⁸⁰⁷ during the whole of Sha‘bān

⁸⁰³ i.e. 15th Sha‘bān. Some scholars have considered that this night may have been influenced by a pre-Islamic New Year festival; Wensinck also notes that ‘According to the ḥadīth, Muḥammad practised superogatory fasting by preference in Sha‘bān.’ Wensinck, ‘Sha‘bān’ *ET*², vol. 9, p. 154. See also von Grunebaum, G. E., *Muhammadan Festivals* (London: Curzon Press, 1976) pp. 52 – 53.

⁸⁰⁴ In a Prophetic ḥadīth about another unnamed prophet, people who have married, built a house and acquired new livestock are exempted from fighting in battle (see Al-Tha‘labī, *QA*, p. 249; Brinner, *Lives*, p. 412); here these people are not exempted from death.

⁸⁰⁵ Note that there is not any consensus on the date when this happens (cf. §142). The Night of Power is the evening of 27th Ramaḍān – see Plessner, M., ‘Ramaḍān’ *ET*² vol. 8, pp. 417 – 418 and Marcotte, Roxanne D., ‘Night of Power’ *EQ* vol. 3, pp. 537 – 539.

⁸⁰⁶ Lit.: ‘...until its likeness.’

⁸⁰⁷ Sheila McDonough comments that ‘Drawing close to God requires abstaining or fleeing from all that might inhibit the human response to the divine initiate.’ McDonough, Sheila, ‘Abstinence’ *EQ* vol. 1, p. 19. Cf. Q 66:1, Arberry, *Koran*, p. 593.

until Ramaḍān; but he only fasted for a whole month during Sha^cbān.⁸⁰⁸ She said: ‘Messenger of God, is it because Sha^cbān is the dearest month for you that you fast during it?’ He said: ‘Yes, ^cĀ’isha, the taking [of souls] is written for the Angel of Death during it; I do not want my name to be deleted, so I fast.

[146] Aḥmad, al-Bazzār and al-Ḥākim and he declared the ḥadīth to be authentic (*ṣaḥīḥ*) from Abū Hurayrah from the Prophet (God bless him and grant him salvation); he said: The Angel of Death used to come to people manifestly, but he came to Moses and he [Moses] slapped him and gouged out his eye, and [the Angel of Death] went to his Lord; and he said: ‘Lord, your servant Moses has gouged out my eye. Unless you favour him, tear him open.’ He said to him: ‘Go to my servant [Moses] and say to him that he should place his hand on a skin of an ox, and then he will have a year for every hair that his hand has covered.’ So he came to him and [Moses] said: ‘What is after this?’ He said: ‘Death.’ And he said: ‘Let it be now.’ And so [the Angel of Death] smelt [Moses], took his soul and God gave him back his eye. After that he came to people in stealth.⁸⁰⁹

[147] Abū Nu^caym from al-A^cmash; he said: The Angel of Death used to be visible to people, but he came to [one particular] man, saying: ‘Finish your business, for I

⁸⁰⁸ i.e. Sha^cbān was the only month during which he performed superogatory fasting for its entirety.

⁸⁰⁹ This ḥadīth is found in many Arabic sources; see Al-Tha^clabī, *QA*, p. 247; Brinner, *Lives*, p. 409; cf. al-Kisā’ī, *QA*, pp. 237 – 240; al-Ṭabarī, *Ta’rīkh*, vol. 1, p. 434; Brinner, W. M. (tr.), *The History of al-Ṭabarī: Volume III – The Children of Israel*, pp. 87 – 88. This popularity of this tradition can be seen in its influence on the Falsahas of Ethiopia, see Ullendorf, Edward, ‘Literature of the Falashas’. There are many examples in extra-Biblical Jewish and Christian literature of Prophets (particularly figures such as Abraham, Moses, David and Solomon) meeting the Angel of Death before they die. The *Testament of Abraham* is a good example of this genre (see Ludlow, *Abraham Meets Death*). Narratives including highly anthropomorphised and comic depictions of the Angel of Death are still found in Arab folktales, cf. El-Shamy, Hasan M., *Folktales of Egypt* (London: University of Chicago Press, 1980) pp. 117 – 122 and Hanauer, J. E., *Folk-Lore of the Holy Land: Moslem, Christian and Jewish* (London: The Sheldon Press, 1935) pp. 32, 36 – 39.

want to take your soul.’ And [the man] made a complaint; consequently, [God] then sent down disease and made death a secret.

[148] al-Marwazī in *al-Janā’iz*, Ibn Abī ‘l-Dunyā and Abū ‘l-Shakyh from al-Sha‘thā’ Jābir ibn Zayd that the Angel of Death used to take souls without pain, but the people cursed him and worried about him, so he complained to his Lord. Consequently, God established diseases and they forgot about the Angel of Death. It is said someone dies like this or like that.⁸¹⁰

[149] Ibn Abī Ḥātim from Ibn ‘Abbās that an angel sought permission from his Lord to go down to Enoch,⁸¹¹ and he came to him and greeted him, and Enoch said to him: ‘Is there anything between you and the Angel of Death?’ He said: ‘He is one of my brother angels.’ He said: ‘Are you able to help me with something concerning him?’ He said: ‘[If you want to] delay [death] any [amount of time],⁸¹² or hasten it, then no, but I will ask him for you, and he will treat you kindly concerning death.’ He said: ‘Ride between my wings!’ So Enoch rode and ascended into the highest heaven, and he met the Angel of Death, with Enoch between his wings; and the angel said to him: ‘I have need of you.’ He said: ‘I already know about your need; you spoke to me about Enoch, [and what remains of his age,]⁸¹³ but his name has been wiped out, and

⁸¹⁰ Lit: it was said that so-and-so died in that way and in that way.

⁸¹¹ Al-Tha‘labī includes one continuous narrative of Enoch; this ḥadīth contains a number of similar elements, but some differences too; see al-Tha‘labī, *QA*, pp. 49 - 50; Brinner, *Lives*, pp. 83 – 85; cf. al-Kisā’ī, *QA*, pp. 81 – 85 and al-Rabghūzī, *QA*, vol. 2, pp. 49 – 52.

⁸¹² *Ammā an yu’khiru shay’an aw yuqdamuhu fa-lā* = (lit.) ‘As for delaying anything or arriving at it, then no.’

⁸¹³ This is added in the Leiden MS; fol. 195v, l. 13,

none of his appointed term⁸¹⁴ remains, save half the blinking of an eye, and then Enoch died between the wings of the angel.

[150] Abū 'l-Shaykh from Muḥammad ibn al-Munkadir that the Angel of Death said to Abraham (peace be upon him):⁸¹⁵ 'Your Lord has ordered me to take your soul in the most peaceful way that I have taken the soul of a believer.' He said: 'I ask you in the truth of the One who sent you that you consult Him about me.' He said: 'Your friend⁸¹⁶ asked that I consult with you about him.' [God] said: 'Go to him and say to him: Your Lord says: the Friend wants to meet His friend.' So he came to him, and he said: 'I was in pain when you ordered him [to take my soul].' He said: 'Abraham, have you drunk wine?'⁸¹⁷ He said: 'No.' Then [the Angel of Death] asked him to breathe over him⁸¹⁸ [and] he took his soul (*nafs*) in that way.

[151] Aḥmad from Abū Hurayrah that the Messenger of God (God bless him and grant him salvation) said: David⁸¹⁹ (peace be upon him) was extremely jealous,⁸²⁰ and he had the habit that when he went out, the doors [of his harem] would be shut. No-one would go into his family until he returned. One day he went out and returned,

⁸¹⁴ *Ajal* refers to both the appointed moment of death, and the total time allotted for life.

⁸¹⁵ For a different account of the death of Abraham, see al-Tha'labī, *QA*, pp. 97 - 98; Brinner, *Lives*, pp. 164 - 165.

⁸¹⁶ Abraham is designated the *khalīl allāh* and the portrayal of Abraham as the 'friend of God' is important in Judaism, Christianity and Islam; see Guthrie, A., 'The Importance of Abraham' *MW* 45 (1955) pp. 113 - 120; p. 118 and Bishop, Eric F. F., 'The Qumran Scrolls and the Qur'an' *MW* 48 (1958) pp. 223 - 236, pp. 225 - 226.

⁸¹⁷ *sharāb* is used by jurists to indicate wine; see Lane, *AELex*, p. 1528; cf. §171.

⁸¹⁸ *istankaha* (X) is relatively rare and refers to the action of breathing over someone's nose so that they can smell the individual's breath; see Hava, J. G., *Farā'id al-durīya* (Beirut: Catholic Press, 1964) p. 799.

⁸¹⁹ For the death of David in the *Qisas al-Anbiya*, which is relatively similar, see al-Tha'labī, *QA* p. 292; Brinner, *Lives*, pp. 489 - 490; al-Kisā'ī, *QA*, pp. 277 - 278; al-Rabghūzī, *QA*, vol. 2, p. 397.

⁸²⁰ *ghayra* refers to sexual jealousy specifically; see Lane, *AELex*, p. 2316. For analysis of a similar story in the *Qisas al-anbiyā* see Wagtendonk, 'The Stories of David' p. 349. This tradition is also told of Abraham; see al-Ghazālī, *Ihyā*, vol. 4, p. 395; Winter (tr.), *Remembrance of Death*, p. 44 - 45.

and there was a man standing in doorway of his house. [David] said to him: ‘Who are you?’ He said: ‘I am the one who does not revere kings, and the one who is not prevented from passing through the veil.’ David said: ‘You, therefore, by God! - are the Angel of Death. [I] welcome the command of God!’ And David hurried⁸²¹ to his place [before the Angel of Death] and his soul was taken.

[152] Ibn Mājah from Abū Umāma; I heard the Messenger of God (God bless him and grant him salvation) saying: God, may He be praised and glorified, made the Angel of Death responsible for the taking of the souls (*arwāḥ*) except those martyred at sea – He takes charge of the taking their souls Himself.⁸²²

[153] Juwaybir from Ibn ʿAbbās; he said: The Angel of Death is responsible for the taking of human souls, and he is the one who orders the taking of their souls; and [there is] an angel for the *Jinn*, an angel for the *Shaytāns*, and an angel for the birds, wild animals, the predatory animals, the large fish and the ant; so there are four angels. Angels die in the first strike of the lightning. The Angel of Death is responsible for taking of their souls, then [the angel] dies. As for those who are martyred at sea, God is responsible for the taking of their souls; He does not give the responsibility for that to the Angel of Death, for their honour is with Him when they travel through the depths of the sea for His sake.

⁸²¹ *zamala*: ‘He was as though he limped, by reason of his briskness, or sprightliness...’ Lane, *AELex*, p. 1252; see also Ibn Manẓūr, *LA*, vol. 13, p. 328 and al-Zabidī, *TA*, vol. 29, p. 135.

⁸²² Although sea trade routes existed before and after the advent of Islam, the Arabs relied on land trade most heavily; however, sea-trade and naval forces did develop – see Hourani, George Fadlo, *Arab Seafaring* (Princeton: Princeton University Press, 1951) pp. 53 – 55.

[154] Ibn Abī 'l-Dunyā from Muḥammad ibn Ka°b al-Qurẓī; he said: It reached me that the last to die is the Angel of Death; it is said to him: 'Angel of Death, die!' So with that he will let out a cry, (if the creatures of the heavens and the earth were to hear it, they would die of fright); then he will die.⁸²³

[155] Ibn Abī 'l-Dunyā from Ziyād al-Numayrī; he said: I have read in a certain book that death is harder for the Angel of Death than it is for the rest of the creations.

[156] al-°Uqaylī in *al-Du°afā*, Abū 'l-Shaykh in *al-°Aẓama* and al-Daylamī from Anas; he said: the Messenger of God (God bless him and grant him salvation) said: The allotted time (*ajal*) for all livestock and insects of the earth is [devoted to] the worship of God. When their glorification of God is completed, God takes their souls and there is nothing for the Angel of Death [to do] in that.

[157] al-Khaṭīb in *Ruwāt Mālik* from Sulaymān ibn Ma°mar al-Kilābī; he said: I was with Mālik ibn Anas, when a man asked him about fleas: 'Does the Angel of Death take their souls (*arwāḥ*)?' He bowed his head for a long while and then said: 'Do they have a soul (*nafs*)?' He said: 'Yes.' He said: 'Then the Angel of Death takes their souls (*arwāḥ*) [and] God receives their souls (*anfus*) in full when they die.'

⁸²³ The Leiden MS may read *lam* for *thumma*, but the writing is not clear (fol. 196r, l. 1); *thumma* makes more sense here.

[158] Abū Nuʿaym in *al-Hilya* from Muʿādh ibn Jabal; he said: The Angel of Death has a spear,⁸²⁴ which has the space from the East to the West in its reach, and when the appointed time of death of a servant of the world comes, he hits his head with that spear and he says: ‘Now the army of death is called upon you.’

[159] Ibn ʿAsākir from Ibn ʿAbbās which is traceable to the Prophet (*marfūʿ*); that the Angel of Death has a poisoned spear, which has one end in the East, and another end in the West, and he cuts the vein of life with it.⁸²⁵

[160] Ibn Abī Ḥātim from Zuhayr ibn Muḥammad; he said: The Angel of Death sits on a ladder between Heaven and Earth and he has messengers⁸²⁶ from amongst the angels. When the soul (*nafs*) is in the throat⁸²⁷ the Angel of Death sees him from his ladder, and he looks intently at him, then another which dies sees him.

[161] Ibn Abī ʿl-Dunyā from al-Ḥakam ibn Ubān; he said: ʿIkrima was asked: ‘Does a blind man see the Angel of Death when he comes to take his soul (*rūḥ*)?’ He said: ‘Yes.’

[162] Abū Nuʿaym in *al-Hilya* from Mujāhid; he said: A servant does not get ill from any illness without the messenger of the Angel of Death being with him until there is

⁸²⁴ The Angel of Death is said to have a spear (*ʿidrāʾ*) in *CantR.* 4:7, although the exact meaning of *ʿidrāʾ* is disputed. Cf. Cohen (tr.), p. 117 and Bender, A. P., ‘Belief, Rites and Customs of the Jews, Connected with Death, Burial and Mourning’ *JQR* 6 (1894) pp. 317 – 347, p. 323.

⁸²⁵ The way in which the Angel of Death kills humans is similar to the way in which humans kill animals in ritual slaughter (*dhabḥ*); see Bousquet, G.-H., ‘Dhabīḥa’ *EF*, vol. 2, pp. 213 – 214.

⁸²⁶ The Leiden MS reads *rusul* for *rasūl*; fol. 196r, l. 13. A large number of angelic helpers would seem more appropriate; cf. § 125, 127 – 129 & 135.

⁸²⁷ *Thughrat al-naḥr* = *fossa jugularis*; see Fonahn, A., *Arabic and Latin Anatomical Terminology* (Kristiana: Jacob Dybwad, 1922) §3282, p. 152; cf. Q 50:16 ‘....and We are nearer to him than the jugular vein.’ Arberry, *Koran*, p. 540.

another illness which the servant gets ill from; the Angel of Death comes to him, and says: Messenger after messenger has come to you, but you did not care about them, and now a messenger has come to you, who will cut your ties⁸²⁸ with this world!’

[163] Abū ‘l-Ḥusayn Ibn al-‘Arīf in his *Fawā'id*, and Abū ‘l-Rabī‘ al-Mas‘ūdī in his *Fawā'id* from Anas ibn Mālīk; he said: the Messenger of God (God bless him and grant him salvation) said: When the Angel of Death comes to a friend of God, Most High, he greets him and his greeting is to say: ‘Peace be upon you, friend of God. Rise and leave your house, which you have left in ruin,⁸²⁹ [and go] to your house which you have built [with your good deeds].’⁸³⁰ When it is not a friend of God, he says to him: ‘Rise and leave your house, which you have made comfortable, and [go] into your house, which you have ruined [with your misdeeds].’⁸³¹

[164] Abū ‘l-Qāsim ibn Mandah in *Kitāb al-ahwāl wa-‘l-īmān* concerning a question from Ibn Mas‘ūd; he said: When God, may He be praised and glorified, wants to take a soul of a believer, He reveals to the Angel of Death: ‘Recite to him from me: “Peace!”’ And when the Angel of Death comes to take his soul, he recites: ‘Your Lord says to you: Peace!’

⁸²⁸ Lit. ‘footprint’.

⁸²⁹ The text could read ‘which I have left in ruin etc.’ However, this ḥadīth appears to express the idea that a pious Muslim should be paying more attention to remembering God, than making their home comfortable; and that the good actions of an individual prepares their place in heaven.

⁸³⁰ *‘amara* carries positive meanings (e.g. flourishing, full of camels etc.); see Lane, *AELex*, p. 2153 – 2154.

⁸³¹ Cf. *Ket.* 104a, pp. 664 – 665: ‘When a righteous man departs from the world he is welcomed by three companies of angels. One exclaims, ‘Come into peace’; the other exclaims, *He who walketh in his uprightness*, while the third exclaims, *He shall enter into peace; they shall rest on their beds*. When a wicked man perishes from the world he is met by three groups of angels of destruction. One announces, *There is no peace, saith the Lord, unto the wicked*, the other tells him, *He shall lie in sorrow*, while the third tells him, *Go down and be thou laid with the uncircumcised*.’ See also *Shab.* 152b, p. 779.

[165] al-Marwazī in *al-Janā'iz*, Ibn Abī 'l-Dunyā and Abū 'l-Shaykh in his *Tafsīr* from Ibn Mas'ūd; he said: When the Angel of Death comes to take the soul of a believer, he says: 'Your Lord says to you: Peace!'

[166]⁸³² Ibn Abī Shayba, Ibn Abī 'l-Dunyā, Ibn Abī Ḥātim, al-Hākim and he declared it to be sound (*ṣaḥīḥ*) and al-Bayhaqī in *Shu'ab al-īmān* from al-Barā' ibn 'Āzab concerning the Word, Most High: '[Their greeting], on the day that they shall meet Him, will be "Peace!"'⁸³³ He said: On that day, they will meet the Angel of Death; whoever is a believer, [the Angel of the Death] will take their soul more peacefully for him.

[166b] Ibn al-Mubārak in *al-Zuhd*, Abū 'l-Shaykh in *al-ʿAzama*, Abū 'l-Qāsim ibn Mandah in *Kitāb al-ahwāl* and al-Bayhaqī in *Shu'ab al-īmān* from Muḥammad ibn Ka'b al-Qurayzī he said: When the soul of the believing servant is spent, the Angel of Death comes to him and says to him: 'Peace be upon you, Friend of God! God says to you: Peace!' Then he recites this verse: '...whom the angels take while they are godly saying, 'Peace be on you!'⁸³⁴

Al-Silafī said in *al-Mashyakha al-Baghdādiyya*: I heard Abū Sa'īd al-Ḥasan ibn 'Alī al-Wā'iz saying; [I heard Muḥammad ibn al-Ḥasan saying;]⁸³⁵ I heard my father saying: I saw in a book that God, Most High, makes the phrase 'In the Name of God, the Compassionate, the Merciful' appear on the palm of the Angel of Death

⁸³² This follows the Leiden MS fol. 196r, l. 27f. In the DKI edition, the *isnād* of §166 used with the *matn* of 166b.

⁸³³ Q. 33:44; Arberry, *Koran*, p. 432.

⁸³⁴ Q. 16:32; Arberry, *Koran*, p. 261.

⁸³⁵ This is included in the *isnād* in the Leiden MS; fol. 196v, l. 3.

in writing of light; then He commands [the Angel of Death] to stretch out his hand to the Knower⁸³⁶ at the time his death, and that writing is shown to him; when the soul of the one who knows sees it, it flies towards Him⁸³⁷ more quickly than a blink of an eye.

[167] Abū 'l-Shaykh from Dā'ūd ibn Abī Hind; he said: It reached me that the Angel of Death was made responsible for Solomon (peace be upon him), and he was told: 'Go into his presence every day, and ask what he needs; then do not leave him until you have performed it.'⁸³⁸ He used to enter upon him in the image of a man, and he would ask him how he was. Then he would say: 'Messenger of God, do you need anything?' If he said: 'Yes', then he did not leave him until he had done it; and if he said: 'No', then he left him until the following morning. One day he entered upon him while there was an old man with him. [Solomon] stood up, and greeted [him], then [the Angel of Death] said: 'Do you need anything, Messenger of God?' He said: 'No.' The [angel] glanced at [the old man] and the old man trembled; the Angel of Death left and the old man stood up and said to Solomon: 'I beg you, by the truth of God! to command the wind⁸³⁹ to carry me and throw me down on the furthest lump of mud in the land of India!' So [Solomon] commanded it and it carried him [there]. The Angel of Death came into Solomon the next morning and asked him about the

⁸³⁶ *Al-Ārif* is not a name of God, but is commonly used to refer to Sufi mystics; see Shah-Kazemi, Reza, 'The notion and significance of *ma'rifa* in Sufism' *JIS* 13 (2002) pp. 155 – 181, p. 157.

⁸³⁷ Or 'to the Angel of Death'.

⁸³⁸ i.e. until he had fulfilled Solomon's needs.

⁸³⁹ Solomon is believed to have had magic powers, including the command of the winds, which were given to him by God. See Johns, Anthony H., 'Air and Wind' *EQ* vol. 1, pp. 51 – 55; Soucek, Priscilla, 'Solomon' *EQ* vol. 5, pp. 76 – 78 and Walker, J., [-P. Fenton], 'Sulaymān b. Dāwūd' *EF* vol. 9, pp. 822 – 824. This power is mentioned in the Qur'ān; cf. Q 21:81; 34:12 and 38:36; Arberry, *Koran*, pp. 329, 438 & 467.

old man. [The Angel of Death] said: ‘His book⁸⁴⁰ came down to me yesterday, [saying] that I should take his soul tomorrow at the rising of dawn in the furthest lump of mud in the land of India; but when I came down, and thinking that he was there, I then found him with you. I was astonished and could not think of [anything] other than him;⁸⁴¹ I came down to him today at the break of dawn and found him on the highest lump of mud in the land of India, and he trembled, and I took his soul (*rūh*).’

[168] Ibn Abī Shayba from Khaythama; he said: The Angel of Death went into Solomon and began to look at one of his companions who continued to look at him. When he left, the man said: ‘Who was that?’ He said: ‘That was the Angel of Death.’ He said: ‘I saw him looking at me as if he wanted me.’ He said: ‘What do you want [me to do]?’ He said: ‘I want you to carry me on the wind until you put me down in India.’ So [Solomon] called the wind and he carried him upon it, and he put him down in India. Then the Angel of Death came to Solomon, and [Solomon] said to him: ‘You were looking at the man from my companions.’ He said: ‘I was astonished by him. I was ordered to take him in India and he was with you!’

[169] al-Ṭabarānī from Ibn ʿAbbās; he said: The Angel of Death went to the Prophet during the illness which he contracted⁸⁴² and he sought permission to enter [his

⁸⁴⁰ This is the book that contains the details of the individual’s *ajal*; see Berg, ‘Ṭabarī’s Exegesis’ p. 763.

⁸⁴¹ Lit.: *mā lī hammun ghayrihi* ‘I had no concerns other than him.’

⁸⁴² This ḥadīth and the following do not appear in the *Sīra* (see Guillaume, A., *The Life of Muhammad* pp. 678 – 683) nor al-Ṭabarī’s account of the Prophet’s death (see al-Ṭabarī, *Ta’rīkh*, vol. 3, pp. 183 – 199; Poonawala, Ismail K. (tr.), *The History of al-Ṭabarī: Vol. IX – The Last Years of the Prophet* (New York: State University of New York Press, 1990) pp. 162 – 183). The death of Muḥammad became important in Muslim spirituality as Muḥammad accepted death willingly; cf. al-Ghazālī, *Iḥyā’*

presence] while his head was in ʿAlī's lap.⁸⁴³ He said: 'Peace be upon you, and the mercy of God and his blessings.' ʿAlī said: 'Come back again [at another time]! We are too busy⁸⁴⁴ to deal with you.' The Prophet (God bless him and grant him salvation) said: 'Do you know who this is, Abū 'l-Ḥasan? This is the Angel of Death. Bring him in, in good faith.' When [the Angel of Death] entered, he said: 'Your Lord says to you: Peace!' [Muḥammad] said: 'Where is Gabriel?' He said: 'He is not near me, but he is coming.' The Angel of Death left until Gabriel came down to him. And Gabriel said to him while he was standing at the door: 'Why did he expel you, Angel of Death!' He said: 'Muḥammad asked for you.' When the two sat down, Gabriel said: 'Peace be upon you, Abū 'l-Qāsim!⁸⁴⁵ This is a farewell for you and for me.' It reached me that the Angel of Death did not greet anyone from a household before him, and will not greet [anyone]⁸⁴⁶ after it.

[170] al-Ṭabarānī from al-Ḥusayn that Gabriel came down to the Prophet (God bless him and grant him salvation) on the day of his death, and he said: 'How do you find yourself?' He said: 'Gabriel, I find myself distressed and I find myself scared.' The Angel of Death sought permission to enter from the door. Gabriel said: 'Muhammad, this is the Angel of Death, who is seeking permission to enter your house. He has not sought permission from me [to come to] a human before you, and he will not seek permission from me [to come to] a human after you.' [Muḥammad] said: 'Give him

vol. 4, p. 399; Winter, *Remembrance of Death*, p. 58. Al-Rabghūzī's *Qīṣaṣ al-anbiyā'* includes similar material to these ḥadīth, see al-Rabghūzī, *QA*, vol. 2, pp. 671 – 679, especially pp. 673 – 678.

⁸⁴³ Some ḥadīth say that this was ʿĀ'isha; cf. al-Ṭabarī, *Ta'rikh*, vol. 3, p. 199; Poonwawala, *Last Years of the Prophet*, p. 183 al-Ghazālī, *Ihyā'*, vol. 4, p. 403; Winter, *Remembrance of Death*, p. 65.

⁸⁴⁴ *mashāghīl* in the *mafā'īl* form is a broken plural of *mashghūl*; see Wright, W., *A Grammar of the Arabic Language* (repr. Cambridge: Cambridge University Press, 2004) vol. 1, §305a, p. 229.

⁸⁴⁵ Qāsim was one of Muḥammad's sons by Khadīja, and Abū 'l-Qāsim was his *kunya*; see Déclais, Jean-Louis, 'Names of the Prophet' *EQ* vol. 3, pp. 501 – 505, p. 501.

⁸⁴⁶ Omitted by the Leiden MS; fol. 196v, l. 29.

permission!’ So [Gabriel] let him in. [The Angel of Death] approached until he stood before [Muḥammad] and said: ‘God has sent me to you and has commanded me to obey you; if you command me to take your soul (*naḥs*), then I will take it; if you do not want [me to take it], then I will leave it.’ He said: ‘Do [it], Angel of Death.’ He said: ‘Yes, as you command.’ Gabriel said to [Muḥammad]: ‘God indeed desires to meet you.’ Then the Messenger of God (God bless him and grant him salvation) said: ‘Carry out what you have been commanded [to do] by Him’

[171] Ibn al-Najjār in his *Ta’rīkh* said: Yusūf ibn al-Mubārak ibn al-Ḥāmil al-Khafāf told me; he said: I bear witness by God and I bear witness to God that Muḥammad ibn ʿAbd al-Bāqī al-Anṣārī told me; he said: I bear witness by God and I bear witness to God that Abū Bakr Aḥmad ibn ʿAlī ibn Thābit al-Khaṭīb told me; he said: I bear witness by God and I bear witness to God that al-Qāḍī Abū al-ʿAlā Muḥammad ibn ʿAlī al-Wāṣiṭī told me;⁸⁴⁷ he said: I bear witness by God and I bear witness to God that Abū Muḥammad ʿAbd Allāh ibn Aḥmad ibn ʿAbd Allāh⁸⁴⁸ ibn al-Mulīḥ al-Sajazī told me; I bear witness by God and I bear witness to God that ʿAlī ibn Muḥammad al-Haruwī told me; I bear witness by God and I bear witness to God that ʿAbd al-Salām ibn Ṣalīḥ told me; I bear witness by God and I bear witness to God that ʿAlī ibn Mūsā al-Raḍī told me; he said: I bear witness by God and I bear witness to God that Abū Mūsā ibn Jaʿfar told me; he said: I bear witness by God and I bear witness to God that Abū Jaʿfar ibn Muḥammad told me;⁸⁴⁹ he said: I bear witness by

God and I bear witness to God that Abū Muḥammad ibn ʿAlī told me;⁸⁵⁰ he said: I bear witness by God and I bear witness to God that Abū ʿAlī ibn al-Ḥusayn told me; he said: I bear witness by God and I bear witness to God that Abū ʿAlī ibn Abī Ṭālib told me; he said: I bear witness by God and I bear witness to God that the Messenger of God (God bless him and grant him salvation) told me; he said: I bear witness by God and I bear witness to God that Gabriel told me; he said: I bear witness by God and I bear witness to God that Michael told me;⁸⁵¹ he said: I bear witness by God and I bear witness to God that ʿAzrāʾīl told me; he said: he said: I bear witness by God and I bear witness to God that God, Most High, told me; he said: The one addicted to wine is like the slave of an idol.⁸⁵²

4.2.10 The Bearers of the Throne⁸⁵³ (peace be upon them)

The Most High said: ‘eight shall carry above them the Throne of thy Lord...’⁸⁵⁴

[179] ʿAbd ibn Ḥamīd, ʿUthmān ibn Saʿīd al-Dārimī in *Kitāb al-radd ʿalā al-jahmīya*,⁸⁵⁵ Abū Yaʿlā, Ibn al-Mundhir, Ibn Khuzayma, Ibn Mardawayh and al-

⁸⁵⁰ The DKI edition includes Abū Muḥammad ibn ʿAlī twice in the *isnād*; the Leiden MS does not include him at all; see fol 197r, l. 10.

⁸⁵¹ Michael is omitted from the *isnād* in the Leiden MS; fol. 197r, l. 14.

⁸⁵² This ḥadīth has already appeared above (§84) in the section on the Angel Michael; the *isnād* is different in each of the ḥadīth, but they have a *common link* in Abū Mūsā ibn Jaʿfar. The ‘angelic *isnād*’ is also different, with the chain going through Isrāfīl in §84 and ʿAzrāʾīl in §171.

⁸⁵³ In the Old Testament Pseudepigrapha the angels that carry God’s Throne are given as Gabriel, Michael, Rafael / Rufael and Fanuel / Penuel (cf. *1 En.* 40:2, 9-10; 71:7- 13; *OTP*, vol. 1, pp. 32 & 50 and *Sib. Or.* 2:215; *OTP*, vol. 1, p. 350); in the Qurʾān and Islamic tradition, however, the Throne Angels are distinct from other named angels, which bears a closer resemblance to later Jewish exegesis in which aspects of God’s Throne become angelic (e.g. the *opannīm* and the *galgallīm* are derived from the wheels of the Throne); see Olyan, *A Thousand Thousands* pp. 31 – 69 and Barton, ‘Names of Angels and Demons’ pp. 156 – 159.

⁸⁵⁴ Q. 69:17; Arberry, *Koran*, p. 604.

⁸⁵⁵ Added by the Leiden MS; fol. 197v, l. 22.

Ḥākīm who declared to be sound (*ṣaḥīḥ*) [in *al-Kitāb al-radd ʿalā al-jaḥmiyyah*]⁸⁵⁶ from al-ʿAbbās⁸⁵⁷ ibn ʿAbd al-Muṭṭalib concerning His Word: '[eight] shall carry above them the Throne of thy Lord' – Eight angels in the form of goats.⁸⁵⁸

[180] ʿUthmān ibn Saʿīd from Ibn ʿAbbās: The Bearers of the Throne have horns, which have corners like the corners of spears. The space between one of their balls of their feet to their ankles is the distance that it would take to travel five hundred years; and the space between the tip of his nose to his collarbone is the distance that it would take to travel five hundred years; and the distance from the tip of his nose to the earlobe is five hundred years.⁸⁵⁹

[181] ʿUthmān ibn Saʿīd and Abū Yaʿlā in a sound chain of authorities from Abū Hurayrah; he said: the Messenger of God (God bless him and grant him salvation) said: Listen to me! I was told about an angel whose two legs pass through the Seven Earths and that the Throne was on his shoulders, [this angel] says: 'I worship you, where you are and where you will be.'

[181b]⁸⁶⁰ Abū Dāʿūd, Abū ʿl-Shaykh and al-Bayhaqī in *al-Asmāʾ wa-l-ṣiḥāḥ* from Jābir that the Prophet (God bless him and grant him salvation) said: Listen to me! I

⁸⁵⁶ Omitted by the Leiden MS; fol. 197v, l. 23.

⁸⁵⁷ Given as 'Ibn ʿAbbās' in the Leiden MS; fol. 197v, l. 23.

⁸⁵⁸ The origin of the belief that the bearers are in the form of goats is unclear, see Halperin, *Faces of the Chariot*, p. 470.

⁸⁵⁹ 'The vast size of angels is a theme of 3En. ... In the Hekalot texts size conveys the idea of majesty and sublimity. It is found not only in the motif of the measurements of the angels, but in Šiʿur Qomah, the measurements of the body of God, and in the motif of the dimensions of the heavens.' Alexander, '3 Enoch – Introduction', p. 263 n. 9c. See also the discussion about the size of the angels in Chapter 3.

⁸⁶⁰ This ḥadīth is added in the Leiden MS; fol. 197v, l. 30 - 198r, l. 1.

was told about one of the angels who carry the Throne; the distance between his earlobe to the shoulder is a distance of seven hundred years.

[182] Abū Dā'ūd, Abū 'l-Shaykh and al-Bayhaqī in *al-Asmā' wa-l-ṣifāt* from Jābir that the Prophet (God bless him and grant him salvation) said: Hear me, that I was told about one of the angels who carry the Throne: his two feet are on the lowest Earth and the Throne is on his horn; and [the space] between his earlobe and his shoulder is the distance it would take a bird to fly for seven hundred years. That angel says: 'I worship you wherever⁸⁶¹ you are!'

[183] Abū 'l-Shaykh through the intermediary of Abū Qabīl that he heard 'Abd Allāh say: The Bearers of the Throne; the space that is between the inner corner of one of their eyes to the outer corner of his eye is the distance of five hundred years.

[184] 'Uthmān ibn Sa'īd, Ibn al-Mundhir and Abū 'l-Shaykh from Ḥassān ibn 'Aṭiyya; he said: The Bearers of the Throne are eight. Their feet are firmly fixed on the Seventh Earth, their heads pass through the Seventh Heaven, their horns are the same as their height and on top of [their horns] is the Throne.

[185] Abū 'l-Shaykh from Zādhān;⁸⁶² he said: The Bearers of the Throne; their feet are on the limits [of the universe]. They are not able to look up because of the beams of light.⁸⁶³

⁸⁶¹ The Leiden MS reads '*ayna*' for '*haythu*'; '*haythu*' seems more appropriate; fol. 198r, l. 4.

⁸⁶² Given as 'Zādān' in the Leiden MS; fol. 198r, l. 8.

⁸⁶³ God is often described in these terms in Islam; cf. The Light Verse; Q 24:35; Arberry, *Koran*, pp. 356 - 357.

[186] Ibn al-Mundhir, Abū 'l-Shaykh and al-Bayhaqī in *Shu'ab al-īmān* from Hārūn ibn Ri'āb, he said: The Bearers of the Throne are eight and they call back to each other in merciful voices; four of them saying: 'We worship You and [we are] in praise of You for Your clemency after Your knowledge [of sins committed]!'; and [the other] four saying: 'We worship You and [we are] in praise of You for Your forgiveness of sins, according to Your decree!'

[187] 'Abd ibn Ḥamīd from al-Rabī' concerning His Word: 'eight shall carry above them the Throne of thy Lord.'⁸⁶⁴ [Eight]⁸⁶⁵ from the angels.

[188] Ibn Jarīr from Ibn Zayd; he said: the Messenger of God (God bless him and grant him salvation) said: Four carry him today, eight [will carry him] on the Day of Resurrection.⁸⁶⁶

[189] 'Abd al-Razzāq, 'Abd ibn Ḥamīd, Ibn al-Mundhir and Abū 'l-Shaykh from Wahb; he said: The Bearers of the Throne: the ones that carry him are four angels, and each angel has four faces and four wings, with two wings on its face, which [prevent it from]⁸⁶⁷ looking at the Throne, [for if it were to look] it would be struck unconscious, and two [other] wings, with which they fly. Their feet are on the ground

⁸⁶⁴ Q. 69:17; Arberry, *Koran*, p. 604; cf. Rev. 4:6, where there are four bearers of the Throne.

⁸⁶⁵ Added by the Leiden MS, fol 198r, l. 13.

⁸⁶⁶ Cf. Q 69:17: '...and the angels shall stand upon its borders, and upon that day eight shall carry above them the Throne of thy Lord.' Arberry, *Koran*, p. 604. There is some debate in the exegetical literature about what this meant exactly, e.g. al-Qurtubī, *Al-Jāmi' li-aḥkām al-Qur'ān* (Cairo: Dār al-Kutub al-Misriyya, 1948) vol. 12, pp. 266 – 267; al-Ṭabarī, *Jāmi' al-bayān 'an ta'wīl al-Qur'ān [Tafsīr]* (Cairo: Muṣṭafā al-Bābī al-Ḥalabī, 1968), vol. 29, pp. 58 – 59; and al-Rāzī, Fakhr al-Dīn Muḥammad ibn 'Umar, *Mafātīḥ al-ghayb [Tafsīr]* (Cairo: Maṭba'at al-'Amīra al-Sharafiyya, c. 1906) vol. 8, p. 200.

⁸⁶⁷ Omitted in the the Leiden MS; fol. 198r, ll. 15 – 16.

and the Throne is on their shoulders. Each one of them has a face of a bull, a face of a lion, a face of a human and a face of an eagle.⁸⁶⁸ They do not say a word, except that they say: ‘Holy! God Almighty, your glory fills the heaven and the earth!’⁸⁶⁹

[190] Abū ‘l-Shaykh through the intermediary of al-Suddī from Abū Mālik; he said: The rock which is under the Earths⁸⁷⁰ is the extent of creation and on its limits are four angels; each one of them has four faces: a face of a man, a face of a lion, a face of an eagle and a face of a bull; while they are standing on it, they encompass the heavens and the earth and their heads are under the Throne.

[191] Abū ‘l-Shaykh from Wahb; he said: The Bearers of the Throne: today they are four, but when the Day of Resurrection comes, they will be supported by four others. An angel from amongst them has the likeness of a human, which intercedes for the children of Adam in their need; an angel has the likeness of an eagle, which intercedes for birds in their need;⁸⁷¹ an angel has the likeness of a bull, which intercedes for livestock in their need and an angel has the likeness of a lion, which intercedes for predatory animals in their need. Each angel has four faces: a face of a human, a face of an eagle, a face of a bull and a face of a lion; and when they carry

⁸⁶⁸ Cf. Ezk. 1:10 and Rev. 4:8; this Arabic text is very close to Ezekiel’s first Throne Vision (Ezekiel 1:1 – 2:11). The four different faces represent creation as a whole rather than just humans; cf. Richard Bauckham on Rev. 4:9: ‘Their representative function is to worship on behalf of all creatures, and therefore it is fulfilled when the circle of worship expands to include not only humans, but “every creature in heaven and on earth and under earth and in the sea” (5:13).’ Bauckham, Richard, *The Theology of the Book of Revelation* (Cambridge: Cambridge University Press, 1993) pp. 33 – 34.

⁸⁶⁹ This is almost a direct translation of the *trisagion* of the Seraphim in Is. 6:3.

⁸⁷⁰ The Leiden MS reads ‘*arḍīn*’; fol. 198r, l. 22. For a discussion of the rock under the earth, see al-Ṭabarī, *Tafsīr*, vol. 1, p. 194 (on Q 2:29); see also Mahmoud, Muhammad, ‘The Creation Story in *Sūrat al-Baqara*, with Special Reference to Al-Ṭabarī’s Material: An Analysis’ *JAL* 26 (1995) pp. 201 – 214, pp. 202 – 203. The idea of the earth being diving into seven layers, with a rock and a sea below is also found in Judaism; see Gaster, T. H., ‘Earth’ *EJ* vol. 6, coll. 338 – 340 and Lane-Poole, Stanley, ‘Cosmogony and Cosmology (Muhammadan) *ERE* vol. 4, p. 174.

⁸⁷¹ See Halperin, *Faces of the Chariot*, pp. 471 – 472.

the Throne, they fall down onto their kness because of the glory of God. They whisper: ‘There is no power and no strength save in God.’ And standing up on their feet they are the same height.

[192] Abū ‘l-Shaykh from Makhūl; the Messenger of God (God bless him and grant him salvation) said: There are four angels amongst the Bearers of the Throne; an angel is in charge of the forms and he is the human,⁸⁷² an angel has the likeness of the master of the predatory animals, and he is the lion; an angel is in the likeness of livestock, he is the bull (and he has been angry since the day of [the worship of]⁸⁷³ the calf⁸⁷⁴ until now),⁸⁷⁵ and an angel has the likeness of the master of the birds, and he is an eagle.

[193] ‘Uthmān ibn Sa‘īd al-Dārimī and al-Bayhaqī in *al-Asmā’ wa-‘l-ṣifāt* from ‘Urwa; he said: The Bearers of the Throne – one of their forms is in the likeness of a man; one of their forms is in the likeness of an eagle; one of their forms is in the likeness of a bull and one of their forms is in the likeness of a lion.

⁸⁷² This alludes to the human dominion over animals.

⁸⁷³ Omitted in the Leiden MS; fol. 198r, l. 30.

⁸⁷⁴ Cf. ‘...he said, “and I seized a handful of dust from the messenger’s track, and cast it into the thing [i.e. the calf]. So my soul prompted me.”’ Q 20:96; Arberry, *Koran*, p. 318. A tradition of Ibn Mas‘ūd interprets the phrase *athar al-rasūl* as *athar faras al-rasūl*; David Halperin argues that this could be related to a Jewish tradition, in which the dust from the footstep of the ox-*ḥayyah* was added to the image of the calf (see Halperin, *Faces of the Chariot*, pp. 176 – 187 and 478 – 479), and concerning the original Jewish tradition comments: ‘The Israelites draw the living essence of the *merkeveh* ox, through the dust of its footprint, into the molten calf that they have made.’ Halperin, *Faces of the Chariot*, p. 178.

⁸⁷⁵ ‘this hour of mine’, i.e. the time of the Prophet.

[194] Ibn Abī Ḥātim from Ibn Zayd; he said: There is no-one higher amongst the Bearers of the Throne, save Isrāfīl. He said: Michael is not one of the Bearers of the Throne.

[195] Abū 'l-Shaykh from Ibn 'Abbās that the Messenger of God (God bless him and grant him salvation) came up to his friends and said: 'Why are you meeting?' And they said: 'We have come together to remember our Lord and we are contemplating his glory.' He said: 'You will never [be able to] continue meditating on his glory, unless I tell you about something of the glory of your Lord.' They said: 'Indeed, Messenger of God!' He said: 'An angel from amongst the Bearers of the Throne, it is said Isrāfīl, has one of the corners of the Throne on the nape of his neck, his feet pierce the lowest Seventh Earth and his head pierces the highest Seventh Heaven; the created world of your Lord is in his likeness.

[196] al-Daylamī from 'Alī; he said: the Messenger of God (God bless him and grant him salvation) said: When the month of Ramaḍān begins, [God, Most High,]⁸⁷⁶ orders the Bearers of the Throne to refrain from saying the *tasbīḥ* and they ask [God's] forgiveness for the community of Muḥammad and the believers.

[197] al-Dīnawarī in *al-Mujālasa* from Mālik ibn Dīnār; he said: I heard that in a part of the heavens there is an angel which has eyes the number of little pebbles [on earth];⁸⁷⁷ there is no eye among them that does not have a tongue and two lips

⁸⁷⁶ Omitted in the Leiden MS; fol. 198v, l. 9.

⁸⁷⁷ In Jewish tradition the Cherubim and the *Hayyōt* are said to have many eyes: cf. *2En* 21:1, *OTP*, vol. 1, pp. 134 – 135; *ApAbr.* 18:3 – 7. *OTP*, vol. 1, p. 698; *3En* 22, *OTP*, vol. 1, p. 278; these images are largely based on the descriptions of God's chariot in *Ezk.* 1 & 10. Having many eyes is a symbol

underneath it, which praise God, the Blessed and the Most High, in a language which is not understood by its neighbours. The Bearers of the Throne have horns between their shoulders. Their horns and their heads are a distance of five hundred years apart and the Throne is above that.

[198] al-Dīnawarī from Abū Mālik concerning His Word: ‘His Throne comprises the heavens and the earth’⁸⁷⁸ He said: The Rock which is under the Seventh Earth; on its four sides are four from amongst the angels; each of the angels has four faces: a face of a human, a face of a lion, a face of an eagle, and the face of a bull; they stand on its sides and they surround the Earth and the Heavens; their heads are under the Seat and the Seat is under the Throne.⁸⁷⁹

[199] al-Dīnawarī from Khālīd ibn Ma‘dān; he said: The Throne has been heavy for the Bearers of the Throne from the very beginning; when those who are praising [God] stand up, it becomes lighter for them.

[200] al-Bayhaqī in *Shu‘ab al-īmān* through the intermediary of Qutayba from Bakr ibn Maḍr from Ṣakhr ibn ‘Abd Allāh from Ziyād ibn Abī Ḥayya; he said: I heard that regarding the Bearers of the Throne, there streams from [one of their] eyes the

of omniscience and God bestowing this power on his creations. Cf. God transforming Enoch into a creature with 365,000 eyes in *3En.* 9; 25:2 & 26:6, *OTP*, vol. 1, p. 263, 278 – 280; see also Ulmer, Rivka, *The Evil Eye in the Bible and Rabbinic Literature* (Jerusalem: Ktav, 1994) pp. 21 – 23.

⁸⁷⁸ Q. 2:255; Arberry, *Koran*, p. 37.

⁸⁷⁹ There is some debate in Islamic tradition about the differences between the Throne (‘*arsh*’) and the Seat (*kursī*); the *kursī* is often interpreted as ‘footstool’ as it is a more general word for a ‘support’. See Hurat, Cl. [-Sadan, J.], ‘Kursī’ *EF* vol. 5, p. 509; Elias, ‘Throne of God’ and Vitestam, Gösta, ‘*‘Arsh* and *kursī*. An Essay on the Throne Traditions in Islam’ in Jakob H. Grønbaek *et al.* (eds.), *Living Waters: Scandinavian Orientalistic Studies* (Copenhagen: Museum Tusculanum Press, 1990) pp. 369 – 378, p. 374.

likeness of rivers of tears.⁸⁸⁰ When one raises its head, it says: ‘I worship You! We do not fear You as much as You deserve to be feared!’ God, may He be praised and glorified, says: ‘But those who swear falsely by My name are liars, they do not know [that they should be fearful].’

[201] Ibn Mardawayh from Umm Sa‘d; she said: I heard the Prophet (God bless him and grant him salvation) say: The Throne is on an angel made of pearls in the image of a cockerel, its feet are on the limits of the earth, and its two wings are in the East and his neck is under the Throne.⁸⁸¹

[202] ‘Abd ibn Ḥamīd, Ibn Mardawayh, al-Bayhaqī in *al-Asmā’ wa-’l-ṣifāt* from Ibn ‘Abbās; he said: The Bearers of the Throne: the [distance] between one of their ankles to the bottom of their foot is the [time it would take to travel] five hundred years. He mentioned that the stride of the Angel of Death [reaches] from the East to the West.

⁸⁸⁰ Cf. *GenR* 78:1, pp. 714 – 715 & *LamR* 3:2 §8, po. 201 – 202; the rivers of paradise are said to be fed by the perspiration of the *ḥayyōt*, caused by their bearing the Throne.

⁸⁸¹ Al-Suyūṭī devotes a chapter to the Cockerel (§280 – 294) as well as part of his collection *Kitāb al-wadīk fī faḍl al-dīk*. (Tottoli, ‘At Cock-Crow’ pp. 142 – 143). The ‘cosmic cockerel’ has been mentioned in passing by a number of scholars, but the significance of the ‘cosmic cockerel’ has not been discussed. Asin Palacios comments: ‘El gallo de la leyenda musulmana es también de gigantesco tamaño, y se ofrece a los ojos de Mahoma llendano el cielo; sus alas agitanse igualmente al entonar sus cánticos religiosos excitando a los hombres a la práctica de la oración, y reposan después...’ Asin Palacios, M., *Escatología Musulmana*, pp. 31 & 52; Kopf, ‘Dīk’. The cockerel does, however, have a long history of being associated with the divine, especially the light or the sun – see Ehrenburg, Erica, ‘The Rooster in Mesopotamia’ in Erica Ehrenburg (ed.), *Leaving No Stones Unturned* (Winona Lake: Eisenbrauns, 2002) pp. 53 – 62.

[203] ʿAbd ibn Ḥamīd from ʿIkrima; he said: All of the Bearers of the Throne are *sawr*. ʿIkrima was asked: ‘What is meant by *sawr*? He said: ‘He bows his cheek a little.’⁸⁸²

[204] ʿAbd ibn Ḥamīd from Maysara; he said: The angels who carry the Throne are not able to look at what is above them because of the beams of light.

[205] ʿAbd ibn Ḥamīd from Maysara; he said: ‘[Concerning] the feet of the Bearers of the Throne; their feet are on the lowest earth and their heads pierce the Throne; they are humble and do not raise their eyes; they have a more intense fear [than the people of the Seventh Heaven, and the people of the seventh heaven have a more intense fear than]⁸⁸³ the people of the heaven which is below, and that which is below [that] has a more intense sense of fear than that which is beneath it.

[206] Ibn Abī Shayba in *al-Muṣannaḡ* from Abū Umāma; he said: The angels who carry the Throne talk in Persian.⁸⁸⁴

⁸⁸² ‘*sawr*’ is a general term for ‘bowing’ or ‘inclination’ and as such does not describe the inclination or bowing of a particular part of the body, see *AELex*, p. 1744.

⁸⁸³ Omitted in the Leiden MS; fol. 199r, l. 1.

⁸⁸⁴ This is unusual as the Arabic language of the Qurʾān is seen as paramount in Qurʾānic self-perception (see Jenssen, Herbjørn, ‘Arabic Language’ *EQ* vol. 1, pp. 127 – 135; especially, pp. 132 – 134), to the extent that non-Arabic loanwords in the Qurʾān were viewed as obscure Arabic words by Islamic scholars (see Kopf, L, ‘Religious Influences on Islamic Philology’ *SI* 5 (1956) pp. 33 – 59). Likewise angelic speech (a form of divine revelation) is normally associated with a faith’s language of revelation, as a symbol of the faith’s claim on true religion, (cf. The Pseudepigraphical work *Jubilees* 12:25 – 27). Steve Weitzmann has commented that: ‘To understand Hebrew, according to *Jubilees*, is to belong to a divinely selected group with access to esoteric knowledge inherited from the age before Babel. In *Jubilees* Hebrew is also said to connect those who use it to the heavenly community.’ Weitzman, Steve, ‘Why did the Qumran community write in Hebrew?’ *JAOS* 119 (1999) pp. 35 – 45, p. 41. There are some other Biblical and Pseudepigraphical texts that believe that angels speak in an esoteric language that humans cannot understand (e.g. *ApAbr.* 15:7; *2En.* 17:1, *2Cor.* 12:4). In this case, however, the angels are speaking in a language other than Arabic that was understood by a large number of Muslims. For more on the relationship between Persian and Arab literature and culture see Danner, Victor, ‘Arabic Literature in Iran’ *CHI*, vol. 4, pp. 566 – 594.

[207] °Abd ibn Ḥamīd and Ibn al-Mundhir from Maysara concerning the Word of the Most High: ‘eight shall carry above them the Throne of Thy Lord.’⁸⁸⁵ He said: Their feet are on the limits [of the earth] and their heads are with the Throne. They are not able to raise their eyes because of the beams of light.

[208] Ibn Jarīr, Ibn al-Mundhir and Ibn Abī Ḥātim from Ibn °Abbās concerning His Word: ‘eight shall carry above them the Throne of Thy Lord.’⁸⁸⁶ He said: Eight ranks of angels – only God knows their number.

[209] °Abd ibn Ḥamīd from al-Ḍaḥḥāk concerning the verse,⁸⁸⁷ he said: It is said: Eight ranks, only God knows their number.⁸⁸⁸

[209b]⁸⁸⁹ [°Abd ibn Ḥamīd and Ibn al-Mundhir from Maysara concerning the verse],⁸⁹⁰ it is said: The heads of the eight angels are with the Throne in the Seventh Heaven and their feet are on the lowest Earth; they have horns like mountain goats and the distance between the roots of their horns to their tips is a journey of five hundred years.

⁸⁸⁵ Q 69:17; Arberry, *Koran*, p. 604.

⁸⁸⁶ Q 69:17; Arberry, *Koran*, p. 604.

⁸⁸⁷ i.e. Q 69:17; Arberry, *Koran*, p. 604.

⁸⁸⁸ This interpretation is relatively common, e.g. Ṭabarī, *Tafsīr*, vol. 29, pp. 58 - 59.

⁸⁸⁹ This is given as a separate ḥadīth in the Leiden MS; fol. 199r, l. 8.

⁸⁹⁰ Added in the Leiden MS; fol. 199r, ll. 8 – 9. The verse being referred to is Q 69:17.

4.2.11 The Spirit (peace be upon him)

The Most High said: ‘in it the angels and the Spirit descend’⁸⁹¹ and He said: ‘Upon the day when the Spirit and the angels stand in ranks’.⁸⁹²

[210] Ibn Jarīr, Ibn al-Mundhir, Ibn Abī Ḥātim, Abū ‘l-Shaykh and al-Bayhaqī in *al-Asmā’ wa-‘l-ṣifāt* through the intermediary of Ibn Abī Ṭalḥa from Ibn ‘Abbās; he said: The Spirit is a creation from the greatest of the angels.⁸⁹³

[211] Abū ‘l-Shaykh from al-Ḍaḥḥāk; he said: The Spirit is the veil⁸⁹⁴ of God, [Most High],⁸⁹⁵ he will stand in front of God on the Day of Resurrection, and he is the greatest of the angels; if he were to open his mouth, there would be enough room for all of the angels together. The creations look to him; but out of fear of him, they are not able to raise their eyes to what is above him.

[212] Ibn Jarīr, Ibn al-Mundhir, Ibn Abī Ḥātim, Abū ‘l-Shaykh and al-Bayhaqī in *al-Asmā’ wa-‘l-ṣifāt* in a weak *isnād* from ‘Alī ibn Abī Ṭālib; he said: The Spirit is an

⁸⁹¹ Q 97:4; Arberry, *Koran*, p. 652.

⁸⁹² Q 78:38; Arberry, *Koran*, p. 627. In Judaism, particularly in the Hellenic period, the ‘spirit of God’ was considered in angelic terms; for a discussion of this in Philo and others see Levinson, John R., ‘The Prophetic Spirit as an Angel according to Philo’ *HTR* 88 (1995) pp. 189 – 207. In Islam, the Spirit was often identified with Gabriel, rather than being a separate angel; cf. al-Qazwīnī, *‘Ajā’ib*, p. 37.

⁸⁹³ The Leiden MS reads: *al-rūḥ malak min a‘zam al-malā’ika khalqan*; fol. 199r, ll. 14 – 15.

⁸⁹⁴ The veil is related to the veil that separated the Holy of Holies from the rest of the Temple in Judaism (for a full discussion of the Veil of the Temple, see Légasse, S., ‘Les voiles du Temple de Jérusalem: Essai de Parcours Historique’ *RB* 87 (1980) pp. 560 – 589). Some Jewish, Christian and Samaritan texts describe the Veil of the Temple as an angel, for a full discussion of these descriptions see Fossum, ‘Angel of the Lord’. For a discussion of the veil in Islam see Winter, Tim, ‘The Chador of God on Earth: the Metaphysics of the Muslim Veil’ *NB* 85 (1996) pp. 144 – 157.

⁸⁹⁵ Added in the Leiden MS; fol. 199r, l. 20.

angel. It has seventy thousand faces; every face has seventy thousand tongues; every tongue has seventy thousand languages,⁸⁹⁶ which praise God in all of those languages; and from every act of praise God creates an angel, which flies with the angels until the Day of Resurrection.

[213] Ibn Jarīr, Ibn al-Mundhir and Abū ‘l-Shaykh through the intermediary of ‘Aṭā’ from Ibn ‘Abbās; he said: The Spirit is an individual angel;⁸⁹⁷ he has ten thousand wings; two wings [span the distance] between the East and the West; he has a thousand faces and every face has a thousand tongues, and two eyes, and two lips, which praise God until the Day of Resurrection.

[214] Abū ‘l-Shaykh from Wahb; he said: The Spirit is one of the angels; he has ten thousand wings, two wings of which [span the distance] between the East and the West; he has a thousand faces, and every face has a thousand tongues and two lips, which will praise God until the Day of Resurrection.

[215] Ibn al-Mundhir and Abū ‘l-Shaykh from Muqātil ibn Ḥayyān; he said: The Spirit is the most exalted angel, and the nearest of them to the Lord, and he is the one responsible for revelation (*wahy*).⁸⁹⁸

⁸⁹⁶ Cf. Ibn Ṭufayl, *Ḥayy ibn Yaqzān*, p. 85.

⁸⁹⁷ Some commentators believed that *al-Rūḥ* refers to a species of angel; cf. §219, 222 – 228.

⁸⁹⁸ *wahy* is an intimate, non-verbal form of revelation (as opposed to *nuzul*, *inzāl* &c.); see Izutsu, Toshihiko, *God and Man in the Koran: Semantics of the Koranic Weltanschauung* (Tokyo: Keio Institute of Cultural and Linguistic Studies, 1964) pp. 158 – 162; Wensinck [-Rippin] ‘*Wahy*’ *EF*² vol. 11, pp. 53 – 56 and Nwyia, Paul, *Exégèse Coranique et Language Mystique* (Beirut: Dar el-Machreq, 1970) pp. 56 – 57. Gabriel is usually associated with revelation that is communicated to prophets by *tanzīl* whereas the Spirit is associated with *wahy* (“inspiration”).

[216] Ibn Jarīr from Ibn Masʿūd; he said: The Spirit is in the Fourth Heaven and he is greater than the heavens, the mountains and the angels. He praises God every day by saying ‘I praise you’ ten thousand times; God, Most High, creates an angel from every act of praise. He will come in a rank by himself on the Day of Resurrection.⁸⁹⁹

[217] Muslim, Abū Dāʿūd, al-Nasāʾī from ʿĀʾisha that the Messenger of God (God bless him and grant him salvation) used to say during his kneelings (*rukūʿ*) and prostrations (*sujūd*): ‘Glory to the Holy One, the Lord of the Angels and the Spirit.’⁹⁰⁰

[218] ʿAbd al-Razzāq, ʿAbd ibn Ḥamīd, Ibn Jarīr, Ibn al-Mundhir, Ibn Abī Ḥātim, Abū ʿl-Shaykh and al-Bayhaqī in *al-Asmāʾ wa-l-sifāt* from Mujāhid; he said: The Spirit was created in the likeness of a human.⁹⁰¹

[219] ʿAbd al-Razzāq, ʿAbd ibn Ḥamīd, Ibn al-Mundhir, Abū ʿl-Shaykh from Mujāhid; he said: The Spirits eat;⁹⁰² they have two hands, feet and heads, whereas the angels do not.

[220] ʿAbd ibn Ḥamīd and Ibn al-Mundhir from ʿIkrima; he said: The Spirit is the greatest creation from among the angels and no angel descends without the Spirit.

⁸⁹⁹ A literal reading of Q. 78:38 mentioned above.

⁹⁰⁰ Cf. ‘All that is in the heavens and the earth magnifies God, the King, the All-Holy...’ Q 62:1; Arberry, *Koran*, p. 583.

⁹⁰¹ Cf. ‘...then we sent to her Our Spirit that presented himself to her a man without fault.’ Q 19:17; Arberry, *Koran*, p. 303.

⁹⁰² Note the plural verb; this ḥadīth is referring to *al-Rūḥ* as a species or class of angel, rather than as an individual angel; as such the translation ‘Spirits’ seems to be preferable, although the Arabic does strictly say ‘the Spirit’.

[221] °Abd ibn Ḥamīd and Abū 'l-Shaykh through the intermediary of Mujāhid from Ibn °Abbās; he said: The Spirit was created from the creations of God in the image of a human; an angel does not come down⁹⁰³ from heaven without one of the Spirits (*wāḥid min al-rūḥ*) with him.

[222] Ibn Abī Ḥātim, Abū 'l-Shaykh and Ibn Mardawayh through the intermediary of Mujāhid from Ibn °Abbās that the Prophet (God bless him and grant him salvation) said: The Spirit is an army amongst the armies of God; they are not part of the angels; they have heads, two hands and feet. Then he recited: 'Upon the day when the Spirit and the angels stand in ranks'⁹⁰⁴ and he said: These are an army and these are an army.⁹⁰⁵

[223] °Abd al-Razzāq, °Abd ibn Ḥamīd, Ibn al-Mundhir, Abū 'l-Shaykh and al-Bayhaqī in *al-Asmā' wa-l-ṣifāt* from Abū Ṣāliḥ; he said: The Spirits are a creation similar to people, but they are not people; they have two hands and feet.

[224] Ibn Abī Ḥātim and Abū 'l-Shaykh from °Abd Allāh ibn Burayda; he said: The *Jinn*, the humans, the angels and the devils do not make one tenth of the Spirit.⁹⁰⁶

⁹⁰³ The Leiden MS reads: *mā nazala*; 'an angel has not come down from heaven...' fol. 199v, l. 7.

⁹⁰⁴ Q. 78:38; Arberry, *Koran*, p. 627.

⁹⁰⁵ The Jalālayn gloss '*yaqūmu al-rūḥ*' with: '*Jibrīl aw jund allāh*' / 'Gabriel or an army of God.' al-Jalālayn [al-Maḥalī, Jalāl al-Dīn ibn Muḥammad ibn Aḥmad & al-Suyūṭī, Jalāl al-Dīn °Abd al-Raḥmān ibn Abī Bakr], *Tafsīr* (s.i.: Maktabat al-Muthannā, c. 1920), p. 499; whereas al-Bayḍawī is even vaguer: '...the spirit is an angel responsible for the spirits (*arwāḥ*) or a group of them, or Gabriel or a creation mightier than the angels (*khalq 'aḥḍam min al-malā'ika*).' al-Bayḍawī, *Commentarius*, vol. 2, p. 383.

⁹⁰⁶ Cf §21 – 23.

[225] Ibn Abī Ḥātim, Abū ‘l-Shaykh from al-Sha‘bī concerning His Word: ‘Upon the day when the Spirit and the angels stand in ranks.’⁹⁰⁷ He said: Both of them are ranks⁹⁰⁸ of the Lord of the Two Worlds; on the Day of Judgement there will be a rank of the spirits and a rank of angels.

[226] Abū ‘l-Shaykh from Salmān; he said: Humans and *jinn* are ten parts: humans make one part and the *jinn* make nine parts; the angels and the *jinn* are ten parts: *jinn* make one part and the angels make nine parts; the angels and the spirits are ten parts: the angels make one part and the Spirit makes nine parts; [the Spirit and]⁹⁰⁹ the cherubim are ten parts: the Spirit makes one part and the cherubim make nine parts.⁹¹⁰

[227] Ibn Abī Ḥātim from Ibn Abī Nujīh; he said: The Spirit is the *hafīz* of the angels.⁹¹¹

[228] Ibn al-Anbārī in *Kitāb al-aḍḍād* from Mujāhid; he said: The Spirits are a creation amongst the angels, but the angels do not see them; just as you do not see the angels.

⁹⁰⁷ Q. 78:38; Arberry, *Koran*, p. 627.

⁹⁰⁸ Read *simātā* for *ṣimātā* and likewise *ṣimāt* (*bis*), cf. Leiden MS fol. 199v, l. 17; = ranks of people, see *AELex*, p. 1427.

⁹⁰⁹ Omitted in the Leiden MS; fol. 199v, l. 20.

⁹¹⁰ Cf. §23 above; al-Suyūṭī has taken the same ḥadīth from a different source (Ibn Abī Ḥātim), but the authority is the same (given as Salmān Abū ‘l-A‘ṭs).

⁹¹¹ Note the ambiguity between the singular *al-Rūḥ* and the plural noun in apposition (*ḥafāza*). *Al-Rūḥ* is strictly singular – the correct plural is *arwāh* – but is considered as a plural in certain places.

4.2.12 Ridwān, Mālik and the Keepers of the Fire (peace be upon them)

The Most High said: ‘And they shall call, ‘O Malik, let thy Lord have done with us!’ He will say, ‘You will surely tarry.’⁹¹² And the Most High said: ‘And those who are in the Fire will say to the keepers of Gehenna’⁹¹³ and the rest of the verse; and the Most High said: ‘and over which are harsh, terrible angels’⁹¹⁴ and the rest of the verse; and he said: ‘over it are nineteen. We have appointed only angels to be masters of the Fire’⁹¹⁵ and the rest of the verse; and the Most High said: ‘the guards of hell’.⁹¹⁶

[229] al-Qutbī⁹¹⁷ in *‘Uyūn al-akhbār* from Ṭāwūs⁹¹⁸ that God, may He be praised and glorified, created Mālik⁹¹⁹ and he created as many fingers as the numbers of people in the Fire for him; no-one in the Fire is tortured without Mālik torturing him with one of his fingers; by God! if Mālik were to place one of his fingers in heaven, then it would melt it.

[230] al-Ḍiyā’ al-Maqdisī in *Ṣifat al-nār* from Anas; I heard the Messenger of God (God bless him and grand him salvation) saying: By the one who [holds] my soul in

⁹¹² Q 43:77; Arberry, *Koran*, p. 511; *Mālik* has normally been interpreted as an actual name (although it could simply mean ‘possessor’), a variant reading of *Māl*, would seem to support this, see al-Baydawī, *Commentarius*, vol. 2, p. 243 and Bell, Richard (ed. C. E. Bosworth & M. E. J. Richardson), *A Commentary on the Qur’ān* (Manchester: Manchester University Press, 1991), vol. 2, p. 248.

⁹¹³ Q 40:49; Arberry, *Koran*, p. 486.

⁹¹⁴ Q 66:6; Arberry, *Koran*, p. 594.

⁹¹⁵ Q 74:30; Arberry, *Koran*, pp. 616 – 617.

⁹¹⁶ Q 96:18; Arberry, *Koran*, p. 651.

⁹¹⁷ This is possibly Ibn Qutayba, who wrote a work called, *‘Uyūn al-akhbār*; see Brockelmann, *GAL* vol. 1, p. 120.

⁹¹⁸ The Leiden MS reads: *Tāwūs* / *Tā’ūs*, fol. 199v, l. 2.

⁹¹⁹ The Leiden MS reads: *malakan*; ‘created an angel’; fol. 199v, l. 28.

his hand!⁹²⁰ The Angels of Hell were created a thousand years before Hell itself; every day they increase their power.

[231] ʿAbd Allāh ibn Aḥmad in *Zuwāʿid al-Zuhd* from Abū ʿImrān al-Jawnī; he said: I heard that there are nineteen Keepers of the Fire.⁹²¹ The space between one of their shoulders is a journey of a hundred autumns; there is no mercy in their hearts; indeed, they were made for torture, one of these angels beats one of inhabitants of the Fire⁹²² vigorously, then he leaves him crushed [like dust] from his head to his feet.

[232] Ibn Jarīr from Kaʿb; he said: The space between the shoulders of one of the Keepers is a journey of [five]⁹²³ hundred years; every of them has a pole with two prongs, and he prods [the inhabitant of Hell] vigorously with it; he harasses seven hundred thousand [people] with it.

[233] Ibn al-Mundhir from Mujāhid; he said: I was told that the Prophet (God bless him and grant him salvation) described the Guardians of Hell; he said: Their eyes are like lightning, and their mouths are like cockerels' spurs, their hair trails [on the floor],⁹²⁴ they are as strong as humans and *jinn*⁹²⁵ and one of them receives a

⁹²⁰ Cf. 'So Glory be to Him, in whose hand is the dominion and unto whom you shall be returned' and 'Blessed by He in whose hand is the Kingdom - He is powerful over everything, who created death and life...' Q36:83 & 67:1 – 2; Arberry, *Koran*, pp. 455 & 596.

⁹²¹ The number nineteen has, as Bell comments '...given much rise to questioning and speculation.' Bell, *Commentary*, vol. 2, p. 453. Al-Baydawī says that the number could refer to angels '*malakan*' or a species of angels '*ṣanfan malā'ika*' that are responsible for punishing different types of sinners or that the nineteen are responsible for punishing the people in the Fire for an hour each, with five hours left aside for the ritual prayers, see Al-Baydawī, *Commentarius*, vol. 2, p. 396. Karl Ahrens associated with the number nineteen with the twelve signs of the zodiac and the seven planets, citing Mandaean beliefs as a possible source, see Ahrens, Karl, *Muhammad als Religionsstifter* (Leipzig: Deutsche Morgenländischen Gesellschaft, 1935) pp. 30 – 31.

⁹²² Lit: 'the angel from amongst them beats the man from amongst the people of the Fire.'

⁹²³ The Leiden MS reads, '*mā'ia*'; fol. 200r, l. 4.

⁹²⁴ Cf. the descriptions of Munkar and Nakīr, §302 – 311.

[whole] community of people [and] he herds them; on his neck is a mountain, until he casts them into the Fire, and he throws the mountain on top of them [afterwards].

[234] Ibn al-Mubārak in *al-Zuhd*, Ibn Abī Shayba, ^cAbd Ibn Ḥamīd, Ibn al-Mundhir and al-Bayhaqī in *al-Ba^cth* through the intermediary of al-Azraq ibn Qays from a man from the Banū Tammīm; he said: We were with Abū ‘l-^cAwām, when he recited this verse: ‘over it are nineteen.’⁹²⁶ He said: ‘What do you say: nineteen angels or nineteen thousand?’ I said: ‘There is no doubt.’⁹²⁷ nineteen angels.’ And he said: ‘How do you know that?’ I said: ‘For God, Most High, said: ‘and their number we have appointed only as a trial for the unbelievers’⁹²⁸ He said: ‘You are right. There are nineteen angels, and in the hand of every one⁹²⁹ of them is an iron rod, with two prongs, and he beats [people] vigorously with it, with it coming down on seventy thousand [people]. Between the shoulders of every angel is a distance of this much.’ Al Qurṭubī said: ‘The intention of His Word is nineteen of their heads, as for the number of the Keepers, no-one knows their number, except God, may He be praised and glorified!’⁹³⁰

[235] Hannād ibn al-Sarī in *Kitāb al-zuhd* from Ka^cb; he said: When men are ordered into the Fire, a hundred thousand angels await him.

⁹²⁵ The *thaqalayn* are humans and jinn; see Lane, *AELex*, p. 344.

⁹²⁶ Q 74:30; Arberry, *Koran*, p. 616.

⁹²⁷ The Leiden MS reads, ‘*ba-lā*’; fol. 200r, l. 11.

⁹²⁸ Q 74:31; Arberry, *Koran*, p. 617.

⁹²⁹ The Leiden MS reads, ‘*malak*’; fol. 200r, l. 13.

⁹³⁰ See al-Qurṭubī, *Al-Jāmi^c*, vol. 19, p. 79. This ḥadīth is also mentioned in his *tafsīr* of this verse, see al-Qurṭubī, *Al-Jāmi^c* vol. 19, p. 78.

[235b]⁹³¹ al-Firyābī, °Abd al-Ḥamīd, Ibn Jarīr, Ibn al-Mundhir and Ibn Abī Hātim from Mujāhid concerning His Word: ‘the guards of hell’⁹³²: [They are] angels.

[236] al-Firyābī, °Abd al-Ḥamīd, Ibn Jarīr, Ibn al-Mundhir and Ibn Abī Hātim from °Abd Allāh ibn al-Hārith;⁹³³ he said: The myrmidons (*al-zabāniyya*):⁹³⁴ their feet are on earth and their heads are in heaven.

[237]⁹³⁵ al-Wāḥidī in *Asbāb al-nuzūl* and Ibn °Asākir in his *Ta’rīkh* through the intermediary of Ishāq ibn Bashār from Juwaybir from al-Ḍaḥḥāk from Ibn °Abbās; he said: When some polytheists reproached the Messenger of God (God bless him and grant him salvation) for being poor, they said: ‘What ails this Messenger that he eats food and goes in the markets?’⁹³⁶ The Messenger of God (God bless him and grant him salvation) was saddened by that, so Gabriel came down to him⁹³⁷ and said: ‘Peace be upon you, Messenger of God, the Lord of Power says to you: “Peace!” And He says to you: “We have not sent any messengers before you who did not eat food whilst walking in the markets.”’ While Gabriel and the Prophet (God bless him

⁹³¹ The Ledien MS includes this ḥadīth; fol. 200r, ll. 16 – 18.

⁹³² Q 96:18; Arberry, *Koran*, p. 651.

⁹³³ A different list of sources is given in the Leiden MS (fol. 200r, ll. 18 – 19): al-Firyābī, Ibn Abī Shayba, Ibn Jarīr, Ibn al-Mundhir and Ibn Abī Hātim from °Abd Allāh ibn al-Hārith.

⁹³⁴ *Al-zabāniyya* (Arberry = ‘the Keepers of Hell’; Q 96:18, *Koran*, p. 651); the word poses questions about its root (c.f. al-Bayḍawī, *Commentarius*, vol. 2, p. 411) and it is believed to be foreign, derived from either Syriac or Persian, see Jeffrey, *Foreign Vocabulary*, p. 148 (Syriac) and Eilers, Wilhelm, ‘Iranisches Lehngut im arabischen Lexikon: Über einige Berufsamen und Titel’ *IJL* 5 (1962) pp. 203 – 232, p. 220 (Persian). Tor Andrae associates the word with the Syriac *shabbāyā*, ‘bodyguards’, see Andrae, Tor (tr. Jules Roche), *Les Origines de l’Islam et le Christianisme* (Paris: Librairie d’Amérique et d’Orient Adiren Maisonneuve, 1955), p. 159.

⁹³⁵ The opening ‘*akhraja*’ is omitted in the Leiden MS; fol. 200r, l. 20.

⁹³⁶ Q. 25:7; Arberry, *Koran*, p. 362.

⁹³⁷ Q 25:7 – 8 continues the Meccans’ words with: ‘Why has an angel not been sent down to him, to be a warner with him, or why is not a treasure (*kānz*) thrown to him, or why has he not a Garden to eat of?’ Arberry, *Koran*, p. 363. Although not focusing on the life of Muḥammad, Michael Bonner has written an article that looks at the importance of poverty in the theology of the Qur’ān, see Bonner, Michael, ‘Poverty and Economics in the Qur’an’ *JIH* 35 (2005) pp. 391 – 406.

and grant him salvation) were talking to each other, Gabriel suddenly made himself smaller⁹³⁸ until he was like a bird.⁹³⁹ The Messenger of God (God bless him and grant him salvation) said: ‘Why have you made yourself smaller until you are like a bird?’ He said: ‘Muḥammad, one of the gates of heaven has opened and it had not been opened before [I did] that.’⁹⁴⁰ Suddenly Gabriel returned to his [normal] state, and he said: ‘Muḥammad, I introduce you to this [angel], Riḍwān, the Guardian of the Garden.’ Then Riḍwān drew closer until he greeted [him]. He said: ‘Muḥammad, the Lord of Power says to you: “Peace!”’ (And he had with him, a basket of light,⁹⁴¹ which glistened) ‘And your Lord says to you: “These are the keys to the treasures of the this world,⁹⁴² however, whatever [you take] will not decrease your reward which will be with you in in the next world, [for me] it is like the wing of a flea.”’⁹⁴³ Then the Prophet (God bless him and grant him salvation) looked at Gabriel,⁹⁴⁴ who was like the advisor to him,⁹⁴⁵ and Gabriel hit him to the ground with his hand; and he said: ‘Humble yourself before God!’ [Muḥammad] said: ‘Riḍwān, there is nothing that I need on earth.’ Riḍwān said: ‘You are right, God is with you.’ They saw that this verse was sent down by Riḍwān: ‘Blessed be He who, if He will, shall assign to

⁹³⁸ In Classical Arabic *dhāba [al-jism]* can have the meaning ‘to become thin’; see Lane, *AELex*, p. 986.

⁹³⁹ The Leiden MS reads ‘*hūda*’ throughout; fol. 200r, ll. 25 – 26.

⁹⁴⁰ Cf. §29 & 53 above; in these cases the angel Isrāfīl appears.

⁹⁴¹ *Safāt al-nūr*; a basket that is formed by weaving leaves together, which was, appropriately for Riḍwān, also used in burials in pre-Islamic times; see Lane, *AELex*, p. 1372.

⁹⁴² Cf. ‘Three keys are in the hands of the Holy One, Blessed be He! - the Keys of burial [i.e. resurrection], rain and the womb.’ *GenR* 73:4, p. 670; see also *DeutR* 7:6, p. 137.

⁹⁴³ Cf. Q 2:26; Arberry, *Koran*, p. 4.

⁹⁴⁴ The Leiden MS omits ‘*ilā jibrīl*’; fol. 200r, l. 30.

⁹⁴⁵ Angels frequently take on this role (the *angelus interpres*) in Jewish and Christian apocalyptic literature; Wansbrough comments: ‘In Muslim, as in Rabbinic, tradition one of Gabriel’s primary functions is that of pedagogue: as he had been guide and mentor to Joseph....and to Moses...so too for Muhammad he performed thie rites of initiation into prophethood, instructed him during his ascension to heaven and arranged from him the conent of revelation during meetings in Ramaḍān.’ Wansbrough, *Quranic Studies*, p. 63; see also Hannah, Darrell D., *Michael and Christ: Michael Traditions and Angel Christology in Early Christianity* (Tübingen: Mohr Siebeck, 1999) p. 47.

thee better than that – gardens underneath which rivers flow, and he shall assign to thee palaces.’⁹⁴⁶

[238] al-Bukhārī and Muslim from Ibn ʿAbbās; he said: the Messenger of God (God bless him and grant him salvation) said: During my night journey I saw Moses, son of ʿImrān with me, as a tall man with curly hair, as if he were a man from the tribe of Shanūʿa;⁹⁴⁷ and I saw Jesus, son of Mary, [who as of medium height],⁹⁴⁸ and of moderate complexion, [ranging between] red and white; and his hair was lank; and I saw Mālik, the Guardian of Gehenna and al-Dajjāl in the verses [of the Qurʾān] that God showed.⁹⁴⁹

[239] Ibn Mardawayh from ʿUmar; he said: When the Messenger of God (God bless him and grant him salvation) travelled by night,⁹⁵⁰ he saw Mālik, the Keeper of the Fire; when a person frowns, [Mālik] can see the anger in his face.

[240] Abū Bakr al-Wāṣiṭī in *Faḍāʾil Bayt al-Maqdis* from Abū Salama; he said: I saw ʿUbāda ibn al-Ṣāmt east of the Holy House, crying; and it was asked of him: ‘What is making you cry?’ He said: ‘In this place, the Messenger of God (God bless

⁹⁴⁶ Q. 25:10; Arberry, *Koran*, p. 363.

⁹⁴⁷ More commonly known as the ʿAzd Shanūʿa; see Strenziok, G., ‘Azd’ *EF* vol. 1, pp. 811 – 813, p. 812.

⁹⁴⁸ This is included because it is found in the ḥadīth in al-Bukhārī’s, *Ṣaḥīḥ*, §3229, p. 621 and in the context of Moses being described as tall, makes sense here.

⁹⁴⁹ Al-Bukhārī includes Q 32:23; ‘...so be not in doubt concerning the encounter with him.’ Arberry, *Koran*, p. 425.

⁹⁵⁰ The two events of the *isrāʾ* (Night Journey) and the *miʿrāj* (Ascension) were sometimes combined, and sometimes separated; for a discussion of these themes, see Nünlist, *Himmelfahrt und Heiligkeit*.

him and grant him salvation) told me that he saw Mālik⁹⁵¹ turn over a live coal like bunch [of fruit].’

[241] al-Daylamī from ʿAlī; he said: the Messenger of God (God bless him and grant him salvation) said: When God wants a servant to be good, he sends an angel from the Keepers of the Garden to him; [the angel] wipes his back and bestows his soul (*nafs*) with purity.

[242] al-Khalīlī in his *Mashyakha* from Anas; he said: The Messenger of God (God bless him and grant him salvation) said: I will be the first [person] to knock on the Gate of the Garden, and the Keeper will stand up and say: ‘Who are you?’ And I will say: ‘I am Muḥammad.’ And he will say: ‘I will go and open it for you. I have not got up for anyone before you, and I will not get up for anyone after you.’

4.2.13 Al-Sijill⁹⁵² (peace be upon him)

[243] ʿAbd ibn Ḥamīd from ʿAlī concerning the Word of the Most High: ‘as a scroll is rolled’⁹⁵³ He said: Mālik.

⁹⁵¹ The Leiden MS reads, ‘*malakan*’; fol. 200v., l. 9. Cf. §229 and fol. 199v, l. 28.

⁹⁵² This Chapter heading is not given in the DKI edition, but given in the Leiden MS; fol. 200v, l. 14.

⁹⁵³ Q 21:104; Arberry, *Koran*, p. 331. Jeffrey comments that *sijill* is only used of the ‘divine scroll’, whereas *sifr* is used for earthly books; see Jeffrey, A., ‘The Qur’ān as Scripture’ *MW* 40 (1950) pp. 41 – 55, p. 47 n4. A similar phrase occurs in Is. 34:4, but here the Hebrew word *sefer* (Ar. *sifr*) is used; (see *BHS*, p. 725). There is some debate about the derivation of *sijill*, but it is now generally accepted to have been derived ultimately from the Latin *sigillum*, and reached Arabic through Greek, Aramaic, Syriac or Armenian. For a full discussion of its etymology see Vacca, V., ‘Sidjill’ *EL*¹ vol. 4, p. 403; de Blois, F. C., ‘Sidjill – In Qur’ānic and Early Arabic Usage’ *EL*² vol. 9, p. 538; Ambros, Arne A., with Procházka, *A Concise Dictionary of Koranic Arabic* (Wiesbaden: Reichert Verlag, 2004), p. 129;

[244] ʿAbd ibn Ḥamīd from ʿAṭiyya,⁹⁵⁴ he said: *Al-Sijill* is an angel's name.⁹⁵⁵

[245] Ibn Jarīr and Ibn Abī Ḥātim from Ibn ʿUmar; he said: *Al-Sijill* is an angel, when forgiveness ascends, he says: 'Write it in light!'

[246] Ibn Jarīr and Ibn Abī Ḥātim from al-Suddī; he said: *Al-Sijill* is an angel responsible for the pages; when a person dies, he hands over his book to *Al-Sijill* and he shuts it and keeps it until the Day of Resurrection.

[247] Ibn Abi Ḥātim and Ibn ʿAsākir from Abu Jaʿfar al-Bāqir; he said: *Al-Sijill* is an angel, and Hārūt and Mārūt⁹⁵⁶ were amongst his helpers, and every day he would glance three times, by which he would look at the *Umm al-Kitāb*, and he would have a look. [The book] is not his, but [one day] he caught sight of some information in it about the creation of Adam,⁹⁵⁷ and what is in [the *Umm al-Kitāb*] concerning them; and he secretly told Hārūt and Mārūt about it, and when the Most High said: "I am creating on earth a viceroy." They said, "What, wilt Thou set therein one who will do corruption there."⁹⁵⁸; the two of them said: 'That is disrespectful to the angels.'

and Jeffery, *Foreign Vocabulary*, pp. 163 - 164. Al-Suyūṭi believed it to be a foreign word, see al-Suyūṭi (ed. & tr. William Y. Bell), *al-Mutawakkilī* (Cairo: Nile Mission Press, 1924) pp. 19 & 41.

⁹⁵⁴ The Leiden MS omits "an ʿAṭiyya"; fol. 200v, l. 16.

⁹⁵⁵ Some exegetes believed that *al-Sijill* referred to an angel others that it refers to a scribe of Muḥammad, e.g. al-Ṭabari, *Tafsīr*, vol. 17, pp. 99 – 100. Al-Suyūṭi also states al-Sijill is an angel in his *Itqān*, vol. 4, p. 69.

⁹⁵⁶ The Leiden MS occasionally uses the form *Harūt* instead of *Hārūt* (e.g. fol. 200v, ll, 20, 22; 201r, l. 8 etc.) and these instances will not be noted further.

⁹⁵⁷ Al-Sijill sees a reference to the creation of Adam in the *Umm al-Kitāb*, before God reveals to the angels his intentions, regarding his creation.

⁹⁵⁸ Q 2:30, Arberry, *Koran*, p. 5.

4.2.14 Hārūt and Mārūt⁹⁵⁹ (peace be upon them)⁹⁶⁰

[248] Aḥmad ibn Ḥanbal, °Abd Ibn Ḥamīd in their *Musnads*, Ibn Abī °l-Dunyā in *Kitāb al-°aqūbāt*, Ibn Ḥibbān in his *Ṣaḥīḥ* and al-Bayhaqī in *Shu°ab al-°imān* from °Abd Allāh ibn °Umar that he heard the Messenger of the God (God bless him and grant him salvation) saying: Concerning Adam; when God brought him down to earth, the angels said: ‘What, wilt Thou set therein one who will do corruption there, and shed blood, while We proclaim Thy praise and call Thee holy?’ He said, ‘Assuredly I know that you know not.’⁹⁶¹ [The angels] said: ‘Our Lord, we are more obedient than the Children of Adam.’ God, Most High, said to the angels:⁹⁶² ‘Pick out two angels. We will send them down to Earth and see how the two [angels] will do. The angels said: ‘Our Lord, Hārūt and Mārūt!’⁹⁶³ And so both of them were sent down to Earth, and al-Zuhara appeared to the two of them⁹⁶⁴ as the most beautiful woman.⁹⁶⁵ She came to the two of them and they asked her for her soul, and she

⁹⁵⁹ Al-Tha°labī devotes a whole chapter to Hārūt and Mārūt, which provides a useful comparison for these stories; see al-Tha°labī, *QA*, pp. 50 – 54; Brinner, *Lives*, pp. 86 – 91; al-Kisā°ī, *QA*, pp. 45 – 48; al-Rabghūzī, *QA*, Vol .2, pp. 52 – 55; see also al-Qazwīnī, *Ajā°ib*, pp. 40 – 41.

⁹⁶⁰ The Leiden MS adds: °*alayhumā al-salām*°; fol. 200v, l. 23.

⁹⁶¹ Q 2:30, Arberry, *Koran*, p. 5. The DKI edition marks the Qur°ānic quotation from ‘*in Ādam lamma...*’ This is an error, the Qur°ānic quotation begins at ‘*ayy rabb...*’ Also note that this ḥadīth combines two separate narratives (that of the creation of Adam and the Hārūt and Mārūt narrative). The story of Hārūt and Mārūt is most frequently placed during the lifetime of the Prophet Idrīs (e.g. §255). There is a certain disjunction between the image of Hārūt and Mārūt in the Qur°ān and Islamic tradition.

⁹⁶² The Leiden MS adds: *li-°l-malā°ika* (fol. 200v, l. 28).

⁹⁶³ For a discussion of the origin of the names Hārūt and Mārūt, see Section 2 above.

⁹⁶⁴ The ḥadīth in this section present two versions of the same story, firstly that al-Zuhara was a woman who then became the star/planet Venus and secondly (e.g. §255) that al-Zuhara / Venus came down from heaven to seduce and test the two angels. The story is not, however, aetioloical.

⁹⁶⁵ Al-Zuhara is associated with Anahīd (= Amretatat) in §251, and Anahīd was associated with great beauty: cf. *Yast* V:78 ‘Ardvi Sūra Anāhita hastened unto him [Vistaru] in the shape of a maid, fair of body, most strong, tall-formed, high-girded, pure, nobly born of a glorious race, wearing shoes up to the ankle, with all sorts of ornaments and radiant.’ For more on Amretatat see Herzfeld, Ernst, *Zoroaster and His World* (Princeton: Princeton University Press, 1947) pp. 356 – 368. In Astrology, Venus is also associated with beauty, fornication, prostitutes and fermented drinks (among other things), cf. al-Qabīšī, Abū al-°aqir °Abd al-°Azīz ibn °Uthmān °Alī al-Mawṣilī (ed. & tr. Charles Burnett & al.), *Kitāb al-mudhal ilā ṣinā°at aḥkam al-nujūm* (London & Turin: The Warburg Institute

said: ‘No! By God! Not until you accept the worship of idols.’⁹⁶⁶ The two of them said: ‘No! By God! We will never associate anything with God.’ So she went away from them. Then she returned with a baby boy,⁹⁶⁷ whom she was carrying; and they asked her for her soul, and she said: ‘No! By God! Not until you kill this baby boy.’⁹⁶⁸ And the two of them said: ‘No! By God! We will never kill him!’ So she went away and then she returned with a glass of wine, which she was carrying. They asked her for her soul and she said: ‘No! By God! Not until you have drunk this wine.’ So they drank,⁹⁶⁹ became drunk, fornicated with her,⁹⁷⁰ and killed the boy. When the two woke up, the woman said: ‘By God! You have not left anything! You both denied me it, but you did it when you were drunk!’ As a result the two had to make a choice between the punishment of this world or the next and they chose the punishment of this world.

[249] al-Bayhaqī in *Shu‘ab al-īmān* from Ibn ‘Umar; he said: the Messenger of God (God bless him and grant him salvation) said: The angels looked down upon this world and they saw the children of Adam being disobedient. They said: ‘Lord! How ignorant these [humans] are! How little knowledge they have of your Majesty!’ God,

& Nino Aragno Editore, 2004), pp. 74 – 75 and al-Birūnī, Abū ‘l-Rayḥān Muḥammad ibn Aḥmad, *Kitāb al-taḥfīm li-awā’il ṣinā‘at al-tanjīm*; R. Ramsey Wright, *The Book of Instruction in the Elements of the Art of Astrology* (London: Luzac & Co., 1934) pp. 232, 240, 245 and 251.

⁹⁶⁶ Lit: Not until you say this word about idolatry.

⁹⁶⁷ *al-sabī*; a baby that has not yet been weaned; see Lane, *AELex*, p. 1650.

⁹⁶⁸ The Qur’ān takes a strong position against infanticide, suggesting that it was common in pre-Islamic Arabic; for a discussion of this theme, see Giladi, Avner, ‘Some Observations on Infanticide in Medieval Islamic Society’ *IJMES* 22 (1990) pp. 185 – 200, especially pp. 186 – 188.

⁹⁶⁹ Cf. Q 5:91; ‘Satan only desires to precipitate enmity and hatred between you in regard to wine and arrow-shuffling, and to bar you from the remembrance of God, and from prayer.’ Arberry, *Koran*, p. 114. Although the Hārūt and Mārūt narratives could be appropriate in the passages forbidding the consumption of wine, the narratives are usually found in the *tafsīrs* of Q 2:102; cf. al-Ṭabarī, *Tafsīr*, vol. 1, pp. 456 – 459; vol. 2, pp. 356 – 375; and vol. 7, pp. 32 – 35.

⁹⁷⁰ The association of sexual immorality was also connected with the pagan worship of Venus / Aphrodite; cf. Moore, Michael S., ‘Jesus Christ: “Superstar” (*Revelation* xxii 16b), *NT* 24 (1982) pp. 82 – 91, p. 86.

may He be praised and glorified said: ‘If you were in their skin, then you would disobey me.’ They said: ‘How can this be? We worship Your praiseworthiness and we glorify You.’ He said:⁹⁷¹ ‘Choose two angels from amongst you!’ And they chose Hārūt and Mārūt; then the two of them came down to earth and [the earth] roused in them human desires. A woman presented herself to them but they did not disobey until they fornicated with her. God said: ‘Choose between the punishment of this world or the next!’ And one of the two looked to his friend and said: ‘Whatever you say, I will choose.’ He said: ‘I say that the punishment of this world will end, but the punishment of the next world will not end.’ So, the two chose the punishment of this world.’ The two are those two whom God mentions in His Book: ‘and that which was sent upon Babylon’s two angels...’⁹⁷² and the rest of the verse.⁹⁷³

[250] al-Ḥākim in *al-Mustadrak* and he declared it to be sound (*ṣaḥīḥ*) from Ibn ‘Umar that he used to say: ‘Has the *red one*⁹⁷⁴ appeared yet?’ When he saw it, he said: ‘It is not welcome.’⁹⁷⁵ Then he said: ‘Two angels from amongst the angels, Hārūt and Mārūt, asked God if they could go down to earth. So they went down to earth,⁹⁷⁶ and judged the people. When they got to a point where they could say words,

⁹⁷¹ The Leiden MS reads *qālū* for *qāla* (fol. 201r, l. 8); this appears to be a scribal error.

⁹⁷² Q 2:102; Arberry, *Koran*, p. 12.

⁹⁷³ None of the ḥadīth in this section actually refer Hārūt and Mārūt teaching people magic, as mentioned in Q 2:101, but are all concerned with the fall of Hārūt and Mārūt. The fall-narratives are often attached to this verse in the exegetical tradition without much elaboration. Incidentally, a number of Christian theologians attributed the teaching of Greek philosophy to fallen angels, see Bauckham, ‘The Fall of the Angels’ and Margoliouth, ‘Hārūt and Mārūt’.

⁹⁷⁴ *Al-Ḥamrā*’ usually refers to the planet Mars, but in this ḥadīth (as well as §255) Venus is clearly intended.

⁹⁷⁵ This would make more sense if *al-Ḥamrā*’ were understood to be the planet Mars, as Mars (and Jupiter) were traditionally seen as bringing bad luck in Near Eastern astrology. Cf. Reiner, E., *Astral Magic in Babylonia* (Philadelphia: The American Philosophical Society, 1995) p. 4 – 7, Jastrow, Morris, ‘Signs and Names of the Planet Mars’ *AJSLL* 27 (1910) pp. 64 – 83, Al-Qabīṣī, K. *al-mudhal*, pp. 68 – 69. The planet Venus is not normally seen as bringing bad luck, but is associated with immorality; this is probably what ‘Umar is referring to.

⁹⁷⁶ The Leiden MS adds *‘fa-ahbaṭa harūt wa-mārūt illā ‘l-arḍ’* (fol. 201r, l. 14).

they went up from [earth] to heaven. God⁹⁷⁷ sent to them the most beautiful woman. She asked them a question about desire and she asked them a question about their souls; and they did not leave until she promised them a meeting. Then she came to them for the meeting and she said: “You two can teach me the word which allows you to ascend.” And they taught her [the word].⁹⁷⁸ She said it and ascended into heaven. She was transformed and made just as you have seen. At the very moment that the two said the word, they could not ascend, so [God] sent them [a message] that the two should choose between the punishment of the afterlife or the punishment of this world; and one of the two said to the other: “Indeed, we should choose the pain of his world.””

[251] Ishāq ibn Rāhwayh in his *Musnad*, ʿAbd ibn Ḥamīd in his *Tafsīr*, Ibn Abī ‘l-Dunyā in his *Kitāb al-ʿaqūbāt*, Ibn Jarīr, Abū ‘l-Shaykh in *al-ʿAzama* and al-Hākīm in *al-Mustadrak* and he declared it to be sound (*ṣaḥīḥ*) from ʿAlī ibn Abī Tālib; he said: This is *Al-Zuhara*: the Arabs call her *al-Zuhara* and the Persians call her *Anahīd*.⁹⁷⁹ The two angels were passing verdicts on the people [of Earth]. She came to the two of them, and they saw⁹⁸⁰ her. Al-Zuhara said to the two: ‘Will the two of you not tell me by what means you go up to heaven and by what means you come down to earth?’ (And the two said ‘In the name of God, the Greatest.’ [to go up to heaven and down to earth]).⁹⁸¹ She said: ‘I will not leave you⁹⁸² until you teach it to me.’ One of the two said to his companion: ‘Teach it to her!’ The [other angel] said:

⁹⁷⁷ The Leiden MS omits *Allāh* (fol. 201r, l. 16).

⁹⁷⁸ The Leiden MS adds ‘*al-kalima*’ (fol. 201r, l. 18).

⁹⁷⁹ Also known in Persian as *Bīdukht*; see Moʿīn, Muḥammad (ed.), *Lughatnāma* (Tehrān: Chāpkhāne-ye Dāneshgāh-e Tehrān, 1959 – 1975) Fasc. 87, p. 264 and Fasc. 174, p. 479.

⁹⁸⁰ The Leiden MS reads ‘*fa-arādāhā*’ (fol. 201r, l. 22); ‘...they wanted her...’.

⁹⁸¹ The phrase ‘In the name of God, the Greatest’ acts as a password for entering and leaving heaven.

⁹⁸² The Leiden MS reads ‘*bi-mawtaykumā*’ (fol. 201r, l. 23).

‘How severe God’s punishment will be for us?!’ The [other angel] said: ‘We will hope in the great abundance of God[’s mercy]!’⁹⁸³ So [one of the angels] taught it to her; she said it and she flew to heaven. An angel of heaven was terrified by her ascent; so he bowed his head and did not sit down afterwards; God transformed her and she became a star.

[252] Ibn Rāhwayh and Ibn Mardawayh in his *Tafsīr* from ‘Alī; he said: the Messenger of God (God bless him and grant him salvation) said: God cursed al-Zuhara, for it was she who seduced the two angels Hārūt and Mārūt.

[253] Ibn Abī Ḥātim from Ibn ‘Abbās; he said: The people of the lowest heaven looked down on the Earth⁹⁸⁴ and they saw them acting disobediently, so they said: ‘Lord, the people of Earth are acting disobediently.’ God, may He be praised and glorified, said: ‘You are with me, but they are hidden from me.’ And it was asked of them: ‘Choose three of you.’⁹⁸⁵ So they chose three from them on the condition that they came down to earth and judged between the people of earth. Human desire would be aroused in them, but they were ordered that they could not drink wine, that they could not kill anyone, that they could not fornicate, and that they could not prostrate themselves before idols. And from them was one that wished to be released [from this task], and he asked and two were sent down to the earth.⁹⁸⁶ The most beautiful woman came to the two of them and it was said she [was called] Anahīd, and the two together fell in love with her. Then the two came to her house, they met

⁹⁸³ The Leiden MS reads: ‘*sa‘at raḥmat allāh*’ (fol. 201r, l. 24).

⁹⁸⁴ The Leiden MS reads ‘*alā ahl al-ard*’ (fol. 201r, ll. 28 – 29).

⁹⁸⁵ The third angel is possibly *al-Sijill* (cf. §247), although this appears to be rare and most accounts of this story only refer to Hārūt and Mārūt being selected.

⁹⁸⁶ The could possible be *al-Sijill*; cf. §247.

with her and they wanted her. She said [to them]:⁹⁸⁷ ‘Not until you drink my wine, kill my neighbour’s son and bow down before my idols.’ The two of them said: ‘We will not bow down [to your idols].’ Then the two drank the wine, killed [the boy], then they bowed down [before the idols]. The angels in the sky looked down at them, and she said to them: ‘Tell me the word which, if you both say it, the two of you can fly away.’ And they told her,⁹⁸⁸ and she flew away then she was turned into live coal, and this is *al-Zuhara*. As for the two, Solomon, son of David, sent for them, and they had to make a choice between the punishment of this world and the [pains of the]⁹⁸⁹ next. They chose the punishment of this world and they are suspended between heaven and earth.

[254] Ibn al-Mundhir, Ibn Abī Ḥātim, al-Ḥākim, and he declared it to be sound (*ṣaḥīḥ*) and al-Bayhaqī in *Shu‘ab al-īmān* from Ibn ‘Abbās; he said: When the people after Adam fell into the situation that they fell into and began to be disobedient and to not believe in God, the angels in Heaven said: ‘The Lord of This World, who created them; you only created them to worship you and to obey you, but they now fall into the situation that they have fallen in to, committing unbelief, committing suicide, eating unlawful food, fornicating, stealing and drinking wine; they have begun to curse each other, and they do not circumcise themselves.’ [Some sources] say that they were in hiding (?)⁹⁹⁰ and they did not circumcise themselves. And it was said to them: ‘Choose from amongst you the two best angels and I will give the two of them of them a task; and I will prohibit the two of them [from doing certain

⁹⁸⁷ The Leiden MS omits ‘*la-humā*’ (fol. 201v, l. 3).

⁹⁸⁸ The Leiden MS reads ‘*fa-akhbarahā*’ – ‘it was told to her’ (fol. 201v, l. 5).

⁹⁸⁹ The Leiden MS reads ‘*wa-‘adhāb al-akhira*’ (fol. 201v, l. 6).

⁹⁹⁰ The text is a little confused here.

things].’ And they chose Hārūt and Mārūt. So the two of them were sent down to Earth and the desires of the sons of Adam were aroused in them. [God] ordered the two that they should serve Him and not associate anything with Him. He banned them from killing prohibited individuals, from eating prohibited foods and from fornicating, stealing and drinking wine. The two remained on the Earth for a time ruling the people with justice. This was during the time of Enoch.⁹⁹¹ And at that time there was a woman, who was the most beautiful woman, just as the beauty of Venus is amongst the rest of the stars. The two of them came to her, spoke softly to her,⁹⁹² and wanted her on her own; but she refused unless the two took her orders and her faith. So the two asked her about her faith and she brought out to them an idol and said: ‘This is what I worship.’ And the two said: ‘There is no need for us to worship this.’ So they went and stayed away⁹⁹³ for a while. Then the two came to her and they wanted⁹⁹⁴ her on her own [and she said as she had said before, so they went away. Then they came to her [again] and they wanted her on her own,]⁹⁹⁵ and when she saw that they refused to worship the idol, she said to the two of them: ‘Choose one of the three faults:⁹⁹⁶ worshiping this idol, killing this person, or drinking wine.’ And the two said: ‘None of these are right, but the least contemptible of the three is the drinking of the wine.’ So they drank the wine. [The wine]⁹⁹⁷ was taken from them

⁹⁹¹ The story of Hārūt and Mārūt is most often placed during the time of Enoch (*Idrīs*); cf. al-Thaʿlabī, *QA*, pp. 50 – 54; Brinner, *Lives*, pp. 86 – 91.

⁹⁹² Cf. Q 33:32; ‘If you are godfearing, be not abject (*takhḍaʿna*) in your speech, so that he in whose heart is sickness may be lustful, but speak honourable words.’ Arberry, *Koran*, p. 430; the verb also has a strong connotation of love, see Lane, *AELex*, p. 757.

⁹⁹³ The Leiden MS reads ‘*ghabarā*’ for ‘*ghābā*’ (fol. 201v, l. 17), *ghābā* is more suitable here.

⁹⁹⁴ The Leiden MS reads ‘*fa-arādahā*’ (fol. 201v, l. 17) but the dual in the DKI edition is more suitable.

⁹⁹⁵ The Leiden MS is missing a portion of the text from ‘*fa-faʿalat mithl dhālik....fa-arādāhā ʿalā nafsihā*’ (fol. 201v, l. 18). This appears to be a scribal error.

⁹⁹⁶ Note the woman’s avoidance of words such as *dhanb* etc.; *khilāl* is a general word, which does not necessarily carry any religious overtones, see Lane, *AELex*, p. 780.

⁹⁹⁷ *Khamr* can be both masculine and feminine (see Lane, *AELex*, pp. 808 – 809).

both and they fornicated with the woman. The two then feared that the person⁹⁹⁸ would reveal what they had done, so they killed him. When the drunkenness lifted from them and they realised what sin they had done, they wanted to go up to heaven; but they could not, as it had been made inaccessible to them.⁹⁹⁹ And the cover that was between the two of them and between the people of heaven was lifted up,¹⁰⁰⁰ and the angels looked down at what had come to pass. They wondered with great wonder and they came to understand that whoever is hidden [from God], is the one with less fear. After that they began to ask for forgiveness for whoever was on the earth.

It was said to the two of them: ‘Choose¹⁰⁰¹ between the punishment of this world and the punishment of the next.’ The two said: ‘As for the punishment of this world, it will come to an end and it will pass. As for the pain of the next world, it will not come to an end.’ So they chose the punishment of this world. The two stayed in Babylon and they were punished.

[255] Ibn Abī Ḥātim from Mujāhid; he said: I was camping with °Abd Allāh ibn °Umar during a journey, when, one night, he said to his servant: ‘Look the *red one* has risen. There is no welcome in it, nor any greeting; God does not give life to it; it is the friend¹⁰⁰² of the two angels.

The angels said: ‘Lord, how can you ignore the disobedience of the sons of Adam, while they are shedding blood unlawfully, violating your prohibitions and

⁹⁹⁸ i.e. a witness; in §255 the angels kill a man (most likely al-Zuhara’s husband) so that their crime is not revealed; in other versions (e.g. §248) the two kill a child.

⁹⁹⁹ For the idiomatic expression, see Lane, *AELex*, p. 674. This is reminiscent of Q 34:53: ‘And a barrier is set between them and that they desire...’ Arberry, *Koran*, p. 443.

¹⁰⁰⁰ Cf. Q. 50:22; ‘Thou wast heedless of this; therefore We have now removed (*fa-kashafnā*) from thee they covering (*ghītā*’), and so thy sight today is piercing.’ Arberry, *Koran*, p. 540.

¹⁰⁰¹ The Leiden MS uses a 2 m. pl. imperative (*ikhtārū*) for the DKI dual (*ikhtārā*), fol. 201v, l. 24; the dual is preferable.

¹⁰⁰² Or ‘master’; which could be appropriate in this context.

spreading corruption in the land?’ He said: ‘Indeed, I have put them to test; perhaps if I tested you in the same way as I have tested them, you would do as they have done.’ They said: ‘No!’ He said: ‘Choose two from the best of you.’ So they chose Hārūt and Mārūt. He said to the two of them, ‘I [am going to permit] your going down to earth. I am going to make you swear that you will not associate [anything with Me], that you will not fornicate and that you will not act treacherously. So they came down to earth and lust overwhelmed them both. Al-Zuhara came down to them, in the form of a most beautiful woman, and paraded herself in front of them, and they wanted¹⁰⁰³ her on her own. She said: ‘Regarding faith, it is not right for anyone to come to me, without them being the same [religion as me].’ The two said: ‘What is your faith?’ She said: ‘Zoroastrianism (*majūsiyya*).’ The two said: ‘This is idolatry.’¹⁰⁰⁴ We cannot associate ourselves with it.’ So she left them for a period of time. Then she came up to them, and they wanted her by herself. She said: ‘What you wish is only [the right of] a husband of mine. I would not like it if [someone] were to catch sight of me doing this; [as] this [would cause me] to be dishonoured.’¹⁰⁰⁵ If you two profess my faith to me and you promise that you will take me up to heaven, then I will do it.’ So they professed her faith to her, and they came to her [whilst she was in the form that] they saw; then the two took her up to

¹⁰⁰³ The Leiden MS reads ‘*fa-arādahā*’ (fol. 202r, l. 2) but the dual in the DKI edition is more suitable.

¹⁰⁰⁴ Zoroastrianism held an unusual place in Islamic theory: ‘Sūra XXII, 17 merely lists [Zoroastrians] along with *ahl al-kitāb* and *mushrikūn*, and it was eventually decided in Muslim theory that the *Madjūs* were intermediate between *ahl al-kitāb* and *mushrikūn* since they had no real prophet or revealed scripture.’ Morony, M., ‘*Madjūs*’ *EP*² vol. 5, pp. 1110 – 1118, p. 1110. See also Bürgel, J. Christoph, ‘Zoroastrians as Viewed in Medieval Islamic Sources’ in Jacques Waardenburg (ed.), *Muslim Perceptions of Other Religions* (Oxford: Oxford University Press, 1999) pp. 202 – 212.

¹⁰⁰⁵ Much has been written on the death penalty for adultery in Islam *fiqh*; e.g. Burton, John, ‘The Origin of the Islamic Penalty for Adultery’ *TGUOS* 26 (1978) pp. 16 – 27 and Burton, John, ‘Law and exegesis: The Penalty for Adultery in Islam’ in G. R. Hawting & Abdul-Kader A. Shareef (eds.), *Approaches to the Qur’ān* (London: Routledge, 1993) pp. 269 – 284.

heaven, and when they got to heaven, she grabbed them and cut off their wings, and the two fell [down to Earth] frightened, remorseful, and crying.

On earth is a prophet, who spent his time in personal devotion from one Friday to the next, and on Friday his prayers would be answered. The two said: 'If we come to somebody, we will ask him to teach us [how to] repent. And they came to him, he said: 'May God have mercy upon you both!' How can inhabitants from the earth teach an angel?!' And they said: 'Indeed, we have been put to the test.' He said: 'Come to me on Friday.' So they came to him and he said: 'I have nothing to say to you. Come to me on the following Friday!' So they came to him, and he said: 'Choose! Indeed, you must choose if you want to be released from the earth and [receive] the punishment of the afterlife; or if you want the punishment of this life, the judgement of God will be upon you both on the Day of Resurrection.' One of the two said: 'This world will only last a short time.' And the other one said: 'Woe unto you! I have obeyed you from the beginning, so I will obey you now.' So the two chose the pain of this world.

This story can be enhanced by many other chains of transmission (*turuq*),¹⁰⁰⁶ the *ḥāfiẓ* Ibn Ḥajar¹⁰⁰⁷ collected them into a single section and he said in his book *Al-Qawl al-musaddad fī 'l-dhabb 'an musnad Aḥmad*, that anyone who had concerns about [the story], could attest with certainty to the veracity of this story, because of the many different chains of transmission and the strength of their sources.¹⁰⁰⁸ He

¹⁰⁰⁶ The Leiden MS highlights this is red (fol. 202r, l. 12).

¹⁰⁰⁷ Al-Suyūṭī's father studied with Ibn Ḥajar, and al-Suyūṭī believed that he may have attended 'the *majlis* (gathering, here probably a kind of seminar is meant) held by an old man whose name he had not been able to remember, but he had thought that it must have been the famous scholar Ibn Ḥajar al-ʿAsqalānī.' Sartain, *Al-Suyūṭī*, p. 26. Al-Suyūṭī was evidently well acquainted with his work and considered him one of his teachers.

¹⁰⁰⁸ Ibn Ḥajar uses word play, referring to 'entrances' and 'exits': the 'entrances' are clearly the chains of transmission, but the 'exits' are more vague, perhaps referring to the sources (i.e. texts and compilations) in which the ḥadīth are found.

said that he had studied a portion of these, which Aḥmad had compiled, and he mentioned over ten different chains of transmission; and [Ibn Ḥajar said:] I collected the different chains of transmission from exegeses and I reckoned them to amount to some twenty-odd chains.

4.2.15 The *Sakīna*¹⁰⁰⁹ (peace be upon it)¹⁰¹⁰

[295] al-Ṭabarānī in *al-Awsaṭ* from ʿAlī (may God be pleased with him); he said: When the pious are mentioned, be quick to mention ʿUmar. We, the Companions of the Prophet, did not think it unlikely that the *Sakīna* articulated itself on the tongue of ʿUmar (may God be pleased with him). Ibn al-Athīr said in *al-Nihāya*: The *Sakīna* is an angel.

[296] al-Ṭabarānī from Usayd ibn Ḥudayr that he came to the Prophet (God bless him and grant him salvation) and he said: ‘Messenger of God, yesterday I recited *Surat al-Kahf*¹⁰¹¹ and something came and covered my mouth.’ The Prophet (God

¹⁰⁰⁹ The *sakīna* is mentioned in the Qurʾān: 2:248; 9:26, 40; 48:4, 18; see Arberry, *Koran*, pp. 35, 182, 184, 531 & 533. There have been a number of studies on this word: e.g., Goldziher, ‘Notion de la Sakina’. In the Qurʾān the *sakīna* is usually associated with the invisible help which came to the Muslims’ aid in battle; however in Q 2:248, the *sakīna* carries the Jewish association with Ark of the Covenant, see Bell, *Commentary*, vol. 1, p. 52.

¹⁰¹⁰ Note the masculine, rather than feminine, suffix; this is because the *Sakīna* is an angel, which is masculine.

¹⁰¹¹ Q. 18; Arberry (1998) 288 – 301. *Surat al-kahf* is recited for protection against the anti-Christ (al-Dajjāl); Massigou also states that the entire *sūra* is recited every Friday at the congregational prayers; see Massigou, Louis, ‘Les “Septs Dormants”, Apocalypse de l’Islam’ *AB* 68 (1949) pp. 245 – 260; cf. Muslim, *Ṣaḥīḥ*, vol. 18, p. 65.

bless him and grant him salvation) said: ‘That is the *Sakīna*. It came to hear the Qur’ān.’¹⁰¹²

[297] al-Ṭabarānī from Abū Salama; he said: When Usayd ibn Ḥuḍayr al-Anṣārī was praying – he said¹⁰¹³ – when it was night; [he said]: Suddenly [something] like a cloud covered me, and in it were things like lights, and [my] wife was sleeping beside me and she was pregnant; the horse was tethered in the courtyard and I feared that the horse¹⁰¹⁴ would bolt away; [my] wife was terrified and she delivered her child; so I concluded my prayers.’ So [the Prophet]¹⁰¹⁵ said: ‘Recite, Usayd! That was an angel that listens to the Qur’ān.’

¹⁰¹² The *sakīna* is associated with the recitation of the Qur’ān; cf. al-Bukhārī, *Ṣaḥīḥ*, §5011, p. 996; see also Firestone, Reuven, ‘Shekina’ *EQ* vol. 4, pp. 589 – 591, p. 591.

¹⁰¹³ Added by the Leiden MS; fol. 204r, l. 15.

¹⁰¹⁴ The Leiden MS reads *faras* and the DKI *ḥisān*; fol. 204r, l. 16.

¹⁰¹⁵ This ḥadīth is quite famous, but here the *matn* omits some information; in the fuller narrative, Usayd tells the Prophet about his experience, asks what it was and what he should have done; cf. Muslim, *Ṣaḥīḥ*, vol. 5, pp. 82 – 83.

Conclusions

5. Conclusions

The main aim of this thesis has been to widen the study of angels in Islam beyond that of Qur'ānic studies and Islamic eschatology. The study of angels in Islam has tended to be restricted to these two areas. Jalāl al-Dīn al-Suyūṭī's *Al-Ḥabā'ik fī akhbār al-malā'ik* provides a corpus of *ḥadīth* that focus Islamic angelology in Islamic tradition more generally. The translation and commentary have shown that the relationship between humans and angels is a very close one, far closer than one may have expected.

The *ḥadīth* in *Al-Ḥabā'ik* do however reveal a complex mix of ideas. Every human has two (or more) recording angels; this establishes a direct relationship between angels and humans; yet despite their closeness to humanity, the angels always retain their unique angelic character. This is seen particularly clearly in the angels' reactions to ritual impurity. Ritual impurity acts as a *shibboleth* between humans and angels: after the expulsion of Adam from the Garden, humans defecate, copulate, menstruate, and so on, and live in a world of impurity. Angels, as creatures of the divine world, remain ritually pure and cannot come into contact with impurity. This relationship, as I have argued in Section 3, has important consequences in Islamic ritual law. Being unclean is not technically sinful, but impurities do still have an effect on angels, and individuals can become *eschatologically disadvantaged* by their inability to perform credited actions. This intricate relationship with the angels is not, however, entirely negative for humans, as the angels pray for the Muslim community, bless and pray for pious devotional behaviour, give more weight

to good actions and so on. The angels, therefore, also enable humans to be *eschatologically advantaged* by certain actions.

Despite the fact that the relationship between humans and angels has a bearing on an individual's eschatological future, al-Suyūṭī's *Al-Ḥabā'ik* is quite different from the standard Islamic eschatological material (as well as Jewish and Christian apocalyptic literature). Traditionally, descriptions of heaven and hell are used as a warning, focused on the *potentiality* of punishment and reward. Hell is the *potential* future for those that do not return to the *straight path*, heaven is the reward for those that do. Sins and crimes in this kind of literature tend to be quite general, or when they are specific, refer to major sins such as murder, *kufṛ* and so on. Crudely, these works argue: Do not [*commit murder*], because those who [*commit murder*] will be sent to the Fire; and those that do not [*commit murder*] will be admitted into the Garden. In contrast, *Al-Ḥabā'ik* does not refer to major sins, but discusses the relationship between humans and angels at a much more basic, everyday level; and raises the question of the effects that certain human actions have on angels. The collection says that angels are present in this world and that the reader should be aware of their existence as human actions have an effect on their behaviour, and consequently, on the reader's *eschatological future*. This is a very different argument.

Section 2 raised the question of the origins and development of Islamic angelology through an analysis of angelic nomenclature and iconography. Past scholarship has usually portrayed Islamic angelology as being entirely derived from Jewish and Christian beliefs. However, the *ḥadīth* in *Al-Ḥabā'ik* show that this relationship is much more complex. The naming of angels in Islam, except for a few isolated borrowings, shows a particularly Islamic approach, especially the use of the

formula: *The Angel of X*. Whilst there are a number of angels derived from divine hypostases in Judaism, some of the angels, such as *al-Sijill* are purely Islamic, derived from the text of the Qur'ān. Likewise, the iconography of angels in Islam has both commonalities with the Judeo-Christian tradition, but also some unique elements. This would seem to suggest that Islam, whilst aware of the role and iconography of angels in Judaism and Christianity, adapted these ideas for its own use, and consequently an Islamic angelology evolved. The inclusion of a number of less well known angels in Islam, such as Ṣadluqan and Miṭaṭrūsh (Sandalphon and Metatron) suggest a much later borrowing, after Islamic angelology had developed and established itself.

The work appears to have been aimed at either a literate public or students, both of whom would have found al-Suyūṭī's approach of spiritual and educational benefit. The world in which *al-Ḥabā'ik* was written was in a state of political and social decline, with the Mamluks falling to the rising power of the Ottomans only a few years after al-Suyūṭī's death. However, the *'ulamā'* and the higher education establishments in Cairo were able to flourish in this period, a result of their independence through the *waqf* system. There also seems to have been a deeper engagement with society at large in this period, with whole genres emerging to reflect the needs of the contemporary society.

Many of these trends in late-Mamluk scholarship can be seen in al-Suyūṭī's *Al-Ḥabā'ik fī akhbār al-malā'ik*, both in the main body of the *ḥadīth* compilation, as well as in the theological *khātima* that follows it. The two sections act to convey the importance of angels in Islam, belief in their existence, and their place in the universe. Al-Suyūṭī's *Al-Ḥabā'ik* acts as a compendium of information about angels,

suitable for both the growing literate public and the significant amount of students that passed through the Cairene higher education establishments.

Al-Suyūṭī is famed for his ability to compile collections of *ḥadīth* in original subject areas, and *al-Ḥabā'ik* is no exception. Al-Suyūṭī's wide knowledge of *ḥadīth* is shown throughout, with the work drawing a wide range of authors and texts. Likewise, the *khātima* shows a strong familiarity with many *mutakallimūn*. There has been some analysis of al-Suyūṭī's use of sources in the past, and the analysis of the sources in *al-Ḥabā'ik* shows that the *ḥadīth* are principally drawn from the formative period of *ḥadīth* scholarship in Islam, namely the third and fourth centuries *hijrī*; whereas the sources for the *khātima* are much later. This shows that al-Suyūṭī wished to engage with more contemporary sources in the theological postscript and accepted reputable collections of *ḥadīth* in the main body of the text. The analysis of the sources also suggests that al-Suyūṭī used the works of Abū 'l-Shaykh and al-Bayhaqī as *Urtexte* for his new compilation. Although, the great number of other works incorporated in *al-Ḥabā'ik* shows that it was not simply an act of plagiarism. Above all, an analysis of al-Suyūṭī's sources in *al-Ḥabā'ik fī akhbār al-malā'ik* reveals the impressive skill that al-Suyūṭī demonstrates in the arrangement and compilation of material. Al-Suyūṭī takes material from diverse sources and reshapes them into an accessible and readable resource.

It is hoped that this thesis has widened the study of Islamic angelology beyond the accounts of Muhammad's *mi'raj*, the Qur'an and the eschatological literature. Jalāl al-Dīn al-Suyūṭī's *Al-Ḥabā'ik fī akhbār al-malā'ik* reveals the wonders of the angelic world, as well as its intimacy with *this* world. At the heart of this relationship is that fact that the angels are God's emissaries, and that everything

that the angels do is done on behalf of God. The angels act as intermediaries between humans and God and this intermediation works in both directions: the angels keep watch over human actions on God's behalf, but the angels also bring blessings to humans, and pray for humanity, especially pious Muslims. It has not been possible to explore all of the questions that the angelology of the *ḥadīth* raise, but it is hoped that this thesis has brought the possibility of further research into this interesting and exciting area of Islamic belief and spirituality.

بسم الله الرحمن الرحيم

الحمد لله جاعل الملائكة رسلاً أولي أجنحة مثنى وثلاث ورباع،
والصلاة والسلام على سيدنا محمد وآل والصحب والأتباع. فهذه
تأليف لطيف جمعت في أخبار الملائكة الأبرار. استوعبت فيه ما وردت به
الأحاديث والآثار، وختمته بفوائد ينتهج بها أولو الأبصار. وسميته
(الحبائك)، في أخبار الملائك) والله المستعان. وعليه التكلان.

ذكر وجوب الإيمان بالملائكة

قال الله تعالى: ﴿أمن الرسول بما أنزل إليه من ربه والمؤمنون كل
أمن بالله وملائكته﴾ قال البيهقي في شعب الإيمان: والإيمان بالملائكة
ينظم في معانٍ:

(أحدها) التصديق بوجودهم.

و (الثاني) إنزالهم منازلهم وإثبات أنهم عباد الله وخلقه كالإنس
والجن مأمورون مكلفون لا يقدرون إلا على ما أقدرهم الله عليه والموت
عليهم جائز ولكن الله تعالى جعل لهم أمداً بعيداً فلا يتوفاهم حتى
يبلغوه ولا يوصفون بشيء يؤدي وصفهم به إلى إشراكهم بالله تعالى،
ولا يدعون آله كما دعتهم الأوائل.

و (الثالث) الاعتراف بأن منهم رسلاً يرسلهم إلى من يشاء من

البشر وقد يجوز أن يرسل بعضهم إلى بعض، ويتبع ذلك الاعتراك منهم حملة العرش ومنهم الصافيون ومنهم خزنة الجنة ومنهم خزنة النار ومنهم كتيبة الأعمال ومنهم الذين يسوقون السحاب فقد ورد في ذلك كله أو بأكثره:

١ - وروينا عن ابن عمر عن عمر عن النبي ﷺ حين مثل الإيمان فقال «ان تؤمن بالله وملائكته وكتبه ورسله».

مبدأ خلق الملائكة والدلالة

على أنهم أجسام

خلافًا للفلاسفة

٢ - (أخرج) مسلم عن عائشة قالت قال رسول الله ﷺ «لا ملائكة من نور وخلق الجن من نار وخلق آدم مما وراءكم».

١ - الترهيب، والتهيب ١٦٥/٢ وعزاه المنذري لأحمد بإسناد صحيح يروى بن عتبة ورواته صحيح في الصحيح والطبراني وغيره ورواه البيهقي بنية عن رجل من أهل الشام عن أبيه.

هل تسمعون ما أسمع قالوا ما نسمع من شيء قال إني لأسمع أطيط السماء وما تلام أن تظن ما فيها موضع قدم إلا عليها ملك ساجد أو قائم.

١١ - (وأخرج) الطبراني عن جابر بن عبد الله قال قال رسول الله ﷺ ما في السموات السبع موضع قدم ولا شبر ولا كف إلا وفيه ملك قائم أو ملك ساجد فإذا كان يوم القيامة قالوا جميعاً سبحانك ما عبدناك حتى عبدناك إلا أنا لم نشرك بك شيئاً.

١٢ - (وأخرج) الديلمي في المجالسة عن عبد الرحمن بن زيد بن أسلم قال ليس من خلق الله أكثر من الملائكة ليس من بني آدم أحد إلا ومعه هلكان سائق يسوقه وشاهد يشهد عليه فهذا ضعف بني آدم ثم بعد ذلك السموات والأرض مكبوسات ومن فوق السموات بعد، الذين حول العرش أكثر مما في السموات.

١٣ - (وأخرج) أبو الشيخ عن أبي سعيد عن رسول الله ﷺ قال (إن في الجنة لهراً ما يدخله جبريل من دخلة فيخرج فينتفض إلا خلق الله من كل قطرة نقطة منه ملكاً).

١٤ - (وأخرج) أبو الشيخ عن وهب بن منبه: إن لله نهراً في الهواء سعة الأرضين كلها سبع مرات ينزل على ذلك النهر ملك من السماء فيملؤه ويسد ما بين أطرافه ثم يغتسل منه فإذا خرج قطر منه قطرات من نور فيخرج من كل قطرة منها ملك يسبح الله بجميع تسبيح الخلائق كلهم.

= الدر المنثور ٢٩٣/٥ وعزه السيوطي لابن مردويه عن حكيم بن حزام رضي الله عنه.

مشكل الآثار ٤٣/٢.

١١ - تفسير ابن كثير ٢٩٥/٨ وذكره بلفظه [أو ملك راكم].

١٥ - (وأخرج) أبو الشيخ عن الأوزاعي قال قال موسى عليه السلام يارب من معك في السماء قال ملائكتي قال وكم هم يارب قال إثنا عشر سبطاً قال وكم عدد كل سبط قال عدد التراب.

١٦ - (وأخرج) أبو الشيخ عن كعب قال لا تقطر عين ملك منهم إلا كانت ملكاً يطير من خشية الله.

١٧ - (وأخرج) أبو الشيخ عن العلاء بن هارون قال: لجبريل في كل يوم اغتماسة في الكون ثم يتفحص فكل قطرة يخلق منها ملك.

١٨ - (وأخرج) أبو الشيخ عن طريق مجاهد عن ابن عباس عن النبي ﷺ قال ليس من خلق الله أكثر من الملائكة ما من شيء بنت إلا ملك موكل به.

١٩ - (وأخرج) أبو الشيخ عن الحكم قال بلغني أنه ينزل مع الطر من الملائكة أكثر من ولد آدم وولد إبليس يحصون كل قطرة وأين تقع من يوزق من ذلك النبات.

٢٠ - (وأخرج) أبو الشيخ عن وهب قال إن السموات السبع شوة من الملائكة لو قيس شجرة ما انقاست، منهم الراكد والراكد لساجد ترعد فرائضهم وتضطرب أجنتهم خوفاً من الله ولم يعصوه فة عين وإن حملة العرش ما بين كعب أحدهم إلى مخه مسيرة مائة ٢٠

٢١ - (وأخرج) ابن المنذر في تفسيره عن عبد الله بن عمرو يرفعه

١٨ - مجمع الزوائد ١٣٥/٨ وذكره الهيثمي بلفظ «ليس من خلق الله أكثر من ثلثة يخلقهم مثل الذباب» ثم يقول تبارك وتعالى «كنوا ألف ألفين» رواه الزوار، ناله رجال الصحيح والحديث عن عبد الله بن عمر، وصلى عليه ابن عباس ي الله عنها.

قال «الملائكة عشرة أجزاء تسعة أجزاء الكروبيون الذين يسبحون الليل والنهار لا يفترون وجزء قد وكلوا بخزانة كل شيء وما من السماء موضع إلا فيه ساجد أو ملك راعع وإن الحرم بحيال العرش وإن البيت المعمور لبحيال الكعبة لو سقط لسقط عليها يصلي فيه كل يوم سبعون ألف ملك ثم لا يعودون إليه».

٢٢ - (وأخرج) ابن المنذر عن عمرو البكالي قال إن الله تعالى جزأ الملائكة عشرة أجزاء تسعة أجزاء منهم الكروبيون وهم الملائكة الذين يحملون العرش وهم أيضاً الذين يسبحون بالليل والنهار لا يفترون قال ومن بقي من الملائكة لأمر الله ورسالات الله.

٢٣ - (وأخرج) ابن أبي حاتم عن طريق خبيب بن عبد الرحمن بن سلمان أبي الأعيس عن أبيه قال: الإنس والجن عشرة أجزاء فالإنس من ذلك جزء والجن تسعة أجزاء، والجن والملائكة عشرة أجزاء فالجن جزء والملائكة تسعة والملائكة والروح عشرة أجزاء فالملائكة جزء والروح تسعة والروح والكروبيون عشرة أجزاء فالروح من ذلك جزء والكروبيون تسعة أجزاء.

٢٤ - (وأخرج) أبو الشيخ والبيهقي في شعب الإيمان والخطيب وابن عساكر عن طريق عباد بن منصور عن عدي بن أرطاة عن رجل من

٢٤ - جمع الجوامع رقم ٢٩٤٥ وذكره السيوطي بلفظه وعزاه لأبي الشيخ في العظمة والبيهقي في شعب الإيمان، والخطيب، وابن عساكر عن رجل من الصحابة.

وانظر تفسير ابن كثير ٢٩٧/٨ / تاريخ بغداد ١٢/٣٠٧.
إتحاف السادة المتقين ١٢٦/٩، ١٢٧/١٠، ١٢٨/١١ / الحاوي للفتاوى ٢/٣٥٠.
كنز العمال رقم ٢٩٨٣٦ وعزاه السيوطي للبيهقي وأبو الشيخ في العظمة، والبيهقي في الشعب، والخطيب، وابن عساكر - عن رجل من الصحابة.

سحبة سماء - قال عباد فنسيت اسمه - عن رسول الله ﷺ قال وإن ملائكة ترد فرائضهم من مخافته ما منهم ملك تقطر من عينيه دمة وقعت ملكاً قائماً يسبح ، وملائكة سجوداً منذ خلق الله السموات أرض لم يرففوا رؤسهم ولا يرففونها إلى يوم القيامة وملائكة ركوعاً لم نفوا رؤوسهم ولا يرففونها إلى يوم القيامة وصفوا لم ينصرفوا عن نافعهم ولا ينصرفون عنها إلى يوم القيامة فإذا كان يوم القيامة تحلى لهم عز وجل فنظروا إليه وقالوا سبحانك ما عبدناك كما ينبغي لك .

٢٥- (وأخرج) ابن منده في المعرفة وابن عساكر عن عبد الرحمن بن عدي عن بني ساعدة عن أبيه العلاء بن سعد وكان ممن بايع يوم الفتح النبي ﷺ قال يوماً لجلسائه هل تسمعون ما أسمع قالوا وما تسمع سول الله قال أظلت السماء وحق لها أن تظلم منها موضع قدم إلا به ملك قائم أو راعع أو ساجد ثم قرأ ﴿ وَإِنَّا لَنَحْنُ الْمُسَبِّحُونَ ﴾ .

٢٦ - (وأخرج) ابن جرير عن الربيع بن أنس في قوله ﴿ وعلم آدم نساء كلها قال أسماء الملائكة ﴾ .

رؤوس الملائكة الأربعة الذين يدبرون أمر الدنيا

٢٧ - (أخرج) ابن أبي حاتم وأبو الشيخ في العظمة هقي في الشعب عن ابن سابط قال يدبر أمر الدنيا أربعة جبريل ناثيل وملك الموت وإسرافيل فأما جبريل فموكل بالرياح والجنود وأما ناثيل فموكل بالقطر والنبات وأما ملك الموت فموكل بقبض الأرواح إسرافيل فهو ينزل بالأمر عليهم .

٢٨ - (وأخرج) أبو الشيخ عن ابن سابط قال في أم الكتاب كل هو كائن إلى يوم القيامة ووكل ثلاثة من الملائكة أن يحفظوه فوكل

٢٩ - سبق بقرن ١٠

جبريل بالكتاب أن ينزل به إلى الرسل ووكل جبريل أيضاً بالهلكات إذا أراد الله أن يهلك قوماً ووكله بالنصر عند القتال ووكل ميكائيل بالحفظ والقطر ونبات الأرض ووكل ملك الموت بقبض الأنفس فإذا ذهبت الدنيا جمع من حفظهم وقابل أم الكتاب فيجدونه سواء . رواه ابن أبي شيبة .

٢٩ - (وأخرج) البيهقي والطبراني وأبو الشيخ عن ابن عباس قال

بينما رسول الله ﷺ ومعه جبريل يناجيه إذ انشق أفق السماء فأقبل جبريل يتضاءل ويدخل بعضه في بعض ويدنو من الأرض فإذا ملك قد مثل بين يدي رسول الله ﷺ فقال يا محمد إن ربك يقربك السلام ويحرك بين أن تكون نبياً ملكاً أو نبياً عبداً قال رسول الله ﷺ فأشار جبريل إلي بيده أن تواضع فعرف أنه لي ناصح فقلت نبياً عبداً فرج ذلك الملك إلى السماء فقلت يا جبريل قد كنت أردت أن أسألك عن هذا فرأيت من حالك ما شغلني عن المسئلة فمن هذا يا جبريل قال هذا إسرافيل خلقه الله يوم خلقه بين يديه صافاً قدميه لا يرفع طرفه بينه وبين الرب سبعون نورا ما منها نور يدنو منه إلا احترق ، بين يديه اللوح المحفوظ فإذا أذن الله بشيء في السماء أو في الأرض ارتفع ذلك اللوح فضرب جهته فينظر فيه فإن كان من عملي أمرني به وإن كان من عملي ميكائيل أمره به وإن كان من عمل ملك الموت أمره به قلت يا جبريل على أي شيء أنت قال على الرياح والجنود قلت على أي شيء ميكائيل قال على النبات والقطر قلت على أي شيء ملك الموت قال على قبض الأنفس وما ظننت أنه هبط إلا بقيام الساعة وما ذاك الذي رأيت مني إلا خوفاً من قيام الساعة .

٣٠ - (وأخرج) أبو الشيخ في العظمة عن جابر بن عبد الله قال

٣٠ - اللآلئ المصنوعة ١/ ١٠ .

رسول الله ﷺ إن أقرب الخلق من الله جبريل وميكائيل وإسرافيل
نهم من الله لمسيرة خمسين ألف سنة جبرائيل عن يمينه وميكائيل عن
أخرى وإسرافيل بينهما.

٣١ - (وأخرج) أبو الشيخ عن وهب قال هؤلاء الأربعة أملاك
ربيل وميكائيل وإسرافيل وملك الموت أول من خلقهم الله من الخلق
آخر من يميتهم وأول من يحييهم هم المذبرات أمراً والمقسمات أمراً.

٣٢ - (وأخرج) أبو الشيخ عن خالد بن أبي عمران قال: جبريل
ن الله إلى رسله وميكائيل يتلقى الكتب التي ترفع من أعمال الناس
سرافيل بمنزلة الحاجب.

٣٣ - (وأخرج) أبو الشيخ عن عكرمة بن خالد أن رجلاً قال
رسول الله أي الملائكة أكرم على الله قال لا أدري فجاءه جبريل فقال
جبريل أي الخلق أكرم على الله قال لا أدري فعرج جبريل ثم هبط
ل: جبريل وميكائيل وإسرافيل وملك الموت فأما جبريل فصاحب
رب وصاحب المرسلين وأما ميكائيل فصاحب كل قطة تسقط وكل
قطة تنبت وكل ورقة تسقط وأما ملك الموت فهو موكل بقبض روح كل
- في بر أو بحر وأما إسرافيل فأمر الله بينه وبينهم.

٣٤ - (وأخرج) الطبراني والحاكم عن أبي المليح عن أبيه أنه
مع النبي ﷺ ركعتي الفجر فصل قريباً منه فصل النبي ﷺ ركعتين
يفتني فسمعتة يقول «اللهم رب جبريل وميكائيل وإسرافيل ومحمد
ذ بك من النار» ثلاث مرات.

٣٤ - مجمع الزوائد ٢/٢١٩، ١٠/١٠٤ و ١١٠.

وذكره الهيثمي بنحوه، وقال رواه النسائي بنحوه من غير تنقيح بركتي الفجر -
أبو يعلى عن شيخه سفيان بن وكيع وهو ضعيف.

٣٥ - (وأخرج) أحمد في الزهد عن عائشة أن النبي ﷺ أغمى عليه
ورأسه في حجرها فجعلت تمسح وجهه وتدعو له بالشفاء فلما أفاق قال
لا بل إستأني الله الرفيق الأعلى مع جبريل وميكائيل وإسرافيل عليهم
السلام.

ما جاء في جبريل عليه السلام

٣٦ - (أخرج) ابن جرير وأبو الشيخ عن علي بن حسين قال
إسم جبريل عبد الله واسم ميكائيل عبيد الله وإسرافيل عبد الرحمن
وكل شيء رجع إلى إيل فهو معبد لله عز وجل.

٣٧ - (وأخرج) ابن جرير عن ابن عباس قال: جبريل عبد الله
وميكائيل عبيد الله وكل اسم فيه «إيل» فهو معبد لله.

٣٨ - (وأخرج) ابن أبي حاتم وأبو الشيخ عن عبد العزيز بن عمير
قال إسم جبريل في الملائكة خادم ربه عز وجل.

٣٩ - (وأخرج) أبو الشيخ عن موسى بن أبي عائشة قال بلغني أن
جبريل إمام أهل السماء.

٤٠ - (وأخرج) الطبراني عن ابن عباس قال قال رسول الله ﷺ
ألا أخبركم بأفضل الملائكة جبريل.

٤١ - (وأخرج) مسلم عن ابن مسعود قال رأى رسول الله ﷺ

٤٠ - مجمع الزوائد ٣/١٤٠، ٨/١٩٨ وذكره الهيثمي بلفظه ولزيادة في
الحديث وعزاه للطبراني وفيه نافع بن هرم وهو متروك،
وانظر الدار المنثور ١/٩٢.

كنز العمال رقم ٣٥٣٤٣ وذكره السيوطي وعزاه للطبراني عن ابن عباس
رضي الله عنه، وله زيادة.

جبريل في حلة خضراء قد ملأ ما بين السماء والأرض.

٤٢ - (وأخرج) أبو الشيخ عن عائشة أن رسول الله ﷺ قال رأيت جبريل منهبطاً قد ملأ ما بين الخافقين عليه ثياب سندس معلق بها اللؤلؤ والياقوت.

٤٣ - (وأخرج) أبو الشيخ عن عائشة رضي الله عنها قالت قال رسول الله ﷺ لجبريل وددت لو رأيتك في صورتك قال وتحب ذلك قال نعم قال موعذك كذا وكذا من الليل بقيع الغرقد فليقيه موعده فشر جناحاً من أجنحته فسد أفق السماء حتى ما يرى من السماء شيء.

٤٤ - (وأخرج) أبو الشيخ عن ابن مسعود في قوله ﴿ولقد رآه نزلة أخرى﴾ قال رأى رسول الله ﷺ جبريل معلقاً رجله عليها الدر كأنه قطر المطر على البقل.

٤٤ - (وأخرج) الطبراني عن ابن عباس عن ورقة الأنصاري قال قلت يا محمد كيف يأتيك الذي يأتيك يعني جبريل قال يأتيني من السماء جناحاً لؤلؤ وباطن قدميه أخضر.

٤٥ - (وأخرج) أبو الشيخ وابن مردويه عن أنس قال قال رسول

٤٢ - كثر العمال رقم ١٥١٦٧ و١٥١٦٨ وذكره السيوطي بلفظه عن عائشة رضي الله عنها وعزاه لأبي الشيخ.
وانظر الدر المنثور ٩٢/١.

٤٥ - إتحاف السادة الثقلين ١٣٧/٥ وأشار الزبيدي إلى الحديث.
وانظر الدر المنثور ٩٣/١ وذكر حديثاً يشابه حديثنا وفيه أن رجلاً من اليهود سأل رسول الله ﷺ فقال يا رسول الله هل احتجب الله بشيء عن خلقه غير سموات. قال: نعم وبينه وبين الملائكة... وذكر نحوه منه.

وانظر الآليء المصنوعة ٩/١.

الله ﷺ لجبريل هل ترى ربك قال إن بيني وبينه لسبعين حجاً من نار ونور لو رأيت أدهاها لاحتزقت.

٤٦ - (وأخرج) أبو الشيخ عن شريح بن عبد الله أن النبي ﷺ لما صعد إلى السماء رأى جبريل في خلقته منظوم أجنحته بالزبرجد واللؤلؤ والياقوت قال فخيل لي أن ما بين عيني قد سد الأفق وكنت أراه قبل ذلك على صور مختلفة وأكثر ما كنت أراه على صورة دحية الكلبي وكنت أحياناً أراه كما يرى الرجل صاحبه من وراء الغريال.

٤٧ - (وأخرج) أحمد وابن أبي حاتم وأبو الشيخ عن ابن مسعود أن رسول الله ﷺ لم ير جبريل في صورته إلا مرتين أما واحدة فإنه سألته أن يريه نفسه فأراه نفسه فسد الأفق وأما الأخرى فليلة الإسراء عند السدرة.

٤٨ - (وأخرج) أبو الشيخ من طريق عطاء عن ابن عباس عن النبي ﷺ قال ما بين منكبتي جبريل مسيرة خمسمائة عام للطائر السريع الطيران.

٤٩ - (وأخرج) أبو الشيخ من طريق إسحاق عن ابن عباس عن النبي ﷺ قال جبريل له ستمائة جناح من لؤلؤ قد نشرها مثل ريش الطاووس.

٥٠ - (وأخرج) ابن جرير عن حذيفة وابن جريج وقناة دخل حديث بعضهم في بعض: لجبريل جناحان وعليه وشاح من در منظوم وهو براق الثنايا أجلى الجبين ورأسه حبك حبك مثل المرجان وهو اللؤلؤ كأنه الثلج وقدماه إلى الخضر.

٤٨ - الدر المنثور ٩٢/١ وعزاه السيوطي لأبي الشيخ عن ابن عباس رضي الله عنها.

٥١ - (وأخرج) أبو الشيخ عن وهب بن منبه أنه سئل عن خلق جبريل فذكر أن ما بين منكيه من ذي إلى ذي خفق الطير سبعمئة عام.

٥٢ - (وأخرج) ابن سعد والبيهقي في الدلائل عن عمار بن أبي عمار أن حمزة بن عبد المطلب قال يا رسول الله أرني جبريل في صورته نال إنك لا تستطيع أن تراه قال بلى فأرنيه قال فاقعد فبعد جبريل على خشبة كانت في الكعبة فقال النبي ﷺ أرفع طرفك فانظر فرفع طرفه فرأى قدميه مثل الزبرجد الأخضر فخر مغشياً عليه.

٥٣ - (وأخرج) ابن المبارك في الزهد عن ابن شهاب أن رسول الله ﷺ سأل جبريل أن يتراءى له في صورته فقال جبريل إنك لن تطيق ذلك قال إني أحب أن تفعل فخرج رسول الله ﷺ إلى المصلى في ليلة قمرة فأتاه جبريل في صورته فغشي على رسول الله ﷺ حين رآه ثم فاق جبريل مسنده وواضع إحدى يديه على صدره والأخرى بين كتفيه فقال رسول الله ﷺ ما كنت أرى أن شيئاً من الخلق هكذا فقال جبريل كيف لو رأيت إسماعيل إن له لاثني عشر جناحاً منها جناح في الشرق وجناح في المغرب وإن العرش على كاهله وإنه ليتضاءل الأحياء لعظمة الله حتى يصير مثل الوضوء حتى ما يحمل عرشه إلا عظمته.

٥٤ - (وأخرج) ابن مردويه عن ابن عباس أن النبي ﷺ قال إن

٥٢ - ابن سعد البيهقي في الدلائل.

٥٣ - الدر المنثور ١/٩٢ وعزاه السيوطي لابن المبارك في الزهد عن ابن

شهاب.

وانظر الزهد لابن المبارك ص ٧٤ وذكره نحوه.

٥٤ - الدر المنثور ١/٩٣ وعزاه السيوطي لابن مردويه عن ابن عباس رضي

الله عنها.

جبريل ليأتيني كما يأتي الرجل صاحبه في ثياب بيض مكفوفة باللؤلؤ والياقوت رأسه كالجبل وشعره كالمرجان ولونه كالثلج أجلى الجبين براق النيا على وشاحان من در منظوم وجناحه أخضران ورجلاه مغموستان في الخضرة وصورته التي صور عليها تملأ ما بين الأفقين وقد قال ﷺ أشتي أن أراك في صورتك يا روح الله فتحول له ففسد ما بين الأفقين.

٥٥ - (وأخرج) ابن عساکر بسند ضعيف عن عائشة قالت قال رسول الله ﷺ خلق الله جمجمة جبريل على قدر الغرطة.

٥٦ - (وأخرج) الطبراني عن ابن عباس قال عاد رسول الله ﷺ رجلاً من الأنصار فلما دنا من منزله سمعه يتكلم في الداخل فلما استأذن عليه دخل عليه فلم ير أحداً فقال له رسول الله ﷺ سمعتك تكلم غيرك قال يا رسول الله لقد دخل عليّ داخل ما رأيت رجلاً قط بعدك أكرم مجلساً ولا أحسن حديثاً منه قال ذاك جبريل وإن منكم لرجلاً لو أن أحدهم يقسم على الله لأبره.

٥٧ - (وأخرج) أبو نعيم في الحلية عن عكرمة قال قال جبريل عليه السلام إن ربي عز وجل ليغنيني إلى الشيء لأفضيه فأجد الكسوف قد سبقني إليه.

٥٨ - (وأخرج) الطبراني عن ميمونة بنت سعد قالت قلت يا رسول الله هل يرقد الجنب قال ما أحب أن يرقد حتى يتوضأ فإني أخاف أن يتوفى فلا يحضره جبريل.

٥٥ - كنز العمال رقم ١٥١٦٦ وذكره السيوطي بلفظه وعزاه لابن عساکر عن عائشة قال الذهبي في الميزان: هذا حديث منكر.

٥٨ - الحاوي للفتاوى ٢/٢٩٤ وذكر السيوطي استشهاده بالخديث على نزول جبريل عليه السلام إلى الأرض بعد وفاة الرسول ﷺ.

٥٩ - (وأخرج) أبو الشيخ عن وهب قال إن أدنى الملائكة من الله بريل ثم ميكائيل فإذا ذكر الله عبداً بأحسن عمله قال فلان بن فلان مل كذا وكذا من طاعتي صلواتي عليه ثم يسأل ميكائيل جبريل ما ندت ربنا فيقول فلان بن فلان ذكر بأحسن عمله فصلي عليه صلواته عليه ثم يسأل ميكائيل من يراه من أهل السماء فيقولون ماذا أحدثنا فيقول ذكر فلان ابن فلان بأحسن عمله فصلي عليه صلوات الله به فلا يزال يقع من سماء إلى سماء حتى يقع إلى الأرض وإذا ذكر عبداً سوءاً عمله قال عبيدي فلان ابن فلان عمل كذا وكذا من معصيتي ننتي عليه ثم يسأل ميكائيل جبريل ماذا أحدث ربنا فيقول ذكر فلان فلان بأسوأ عمله فعليه لعنة الله فلا يزال يقع من سماء إلى سماء يقع إلى الأرض.

٦٠ - (وأخرج) الصابوني في المائتين والبيهقي في شعب الإيمان عن بر بن عبد الله عن النبي ﷺ قال إن جبريل موكل بحاجات العباد ادعوا المؤمن قال الله يا جبريل أحسن حاجة عبيدي فأني أحبه وأحب ربه وإذا دعا الكافر قال الله يا جبريل أقض حاجة عبيدي فأني أبغضه فخص صوته.

٦١ - (وأخرج) البيهقي عن ثابت قال بلغنا أن الله تعالى وكل بريل عليه السلام بحوائج الناس فإذا دعا المؤمن قال يا جبريل أحسن جته فأني أحب دعاءه وإذا دعا الكافر قال يا جبريل أقض حاجته فأني خص دعاءه قال البيهقي هذا هو المحفوظ .

٦٢ - (وأخرج) ابن أبي شيبه من طريق ثابت عن عبد الله بن ر قال إن جبريل موكل بالحوائج فإذا سأل المؤمن ربه قال أحسن ربي - الدر المنثور ٩٢/١ وعزاه السيوطي للبيهقي والصابوني في المائتين عن رضي الله عنه .

أحسن جبراً لدعائه أن يزداد وإذا سأل الكافر قال أعطه أعطه بغضاً لدعائه.

٦٣ - (وأخرج) الحكيم الترمذي عن أبي ذر قال إن الله يقول يا جبريل إنسخ من قلب عبيدي المؤمن الحلاوة التي كان يجدها لي قال فيصير العبد المؤمن والهأ طالباً للذي كان يعهد من نفسه نزلت به مصيبة لم ينزل به مثله قط فإذا نظر الله إليه على تلك الحال قال يا جبريل رد إلى قلب عبيدي ما نسخت منه فقد ابتليته فوجدته صادقاً وسامداً من قبلي بزيادة.

٦٤ - (وأخرج) أبو الشيخ عن عمرو بن مرة قال: جبريل على ربح الجنوب.

٦٥ - (وأخرج) ابن عساكر في تاريخه عن علي قال قال رسول الله ﷺ ما شئت أن أرى جبريل عليه السلام متعلقاً بأستار الكعبة وهو يقول يا واجد يا ماجد لا تنزل عني نعمة أنعمت بها علي إلا رأيته.

٦٦ - (وأخرج) أبو الشيخ عن عبد العزيز بن أبي رواد قال نظر الله إلى جبريل وميكائيل وهما بكيان فقال الله ما يبيكما وقد علمتما أني لا أجور فقلالا يا رب إنا لا نأمن منك قال هكذا فافعل فإنه لا يأمن من مكري إلا كل خاسر .

٦٧ - (وأخرج) الإمام أحمد في الزهد عن أبي عمران الجوني أنه بلغه أن جبريل أتى النبي ﷺ وهو يبكي فقال له رسول الله ﷺ ما يبكيك قال وما لي لا أبكي فوالله ما جفت لي عين منذ خلق الله النار مخافة أن أعصيه فيقتلني فيها.

٦٨ - كنز العمال رقم ٥٠٦٣ و٦٤٣٣ وذكره السيوطي بلفظه عن علي رضي الله عنه إلا أنه قال (يا واحد يا أحد) ولم يقل (يا واحد يا ماجد).

وقال البيهقي في شعب الإيمان أنبأنا أبو محمد عبد الله بن يوسف الأصبهاني أنبأنا أبو بكر أحمد بن سعيد بن فرسخ الأحمي بمكة حدثنا الوليد بن حماد حدثنا أبو محمد عبد الله بن الفضل بن عاصم ابن عمر بن قتادة بن النعمان الأنصاري حدثني أبي الفضل عن أبيه عاصم عن أبيه عمر عن قتادة بن النعمان قال قال رسول الله ﷺ أنزل الله جبريل عليه السلام في أحسن ما كان يأتي في صورة فقال إن الله يقرئك السلام يا محمد ويقول لك إني قد أوحيت إلى الدنيا أن تمرري تكذري وضيقني وتشدي علي أوليائي كي يجوا لقائي وتسهلي وتوسعي تطيبي لأعدائي حتى يكرهوا لقائي فإني قد خلقتها سجنًا لأوليائي وجنة أعدائي، قال البيهقي لم نكتبه إلا بهذا الإسناد وفيهم مجاهيل.

٦٩ - (وأخرج) ابن عساکر عن وائلة بن الأسقع قال أتى النبي ﷺ جل من أهل اليمن أكشف أحول أوقص أحنف أصمع أعسر أرسح سج فقال يا رسول الله أخبرني بما فرض الله عليّ فلما أخبره قال إني ناهد الله أن لا أزيد على فرضه فقال ولم ذاك قال لأنه خلقني فشوه لمقي ثم أدبر فأتاه جبريل فقال يا محمد أين العاتب إنه عاتب رباً كريماً عتبه قال قل له ألا يرضى أن يبعثه الله في صورة جبريل يوم القيامة ال له، فقال بلى يا رسول الله فيأني أعاهد الله أن لا يقوى جسدي شيء من مرضاة الله إلا عملته، فيه العلاء بن كثير قال البخاري كره الحديث.

٧٠ - (وأخرج) وأبو الشيخ عن سعيد بن جبير في قوله إلا من

٦٨ - جمع الجوامع رقم ٤٥٢١ وذكره السيوطي بلفظه الأ [وتسهلي وتوسعي ليبي لأعدائي] وعزاه للبيهقي عن قتادة بن النعمان وقال، لم نكتبه إلا بهذا نناد، وفيه مجاهيل. وانظر كثر العمال ٦١١٠ نحوه.

ارتضى من رسول فإنه يسلك من بين يديه ومن خلفه رصداً قال ما نزل جبريل بشيء من الوحي إلا ومعه أربعة حفظة من الملائكة.

٧١ - (وأخرج) الطبراني بسند رجاله ثقات عن أم سلمة أن النبي ﷺ قال إن في السماء ملكين أحدهما يأمر بالشدّة والآخر يأمر باللين وكل مصيب جبريل وميكائيل، ونيان أحدهما يأمر باللين والآخر يأمر بالشدّة وكل مصيب وذكر إبراهيم ونوحاً ولي صاحبان أحدهما يأمر باللين والآخر بالشدّة وكل مصيب وذكر أبا بكر وعمر.

(وأخرج) أبو الشيخ عن ابن مسعود قال جاء جبريل إلى النبي ﷺ فقال يا جبريل إني لأحسب أن لي عندك منزلة فقال أجل والذي بعثك بالحق ما بعثت إلى نبي قط أحب إليّ منك قال فيأني أحب أن تعلمني منزلي هناك قال إن قدرت على ذلك قال والذي بعثك بالحق لقد دنوت فيها من ربي دنواً ما دنوت مثله قط وإن كان قدر دنوي منه مسيرة خمسمائة سنة وإن أقرب الخلق من الله عز وجل إسرافيل وإن قدر دنوه منه مسيرة سبعين سنة فيهن سبعون نوراً إن أدناها ليغشى بالأبصار فكيف لي بالعلم فيها وراء ذلك ولكن يعرض لي بلوح ثم يدعونا فيبعثنا.

٧٣ - (وأخرج) أحمد في الزهد عن رباح قال حدثت أن النبي ﷺ قال لجبريل لم تأتني إلا وأنت صائر بين عينيّك قال إني لم أضحك منذ خلقت النار.

٧١ - مجمع الزوائد ٥١٧/٩ وذكره الهيثمي بلفظه وعزاه للطبراني ورجاله ثقات. وانظر الدر المنثور ٩٤/١ نحوه.

٧٣ - الدر المنثور ٩٣/١ وعزاه السيوطي لإحمد في الزهد عن رباح رضي الله عنه. وانظر الزهد للإمام أحمد ص ٢٧.

٧٤ - (وأخرج) الفريابي وابن مردويه عن أنس قال قال رسول الله ﷺ «ونفخ في الصور فصعق من في السموات ومن في الأرض إلا ما شاء الله» قالوا يا رسول الله من هؤلاء الذين استثنى الله عز وجل قال برئيل وميكائيل وملك الموت وإسرافيل وجملة العرش فإذا قبض الله وإحاطة قال لملك الموت من بقي فيقول سبحانه ربي وتعاليت ذا علل والإكرام بقي جبريل وميكائيل وإسرافيل وملك الموت فيقول خذ من إسرافيل فيأخذ نفس إسرافيل فيقول الله لملك الموت من بقي نول سبحانه تباركت ربي وتعاليت ذا الجلال والإكرام بقي جبريل ميكائيل وملك الموت فيقول خذ نفس ميكائيل فيأخذ نفس ميكائيل نع كالطود العظيم فيقول يا ملك الموت من بقي فيقول جبريل : ملك يت فيقول مت يا ملك الموت فيموت فيقول يا جبريل من بقي فيقول يا وجهك الدائم الباقي وجبريل الميت الثاني قال لا بد من موته فيقع جداً يخفق بجناحيه قال قال رسول الله ﷺ إن فضل خلقه على خلق كائيل كالطود العظيم .

٧٥ - (وأخرج) ابن مردويه والبيهقي في البعث عن أنس رفعه في «ونفخ في الصور» الآية قال فكان ممن استثنى الله عز وجل ثلاثة ريل وميكائيل وملك الموت فيقول الله وهو أعلم يا ملك الموت من فيقول بقي وجهك الباقي الكريم وعبدك جبريل وميكائيل وملك يت فيقول توف نفس ميكائيل ثم يقول، وهو أعلم، يا ملك الموت من فيقول بقي وجهك الباقي وعبدك جبريل وملك الموت فيقول توف من جبريل ثم يقول، وهو أعلم، يا ملك الموت من بقي فيقول بقي هلك الباقي الكريم وعبدك ملك الموت وهو ميت فيقول مت ثم بي أنا بدأت الخلق ثم أعيدته .

٧٦ - (وأخرج) ابن أبي حاتم عن عطاء بن السائب قال أول من

يحاسب جبريل لأنه كان أمين الله إلى رسله .
٧٧ - (وأخرج) ابن جرير عن حذيفة قال صاحب الموازين يوم القيامة جبريل عليه السلام .

ما جاء في ميكائيل عليه السلام

٧٨ - (أخرج) ابن المنذر عن عكرمة قال جبريل اسمه عبد الله وميكائيل اسمه عبيد الله .

٧٩ - (وأخرج) أحمد وأبو الشيخ عن أنس أن رسول الله ﷺ قال لجبريل مالي لم أر ميكائيل ضاحكاً قط قال ما ضحك ميكائيل منذ خلقت النار .

٨٠ - (وأخرج) الحكيم الترمذي في نوادر الأصول عن زيد بن ربيع قال دخل على رسول الله ﷺ جبريل وميكائيل وهو يستاك فناول رسول الله ﷺ جبريل السواك فقال جبريل كبر قال الحكيم أي ناوول ميكائيل فإنه أكبر .

٨١ - (وأخرج) الحاكم عن أبي سعيد قال قال رسول الله ﷺ وذئري من أهل السماء جبريل وميكائيل ومن أهل الأرض أبو بكر وعمر .

٧٩ - مسند أحمد ٣/٢٢٤ ورواه بإلفظه .
وانظر الشريعة للأجرو ص ٣٩٥ / الزهد للإمام أحمد ص ٦٩ .

٨١ - الدر المنثور ٩٤/١ وعزاه السيوطي للحاكم عن أبي سعيد رضي الله عنه . وانظر كثر العمال رقم ٣٢٦٧٩ و ٣٦١٤٨ / الجامع الكبير ٢/٢٨٦ و ٤٧٤ .

زيد بن علي بن الحسين بن علي بن أبي طالب قال أشهد بالله لقد حدثني أحمد بن عبد الله الشعبي البغدادي قال أشهد بالله لقد حدثني الحسن بن علي العسكري قال أشهد بالله لقد حدثني أبي علي بن محمد قال أشهد بالله لقد حدثني أبي محمد بن علي بن موسى قال أشهد بالله لقد حدثني أبي علي بن موسى قال أشهد بالله لقد حدثني أبي جعفر قال أشهد بالله لقد حدثني أبي جعفر بن محمد قال أشهد بالله لقد حدثني رسول الله ﷺ وقال أشهد بالله لقد حدثني محمد بن علي بن أبي طالب قال أشهد بالله لقد حدثني ميكائيل وقال أشهد بالله لقد حدثني إسرافيل عن الموح المحفوظ أنه يقول الله تبارك وتعالى شارب الخمر كعابد وثن، قال الحافظ ابن حجر في لسان الميزان هذا المتن بالسند المذكور إلى علي بن موسى أخرجه أبو نعيم في الحلية بسند له فيه من لا يعرف حاله إلى الحسن العسكري أيضاً لكن لم يذكر فيه إلا جبريل قال يا محمد إن مدمن الخمر كعابد وثن. والثن أورده ابن جبان في صحيحه من حديث ابن عباس.

ما جاء في إسرافيل عليه السلام

٨٥- (أخرج) أبو الشيخ عن وهب قال خلق الله تعالى الصور لقوة يضاء في صفاء الزجاج ثم قال للعرش خذ الصور فتعلق به ثم قال كن فكان إسرافيل فأمره أن يأخذ الصور فأخذه وبه ثقب بعدد كل روح مخلوقة ونفس مفنوسة لا تخرج روحان من ثقب واحدة وفي وسط الصور كرة كاستدارة الساء والأرض وإسرافيل وأضح فمه على تلك الكرة ثم قال له الرب قد وكلتك بالصور فأنت للنفخة وللصيحة فدخل إسرافيل في مقدم العرش فدخل رجله اليمنى تحت العرش وقدم اليسرى

٨٢- (وأخرج) البزار والطبراني وأبو نعيم في الحلية عن ابن عباس قال قال رسول الله ﷺ إن الله أيدني بأربعة وزراء اثنين من أهل السماء جبريل وميكائيل واثنين من أهل الأرض أبي بكر وعمر.

٨٣- (وأخرج) السديمي من طريق السري بن عبيد الله السلمي عن عبد الحميد بن كنانة عن أبي أمامة عن علي ابن أبي طالب رفعه: مؤذن أهل السماوات جبريل وأمامهم ميكائيل يؤم بهم عند البيت المعمور فتجتمع ملائكة السماوات فيطوفون بالبيت المعمور وتصلّي وتستغفر فيجعل الله ثوابهم واستغفارهم وتسيحهم لأمة محمد ﷺ.

٨٤- وقال ابن النجار في تاريخه أشهد بالله لقد أخبرني أبو عبد الله الأديب مشافهة بأصهبان عن أبي طاهر ابن أبي نصر التاجر أن عبد الرحمن بن محمد بن إسحاق بن منده أخبره قال أشهد بالله لقد أخبرني أبو عبد الله الحسين بن محمد بن الحسين الدينوري قال أشهد بالله لقد أخبرني أبو القاسم عبد الله بن إبراهيم الجرجاني قال أشهد بالله لقد أخبرني أبو الحسن محمد بن علي بن الحسين بن القاسم بن الحسن بن

٨٦- الجامع الكبير ٤٧٣/٢ وذكره السيوطي بنحوه وعزاه للخطيب، وابن عساكر وقال تفرد بروايته محمد بن (نجيب) عن وهيب عن عطا.

٨٤- الجامع الكبير ١٨٠/٢ وذكر الحديث بسنده الطويل، وقال السيوطي: قال أبو نعيم: صحيح ثابت.

ونظر جمع الجوامع رقم ٣٣٠٦ و ٣٣٠٩. / كنز العمال رقم ٣١٦٠ و ١٣٦٩٨. / حلية الأولياء ٣/ ٢٠٤. / لسان الميزان ١/ ٦٤٦.

ولم يطرف منذ خلقه الله لينتظر ما يؤمر به .

٨٦- (وأخرج الترمذي وحسنه والحاكم والبيهقي في البعث عن أبي سعيد الخدري قال قال رسول الله ﷺ كيف أنعم وصاحب الصور قد التقم القرن وحتى جبهته وأصغى سمعه ينتظر متى يؤمر به فينفخ قالوا فما نقول يا رسول الله قال قولوا حسينا الله ونعم الوكيل على الله توكلنا .

٨٧- (وأخرج الحاكم وصححه وأبو الشيخ وابن مردويه عن أبي هريرة قال قال رسول الله ﷺ إن طرف صاحب الصور منذ وكل به مستعد ينظر حول العرش مخافة أن يؤمر بالصيحة قبل أن يرتد إليه طرفه كأن عينيه كوكبان دريان .

٨٨- (وأخرج ابن أبي حاتم عن أبي سعيد الخدري قال قال رسول الله ﷺ ما زال صاحباً الصور ممسكين بالصصور ينتظرون متى يؤمران .

٨٩- (وأخرج الديلمي عن أبي أمامة قال قال رسول الله ﷺ

٨٦- حلية الأولياء ١٠٥/٥ ، ١٣٠/٧ وذكره أبو نعيم بلفظ [كيف أنعم وصاحب القرن قد التقم القرن، وأصغى بسمعه متى يؤمر فينفخ فيه] وقال غريب من حديث الثوري عن عمرو ولم نكتبه إلا من حديث القرطبي . ورواه ابن عيينة عن عمار الدهني عن عطية / تاريخ بغداد ٣/٣٦٣ . وانظر الحاكم ٤/٥٥٩ .

٨٧- الحاكم ٤/٥٥٩ ورواه الحاكم بلفظه غير «حول» فغناه (نحو) وقال هذا حديث صحيح الإسناد ولم يخرجاه . . .
وانظر الدرر المنثور ٣/٢٢ . / جمع الجوامع رقم ٦٦٤٢ . / كثير العمال رقم ٣٨٩٠٥ .

٨٩- الدر المنثور ١/٩١ وعزاه السيوطي لابن جرير وأبو الشيخ في العظمة =

اسم جبريل عبد الله واسم ميكائيل عبيد الله واسم إسماعيل عبد الرحمن .

٩٠ (وأخرج الطبراني وأبو نعيم في الحلية وابن مردويه عن أبي هريرة أن رجلاً من اليهود قال يا رسول الله أخبرني عن ملك الله الذي يليه قال إن الملك الذي يليه إسماعيل ثم جبريل ثم ميكائيل ثم ملك الموت عليهم السلام .

٩١- (وأخرج أحمد والحاكم عن أبي سعيد قال قال رسول الله ﷺ إسماعيل صاحب الصور وجبريل عن يمينه وميكائيل عن يساره .

٩٢- (وأخرج أبو الشيخ عن أبي بكر الهذلي قال ليس شيء من الخلق أقرب إلى الله من إسماعيل وبينه وبين الله سبعة حجب وله جناح بالشرق وجناح بالغرب وجناح في الأرض السابعة وجناح عند رأسه . وهو واضح رأسه بين جناحيه فإذا أمر الله بالأمر تدلت الألواح على إسماعيل بما فيها من أمر الله فينظر فيها إسماعيل ثم ينادي جبريل فيجيبه فلا يسمع صوته أحد من الملائكة إلا صعد فإذا أفاقوا قالوا ماذا قال ربيكم قالوا الحق وهو العلي الكبير وإن ملك الصور الذي وكل به إن إحدى قدميه لفي الأرض السابعة وهو جاث على ركبته شاخص بصره إلى إسماعيل ما طرف منذ خلقه الله لينتظر متى يشير إليه فينفخ في الصور .

٩٣- (وأخرج ابن أبي زئب في السنة عن كعب قال إن أقرب

عن علي بن حسين وزاد عليه [وكل شيء راجع إلى «إيل» فهو معبد لله عز وجل] .

٩١- الدر المنثور ١/٩٤ وعزاه السيوطي لسعيد بن منصور وأحمد وابن أبي داود في المصاحف وأبي الشيخ في العظمة والحاكم وصححه، وابن مردويه والبيهقي في البعث عن أبي سعيد الخدري .

الملائكة إلى الله إسرائيل وله أربعة أجنحة جناح بالشرق وجناح بالغرب وقد تسرول بالثالث والرابع بينه وبين اللوح المحفوظ فإذا أراد الله أن يوحى أمراً جاء اللوح المحفوظ حتى يصفق جبهة إسرائيل فيرفع رأسه فينظر فإذا الأمر مكتوب فينادي جبريل فيليبه فيقول أموت بكذا أموت بكذا فلا يهبط جبريل من سماء إلى سماء إلا أفرغ أهلها بخافق السلطة حتى يقول جبريل الحق من عند الحق فيهبط على النبي فيوحى إليه.

٩٤ - (وأخرج) أبو الشيخ عن عبد الله بن الحارث قال كنت عند عائشة وعندها كعب فقالت يا كعب حدثنا عن إسرائيل فقال هو ملك الله ليس لديه شيء جناح له بالشرق وجناح له بالغرب وجناح على كاهله والعرش على كاهله فقالت عائشة هكذا سمعت النبي ﷺ قال كعب واللوح على جبهته فإذا أراد الله أمراً أثبت له في اللوح عند راسه.

٩٥ - (وأخرج) أبو الشيخ عن عبد الرحمن بن الحارث قال سمعت رسول الله ﷺ يقول في إسرائيل شيئاً قالت سمعت رسول الله ﷺ يقول: له أربعة أجنحة منها جناحان أحدهما بالشرق والآخر بالغرب واللوح بين عينيه فإذا أراد الله أن يكتب الرحي يقرن جبهته.

٩٦ - (وأخرج) أبو الشيخ وأبو نعيم في الحلية عن ابن عباس أن رسول الله ﷺ قال إن ملكاً من حملة العرش يقال له إسرائيل زاوية من زوايا العرش على كاهله قد مرقت قدماه من الأرض السابعة السفلى ومروق رأسه من السماء السابعة العليا.

٩٦ - حلية الأولياء ٦/٦٦ وذكره أبو نعيم، وقال تفرد به إسماعيل بن عياش الأحوص عن شهر بن حوشب عن ابن عباس، ورواه عبد الجليل بن عطية عن شهر عن عبد الله بن سلام... الدرر المنثور ٥/٣٤٧.

٩٧ - (وأخرج) البيهقي في شعب الإيمان عن المطلب أن رسول الله ﷺ قال قلت لجبريل يا جبريل مالي لا أرى إسرائيل يضحك ولم يأتني أحد من الملائكة إلا رأيته يضحك قال جبريل ما رأينا ذلك الملك ضاحكاً منذ خلقت النار.

٩٨ - (وأخرج) أبو الشيخ عن ابن عباس قال سمع النبي ﷺ هذه فقال يا جبريل أقامت الساعة قال لا هذا إسرائيل هبط إلى الأرض.

٩٩ - (وأخرج) عبد بن حميد والطبراني في الأوسط وأبو الشيخ عن عبد الله بن الحارث قال كنت عند عائشة وعندها كعب الجبر فذكر إسرائيل فقالت عائشة أخبرني عن إسرائيل فقال كعب عنكم العلم قالت أجل فأخبرني قال: له أربعة أجنحة جناحان في الهواء وجناح قد تسربل به وجناح على كاهله والقلم على أذنه فإذا نزل الوحي كتب القلم ثم درست الملائكة وملك الصور أسفل منه جاث على إحدى ركبتيه وقد نصب الأخرى فالتقم الصور محي ظهره وطرفه إلى إسرائيل وقد أمر إذا رأى إسرائيل قد ضم جناحيه أن ينفخ في الصور فقالت عائشة هكذا سمعت رسول الله ﷺ.

١٠٠ - (وأخرج) أبو الشيخ عن الأوزاعي قال إذا سبح إسرائيل قطع على كل ملك في السماء صلاته استماعاً له.

١٠١ - (وأخرج) عنه أيضاً قال ليس أحد من خلق الله أحسن صوتاً من إسرائيل فإذا أخذ في التسبيح قطع على أهل سبع سموات صلاتهم وتسييحهم.

١٠٢ - (وأخرج) من طريق الليث حدثني خالد عن سعيد قال بلغنا أن إسرائيل مؤذن أهل السماء فيؤذن لاثنتي عشرة ساعة من النهار ولاثنتي عشرة ساعة من الليل لكل ساعة تأذين يسمع تأذينه من في السماوات

لسبع ومن في الأرضين السبع إلا الجن والإنس ثم يتقدم منهم عظيم الملائكة فيصلي بهم ، قال وبلغنا أن ميكائيل يؤم الملائكة في البيت لمعهور .

١٠٣ - (وأخرج) ابن المبارك في الزهد عن ابن أبي حنبل بسنده ال أول من يدعى يوم القيامة إسرافيل فيقول الله هل بلغت عهدي يقول نعم يا رب قد بلغت جبريل فيدعى جبريل فيقول هل بلغت سرافيل عهدي فيقول نعم فيخلى عن إسرافيل فيقول لجبريل ما صنعت في عهدي فيقول يا رب بلغت الرسل فيدعى الرسل فيقال لهم بل بلغكم جبريل عهدي فيقولون نعم فيخلى عن جبريل .

١٠٤ - (وأخرج) أبو الشيخ عن أبي سنان قال أقرب الخلق من لله اللوح وهو معلق بالعرش فإذا أراد الله أن يوحى بشيء كتب في اللوح فيجيء اللوح حتى يقرع جبهة إسرافيل وإسرافيل قد غطي رأسه جناحه لا يرفع بصره إعظاماً لله فينظر فيه فإن كان إلى أهل السماء دفعه إلى ميكائيل وإن كان إلى أهل الأرض دفعه إلى جبريل فأول ما يجاسب زم القيامة اللوح يدعى به ترتعد فرائضه فيقال له هل بلغت فيقول نعم يقال من يشهد لك فيقول إسرافيل فيدعى إسرافيل ترتعد فرائضه فيقال هل بلغت اللوح فإذا قال نعم قال اللوح الحمد لله الذي نجاني من سوء الحساب ثم كذلك .

١٠٥ - (وأخرج) ابن أبي حاتم وأبو الشيخ عن ضمرة قال بلغني أن أول من سجد لآدم عليه السلام إسرافيل فأتاه الله أن كتب القرآن وجهته .

١٠٦ - (وأخرج) الطبراني في الأوسط والبيهقي في الأساء الصفات والبنار عن ابن عمرو قال جاء فيهم (١) من الناس إلى رسول الله صلى الله عليه وسلم يكسر الفاء أي جماعة .

الله ﷺ فقالوا يا رسول الله زعم أبو بكر أن الحسنات من الله والسيئات من العباد وقال عمر الحسنات والسيئات من الله فتابع هذا قوم وهذا قوم فقال رسول الله ﷺ لأقضي بينكما بقضاء إسرافيل بين جبريل وميكائيل إن ميكائيل قال يقول أبي بكر وقال جبريل يقول عمر فقال جبريل لميكائيل إنما متى يختلف أهل السماء يختلف أهل الأرض فلتحاكم إلى إسرافيل فتحاكما إليه ففضى بينهما بحقيقة القدر خيره وشره وحلوه ومرو كله من الله ثم قال يا أبا بكر إن الله لو أراد أن لا يعصى لم يخلق إبليس فقال أبو بكر صدق الله ورسوله .

ما جاء في ملك الموت عليه السلام

١٠٧ - (أخرج) سعيد بن منصور وابن المنذر وابن أبي حاتم عن أبي هريرة قال لما أراد الله عز وجل أن يخلق آدم بعث ملكاً من حملة العرش يأتي بترواب من الأرض فلما هوى ليأخذ قالت الأرض أسالك بالذي أرسلك أن لا تأخذ مني اليوم شيئاً يكون للنار منه نصيب غداً فتركها فلما رفع إلى ربه قال ما منعك أن تأتي بما أمرتك قال سألتني بك فعظمت أن أرد شيئاً سألني بك فأرسل لها آخر فقال مثل ذلك حتى أرسلهم كلهم فأرسل ملك الموت فقالت له مثل ذلك فقال إن الذي أرسلني أحق بالطاعة منك فأخذ من وجه الأرض كلها من طيها وخبثتها فجاء به إلى ربه فصب عليه من ماء الجنة فصار حملاً مسنوناً فخلق منه آدم .

١٠٨ - (وأخرج) ابن جرير والبيهقي في الأساء والصفات وابن عساکر عن طريق السدي عن أبي مالك وعن أبي صالح عن ابن عباس وعن مرة عن ابن مسعود وناس من الصحابة قالوا بعث الله جبريل إلى الأرض ليأتيه بطين منها فقالت الأرض أعوذ بالله منك أن تنقص مني

فرجع ولم يأخذ شيئاً وقال يا رب إنها عادت بك فأعذتها فبعث ميكائيل كذلك فبعث ملك الموت فعادت منه فقال وأنا أعوذ بالله أن أرجع ولم أنفذ أمره فأخذ من وجه الأرض .

١٠٩ - (وأخرج) الديلمي عن زيد بن ثابت قال قال رسول الله ﷺ لو رأيتم الأجل ومسيره لأبغضتم الأمل وغروره وما من أهل بيت إلا وملك الموت يتعاهدهم في كل يوم مرتين فمن وجده قد انقضى أجله قبض روحه فإذا بكى أهله وجزعوا قال لم تكون ولم تجزعون فوالله ما نقصت لكم عمراً ولا حبست لكم رزقاً ما لي ذنب وإن لي فيكم لعودة ثم عودة ثم عودة حتى لا أبقي منكم أحداً .

١١٠ - (وأخرج) عبد الرزاق وأحمد في الزهد وابن جرير وابن المنذر وابن أبي حاتم وأبو الشيخ عن مجاهد قال ما على ظهر الأرض من بيت شعر ولا مدر إلا وملك الموت يطوف به كل يوم مرتين .

١١١ - (وأخرج) ابن أبي شيبة في المصنف وحيد الله بن أحمد في زوائد الزهد عن عبد الأعلى التميمي قال ما من أهل بيت إلا وملك الموت يتصفحهم في اليوم مرتين .

١١٢ - (وأخرج) ابن أبي الدنيا في ذكر الموت وأبو الشيخ عن الحسن قال ما من يوم إلا وملك الموت يتصفح في كل بيت ثلاث مرات فمن وجده منهم قد استوفى رزقه وانقضى أجله قبض روحه وأقبل أهله برنة وبكاء فيأخذ ملك الموت بعضا من الباب فيقول ما لي إليكم من ذنب وإني لأمر والله ما أكلت لكم رزقاً ولا أفنيت لكم عمراً ولا انتقصت لكم أجلاً وإن لي فيكم لعودة ثم عودة ثم عودة حتى لا أبقي

١٠٩ - عن كنز العمال رقم ٤٢١٣٣ وعزاه السيوطي للديلمي عن زيد بن ثابت رضي الله عنه .

منكم أحداً قال الحسن فيوالله لو يرون مقامه ويسمعون كلامه لذهلوا عن ميتهم ولبكوا على أنفسهم .

١١٣ - (وأخرج) ابن أبي الدنيا وأبو الشيخ عن زيد بن أسلم قال يتصفح ملك الموت المنازل كل يوم خمس مرات ويطلع في وجه ابن آدم كل يوم اطلاعه قال فمنها الذعرة التي تصيب الناس يعني القشعريرة والانفراض .

١١٤ - (وأخرج) ابن أبي حاتم وأبو الشيخ عن عكرمة قال ما من يوم إلا وملك الموت يطلع في كتاب حياة الناس؛ قائل يقول ثلاثاً وقائل يقول خمساً .

١١٥ - (وأخرج) ابن أبي حاتم عن كعب قال ما من بيت فيه أحد إلا وملك الموت على بابه كل يوم سبع مرات ينظر هل فيه أحد أمر به يتوفاه .

١١٦ - (وأخرج) سعيد بن منصور وأحمد في الزهد عن عطاء بن يسار قال ما من أهل بيت إلا يتصفحهم ملك الموت في كل يوم خمس مرات هل منهم أحد أمر يقبضه .

١١٧ - (وأخرج) أبو نعيم في الحلية عن ثابت البناني قال الليل والتهار أربع وعشرون ساعة ليس فيها ساعة تأتي على ذي روح إلا وملك الموت قائم عليها فإن أمر يقبضها قبضها وإلا ذهب .

١١٨ - (وأخرج) ابن النجار في تاريخه عن أنس مرفوعاً إن ملك الموت لينظر في وجوه العباد كل يوم سبعين نظرة فإذا ضحك العبد الذي بعث إليه يقول يا عجباً بعثت إليه لأقبض روحه وهو يضحك .

١١٩ - (وأخرج) الطبراني في الكبير وأبو نعيم وابن منتهه كلاهما في المعرفة من طريق جعفر بن محمد عن أبيه عن الحارث بن الخزرج قال سمعت رسول الله ﷺ يقول - ونظر إلى ملك الموت عند رأس رجل من الأنصار - فقال يا ملك الموت ارفق بصاحبي فإنه مؤمن فقال ملك الموت طب نفساً وقر عيناً فأني بكل مؤمن رفيق واعلم يا محمد أنني لأقبض روح ابن آدم فإذا صرخ صارخ قمت في الدار ومعي روحه فقلت ما هذا الصارخ والله ما ظلمناه ولا سبقنا أجله ولا استعجلنا قدره وما لنا في قبضه من ذنب فإن ترضوا بما صنع الله تؤجروا وإن تسخطوا تأثموا وتوزروا وإن لنا عندكم عودة ثم عودة بعد عودة فالخذر الخذر وما من أهل بيت شعر ولا مدر بر ولا فاجر سهل ولا جبل إلا أنا اصفحهم في كل يوم وليلة حتى لأنا أعرف بصغيرهم وكبيرهم منهم بأنفسهم والله لو أردت أن أقبض روح بعوضة ما قدرت على ذلك حتى يكون الله هو يأذن بقبضها. قال جعفر بن محمد بلغني إنما يتصفحهم عند مواقيت الصلاة فإذا حضر عند الموت فإن كان ممن يحافظ على الصلوات دنا منه الملك وطرد عنه الشيطان ويلقنه الملك لا إله إلا الله محمد رسول الله في ذلك الحال العظيم.

١٢٠ - (وأخرج) ابن أبي الدنيا في كتاب ذكر الموت عن عبيد بن عمير قال بينما إبراهيم عليه السلام يوماً في داره إذ دخل عليه رجل حسن الشارة فقال يا عبد الله من أدخلك داري قال أدخلنيها ربه

١١٩ - الطبراني في الكبير ٢٦١/٤ ورواه الطبراني بزيادة في الألفاظ والحديث

عنده عن الحارث بن الخزرج عن أبيه.

ونظر تفسير ابن كثير ٣٦٣/٦ / مجمع الزوائد ٢/٣٢٦.

الجامع الكبير ٣٨٥/٢ / كنز العمال رقم ٤٢٨١٠ / الدرر المنثور

١٧٣/٥

تأخَّل ربه أحمق بها فمن أنت قال ملك الموت قال لقد نمت لي منك أشياء ما أراها فيك قال أدبر فأدبر فإذا عيون مقبلة وعيون مدبرة وإذا كل شعرة منه كأنها إنسان قائم فتعوذ إبراهيم من ذلك وقال عد إلى الصورة الأولى قال يا إبراهيم إن الله إذا بعثني إلى من يحب لقاءه بعثني في الصورة التي رأيت أولاً.

١٢١ - (وأخرج) ابن أبي الدنيا عن كعب قال إن إبراهيم عليه السلام رأى في بيته رجلاً فقال من أنت قال أنا ملك الموت قال إبراهيم إن كنت صادقاً فأرني منك آية أعرف أنك ملك الموت قال ملك الموت أعرض بوجهك فأعرض ثم نظر فأراه الصورة التي يقبض فيها المؤمنين فرأى من النور والبهاء شيئاً لا يعلمه إلا الله تعالى ثم قال أعرض بوجهك فأعرض ثم نظر فأراه الصورة التي يقبض فيها الكفار والفجار فرعب إبراهيم رعباً حتى أرعدت فرائضه وألصق بطنه بالأرض وكادت نفسه تخرج.

١٢٢ - (وأخرج) عن ابن مسعود وابن عباس قال لما اتخذ الله تعالى إبراهيم خليلاً سأل ملك الموت ربه أن يأذن له فيشره بذلك فأذن له فجهاء إبراهيم فبشره بذلك فقال الحمد لله ثم قال يا ملك الموت أرني كيف تقبض أنفاس الكفار قال يا إبراهيم لا تطيق ذلك قال بلى قال فأعرض فأعرض ثم نظر فإذا برجل أسود ينال رأسه السماء يخرج من فيه لهب النار ليس من شعرة في جسده إلا في صورة رجل يخرج من فيه ومسامحه لهب النار فغشي على إبراهيم ثم أفاق وقد تحول ملك الموت في الصورة الأولى فقال يا ملك الموت لو لم يلق الكافر من البلاء والخزن إلا صورتك لكفاه فأرني كيف تقبض أنفاس المؤمنين قال أعرض فأعرض ثم التفت فإذا هو برجل شاب أحسن الناس وجهاً وأطيبهم ريحاً في ثياب بيضاء فقال يا ملك الموت لو لم ير المؤمن عند موته من قرة العين

والكرامة إلا صورتك هذه لكان يكفيه.

١٢٣ - (وأخرج) ابن أبي الدنيا وأبو الشيخ في العظمة عن أشعث بن أسلم قال سأل إبراهيم عليه السلام ملك الموت واسمه عزرائيل وله عينان في وجهه وعينان في قفاه فقال يا ملك الموت ما تصنع إذا كانت نفس بالشرق ونفس بالمغرب ووقع الوتاء بأرض والتقى الزحفان كيف تصنع قال أدعو الأرواح يا ذن الله فتكون بين أصبعي هاتين قال ودجيت له الأرض فتركت مثل الطلست يتناول منها حيث يشاء..

١٢٤ - (وأخرج) ابن أبي الدنيا عن الحكم أن يعقوب عليه السلام قال يا ملك الموت ما من نفس منقوسة إلا وأنت تحبس روحها قال نعم قال فكيف وأنت عندي ها هنا والأنفس في أطراف الأرض قال إن الله يجزلي الدنيا فهي كالطست يوضع قدام أحدكم فتنال أيها من أطرافها شاء، كذلك الدنيا عندي.

١٢٥ - (وأخرج) عبد الرزاق وأحمد في الصحيحين وأبو حنيفة والمنذر وأبو الشيخ في العظمة وأبو نعيم في الحلية عن أبي حنيفة قال سألت الأرض ملك الموت مثل الطست يتناول من حيث شاء ويحيط به أعوان يتوفون الأنفس ثم يقبضها منهم.

١٢٦ - (وأخرج) ابن جرير وأبو الشيخ عن الربيع بن أنس أنه سئل عن ملك الموت هل هو وحده الذي يقبض الأرواح قال هو الذي يلي أمر الأرواح وله أعوان على ذلك غير أن ملك الموت هو الرئيس وكل خطوة منه من المشرق إلى المغرب.

١٢٧ - (وأخرج) ابن أبي شيبة وابن جرير وابن المنذر وابن أبي حاتم وأبو الشيخ في التفسير عن ابن عباس في قوله تعالى ﴿توفته رسلاً﴾

قال أعوان ملك الموت من الملائكة.

١٢٨ - (وأخرج) عبد بن حميد وابن جرير وابن المنذر وابن أبي حاتم وأبو الشيخ في التفسير عن إبراهيم النخعي في قوله ﴿توفته رسلاً﴾ قال الملائكة تقبض الأنفس ثم يقبضها منهم ملك الموت بعد.

١٢٩ - (وأخرج) عبد الرزاق وابن جرير وأبو الشيخ في العظمة عن قتادة في قوله ﴿توفته رسلاً﴾ قال إن ملك الموت له رسل فيل قبضها الرسل ثم يدفعوها إلى ملك الموت.

١٣٠ - (وأخرج) أبو الشيخ في العظمة عن وهب بن منه قال إن الملائكة الذين يقربون بالناس هم الذين يتوفونهم ويكتبون لهم آجالهم فإذا توفوا النفس دفعوها إلى ملك الموت وهو كالعاقب يعني العشار الذي يؤدي إليه من تحته.

١٣١ - (وأخرج) ابن أبي الدنيا وأبو الشيخ وأبو نعيم في الحلية عن شهر بن حوشب قال: ملك الموت جالس والدنيا بين ركبتيه واللوح الذي في آجال بني آدم في يديه وبين يديه ملائكة قيام وهو يعرض اللوح لا يطرف فإذا أتى على أجل عبد قال اقبضوا هذا.

١٣٢ - (وأخرج) ابن أبي حاتم وأبو الشيخ عن ابن عباس أنه سئل عن نفسين اتفقا موتها في طريقة عين واحد في المشرق وآخر بالمغرب كيف قدر ملك الموت عليها قال ما قدرة ملك الموت على أهل المشرق والمغرب والظلمات والهواء والبحور إلا كرجل بين يديه مائدة يتناول من أيها شاء.

١٣٣ - (وأخرج) ابن أبي حاتم عن زهير بن محمد قال قيل يا رسول الله ملك الموت واحد والزحفان يلتقيان بين المشرق والمغرب وما بين ذلك من السقط والحلاك فقال إن الله عز وجل قوى ملك الموت

حتى جعلها كالطست بين يدي أحدكم فهل يفوته منها شيء.

١٣٤ - (وأخرج جويرير عن ابن عباس قتال ملك الموت الذي يتوفى الأنفس كلها وقد سلط على ما في الأرض كما سلط أحدكم على ما في راحته ومعه ملائكة من ملائكة الرحمة وملائكة من ملائكة العذاب فإذا توفى نفساً طيبة دفعها إلى ملائكة الرحمة وإذا توفى نفساً خبيثة دفعها إلى ملائكة العذاب.

١٣٥ - (وأخرج ابن أبي الدنيا وأبو الشيخ عن أبي الثني الحمصي قال إن الدنيا سهلها وجبلها بين فخذي ملك الموت ومعه ملائكة الرحمة وملائكة العذاب فيقبض الأرواح فيعطي هؤلاء هؤلاء وهؤلاء هؤلاء يعني ملائكة الرحمة وملائكة العذاب قيل فإذا كانت ملحمة وكان السيف مثل البرق قال يدعوها فتأتيه الأنفس.

١٣٦ - (وأخرج الدينوري في المجالسة عن أبي قيس الأزدي قال قيل لملك الموت كيف تقبض الأرواح قال أدعوها فتجيئي.

١٣٧ - (وأخرج ابن أبي شيبة عن خزيمة قال أتى ملك الموت سليمان بن داود وكان له صديقاً فقال له سليمان ما لك تأتي أهل البيت فتقبضهم جميعاً وتلدع أهل البيت إلى جنبهم لا تقبض منهم أحداً قال لا أعلم بما أقبض منها إنما أكون تحت العرش فتلقى إلى صيكاك فيها أساء.

١٣٨ - (وأخرج ابن عساكر عن خزيمة قال قال سليمان بن داود لملك الموت إذا أردت أن تقبض روحي فأعلمني بذلك قال ما أنا أعلم بذلك منك إنما هي كتب تلقى إلي فيها تسمية من يموت.

١٣٩ - (وأخرج أحمد في الزهد وابن أبي الدنيا عن معمر قال بلغنا أن ملك الموت لا يعلم متى يحضر أجل الإنسان حتى يؤمر بقبضها.

١٤٠ - (وأخرج ابن أبي الدنيا عن ابن جرير قتال بلغنا أنه يقال لملك الموت أقبض فلاناً في وقت كذا في يوم كذا.

١٤١ - (وأخرج ابن أبي حاتم عن عكرمة في قوله تعالى: ﴿وَهُوَ الَّذِي يَتَوَفَّاكُم بِاللَّيْلِ﴾ قال يتوفى الأنفس عند منامها ما من ليلة إلا والله يقبض الأرواح كلها فيسأل كل نفس عما عمل صاحبها من النهار ثم يدعو ملك الموت فيقول إقبض هذا إقبض هذا.

١٤٢ - (وأخرج ابن أبي الدنيا عن عطاء بن يسار قال إذا كانت ليلة النصف من شعبان دفع إلى ملك الموت صحيفة فيقال إقبض من في هذه الصحيفة فإن العبد ليفرش الفراش وينسكح الأزواج ويبني البنيان وإن اسمه قد نسخ في الموق.

١٤٣ - (وأخرج ابن جرير عن عمر مولى غفرة قال ينسخ ملك الموت من يموت ليلة القدر إلى مثلها فتجد الرجل ينكح النساء ويغرس الغرس واسمه في الأموات.

١٤٤ - (وأخرج الدينوري في المجالسة عن راشد بن سعيد أن النبي ﷺ قال في ليلة النصف من شعبان يسوجي الله إلى ملك الموت يقبض كل نفس يريد قبضها في تلك السنة.

١٤٥ - (وأخرج الخطيب وابن النجار عن عائشة قالت كان رسول الله ﷺ يصوم شعبان كله حتى يصله برمضان ولم يكن يصوم شهراً تاماً إلا شعبان فقلت يا رسول الله إن شعبان لمن أحب الشهور

راشد بن سعد مرسلًا / إتحاف السادة المتقين ٢٨٢/١٠. وعزاه السيوطي للدينوري في المجالسة عن

وانظر الدر المنثور ٢٦/٦

ليك أن تصومه قال نعم يا عائشة إنه يكتب فيه ملك الموت من يقبض تأحب أن لا ينسخ اسمي إلا وأنا صائم.

١٤٦ - (وأخرج أحمد والبخاري والمسلم وصححه عن أبي هريرة عن النبي ﷺ قال إن ملك الموت كان يأتي النائم عياناً فأتى موسى فلطمه ففقد عينه فأتى ربه فقال يا رب عبدك موسى فقفاً عيني ولولا كرامته عليك لشققت عليه قال له اذهب إلى عبدك فقل له فليضع يده على جلد ثور فله بكل شعرة وارت يده سنة فأتاه فقال ما بعد هذا قال الموت قال فالآن فشمة فقبض روحه ورد الله عليه فكان فبعد يأتي الناس في خفية.

١٤٧ - (وأخرج أبو نعيم عن الأعمش قال كان ملك الموت يظهر للناس فيأتي الرجل فيقول إقبض حاجتك فإني أريد أن أقبض روحك فشكا فانزل الداء وجعل الموت خفية.

١٤٨ - (وأخرج المروزي في الجنائز وابن أبي الدنيا وأبو الشيخ عن أبي الشعثاء جابر بن زيد أن ملك الموت كان يقبض الأرواح بغير وجع فنبه الناس ولعنوه فشكى إلى ربه فوضع الله الأرواح ونبي ملك الموت يقال مات فلان بكذا وكذا.

١٤٩ - (وأخرج ابن أبي حاتم عن ابن عثيمين أن ملكاً استأذن ربه أن يهبط إلى إدريس فأتاه فسلم عليه فقال له إقرئ من هل بينك وبين

١٤٦ - الحاكم ٥٧٨/٢ ورواه الحاكم بنحوه، وقال هذا حديث صحيح على شرط مسلم ولم يخرجاه.
/ جمع الجوامع رقم ٧١٠٢ / كثر العمال رقم ٣٣٣٨٣ / الأتحافات السنية ص ١٧٨.

ملك الموت شيء قال ذاك أخي من الملائكة قال هل تستطيع أن تنفعي عنده بشيء قال أما أن يؤخر شيئاً أو يقدمه فلا، ولكن سأكلمه لك فيرفق بك عند الموت قال إركب بين جناحي فركب إدريس فصعد إلى السماء العليا فلقى ملك الموت وإدريس بين جناحيه فقال له الملك إن لي إليك حاجة قال قد علمت حاجتك تكلمني في إدريس وقد محى اسمه ولم يبق من أجله إلا نصف طرفة عين فمات إدريس بين جناحي الملك.

١٥٠ - (وأخرج أبو الشيخ عن محمد بن النكدر أن ملك الموت قال لإبراهيم عليه السلام إن ربك أمرني أن أقبض نفسك بأيسر ما قبضت نفس مؤمن قال فإني أسألك بحق الذي أرسلك أن تراجعني في فقال إن خليلك سأل أن أراجعك فيه فقال الله وقل له إن ربك يقول إن الخليل يحب لقاء خليله فأتاه فقال امض لا أمرت به قال يا إبراهيم هل شربت شرباً قال لا فاستكهه قبض نفسه على ذلك.

١٥١ - (وأخرج أحمد عن أبي هريرة أن رسول الله ﷺ قال كان داود عليه السلام فيه غيرة شديدة فكان إذا خرج أغلقت الأبواب فلم يدخل على أهله أحد حتى يرجع فخرج ذات يوم ورجع فإذا في الدار رجل قائم فقال له من أنت قال أنا الذي لا أهاب الملوك ولا يمنع مني الظناب قال داود أنت إذا والله ملك الموت مرحباً بأمر الله فزمل داود مكانه فقبضت نفسه.

١٥٢ - مجمع الزوائد ٢٠٦/٨ وذكره الهيثمي وله زيادة طويلة، وعزاه لأحمد وفيه الطلب بن عبد الله بن حنطب وثقه أبو زرعة وغيره، وثقه رجاله رجال الصحيح.

وانظر كثر العمال رقم ٣٣٣٧٧ / تفسير ابن كثير ١٩/٦.

١٥٢ - (وأخرج) ابن ماجه عن أبي أمامة سمعت رسول الله ﷺ يقول إن الله عز وجل وكل ملك الموت يقبض الأرواح إلا شهداء لبحر فإنه يتولى قبض أرواحهم .

١٥٣ - (وأخرج) جوير عن ابن عباس قال: وكل ملك الموت قبض أرواح الأديمين فهو الذي يلي قبض أرواحهم وملك في الجن وملك في الشياطين وملك في الطير والوحش والسمك والحيتان والتمل فهم أربعة أملاك والملائكة يموتون في الصعقة الأولى وإن ملك الموت يلي قبض أرواحهم ثم يموت فأما الشهداء في البحر **رحمهم الله** يلي قبض أرواحهم لا يوكل ذلك إلى ملك الموت لكرامتهم عليه حيث ركبوا لجح البحر في سبيله .

١٥٤ - (وأخرج) ابن أبي الدنيا عن محمد بن عصب القرظي قال بلغني أن آخر من يموت ملك الموت يقال له يا **ملك الموت** مت فيصرخ عند ذلك صرخة لو سمعها أهل السماوات والأرض لما تروا فرعاً ثم يموت .

١٥٥ - (وأخرج) ابن أبي الدنيا عن زياد الشامي قال قرأت في بعض الكتب أن الموت أشد على ملك الموت منه على **جميع الخلق** .

١٥٦ - (وأخرج) العقيلي في الضعفاء **وأبو الشيخ** في العظمة والدليمي عن أنس قال قال رسول الله ﷺ **آجال اليهائم** وخشاش

١٥٢ - ابن ماجه رقم ٢٧٧٨ ورواه بزيادته عن أبي أمامة رضي الله عنه .

وانظر الدر المنثور ١٧٣/٥ / إرواء الغليل ١٧/٥ .

١٥٦ - جمع الجوامع رقم ٥٤٤ وعزه السيوطي للعقيلي في الضعفاء وقال: لا أصل له وأورده ابن الجوزي في الموضوعات، وفي اللآلئ المصنوعة: «موضوع والتهم به الوليد (بن موسى الدمشقي) قال العقيلي أحاديثه بواطل» .

الأرض كلها في التسبيح فإذا انقضى تسبيحها قبض الله أرواحها وليس إلى ملك الموت من ذلك شيء .

١٥٧ - (وأخرج) الخطيب في رواة مالك عن سليمان بن معمر الكلابي قال حضرت مالك بن أنس وسأله رجل عن البراءة أملاك الموت يقبض أرواحها فأطرق طويلاً ثم قال: أها نفس قال نعم قال فإن ملك الموت يقبض أرواحها الله يتوفى الأنفس حين موتها .

١٥٨ - (وأخرج) أبو نعيم في الحلية عن معاذ ابن جبل قال إن ملك الموت حرية تبلغ ما بين المشرق والمغرب فإذا انقضى أجل عبد من الدنيا ضرب رأسه بذلك الحرية وقال الآن يزار بك عسكر الموت .

١٥٩ - (وأخرج) ابن عساكر عن بن عباس مرفوعاً إن ملك الموت حرية مسمومة طرف لها بالشرق وطرف لها بالمغرب يقطع بها عرق الحياة .

١٦٠ - (وأخرج) ابن أبي حاتم عن زهير بن محمد قال: ملك الموت جالس على معراج بين السماء والأرض وله رسول من الملائكة فإذا كانت النفس في ثغرة النحر رأى ملك الموت على معراجة شخص بصره إليه ففطره آخر ما يموت .

١٦١ - (وأخرج) ابن أبي الدنيا عن الحكم بن أبان قال سئل عكرمة أيعصر الأعمى ملك الموت إذا جاء يقبض روحه قال نعم .

وانظر كبر العجمال رقم ١٩٢١ / الدر المنثور ٢١/٢ ، ١٨٤/٤ .
الآلئ المصنوعة ٢٢٥/٢ / الحاوي للفتاوى ٢١/٢ .

الفوائد المصنوعة ص ٢٧١ / لسان الميزان ٨٠٧/٦ .

١٦٢ - (وأخرج) أبو نعيم في الحلية عن مجاهد قال ما من مريض يعرضه العبد إلا رسول ملك الموت عنده حتى إذا كان آخر مرض يعرضه العبد أتاه ملك الموت فقال أذاك رسول بعد رسول فلم تعباً به وقد أذاك رسول يقطع أثرك من الدنيا.

١٦٣ - (وأخرج) أبو الحسين ابن العريف في فوائده وأبو الربيع المسعودي في فوائده عن أنس بن مالك قال قال رسول الله ﷺ إذا جاء ملك الموت إلى ولي الله تعالى سلم عليه وسلامه عليه أن يقول السلام عليك يا ولي الله قم فأخرج من دارك التي خرجتها إلى دارك التي عمرتها وإذا لم يكن ولياً لله قال له قم فأخرج من دارك التي عمرتها إلى دارك التي خرجتها.

١٦٤ - (وأخرج) أبو القاسم ابن منده في كتاب الأموال والإيمان بالسؤال عن ابن مسعود قال إذا أراد الله عز وجل قبض روح المؤمن أوحى إلى ملك الموت اقربته مني السلام فإذا جاء ملك الموت قبض روحه قال ربك يقرئك السلام.

١٦٥ - (وأخرج) المروزي في الجنائز وابن أبي الدنيا وأبو الشيخ في تفسيره عن ابن مسعود قال إذا جاء ملك الموت يقبض روح المؤمن قال: ربك يقرئك السلام.

١٦٦ - (وأخرج) ابن أبي شيبة وابن أبي الدنيا وابن أبي حاتم والحاكم وصححه والبيهقي في شعب الإيمان عن محمد بن كعب القرظي قال إذا استنفقت نفس العبد المؤمن جاءه ملك الموت فقال له السلام عليك يا ولي الله، والله يقرأ عليك السلام ثم نزع بهمة الآية: ﴿الذين تتوفاهم اللاتكة طيبين يقولون سلام عليكم﴾ وقال السلفي في المشيخة البغدادية سمعت أبا سعيد الحسن بن علي الواعظ يقول سمعت أبي

يقول رأيت في بعض الكتب أن الله تعالى يظهر على كف ملك الموت بسم الله الرحمن الرحيم بخط من التور ثم يأمره أن يسط كفه للعارف في وقت وفاته ويريه تلك الكتابة فإذا رأتها روح العارف طارت إليه في أسرع من طرف العين.

١٦٧ - (وأخرج) أبو الشيخ عن داود بن أبي هند قال بلغني أن ملك الموت كان وكل سليمان عليه السلام ف قيل له ادخل عليه كل يوم دخلة فسله عن حاجته ثم لا تبرح حتى تقضيها فكان يدخل عليه في صورة رجل فيسأله كيف هو ثم يقول يا رسول الله ألك حاجة فإن قال نعم لم يبرح حتى يقضيها وإن قال لا انصرف عنه إلى الغد فدخل عليه يوماً وعنده شيخ فقام فسلم ثم قال ألك حاجة يا رسول الله قال لا ولخط الشيخ لحظة فارتعد الشيخ وانصرف ملك الموت فقام الشيخ فقال لسليمان أسألك بحق الله إلا ما أمرت بالريح فتحملني فتلقيني بأقصى مدرة من أرض الهند فأمرها فحملته ودخل ملك الموت على سليمان من الغد فسأله عن الشيخ فقال هبط إلي كتابه أمس أن أقبض روحه غداً مع طلوع الفجر بأقصى مدرة من أرض الهند فهبطت وما أحسبه إلا ثم فوجدته عندك فجعلت أتعجب وأنظر إليه مالي هم غيره فهبطت عليه اليوم مع طلوع الفجر فوجدته بأقصى مدرة من أرض الهند ينتفض فقبضت روحه.

١٦٨ - (وأخرج) ابن أبي شيبة عن خيشمة قال دخل ملك الموت إلى سليمان فجعل ينظر إلى رجل من جلسائه يديم النظر إليه فلما خرج قال الرجل من هذا قال هذا ملك الموت قال رأيته ينظر إلي كأنه يريدني قال فما تريد قال أريد أن تحملي على الريح حتى تلقيني بالهند فدعا الريح فحمله عليها فآلقته في الهند ثم أتى ملك الموت سليمان فقال إنك كنت تدبم النظر إلى رجل من جلسائي قال كنت أعجب منه أمرت أن

قبضه بالهند وهو عندك.

١٦٩ - (وأخرج الطبراني عن ابن عباس قال جاء ملك الموت إلى

لنبي ﷺ في مرضه الذي قبض فيه فاستأذن ورأسه في حجر علي فقال
لسلام عليكم ورحمة الله وبركاته فقال علي أرجع فينا مشاقيل عنك
قال النبي ﷺ أتدري من هذا يا أبا الحسن هذا ملك الموت أدخل
إشداً فلما دخل قال إن ربك يقرئك السلام قال أين جبريل فقال ليس
هو قريب مني، الآن يأتي، فخرج ملك الموت حتى نزل عليه جبريل
فقال له جبريل وهو قائم بالباب ما أخرجك يا ملك الموت قال التمسك
محمد فلما أن جلسنا قال جبريل سلام عليك يا أبا القاسم فقال ليودع مني
منك فبلغني أنه لم يسلم ملك الموت على أهل بيتي ولا يسلم على
حد بعده.

١٧٠ - (وأخرج الطبراني عن الحسين أن جبريل هبط على

لنبي ﷺ يوم موته فقال كيف تجدك قال أجدي يا جبريل مغموماً
أجدي مكروباً فاستأذن ملك الموت على الباب فقال جبريل يا محمد
هذا ملك الموت يستأذن عليك ما استأذن عليّ أمّي فقال لا يستأذن
عليّ أمّي بعدك قال أذن له فأذن له فأقبل حتى وقف بين يديه فقال إن
لله أرسلني إليك وأمري أن أطيعك إن أمرتني أن أقصّ فتفك قبضتها
إن كرهت تركتها قال وتفضل يا ملك الموت قال نعم بذلك أمرت فقال
جبريل إن الله قد اشتاق إلى لقاءك فقال رسول الله ﷺ امض لما
موت به.

١٧٠ - الطبراني في الكبير ١٣٩/٣ ورواه بنحوه.

وانظر الجامع الكبير ٢/١٨٠ . وانظر جمع الجوامع رقم ٣٣٠٦ و ٣٣٠٩ .

حاتم والطبراني في الأوسط وأبو الشيخ عن الربيع بن أنس قال السماء الدنيا موج مكفوف والثانية ممررة بيضاء والثالثة حديد والرابعة نحاس والخامسة فضة والسادسة ذهب والسابعة ياقوتة حمراء وهما حقوق ذلك صحارى من نور ولا يعلم ما فوق ذلك إلا الله تعالى وملاك موكل بالحجب يقال له ميطار طروش.

ما جاء في حملة العرش عليهم السلام
وقد عرش ربك فونهم يومئذ ثمانون - قال تعالى

١٧٩ - (أخرج) عبد بن حميد وعثمان بن سعيد الباقين في نسخة وابن النذر وابن خزيمة وابن مردويه والحاكم وصححه في نسخة وابن أبي عمير على الجهمية عن العباس بن عبد المطلب في قوله ويحمل عرشك ويملك قلوبهم يومئذ ثمانية قال ثمانية أملاك على صورة الأوعال .

١٨٠ - (وأخرج) عثمان بن سعيد عن ابن عباس عمنه القرض
قرون لها كعوب القضا ما بين أخص الخطم إلى خذيرة
خمس مائة عام وبين أربنته إلى ترقوته مسيرة خمس
إلى موضع القرط خمس مائة عام.

١٨١ - (وأخرج عثمان بن سعيد وأبو يعلى **عنه** صحيح عن أبي هريرة قال قال رسول الله ﷺ أذن لي أن أعتق من ملكي فمد مرقف رجلاه الأرض السابعة والعرش على منكبِهِ وهو يقول سبحانك أين كنت وأين تكون.

١٨٢ - (وأخرج) أبو داود وأبو الشيخ والبيهقي في الأسماء والصفات عن جابر أن النبي ﷺ قال أذن لي أن أحدث عن ملك من

حَمَلَةُ الْعَرْشِ رَجُلَاهُ فِي الْأَرْضِ السُّفْلَى وَعَلَى قَرْيَةِ الْعَرْشِ وَبَيْنَ شَحْمَةِ أَذْنِهِ وَغَائِقَةِ خَفَقَانِ الطَّيْرِ سَبْعَ مِائَةِ عَامٍ ذَلِكَ الْمَلِكُ سَبْعَانُكَ حَيْثُ كُنْتَ

يقول: حملة العرش ما بين موق أحدهم إلى مؤخر عيينه مسيرة خمس مائة عام.

١٨٤ - (وأخرج) عثمان بن سعيد وابن المنذر وأبو الشيخ عن
حسان بن عطية قال حملة العرش ثمانية أقدامهم مبيتة في الأرض
السابعة رؤوسهم قد جاوزت السماء السابعة وقرونها مثل طوهم
عليها العرش .

١٨٥ - (وأخرج) أبو الشيخ عن زاذان قال: حملة العرش أرجلهم في التخم لا يستطيعون أن يرفعوا أبصارهم من شعاع النور.

١٨٦ - (وأخرج) ابن المنذر وأبو الشيخ والبيهقي في شعب الإيمان عن هارون بن رثاب قال : حلة العرش ثمانية يتجاوبون بصوت رخيم تقول أربعة منهم : سبحانك وبحمدك على حلمك بعد علمك وأربعة، يقولون : سبحانك وبحمدك على عفوك بعد قدرتك .

١٨٧ - (وأخرج) عبد بن حميد عن الربيع في قوله ﴿ويحمل عرش ربك فوقهم يومئذ ثمانية﴾ من الملائكة.

١٨٨ - (وأخرج) ابن جرير عن ابن زيد قال قال رسول الله ﷺ يحمله اليوم أربعة ويوم القيامة ثمانية:

تفسیر الطبری ۳۷/۲۹ و ذکره باقظه: ۱۸۸

وانظر الدر المنثور ٢٦١/٦. / تفسير القرطبي ٢٦٦/١٨.

١٨٩ - (وأخرج) عبد الرزاق وعبد بن حميد وابن المنذر وأبو الشيخ عن وهب قال حملة العرش الذين يحملونه أربعة أملاك لكل ملك منهم أربعة وجوه وأربعة أجنحة جناحان على وجهه يمنعه من أن ينظر إلى العرش فيصعق وجناحان يطير بهما أقدامهم من الشرى والعرش على أكتافهم لكل واحد منهم وجه ثور ووجه أسد ووجه إنسان ووجه نسر ليس لهم كلام إلا أن يقولوا قدوس، الله القوي ملأ عظمته السماوات والأرض.

١٩٠ - (وأخرج) أبو الشيخ من طريق السدي عن أبي مالك قال الصخرة التي تحت الأرض منتهى الخلق على أرجائها أربعة أملاك لكل واحد منهم أربعة وجوه وجه إنسان ووجه أسد ووجه ثور وهم قيام عليها قد أحاطوا الأرض والسماوات والعرش على العرش.

١٩١ - (وأخرج) أبو الشيخ عن وهب قال حملة العرش الذين أربعة فإذا كان يوم القيامة أيدوا بأربعة أخرى ملك منهم في صورة إنسان يشفع لبني آدم في أرزاقهم وملك في صورة نسر يشفع للطيور في أرزاقها وملك في صورة ثور يشفع للبهائم في أرزاقهم وملك في صورة أسد يشفع للسباع في أرزاقها ولكل ملك منهم أربعة وجوه وجه إنسان ووجه نسر ووجه ثور ووجه أسد فلما حملوا العرش دخلوا على ربهم من عظمة الله فلقنوا لا حول ولا قوة إلا بالله فاستوت على أرجلهم.

١٩٢ - (وأخرج) أبو الشيخ عن مكحول قال رسول الله ﷺ إن في حملة العرش أربعة أملاك ملك على سيد الصور وهو ابن

١٩٢ - الدر المنثور ٣٤٦/٥ وعزاه السيوطي لأبو الشيخ عن مكحول رضي الله عنه.

آدم وملك على صورة سيد السباع وهو الأسد وملك على صورة الأنعام وهو الثور فما زال غضبان منذ يوم عبد العجل إلى ساعتي هذه وملك على صورة سيد الطير وهو النسر.

١٩٣ - (وأخرج) عثمان بن سعيد الدارمي والبيهقي في الأساء والصفات عن عروة قال حملة العرش منهم من صورته على صورة إنسان ومنهم من صورته على صورة النسر ومنهم من صورته على صورة الثور ومنهم من صورته على صورة الأسد.

١٩٤ - (وأخرج) ابن أبي حاتم عن ابن زيد قال لم يسم من حملة العرش إلا إسرافيل قال وميكائيل ليس من حملة العرش.

١٩٥ - (وأخرج) أبو الشيخ عن ابن عباس أن رسول الله ﷺ خرج على أصحابه فقال ما جمعكم فقالوا اجتمعنا نذكر ربنا ونشكر في عظمته فقال لن تتركوا التفكير في عظمته ألا أخبركم ببعض عظمة ربكم قالوا بلى يا رسول الله قال إن ملكاً من حملة العرش يقال له إسرافيل زاوية من زوايا العرش على كاهله قد مرققت قدماه في الأرض السابعة السفلى ومرق رأسه من الساء السابعة العليا في مثله من خلقته ربكم.

١٩٦ - (وأخرج) الدليمي عن علي قال قال رسول الله ﷺ «إذا

رضي الله عنها.

الأرض وجناتها في المسرق وعنه تحت العرش..

٢٠٢ - (والخروج) عبد بن حميد وابن مردويه والبيهقي في الأساء
والصفات عن ابن عباس قال حملة العرش ما بين كعب أحدهم إلى
أسفل قدمه مسيرة خمسمائة عام وذكر أن خطوة ملك الموت ما بين
الشرق إلى الغرب .

٢٠٣ - (وَأَخْشَوْج) عبد بن حميد عن عكرمة قال: جملة العرش كلهم صور قبل لمعركة وما صور فأمال خده قليلاً.

٢٠٤ = (وأخرج) عهد بن حميد عن مسرة قال: لا تستطيع الملائكة الذين يحملون العرش أن ينظروا إلى ما فوقهم من شعاع النور.

٢٠٥ - (وأخرج) عبيد بن حميد عن ميسرة قال: حلة العرش
أرجلهم في الأرض السفلى ورؤسهم قد خرقت العرش وهم خشوع لا
يرفعون طرفهم وهم أشد خوفاً من أهل السماء السابعة وأهل السماء
السابعة أشد خوفاً من أهل السماء التي تليها والتي تليها أشد خوفاً من
التي تليها.

٢٠٦ - (وأخرج) ابن أبي شيبة في المصنف عن أبي أمامة قال: إن الملائكة الذين يحملون العرش يتكلمون بالفارسية.

٢٠٧ - (وأخرج) عبد بن حميد وابن المنذر عن ميسرة في قوله تعالى: ﴿وَيَحْمِلُ عَرْشَ رَبِّكَ فَوْقَهُمْ يَوْمَئِذٍ ثَمَانِيَةٌ﴾ قال أرجلهم في التخم وروؤوسهم عند العرش لا يستطيعون أن يرفعوا أبصارهم من شتعا النور.

٢٠٨ - (وأخرج) ابن جرير وابن المنذر وابن أبي حاتم عن ابن عباس في قوله ﴿وَيَجْمَلُ عَرْشَ رَبِّكَ فَوْقَهُمْ يَوْمَئِذٍ ثَمَانِيَةٌ﴾ قال: ثمانية صفوف من الملائكة لا يعلم عدتهم إلا الله.

٢٠٩ - (وأخرج) عبد بن حميد عن الضحاك في الآية قال: يقال ثمانية صفوف لا يعلم عدتهم إلا الله ويقال: ثمانية أملاك ورؤوسهم عند العرش في السماء السابعة وأقدامهم في الأرض السفلى ولهم قرون كقرون الوعلة ما بين أصل قرن أحدهم إلى منتهاه مسيرة خمسمائة عام.

ما جاء في الروح عليه السلام

قال تعالى: ﴿تَنَزَّلُ الْمَلَائِكَةُ وَالرُّوحُ فِيهَا﴾. وقال: «يوم يقوم الروح والملائكة صفاً».

٢١٠ - (وأخرج) ابن جرير وابن المنذر وابن أبي عمير وأبو الشيخ والبيهقي في الأسماء والصفات من طريق أبي بصير عن عبد الله بن عباس قال: الروح من أعظم الملائكة خلقاً.

٢١١ - (وأخرج) أبو الشيخ عن الضحاك قال: الروح حليج الله: يقوم بين يدي الله يوم القيامة، وهو أعظم الملائكة خلقاً. قاله لوسع جميع الملائكة، فالخلق إليه ينظرون فمن أحبهم أحبوا الروح إلى من فوقه.

٢١٢ - (وأخرج) ابن جرير وابن المنذر وأبو الشيخ والبيهقي في الأسماء والصفات بسند ضعيف عن أبي طالب قال: الروح ملك له سبعون ألف وجه لكل وجه ألف لسان لكل لسان سبعون ألف لغة يسبح الله بتلك الألسنة خلق الله من كل تسبيحة ملكاً يطير مع الملائكة إلى يوم القيامة.

٢١٣ - (وأخرج) ابن جرير وابن المنذر وأبو الشيخ عن طريق عطاء عن ابن عباس قال: الروح ملك وليا له سبعون ألف جناح جناحان منها ما بين المشرق والمغرب، له ألف وجه في كل وجه ألف لسان وعينان وشفطان يسبحان الله إلى يوم القيامة.

٢١٤ - (وأخرج) أبو الشيخ عن وهب قال: الروح ملك من الملائكة له عشرة آلاف جناح جناحان منها ما بين المشرق والمغرب له ألف وجه لكل وجه ألف لسان وشفطان يسبحان الله إلى يوم القيامة.

٢١٥ - (وأخرج) ابن المنذر وأبو الشيخ عن مقاتل بن حيان قال: الروح أشرف الملائكة وأقربهم من الرب وهو صاحب الوحي.

٢١٦ - (وأخرج) ابن جرير عن ابن مسعود قال: الروح في السماء الرابعة وهو أعظم من السماوات والجبال والملائكة يسبح كل يوم اثني عشر ألف تسبيحة يخلق الله تعالى من كل تسبيحة ملكاً من الملائكة يجيء يوم القيامة صفاً وحده.

٢١٧ - (وأخرج) مسلم وأبو داود والنسائي عن عائشة أن رسول الله ﷺ كان يقول في ركوعه وسجوده «سبح قدوس رب الملائكة والروح».

٢١٨ - (وأخرج) عبد الرزاق وعبد بن حميد وابن جرير وابن المنذر وابن أبي حاتم وأبو الشيخ والبيهقي في الأسماء والصفات عن مجاهد قال: الروح خلق على صورة بني آدم.

٢١٩ - (وأخرج) عبد الرزاق وعبد بن حميد وابن المنذر وأبو الشيخ عن مجاهد قال: الروح يأكلون ولهم أيدي وأرجل ورؤوس ويتنصرون لملائكة.

٢٢٠ - أبو داود، كتاب استفتاح الصلاة تفريع أبواب الركوع والسجود ب ١٥١ حديث رقم ٨٧١ ورواه بلفظه عن عائشة رضي الله عنها. وانظر السائي كتاب الانتصاح ب ٩٨، ١٦١. / البيهقي ٨٧/٢ و ١٠٩، ١٣١/٥. إحياء علوم الدين ٣٢٨/١ / تفسير القرطبي ٢٧٧/١. / الإتحافات السنية ٣/٧٥، ٦٤/٥ و ٩٦ و ١٧١.

والروح تسعة والروح والكروبيون عشرة أجزاء فالروح جزء والكروبيون تسعة أجزاء.

٢٢٧ - (وأخرج) ابن أبي حاتم عن ابن أبي نجيع قال: الروح حفظة على الملائكة.

٢٢٨ - (وأخرج) ابن الأنباري في كتاب الأضداد عن مجاهد قال: الروح خلق من الملائكة لا تراهم الملائكة كما لا ترون أنتم الملائكة.

ما جاء في رضوان ومالك وخزنة النار عليهم السلام

قال تعالى: ﴿وَنَادُوا يَا مَلَكُ لِيَقْضِ عَلَيْنَا رِبْكَ قَالَ إِنَّكُمْ مَأْكُونٌ﴾ وقال تعالى ﴿وَقَالَ الَّذِينَ فِي النَّارِ لِخَزَنَةِ جَهَنَّمَ الْآيَةُ وَقَالَ تَعَالَى ﴿عَلَيْهَا مَلَائِكَةٌ غُلَاظٌ شِدَادٌ﴾. الْآيَةُ وَقَالَ ﴿عَلَيْهَا تِسْعَةُ عَشْرَ وَمَا جَعَلْنَا أَصْحَابَ النَّارِ إِلَّا مَلَائِكَةً وَمَا جَعَلْنَا عِدَّتَهُمْ إِلَّا فِتْنَةً لِلَّذِينَ كَفَرُوا﴾ الْآيَةُ وقال تعالى ﴿سَنَدْعُ الزَّبَانِيَةَ﴾.

٢٢٩ - (وأخرج) القتيبي ^(١) في عيون الأخبار عن طاوس أن الله عز وجل خلق ملكاً وخلق له أصابع على عدد أهل النار، فما من أهل النار يعذب إلا ومالك يعذبه بأصبع من أصابعه فوالله لو وضع مالك أصبعاً من أصابعه على الساء لأذاها.

٢٣٠ - (وأخرج) الضياء المقدسي في صفة النار عن أنس سمعت رسول الله ﷺ يقول: والذي نفسي بيده لقد خلقت ملائكة جهنم قبل أن تخلق جهنم بألف عام فهم كل يوم يزادون قوة إلى قوتهم.

٢٣١ - (وأخرج) عبد الله بن أحمد في زوائد الزهد عن أبي عمران الجوني قال: بلغنا أن خزنة النار تسعة عشر ما بين منكمي أحدهم مسيرة

(١) ويقال: القتيبي وهو عبد الله بن مسلم بن قتيبة، اللغوي والأديب المشهور، قليل الرواية، صدوق.

٢٢٣ - (وأخرج) عبد الرزاق وعبد

٢٢٤ - (وأخرج) ابن أبي حاتم عن

٢٢٥ - (وأخرج) ابن أبي حاتم عن

٢٢٦ - (وأخرج) أبو الشيخ عن عبد

٢٢٢ - الدر المنثور ٦/٣٩٩ وعنه البيهقي

مائة خريف، ليس في قلوبهم رحمة إنما خلقوا للعذاب يضرب الملك منهم الرجل من أهل النار الضربة فيتركه طحيماً من لدن قرنه إلى قدمه.

٢٣٢ - (وأخرج ابن جرير عن كعب قال: ما بين منكبي الخازن من خزنتها مسيرة خمسمائة سنة، مع كل واحد منهم عمود وشعثان يدفع به الدفع يصدع به في النار سبعمائة ألف.

٢٣٣ - (وأخرج ابن المنذر عن مجاهد قال: حدثت أن النبي ﷺ وصف خزان جهنم فقال «كان أعينهم البرق وكأن أفواههم الصياحي يجرون أشعارهم، لهم مثل قوة الثقلين يقبل أحدهم بطانة من الناس يسوقهم. على رقبته جبل حتى يرمى بهم في النار فيرمى ثلثين عليهم».

٢٣٤ - (وأخرج ابن المبارك في الزهد وابن أبي عمير وعبد بن حميد وابن المنذر والبيهقي في البعث من طريق الأزرقي عن فضالة عن رجل من بني تميم قال كنا عند أبي العوام فقراً هذه الآية «جعلنا لهم من جنات عرشاً فقالوا ما تقولون أتسعة عشر ملكاً أو تسعة عشر ألفاً؟ قال لا بل تسعة عشر ملكاً، فقال ومن أين علمت ذلك؟ قلت لأن الله قال «ولهم أزواج مطهرة من عبادة الصالحين» فقالوا فما جعلناهم من جنات عرشاً إلا فتنة للذين كفروا؟ قال صدقت نعم جعلناهم من جنات عرشاً وبيد كل واحد منهم مرزبة من حديد لها شعيرات كضريحها الضربة يهوي بها سبعين ألفاً بين منكبي كل ملك منهم تسعة عشر ألفاً وكذا، قال القرطبي المراد بقوله عليها تسعة عشر رؤساً لهم جعلنا لهم أزواجاً مطهرة من عبادة الصالحين إلا الله عز وجل.

٢٣٥ - (وأخرج هناد بن السري في كتاب الزهد عن كعب قال:

يؤمر بالرجل إلى النار فيبتدره مائة ألف ملك.

٢٣٦ - (وأخرج الفريابي وعبد بن حميد وابن جرير وابن المنذر وابن أبي حاتم عن عبد الله بن الحارث قال: الزبانية أرجلهم في

الأرض ورؤوسهم في السماء.

٢٣٧ - (وأخرج الواحدي في أسباب النزول وابن عساكر في

تاريخه من طريق إسحق بن بشر عن جوير عن الضحاك عن ابن عباس قال: لما عبر المشركون رسول الله ﷺ بالفاقة قالوا «ما لهذا الرسول يأكل الطعام ويمشي في الأسواق» حزن رسول الله ﷺ لذلك فنزل عليه جبريل فقال: السلام عليك يا رسول الله رب العزة يقرئك السلام ويقول لك وما أرسلنا قبلك من المرسلين إلا أنهم ليأكلون الطعام ويمشون في الأسواق فيبيننا جبريل والنبي ﷺ يتحدثان إذ ذاب جبريل حتى صار مثل الهودة فقال رسول الله ﷺ «مالك ذبت حتى صرت مثل الهودة» قال: يا محمد فتح باب من أبواب السماء لم يكن فتح قبل ذلك إذ عاد جبريل إلى حاله فقال: يا محمد أبشر هذا رضوان خازن الجنة فأقبل رضوان حتى سلم ثم قال يا محمد رب العزة يقرئك السلام ومعه سبط من نور يتلأأ ويقول لك ربك هذه مفاتيح خزائن الدنيا مع ما لا يتقصد لك مما عندي في الآخرة مثل جناح بعوضة، فنظر النبي ﷺ إلى جبريل كالمنشور له، ففرض جبريل بيديه إلى الأرض فقال تواضع لله فقال يا رضوان لا حاجة لي في الدنيا، فقال رضوان: أصبت أصاب الله بك. ويرون أن هذه الآية أنزلها رضوان «تبارك الذي إن شاء جعل لك خيراً من ذلك جنات تجري من تحتها الأنهار ويجعل لك قصوراً».

٢٣٨ - (وأخرج البخاري ومسلم عن ابن عباس قال قال رسول الله ﷺ «رأيت ليلة أسري بي موسى بن عمران رجلاً طويلاً جمعداً كأنه من رجال شنوءة ورأيت عيسى بن مريم مرسوع الخلق إلى الحمرة

٢٣٨ - مسند أحمد ٢٤٥/١ ورواه بلفظه عن ابن عباس ولم يذكر فيه [ورأيت

مالكا خازن جهنم والريخال في آيات أراهن الله تعالى]..

والبياض سبط الرأس ورأيت مالكا خازن جهنم والبذجان في آياتهما
أراهن الله تعالى .

٢٣٩ - (وأخرج) ابن مردويه عن عمر قال : لما أُنزل رسول الله ﷺ رأى مالكا خازن النار فإذا رجل عابس يعرف الغضب في وجهه .

٢٤٠ - (وأخرج) أبو بكر الواسطي في فضائل بيت المقدس عن أبي سلمة قال رأى عبادة بن الصامت على شرفي بيت المقدس يعني فقيل له : ما يبكيك؟ فقال من هاهنا حدثني رسول الله ﷺ أنه رأى مالكا يقلب جراً كالقطف .

٢٤١ - (وأخرج) الديلمي عن علي قال قال رسول الله ﷺ : إذا أراد الله بعبد خيراً بعث إليه ملكاً من خزان الجنة فتمسح بوجهه فيسحق نفسه بالزكاة .

٢٤٢ - (وأخرج) الخليلي في مشيخته عن أبيه قال قال رسول الله ﷺ : «أنا أول من يقرع باب الجنة فيقوم الخاقان فيقول من أنت؟ فأقول أنا محمد فيقول أقوم فأفتح لك ولم أقم لأحد قبلك ولا أقوم لأحد بعدك» .

٢٤٣ - (وأخرج) عبد بن حميد عن علي في قوله تعالى ﴿كطي السجل﴾ قال مالك .

٢٤٤ - (وأخرج) عبد بن حميد عن عطية قال السجل اسم ملك .
٢٤٥ - (وأخرج) ابن جرير وابن أبي حاتم عن ابن عمر قال : السجل ملك فإذا صعد بالاستغفار قال اكتبوها نورا .

٢٤١ - جمع الجوامع رقم ١١١٢ وعزه السيوطي للديلمي عن علي رضي الله عنه .
وانظر تنزيه الشريعة ١٤١/٢ . / كشف الخفاء ٣٠٩/٢ . / تذكرة الموضوعات ص ٦٣ .

٢٤٦ - (وأخرج) ابن جرير وابن أبي حاتم عن السدي قال : السجل ملك موكل بالصحف فإذا مات الإنسان دفع كتابه إلى السجل فطواه ورفعاه إلى يوم القيامة .

٢٤٧ - (وأخرج) ابن أبي حاتم وابن عساكر عن أبي جعفر الباقر قال : السجل ملك ، وكان هاروت وماروت من أعوانه ، وكان له كل يوم ثلاث لمحات ينظرهن في أم الكتاب فنظر نظرة لم تكن له فأبصر فيها خلق آدم وما فيه من الأمور ، فأسر ذلك إلى هاروت وماروت فلما قال تعالى ﴿إني جاعل في الأرض خليفة قالوا أتجعل فيها من يفسد فيها﴾ قالوا ذلك استطالة على الملائكة .

ما جاء في هاروت وماروت

٢٤٨ - (أخرج) أحمد بن حنبل وعبد بن حميد في مسندهما وابن أبي الدنيا في كتاب العقوبات وابن حبان في صحيحه والبيهقي في شعب الإيمان عن عبد الله بن عمر أنه سمع رسول الله ﷺ يقول ﴿إن آدم لما أهبطه الله إلى الأرض قالت الملائكة أي رب أتجعل فيها من يفسد فيها ويسفك الدماء ونحن نسبح بحمدك ونقدس لك قال إني أعلم ما لا تعلمون﴾ قالوا ربنا نحن أطوع لك من بني آدم ، قال الله تعالى : هلموا ملكين من الملائكة حتى تهبطهيا إلى الأرض فتنظر كيف يعملان فقالوا : ربنا هاروت وماروت فأهبطا إلى الأرض فتملت لهما الزهرة امرأة من أحسن البشر فجاءتهما فسألاها نفسها فقالت : لا والله حتى تكلم بهذه الكلمة من الإشرار ، قال لا والله لا ننشرك بالله أبداً فذهبت عنهما ثم رجعت بصبي تحمله ، فسألاها نفسها فقالت لا والله حتى تقتل هذا الصبي ، قال والله لا نقتله أبداً ، فذهبت ثم رجعت بقدح من خمر تحمله فسألاها نفسها ، فقالت لا والله حتى تشربا هذا الخمر فشربا فسكرا فوقعا عليها وقتلا الصبي ، فلما أفاقا قالت المرأة والله

ما تركتم شيئاً أيتماه عليّ إلا قد فعلتموه حين سكرتما، فخيراً عند ذلك بين عذاب الدنيا والآخرة. فاختاراً عذاب الدنيا».

٢٤٩ - (وأخرج البيهقي في شعب الإيمان عن ابن عمر قال قال رسول الله ﷺ «أشرفت الملائكة على الدنيا فرأت بني آدم يعصون فقال يا رب ما أجهل هؤلاء ما أقل معرفة هؤلاء بعظمتك!» فقال الله عز وجل لو كنتم في مسلاخهم لعصيتوني فيالوا كيف يكون هذا ونحن نسبح بحمدك ونقدس لك فقال فاختاروا منكم ملكين فاختاروا هاروت وماروت، ثم أهبطا إلى الأرض وركبت فيهما شهوات بني آدم ومثلت لهما امرأة فيها عصا حتى واقعا المعصية فقال الله اختاراً عذاب الدنيا والآخرة فنظر أحدهما إلى صاحبه قال ما تقول فاختار عذاب الدنيا عذاب الدنيا ينقطع وإن عذاب الآخرة لا ينقطع، فاختار عذاب الدنيا فيها اللذان ذكر الله في كتابه «وما أنزل على الملكين» الآية.

٢٥٠ - (وأخرج الحاكم في المستدرک وصححه عن ابن عمر أنه كان يقول: أطلعت الحمراء بعد؟ فإذا رآها قائل، لا مرحباً بكم قال إن ملكين من الملائكة هاروت وماروت سالا الله أن يهبطا إلى الأرض، فكانا يقضيان بين الناس فإذا أمسيا تكلم بكلمات فخرجتا بها إلى النساء، فقضى الله لهما امرأة من أحسن الناس وألقت عليهما الشهوة وألقت في أنفسهما فلم يزالا حتى وعدتهما ميعاداً فأتتهما للميعاد فقبالت علماني الكلمة التي تخرجان بها فعملماها فنكلمت بها فخرجت إلى النساء

٢٤٩ - الجامع الكبير ٥٠٩/٢ وذكره السيوطي عن ابن عمر رضي الله عنهما. وفيه [قرأت بني آدم يعصون] وكلمة [مسلاخهم] غير كلمة [مسلاخهم].

شعب الإيمان ١١٣/١ ورواه بلفظه ثم قال البيهقي في تعليقه: ورويناه موقوفاً من وجه آخر عن مجاهد عن ابن عمر، وهو الأصح فإن ابن عمر أنه أخذه عن كعب

فمسخت فجعلت كما ترون، فلما أمسيا تكلم بالكلمة فلم يعرجا فبعث إليهما إن شئتما فعذاب الآخرة وإن شئتما فعذاب الدنيا فقال أحدهما لصاحبه بل نختر عذاب الدنيا.

٢٥١ - (وأخرج إسحاق بن راهويه في مسنده وعبد بن حنيد في تفسيره وابن أبي الدنيا في كتاب العقوبات وابن جرير وأبو الشيخ في العظمة والحاكم في المستدرک وصححه عن علي بن أبي طالب قال إن هذه الزهرة تسميها العرب الزهرة والمعجم أنها عيد، وكان المكان يحكمنا بين الناس فأتتها فرأياها فقالت لهما الزهرة: ألا تجرباني بما تصعدان به إلى السماء وما تهبطان به إلى الأرض فقالا باسم الله الأعظم، قالت ما أنا بمواتيكا حتى تعلمانيه فقال أحدهما لصاحبه علمها إياه فقال كيف بنا بشدة عذاب الله؟ قال الآخر انا نرجو سعة الله فعلمها إياه فنكلمت به فطارت إلى السماء، ففرغ ملك في السماء لصعودها فطأ رأسه فلم يجلس بعد ومسحها الله فكانت كوكباً.

٢٥٢ - (وأخرج ابن راهويه وابن مردويه في تفسيره عن علي قال قال رسول الله ﷺ لعن الله الزهرة فإنها هي التي فتنت الملكين هاروت وماروت.

٢٥٣ - (وأخرج ابن أبي حاتم عن ابن عباس قال: إن أهل نساء الدنيا أشرفوا على الأرض فرأوهم يعملون بالمعاصي فقالوا يا رب أهل الأرض يعملون بالمعاصي فقال الله عز وجل: أنتم معي وهم غيب عني، فقبل لهم اختاروا منكم ثلاثة فاختاروا منهم ثلاثة على أن يهبطوا إلى الأرض فيحكموا ما بين أهل الأرض وجعل فيهم شهوة الأدميين

٢٥٢ - تذكرة الموضوعات ص ١١٠ وأشار الفتي إلى الحديث وعزاه لأبي نعيم عن علي وقال: الصحيح وقفة على كعب كذا قال البيهقي.

فأمروا أن لا يشربوا خمرًا ولا يقتلوا نفساً ولا يزنوا ولا يسجدوا لولن، فاستقال منهم واحد فأقيل وأهبط اثنان إلى الأرض، فأتتها امرأة من أحسن الناس يقال لها أناهيد، فهويها جميعاً ثم أتيا منزلاً فاجتمعا عندها فأراداها، فقالت لها: لا حتى تشربا خمرى وتقتلا ابن جاري وتسجدا لولني. فقالا: لا نسجد ثم شربا من الخمر ثم قتلا ثم سجدا فأشرف أهل الساء عليها، وقالت لها أخبراني بالكلمة التي إذا قلتماها طرما فأخبراهما فطارت فمسخت جرة وهي هذه الزهرة، وأما هما فأرسل إليهما سليمان بن داود فخيرهما بين عذاب الدنيا والآخرة فاختارا عذاب الدنيا فهما مناطان بين الساء والأرض.

٢٥٤ - (وأخرج) ابن المنذر وابن أبي حاتم والحاكم وصححه والبيهقي في شعب الإيمان عن ابن عباس قال: لما وقع الناس من بعد آدم فيها وقعوا فيه من المعاصي والكفر بالله قالت الملائكة في السماء: رب هذا العالم الذي إنما خلقتهم لعبادتك وطاعتك قد وقعوا فيها وقعوا فيه وركب الكفر وقتل النفس وأكل مال الحرام والزنا والسرقة وشرب الخمر فجعلوا يدعون عليهم ولا يعذرونهم، فقتل إثمهم في غيب فلم يعذروهم فقتل لهم: اختاروا منكم من أفضلكم ملكين أمرهما وأنهاهما فاخترارا هاروت وماروت فأهبطا إلى الأرض وجعل لهما شهوات بني آدم وأمرهما أن يعبداه ولا يشركا به شيئاً ونهاهما عن قتل النفس الحرام وأكل مال الحرام وعن الزنا والسرقة وشرب الخمر فلبثا في الأرض زماناً يحكمان بين الناس بالحق، وذلك في زمان إدريس وفي ذلك الزمان امرأة حسنها في النساء كحس الزهرة في سائر الكواكب وأنها أتيا عليها فخصمها لها في القول وأراداها على نفسها فأبى إلا أن يكونا على أمرها ودينها فسألاها عن دينها فأخرجت لهما صنماً فقالت هذا أعبد فقلالا لا حاجة لنا في عبادة هذا فذهبا فغابا ما شاء الله، ثم أتيا عليها فأراداها على نفسها

ففعلت مثل ذلك فذهبا ثم أتيا عليها فأراداها على نفسها، فلم رأت أنها أتيا أن يعبدا الصنم فقالت لهما اختارا إحدى الخلال الثلاث إما أن تعبدا هذا الصنم وإما أن تقتلا هذا النفس وإما أن تشربا الخمر فقلالا: هذا لا ينبغي وأهون الثلاثة شرب الخمر، فشربا الخمر فأخذت منها فوقعا المرأة فخشيا أن يجبر الإنسان عنهما فقتلاه، فلما ذهب عنهما السكر وعلم ما وقعا فيه من الخطيئة أراد أن يصعدا إلى السماء فلم يستطيعا وحيل بينهما وبين ذلك، وكشف الغطاء فيما بينهما وبين أهل السماء، فنظرت الملائكة إلى ما وقعا فيه، فعجبوا كل العجب وعرفوا أنه من كان في غيب فهو أقل خشية، فجعلوا بعد ذلك يستغفرون لمن في الأرض، فقتل لهما اختارا عذاب الدنيا أو عذاب الآخرة فقلالا: أما عذاب الدنيا فإنه ينقطع ويذهب، وأما عذاب الآخرة فلا انقطاع له فاخترتا عذاب الدنيا فجعلتا يبابل فهما يعذبان.

٢٥٥ - (وأخرج) ابن أبي حاتم عن مجاهد قال: كنت نازلاً على عبد الله بن عمر في سفر فلما كان ذات ليلة قال ليلاً: أنظر طلعت الحمراء لا مرجاً بها ولا أهلاً ولا حيها الله هي صاحبة الملكين قالت الملائكة رب كيف تدع عصاة بني آدم وهم يسفكون الدم الحرام ويتهكون محارمك ويفسدون في الأرض، قال إني قد ابتليتهم فلعل إن ابتليتهم مثل الذي ابتليتهم به فعلتم كالذي يفعلون قالوا لا، قال فاختراروا من خياركم اثنين فاختراروا هاروت وماروت فقال لهما إني مهبطكما إلى الأرض وعاهد إليكما أن لا تشركا ولا تزنيا ولا تخونا فأهبطا إلى الأرض وألقي عليها الشيب وأهبطت لهما الزهرة في أحسن صورة امرأة، فتمرضت لهما فأراداها على نفسها فقالت إني على دين لا يصلح لأحد أن يأتيني إلا من كان على مثله، قالوا وما دينك قالت المجوسية قالوا الشريك هذا شيء لا تقربه فمكثت عنهما ما شاء الله ثم تعرضت لهما

فأرادها على نفسها فقالت ما شئتُها غير أن لي زوجاً أكره أن يطلق عليَّ هذا مني فافتضح فإن أقررتما لي بديني وشرطتها أن تصعدا بي إلى السماء فعلت، فأقراهما بدينها وأتاها فيها يريان ثم صعدا بها إلى السماء فلما انتهيا إلى السماء اختلطت منها وقطعت أجنحتها فوقعا خائفين نادمين بكيان، وفي الأرض نبي يدعو بين الجمعيتين فإذا كان يوم الجمعة أحجب، فقالوا لو أتينا فلاناً فسألناه يطلب لنا التوبة فأتياه فقال: رحمكم الله كيف يطلب أهل الأرض لأهل السماء؟ قالوا إنا قد ابتلينا، قال: اثنياني في يوم الجمعة، فأتياه فقال ما أحببت فيكما بشيء اثنياني في الجمعة الثانية، فأتياه فقال اختارا فقد خيرتما فإن أحببتهما معافاة الدنيا وعذاب الآخرة، وإن أحببتهما فعذاب الدنيا وأتاها يوم القيامة على حكم الله قال أحدهما الدنيا لم يحض منها إلا القليل وقال الآخر ويحك إني قد أظلمت في الأول فأطعني الآن فاختارا عذاب الدنيا؛ لهذه القصة طرق أخرى كثيرة جمعها الحافظ ابن حجر في جزء مفرد، وقال في كتابه القول المسدد في الذب عن مسند أحمد، إن الواقف عليه يكاد يقطع بوقوع هذه القصة لكثرة الطرق الواردة فيها وقوة مخرج أكثرها وقد وقفت على الجزء الذي جمعه فوجدته أورد فيه بضعة عشر طريقاً، وقد جمعت أنا طرقها في التفسير فبلغت نيفاً وعشرين طريقاً.

ذكر قصة ملك آخر عليه السلام

٢٥٦ - (وأخرج) ابن أبي شيبة في المصنف عن عبد الله بن عيسى قال: كان فيمن كان قبلكم رجل عبد الله أربعين سنة في البر، قال: يارب قد اشتقت أن أعبدك في البحر، فأتى إلى قوم فاستحملهم فحملوه وجررت بهم سفيتهم ما شاء الله أن تجري ثم قامت، فإذا شجرة في ناحية الماء فقال: ضعوني على هذه الشجرة فوضعهوه وجررت بهم سفيتهم فأراد ملك أن يعرج إلى السماء فتكلم بكلامه الذي كان

يعرج به فلم يقدر على ذلك فعلم أن ذلك لخطيئة كانت منه، فأتى صاحب الشجرة فسأله أن يشفع له إلى ربه، فصلى ودعا للملك، وطلب الملك إلى ربه أن يكون هو يقبض نفسه ليكون أهون عليه من ملك الموت، فأتاه حين حضر أجله فقال: إني طلبت إلى ربي أن يشفعني فيك كما شفعتك في، وأن أكون أنا أقبض نفسك فمن حيث شئت قبضتها، فسجد سجدة فخرجت من عينه دمة فمات.

ما جاء في الرعد والبرق عليها السلام

قال تعالى ﴿ويسبح الرعد بحمده والملائكة من خيفته﴾.

٢٥٧ - (أخرج) أحمد والترمذي وصححه والنسائي وابن المنذر وابن أبي حاتم وأبو الشيخ في العظمة وابن مردويه وأبو نعيم في الدلائل والضياء في المختارة عن ابن عباس قال: أقبلت يهود إلى رسول الله ﷺ فقالت: أخبرنا ما هذا الرعد؟ قال «ملك من ملائكة الله موكل بالسحاب، يبده مخراق من نار يزجر به السحاب، يسوقه حيث أمره الله» قالوا: فما هذا الصوت الذي نسمع؟ قال «صوته» قالوا صدقت.

٢٥٨ - (وأخرج) ابن أبي الدنيا في كتاب المطر وابن جرير وابن المنذر والبيهقي في سننه عن علي بن أبي طالب قال: الرعد ملك والبرق ضربة السحاب بمخراق من حديد.

٢٥٩ - (وأخرج) ابن المنذر وأبو الشيخ عن ابن عباس قال: الرعد ملك يسوق السحاب بالتسيح كما يسوق الحادي الإبل بجذاته.

٢٦٠ - (وأخرج) البخاري في الأدب وابن أبي الدنيا عن ابن

٢٥٧ - الدر المنثور ٥/٤ وذكره السيوطي في حديث طويل وعزاه للترمذي وصححه، وأحمد والنسائي وابن مردويه وابن المنذر وابن أبي حاتم وأبي الشيخ في العظمة وأبو نعيم في الدلائل والضياء في المختارة عن ابن عباس رضي الله عنهما.

٢٨٧ - (وأخرج الطبراني في الأوسط وأبو الشيخ من طريق سالم بن أبي الجعد عن ابن عباس قال قال رسول الله ﷺ «إن مما خلق الله ديكاً برأته على الأرض السابعة وعرفه تنطو تحت العرش قد أحاط جناحه بالأفقيين فإذا بقي ثلث الليل الآخر ضرب بجناحيه ثم قال سبحوا الملك القدوس سبحان ربنا الملك القدوس لا إله لنا غيره، فيسمعها من بين الخافقين إلا الثقلين» فيرون أن الديكة إنما تضرب بأجنحتها وتصرخ إذا سمعت ذلك.

٢٨٨ - (وأخرج أبو الشيخ عن أبي صادق قال الديكة تجاوب الملائكة بالنسبح هل رأيتم طيراً يصيح بالليل.

٢٨٩ - (وأخرج أبو الشيخ عن ابن أبي عمرة قال حين يقول الملك: سبحوا القدوس فحينئذ تحرك الطير أجنحتها.

٢٩٠ - (وأخرج أبو الشيخ عن عبد الحميد بن يوسف قال صاح ديك عند سليمان عليه السلام فقال سليمان هل تدرون ما يقول هذا؟ قالوا لا: قال فإنه يقول: اذكروا الله يا غافلين.

٢٩١ - (وأخرج الطبراني عن صفوان بن عسال قال: إن لله ديكاً تحت العرش جناحه في الهواء وبرأته في الأرض فإذا كان في الأسفار وأذان الصلوات خفق بجناحه وصفق بالنسبح فتسبح الديكة تحييه بالنسبح.

٢٩٢ - (وأخرج ابن عدي والبيهقي في شعب الإيمان وضعفه عن

٢٨٧ - اللآلئ المصنوعة ٣٢/١.

٢٩٢ - جمع الجوامع رقم ٦٩٦١ وعزاه السيوطي لابن عدي والبيهقي في شعب الإيمان، وضعفه عن جابر رضي الله عنه، وعنده لفظ (هاج) غير لفظ (صاح) وفي الباب أربعة أحاديث بلفظ (إن لله ديكاً كلها ضعيفة).

جابر بن عبد الله قال قال رسول الله ﷺ «إن لله ديكاً رجلاه في النخوم وعنقه تحت العرش منطوية فإذا كان هنة من الليل صاح سبح قدوس فصاحت الديكة».

٢٩٣ - (وأخرج ابن عدي عن العرش بن عميرة قال قال رسول الله ﷺ إن لله تعالى ديكاً برأته في الأرض السفلى وعنقه تحت العرش يصرخ عند مواقيت الصلاة ويصرخ له ديك السماوات ساء ساء ثم يصرخ بصراح ديك السماوات ديكاً الأرض سبح قدوس رب الملائكة والروح.

٢٩٤ - (وأخرج الديلمي في مسند الفردوس عن أم سعد، امرأة من المهاجرات، قالت قال رسول الله ﷺ «العرش على ملك من لؤلؤ على صورة ديك رجلاه في النخوم السفلى وعنقه مثنية تحت العرش وجناحاه بالمشرق والمغرب فإذا سبح الله ذلك الملك لم يبق شيء إلا سبح الله عز وجل».

ما جاء في السكينة عليه السلام

٢٩٥ - (أخرج الطبراني في الأوسط عن علي رضي الله عنه قال «إذا ذكر الصالحون فحي هلاً بعمرو، ما كنا أصحاب محمد نبعد أن السكينة تنطق على لسان عمر رضي الله عنه. قال ابن الأثير في النهاية السكينة هنا ملك.

٢٩٦ - (وأخرج الطبراني عن أسيد بن حضير أنه أتى النبي ﷺ

٢٩٣ - كنز العمال رقم ٣٥٢٨٤ أنظر حديث ٢٨٤.

٢٩٤ - الدر المنثور ٣٤٦/٥ وعزاه السيوطي لابن مردويه عن أم سعد رضي الله عنها.

فقال يا رسول الله إني كنت أقرأ الباردة سورة الكهف فجاء شيء حتى غطى فمي فقال النبي ﷺ تلك السكينة جاءت حتى تسمع القرآن.

٢٩٧ - (وأخرج الطبراني عن أبي سلمة قال بينا أسيد بن حضير الأنصاري يصلي بالليل فإذا غشي مثل السحابة فيها مثل المصابيح والمرأة نائمة إلى جنبي وهي حامل، والفرس مربوط في الدار فخشيت أن تنفر الحصان فتفرع المرأة فتلقي ولدها فانصرفت من صلاتي فقال اقرأ يا أسيد فإن ذلك ملك استمع القرآن.

ما جاء في ملك الجبال عليه السلام

٢٩٨ - (أخرج أحمد والبخاري ومسلم عن عائشة أنها قالت قلت للنبي ﷺ أتى عليك يوم أشد من يوم أحد؟ قال «لقد لقيت من قومك وكان أشد ما لقيت منهم يوم العقبة إذ عرضت نفسي على ابن عبد ياليل ابن عبد كلال فلم يجيني إلى ما أردت فانطلقت وأنا مهموم على وجهي فلم أستفق إلا وأنا بقرن الثعالب فرفعت رأسي فإذا أنا بسحابة قد أظلنتني فنظرت فإذا جبريل فنناداني فقال إن الله قد سمع قول قومك لك وما ردوا عليك وقد بعث إليك ملك الجبال لتأمره بما شئت فيهم فنناداني ملك الجبال فسلم علي ثم قال يا محمد إن شئت أطبق عليهم الأخشيش، قال النبي ﷺ بل أرجو أن يخرج الله من أصلابهم

٢٩٨ - فتح الباري ١٦٦/٧ وأشار إلى الحديث ولم يذكره.

- مشكاة المصابيح رقم ٥٨٤٨ وذكره باللفظ وقال متفق عليه.

وانظر إحياء علوم الدين ١٣٩/٤ / إتحاف السادة المتقين ٨٨/٩.

تفسير ابن كثير ٣/٢٥٩. / رياض الصالحين ص ٢٨٥.

كنز العمال رقم ٣١٩٨٢ وعزاه السيوطي لأحمد، والبخاري، ومسلم عن

عائشة رضي الله عنها.

من يعبد الله وحده لا يشرك به شيئاً».

٢٩٩ - (وأخرج ابن أبي حاتم عن عكرمة قال قال رسول الله ﷺ «جاءني جبريل فقال يا محمد إن ربك يقرئك السلام وهذا ملك الجبال قد أرسله معك وأمره أن لا يفعل شيئاً إلا بأمرك فقال له ملك الجبال إن شئت دمدت عليهم الجبال وإن شئت رمتهم بالحصباء وإلا شئت خسفت بهم الأرض قال يا ملك الجبال فإني أأتي بهم لعلهم أخرج منهم ذرية يقولون لا إله إلا الله، فقال ملك الجبال أنت كسماك ربك رؤوف رحيم».

ما جاء في رميايل خازن أرواح المؤمنين عليه السلام

٣٠٠ - (وأخرج ابن أبي الدنيا في ذكر الموت عن وهب بن منبه قال: إن أرواح المؤمنين إذا قبضت ترفع إلى ملك يقال له رميايل وه خازن أرواح المؤمنين.

ما جاء في دومة خازن أرواح الكفار عليه السلام

٣٠١ - (أخرج ابن أبي الدنيا في ذكر الموت من طريق أبيان بن تغلب عن رجل من أهل الكتاب قال: الملك الذي على أرواح الكفار يقال له دومة.

ما جاء في فتان القبر عليهم السلام

٣٠٢ - (أخرج الترمذي وحسنه وابن أبي الدنيا والأجري في

٣٠٢ - موارد الظمان رقم ٧٨٠ ورواه بنحو من لفظه.

وانظر شرح السنة ٤١٦/٥ قال البيهقي حديث حسن.

Textual Variants: Leiden MS Or. 474(28)

MS Variants [Leiden MS Or.474/28]

Chapter	No.	Fol.	Line	MS Reading	DKI Reading
Preface	-	187v	1	Marginalia: السابعة والعشرون في الملائكة من وجوه	
	-	187v	1	بسم الله الرحمن الرحيم <u>وتقني</u>	بسم الله الرحمن الرحيم
	-	187v	2	اما بعد حمد الله	الحمد لله
	-	187v	3	فهذا تاليف	فهذه تاليف
	-	187v	4	استوعبت فيها	استوعبت فيه
	-	187v	7	الملائكة ينتظم معان (?)	الملائكة ينتظم في معان
	-	187v	10	ولا يدعون الهة	ولا يدعون الهة
	-	187v	12	Omitted	الا عترف بان منهم رسلا يرسل الى من يشاء من البشر وقد يجوز ان يرسل بعضهم الى الارض ويتبع ذلك
Substance	1	187v	16	عن ابن عمر عن النبي	عن ابن عمر عن <u>عمر عن النبي</u>
	2	187v	17- 18	اخرج عن عائشة	اخرج مسلم عن عائشة
	2	187v	18- 19	Ḥadīth inserted	
Great Abundance	6	187v	25	ما في السماء سماء منها موضع	ما في السماوات شيء منها موضع
	8	187v	29	تُنط	
	9	187v	31	النبي	رسول الله
		188r	1	قائم فذلك قوله تعالى	قائم ذلك قوله
	10	188r	2	بينما	بيننا
		188r	4	موضع قدم الا عليه ملك	موضع قدم الا عليها ملك
	11	188r	6	لقيامه قالوا سبحانك	القيامه قالوا جميعاً سبحانك
		188r	7	عبادتك انا لم	عبادتك الا انا لم
	12	188r	9-10	ذلك اسماء مكبوسات	ذلك السماوات والارض مكبوسات
	14	188r	14	فاذا خرج قطرت منه	فاذا خرج قطر منه
		188r	14	من نور فخلق من كل قطرة	من نور فيخرج من كل قطرة

Great Abundance	15	188r	16	رب من معك	يا رب ن معك
	20	188r	25	اجنحتهم فرقا من الله	اجنحتهم خوفاً من الله
		188r	26	Ḥadīth inserted	
	21	188r	31	موضع اهاب الا فيه ملك ساجد	موضع الا فيه ساجد
	22	188v	2	قال ان الله	قال ان الله تعالى
		188v	2	فتسعة	تسعة
		188v	4-5	من بقي من الملائكة الذين يحملون العرش وهم ايضاً الذين يسحون الليل والنهار ولا يفترون ومن بقي من الملائكة لا امر الله	من بقي من الملائكة لا امر الله
	23	188v	6	ابن خبيب ابن عبد الرحمن بن سلمان الاغيش	خبيب ابن عبد الرحمن بن سلمان الا عيس
	24	188v	10	فرائصهم ما منهم ملك	فرائص من مخافعه ما منهم ملك
	25	188v	18	وانا لنحن الصافون وانا لنحن المسيحون	انا لنحن المسيحون
Four Archangels	27	188v	20-21	ابن ابي شبة وابن ابي حاتم والبيهقي في الشعب وابو الشيخ في العظمة عن ابن سابط	ابن اي حاتم وابو الشيخ في العظمة ولييهقي في الشعب عن ابن سابط
		188v	22	اما السرافيل فموكل القطر	اما ميكائيل فموكل القطر
	28	188v	23	الدنيا جمع بين حفظهم وما في ام الكتاب	الدنيا جمع من حفظهم وقابل ام الكتاب
		188v	20	[Mentioned at the beginning of the ḥadīth]	...رواه ابن ابي شبة
	29	188v	28	بينما	بينما
	30	189r	12	خمسة الاف سنة	خمسين الف سنة
	32	189r	15	Omitted	
	35	189r	25	لا بل اسال الله الرفيق الاعلى / الا على	لا بل اسال الله الرفيق الاعلى
	36	189r	28	معبد	
	43	189v	6	Omitted	رضي الله عنها
Gabriel	44b	189v	12	يا محمد كيف ياتك جبريل	يا محمد كيف ياتك الذي ياتك يعني جبريل
	48	189v	23	Omitted	مسيرة
	49	189v	24	اسحاق الهاشمي	اسحاق

Gabriel	50	189v	26	ابن جرير عن حذيفة وابن جرير وقتادة دخل	ابن جرير عن حذيفة وابن جرير وقتادة دخل
		189v	27	حُبْك حُبْك	
	52	190r	1	فقعد فنزل جبريل على خشبة	فقعد جبريل على خشبة
	53	190r	7	ما كنتُ	
	54	190r	12	راسه كالحبك	راسه كالجبل
	56	190r	20	لقد دخلت الداخل اغتماماً بكلام الناس مما بي من الحمى فدخل علي داخل	فدخل علي داخل
		190r	21	رجلاً بعدك قط اكرم	رجلاً قط بعدك اكرم
	60	190v	5	دعى المؤمن قال يا جبريل	دعى المؤمن قال الله يا جبريل
	62	190v	10	عبد الله ابن عمير	عبد الله ابن عمر
	68	190v	26	The ḥadīth runs on from the last with <i>qāla</i> (no <i>akhraja</i>) as per the DKI edition	
		190v	27-29	محمد بن عبد الله بن الفضل بن عاصم عن عمرو بن قتادة بن عمر بن قتادة بن النعمان الامصاري عن ابيه قتادة بن النعمان قال قال رسول الله	ابو محمد عبد الله بن الفضل بن عاصم بن عمر بن قتادة بن النعمان الامصاري عن ابيه عمر عن قتادة بن النعمان قال قال رسول الله
		191r	1	Omitted	وتسهلي وتوسعي وتطبيبي لاعدائي حتى يكرهوا لقائي
	69	191r	3	احنف اضجم اعسر	احنف اصمع اعسر
		191r	6	قل الا	قل له الا
		191r	7	فقال له قل بلا يا رسول الله	فقال له قل بلا
	70	191r	9	Large gap between <i>akhraja</i> and Abū 'l-Shaykh – name missing (?)	
	71	191r	14	Omitted	وذكر ابراهيم ونوحاً ولي صاحبان احمدهما يا عر باللين والآخر بالشدة وكل مصيب
	72	191r	19	مسيرة سبعين عاماً	مسيرة سبعين سنة

Gabriel	74	191r	30	فيقول جبريل وملك الموت	فيقول جبريل: ملك الموت
	75	191v	5	وجهك الباقي الكريم وعبدك وعبدك جبريل	وجهك الباقي الكريم وعبدك جبريل
Michael	78	191v	10	ابن عبد المنذر	ابن المنذر
	84	191v	25	Omitted	ابو عبد الله الحسين الدينوري
		191v	30	Omitted	ابو علي بن موسى
		191v	30	Omitted	ابو موسى بن جعفر
		191v	32	Omitted	ابن علي بن علي طالب
		191v	32	وقال اشهد بالله لقد حدثنا جبريل وقال...	Omitted
Isrāfil	85	192r	6	Ornamentation	
		192r	6 – 7	الصور من لؤلؤة	الصور لؤلؤة
		192r	7	ضفاء الزجاجة	ضفاء الزجاج
		192r	9	من ثقب واحد	من ثقب واحدة
		192r	9	كوة كاستدار	كوة كاستدارة
	87	192r	17	مستعد ينظر نحو العرش	مستعد ينظر حول العرش
	88	192r	18	ابي سعيد الخذري	ابي سعيد الخذري
	90	192r	22	عن ملك الله الذي يليه اسرافيل ثم	عن ملك الله الذي يليه قال ان الملك الذي يليه اسرافيل ثم
	91	192r	23	احمد والحاكم وابن مردويه عن ابن سعيد	احمد والحاكم عن ابن سعيد
	93	192v	5	بكذا فلا تهبط	بكذا فلا يهبط
	94	192v	6	Omitted (but a space left)	اخرج
		192r	8	ليس دونه شيء	ليس لدونه شيء
	95	192r	11	عن عبد الحرث ان كعبا	عن عبد الرحمن بن الحارثان كعبا
		192r	12		يقول في اسرافيل شيئاً قالت نعم سمعت رسول الله صلعم يقول
	97	192r	20	قال رسول الله صلعم	قال النبي صلعم
	99	192v	29	فقال عائشة هكذا سمعت رسول الله صلعميقول	فقال عائشة هكذا سمعت رسول الله صلعم
	100	193r	1	In black	اخرج

Isrāfil	102	193r	2	Omitted	لاثنى عشرة ساعة من النهار و[لاثنى]
	103	193r	6	نعم رب	نعم يا رب
	104	193r	10	بشيء كتب في اللوح المحفوظ فنحى اللوح حتى	بشيء كتب في اللوح حتى
		193r	10-11	اسرافيل قد عطي وجهه بجناحه	اسرافيل قد عطي راسه بجناحه
		193r	11	فان كان الى السماء	فان كان الى اهل السماء
		193r	12	Omitted	الى ميكائيل وان كان الى اهل الارض دفعه
		193r	12	Omitted	اللوح يدعى به ترتعد فرائصه فيقال له هل بلغت فيقول نعم فيقال من يشهد لك فيقول اسرافيل فيدعى اسرافيل
		193r	12	فيقال له قد بلغك	فيقال له هل بلغك
	106	193r	15	البزار والطبراني والبيهقي في السماء والصفات عن ابن عمرو	الطبراني في الاوسط والبيهقي في الاسماء والصفات والبزار عن ابن عمرو
		193r	16	الى النبي	الى الرسول الله
		193r	16	اهل الارض فليحاكم الى اسرافيل	اهل لارض فلنتحاكم الى اسرافيل
Angel of Death	107	193r	27	فارسل اخر	فارسل لها اخر
		193r	29	Marked (ink stain?) after: كلها من طيبها	
	108	193v	2	بلله منك عن ينقص مني	بلله منك عن تنقص مني
	112	193v	14	اجله قبض روحه فاذا قبض روحه اقبل	اجله قبض روحه اقبل
		193v	16	والله ما اكلت لها رزقا	والله ما اكلت لكم رزقا
		193v	16	...لها عمرا	... لكم عمرا
		193v	16	...لها اجلا	... لكم اجلا
		193v	20	تسيب الناس ومنها	تسيب الناس يعني...
	113	193v	20	الاقباض	الاتفاض
		193v	22	Placed after 116	
	116	193v	24	Placed before 115	

Angel of Death	115	193v	25	على بابهِ سبع مرات	على بابهِ كل يوم سبع مرات
		193v	25	ينظر حاله	ينظر حاله
	119	193v	32	الحارث بن الخزرج عت ابيه قال	الحارث بن الخزرج قال
		193v	32	ونظر ملك الموت [Corrected in margin]	ونظر الى ملك الموت
		194r	6	الى انا تصفحهم	الى انا اصفحهم
		194r	6	حتى لا انا اعرف	حتى لا انا اعرف
		194r	8	بلغني عنه انما	بلغني انما
		194r	8	الصلى فاذا نظر عند...	الصلى فاذا حضر عند...
		194r	8	الشارية	الشارية
	120	194r	12	السارة	السارة
		194r	13	لي منك قال ادبر	لي منك اشياء ما ارلها فيك قال ادبر
		194r	15	ornamentation: dot in a circle

		204v	12	فيقول هو عبد الله	فيقول ما كان تقول هو عبد الله

Appendix D

Al-Suyūṭī's Sources

Sources Used by al-Suyūṭī in the Ḥadīth Section

The following is a table giving the full names of the sources used by al-Suyūṭī in those ḥadīth from *Al-Ḥabā'ik fī akhbār al-malā'ik* translated in this thesis. The table includes:

- (i) the name, as used by al-Suyūṭī (and other classical Arabic texts)
- (ii) the full name of the author
- (iii) the author's date of death
- (iv) a reference to either Sezgin's *Geschichte der arabischen Schriftums* or, where appropriate, Brockelmann's *Geschichte der arabischen Literatur*.

? indicates an uncertain attribution

X indicates an author that I have been unable to trace

Ibn Ḥanbal	<i>Musnad</i>	<i>Al-Musnad</i>	248		I:504 §1	
	<i>Al-Zuhd</i>	<i>Kitāb al-zuhd</i>	35, 67, 73, 110, 111, 116, 125, 139		I:506 §3	
Ibn Ḥibbān	<i>Al-Qawl al-musaddad</i>	<i>Al-Qawl al-musaddad fī 'l-dhabb 'an Musnad al-Imām Ahmad</i>	255		I:505	
	<i>Ṣaḥīḥ</i>	<i>Al-Musnad al-ṣaḥīḥ 'ala al-taqāsīm wa- 'l-anwā'</i>	84, 248		I:190 §1	
Ibn Mandah	<i>Kitāb al-radd 'alā al-jahmiyya</i>	<i>Kitāb al-radd 'alā al-jahmiyya</i>	5		I:215 §3	
	<i>Al-Ma'rifa</i>	<i>Ma'rifat al-ṣaḥāba</i>	25, 119		I:215 §1	

⁴ However a work with the title *Ṣifāt al-janna* is listed (GAL SI:690 §12), and the *Ṣifāt al-nār* is likely to be part of this text, or a companion work.

⁵ The work is no longer extant, but it has been reconstructed by Leah Kinberg; see Ibn Abī 'l-Dunyā (reconstructed Leah Kinberg), *Kitāb al-mawt wa-kitāb al-qubūr* (Haifa: University of Haifa, 1983).

Ibn Mardawayh	<i>Tafsīr</i>	No longer fully extant	252	I:225 §5	
Ibn al-Mundhir	<i>Tafsīr</i>	<i>Tafsīr al-Qurʿān</i>	21	I:496 §1	
Ibn al-Najjār	<i>Taʾrīkh</i>	<i>Taʾrīkh Baghdad</i> ⁶	84, 118, 171	I:350 §1	
Ishāq ibn Rāhwayh	<i>Musnad</i>	<i>Al-Musnad</i>	251	I:110	
al-Khalīlī	<i>Mashaykha</i>	<i>Al-Mashaykha</i> ⁷	242		
al-Khaṭīb	<i>Rūwāt Maik</i>	Not listed	157		
al-Marwazī	<i>Al-Janāʾiz</i>	Possibly part of his <i>al-Kāfi fī ʾl-fiqh</i>	148, 165	I:443	
al-Qutbī / Ibn Qutayba (?)	<i>ʿUyūn al-akhbār</i>	<i>ʿUyūn al-akhbār</i>	229		I:121 §1
al-Sābūnī	<i>Al-Miʾatayn</i>	<i>Kitāb al-miʾatayn</i>	60		I:363
Al-Silafī	<i>Al-Mashaykha al-Baghdādīyya</i>	<i>Muʿjam shuyūkh Baghdad</i>	166b		I:365 §2
al-Ṭabarānī	<i>Al-Awsat</i>	<i>Al-Muʿjam al-awsat</i>	99, 106, 295	I:196 §2	
	<i>Al-Kabīr</i>	<i>Al-Muʿjam al-kabīr</i>	119	I:196 §1	
al-Tirmidhī	<i>Nawādir al-usūl</i>	<i>Nawādir al-uṣūl fī maʿrifat akhbār al-rasūl</i>	80	I:655 §9	
al-ʿUqaylī	<i>Al-Duʿafāʾ</i>	<i>Kitāb al-ḍuʿafāʾ (wa-ʾl-matrūkīn)</i>	156	I:177 §1	
Al-Wāhidī	<i>Asbāb al-nuzūl</i>	<i>Kitāb asbāb al-nuzūl</i>	237		I:411 §1

⁶ There is also a *Taʾrīkh Kūfā* by the same author (*GAS* I:350 §2) but it is most likely to be his more famous *Taʾrīkh Baghdad*.

⁷ See the note on al-Khalīlī above.

Appendix E

The Authorities of the *Ḥadīth*

Index of Authorities

The authorities cited by al-Suyūṭī are only given with a short name in most instances. The table below gives the full names as given in Volume 8 of A. J. Wensinck's, *Concordance de la Tradition Muslumane*.

- X : marks an authority I have been unable to trace
- * : marks a name which could refer to a number of different people
- ? : marks a possible, although not definite, authority

Appendix F

Summary of the *Ḥadīth* Not Translated

Summary of *Ḥadīth* Not Translated

172 – 177 The Angel of the Rain

- 172 al-Baghawī and al-Ṭabarānī
An angel comes to Muḥammad and tells him that his community will kill Ḥusayn at Karbalā’.
- 173 al-Ṭabarānī
An angel comes to Muḥammad and tells him that his community will kill Ḥusayn at Karbalā’.
- 174 Ibn Jarīr
When Abraham was cast into the fire of Nimrod, the Guardian of the Rain prayed for him.
- 175 Abū ‘Awāna and al-Ḍiyā’
An angel drives the clouds and he has a rope.
- 176 al-Ṭayālīsī, Aḥmad and Muslim
A man hears a voice in the clouds and then follows the clouds to Yemen; he then meets the Angel of the Rain.
- 177 al-Dīnawarī
When Abraham was cast into the fire of Nimrod, the Guardian of the Rain prayed for him.

178 The Angel of the Veil

- 178 Ishāq ibn Rahwayh, Ibn al-Mundhir, Ibn Abī Ḥātim, al-Ṭabarānī and Abū ‘l-Shaykh

The heaven of this world has invisible waves; the Second Heaven is made of white marble; the Third Heaven is made of iron, the Fourth Heaven is made of copper; the Fifth Heaven is made of silver; the Sixth Heaven is made of gold; and the Seventh Heaven is made of rubies; above that is a desert of light and no one knows what is above it except God, Most High. The angel responsible for the veil is called Mītātrūsh.

256 Another Angel

- 256 Ibn Abī Shayba
A pious man wishes to worship God in the sea and he is taken there by a group of people. The man asks to be left by a tree in a river. An angel wanted the pious man to go to heaven, so God commands the Angel of Death to take his soul.

257 – 267 Thunder and Lightning

- 257 Aḥmad, al-Tirmidhī, al-Nasā'ī, Ibn al-Mundhir, Ibn Abī Ḥātim, Abū 'l-Shaykh, Ibn Mardawayh, Abū Nu'aym and al-Diyā'

An angel is responsible for the clouds; the angel has a whip to drive the clouds; thunder is the sound of his voice.

- 258 Ibn Abī 'l-Dunyā
Thunder is an angel and lightning is the sound of the clouds being driven with a whip.

- 259 Ibn al-Mundhir and Abū 'l-Shaykh
Thunder is an angel.

- 260 al-Bukhārī and Ibn Abī 'l-Dunyā
Thunder is an angel.

- 261 Ibn Jarīr and Ibn Mardawayh
Thunder is an angel; his voice is thunder and lightning is his whip.

- 262 Abū 'l-Shaykh
Thunder is an angel.

- 263 Ibn Mardawayh
An angel is responsible for moving the clouds; lightning is the raising of the angel's whip and thunder is the sound of the whip being cracked.

- 264 Ibn Abī 'l-Dunyā
Lightning is an angel coming into view.

- 265 Ibn Abī Ḥātim and Abū 'l-Shaykh
Thunder is the sound of the Angel of the Cold clapping and lightning is when he looks at the people on Earth.

- 266 Ibn Mardawayh
There is an angel responsible for moving the clouds; he is called Rūfīl.

- 267 Ibn Abī Ḥātim
Lightning is an angel; the angel has four faces: a face of a human, an eagle, a lion and a bull; lightning is when the angel flicks its tail.

268 – 273 Ismā'īl

- 268 al-Ṭabarānī and Abū 'l-Shaykh
There is an angel in heaven called Ismā'īl who is in charge of 70,000 angels.

- 269 Ibn Jarīr, Ibn al-Mundhir, Ibn Abī Ḥātim, Ibn Mardawayh and al-Bayhaqī
During the *miʿrāj* Muḥammad sees Ismāʿīl, who is responsible for the Second Heaven; he is in charge of 70,000 angels; each angel has an army of 100,000 angels.
- 270 Abū ʿl-Shaykh
There is an angel in heaven called Ismāʿīl.
- 271 al-ʿAdani
Before the Prophet's death, Gabriel comes to him three times; on the third day Gabriel shows Muḥammad the angel Ismāʿīl, who is the Angel of Death.
- 272 al-Shāfiʿī
Ismāʿīl is an angel that has command over 100,000 angels; each of these angels has command over 100,000 angels.
- 273 al-Bayhaqī
Ismāʿīl is an angel that has command over 70,000 angels; each of these angels has command over 70,000 angels.

274 Sadluqān

- 274 Abū ʿl-Shaykh
Ṣadluqān is an angel; his toe is a ninth of the size of the seas.

275 – 276 Riyāfīl

- 275 Abū ʿl-Shaykh
Riyāfīl was the angel that accompanied Dhū ʿl-Qarnayn; he tells Dhū ʿl-Qarnayn how the angels worship God in heaven.
- 276 Ibn Abī Ḥatim
Dhū ʿl-Qarnayn asks Riyāfīl about the Water of Life.

277 – 278 Dhū ʿl-Qarnayn

- 277 Ibn Abī Ḥatim
Dhū ʿl-Qarnayn was an angel.
- 278 Ibn ʿAbd al-Ḥakam, Ibn al-Mundhir, Ibn Abī Ḥatim and Abū ʿl-Shaykh
Dhū ʿl-Qarnayn was an angel.

279 Dhū 'l-Nurayn

- 279 Ibn ʿAsākir
Dhū 'l-Nurayn was an angel.

280 – 294 The Cockerel

- 280 Abū 'l-Shaykh
There is an angel in heaven in the form of Cockerel; when the Cockerel praises God in heaven, the earthly cockerels reply.
- 281 Abū 'l-Shaykh
The Cockerel is underneath the Throne; its claws are made of pearls, and its spurs are made of green chrysolite; it causes the cockerels to crow at dawn.
- 282 Abū 'l-Shaykh
The Cockerel's feet are on the Seventh Earth and it passes through the Seven Heavens.
- 283 al-Ṭabarānī, Abū 'l-Shaykh and al-Ḥākim
The Cockerel's feet are on the Seventh Earth and it passes through the Seven Heavens.
- 284 Abū 'l-Shaykh
The Cockerel's feet are on the Seventh Earth, its head is under the Throne and its wings are in the air.
- 285 Abū 'l-Shaykh
God has a Cockerel in the lowest heaven; its chest is made of gold, its stomach is made of silver, and its legs are made of sapphires, its claws are made of emeralds, and its claws are under the lowest earth. It has a wing in the East and a wing in the West, its neck is under the Throne and its crest is made of light, protecting the space between the Throne and the Seat; it flutters his wings every night, three times.
- 286 Abū 'l-Shaykh
God has a Cockerel; its two wings are ornamented with chrysolite, pearls and sapphires. It has a wing in the East and a wing in the West, its feet are on the lowest earth and its head is under the throne. It causes the cockerels to crow at dawn. On the Day of Resurrection it will be told to stop beating its wings.
- 287 al-Ṭabarānī and Abū 'l-Shaykh
The Cockerel's feet are on the Seventh Earth and its neck is under the Throne. It calls out to the Earth three times each night.
- 288 Abū 'l-Shaykh
Cockerels reply to the angels and praise God.

- 289 Abū 'l-Shaykh
When the angel says 'Praise the Holy One', the cockerels on earth flap their wings.
- 290 Abū 'l-Shaykh
A cockerel crowed in the presence of Solomon and he told people that it was praising God.
- 291 al-Ṭabarānī
God has a Cockerel under the Throne; its wings are in the air and its claws are on the earth; when it is dawn, and it is the time of the call to prayer, it flaps its wings and the cockerels praise God.
- 292 Ibn 'Addī and al-Bayhaqī
The Cockerel's feet are on the extremities of the Earth and its neck is under the Throne. It calls out to the Earth three times each night.
- 293 Ibn 'Addī
God has a Cockerel; its claws are on the lowest earth and its neck is under the Throne. It calls out when it is the time for the ritual prayers; the cockerel calls out to the heavens: 'Exalt! Exalt!' Then the Cockerel of the heavens and the cockerels of the earth call out.
- 294 al-Daylamī
The Throne is on an angel made of pearls in the image of a cockerel; its feet are on the boundaries of the lowest [earth] and its neck is under the throne; its wings are in the East and the West; when that angel worships God, there does not remain anything except the praise of God.

298 – 299 The Angel of the Mountains

- 298 Aḥmad, al-Bukhārī and Muslim
Ibn 'Abd Yālayl ibn 'Abd Kalāl was approached by Muḥammad to enter into a treaty, but he refused. At Qarn al-Tha'ālīb Muḥammad looked to heaven and saw Gabriel. Gabriel tells him that God has sent him the Angel of the Mountains to help Muḥammad. The Angel of the Mountains asks Muḥammad if he would like him to cause the mountains to fall up Ibn 'Abd Yālayl and his people. Muḥammad says no, but asks that their children may become Muslims.
- 299 Ibn Abī Ḥātim
Gabriel informs Muḥammad that God has sent him the Angel of the Mountains to help Muḥammad. The Angel of the Mountains tells Muḥammad that he can do anything he wants. Muḥammad says that he does not want anything, other than for people to profess *tawḥīd*. The Angel tells Muḥammad that he is very merciful.

300 Ramyā'il

- 300 Ibn Abī 'l-Dunya
The souls of the believers are handed over to Ramyā'il.

301 Dūma

- 301 Ibn Abī 'l-Dunya
The souls of the unbelievers are handed over to Dūma.

302 – 311 The Tempters of the Grave

- 302 al-Tirmidhī, Ibn Abī 'l-Dunyā, al-Ājurrī and al-Bayhaqī
An account of the events in the grave.
- 303 al-Ṭabarānī and Ibn Mardawayh
A description of Munkar and Nakīr.
- 304 Ibn Abī 'l-Dunyā and Abū Nu^ʿaym
An account of human interaction with angels, including references to: The Angel of the Womb, the angel that accompanies an individual until puberty, The Noble Watching Scribes and the Angels of the Grave (unnamed).
- 305 al-Bayhaqī
A description of Munkar and Nakīr.
- 306 al-Ṭabarānī
The names of the two angels who come to the grave are Munkar and Nakīr.
- 307 Ibn Abī 'l-Dunyā
A description of Munkar and Nakīr.
- 308 Juwaybir
An account of what happens at the moment of death and the questions asked by the angels in the grave.
- 309 Abū Nu^ʿaym
There are three Angels of the Grave: Ankar, Nākūr and Rūmān.
- 310 Abū 'l-Ḥasan al-Qaṭṭān
There are four Angels of the Grave: Munkar, Nakīr, Nākūr and their master, Rūmān.
- 311 Ibn al-Najjār
The angels of the daytime are kinder than the angels of the night.

312 – 406 The Noble Watching Scribes

- 312 Ibn al-Mundhir and Abū ‘l-Shaykh
There are two angels: one writes down good deeds, the other bad deeds. The angel of good deeds is on the right, the angel of bad deeds is on the left. If the person is walking, one is in front and the other is behind; if the man is sitting, one is on the left and the other is on the right; if the man is sleeping, one is by the man’s head and the other is by his feet. There are two angels responsible for the man at night and another two responsible for him during the day; a fifth angel is with the man continuously.
- 313 Abū ‘l-Shaykh
An exegesis of Q 6:60.
- 314 Ibn Abī Zamanīn
There are four scribes: two for the night and two for the day; they come together at the dawn prayers.
- 315 Mālik, al-Bukhārī, Muslim, al-Nasā’ī and Ibn Ḥibbān
Angels follow people at night and day and they come together at the dawn prayers.
- 316 Ibn al-Mundhir and Ibn Abī Ḥātim
An exegesis of Q 13:11; the scribes note down individuals’ deeds.
- 316b¹ Ibn Jarīr, Ibn al-Mundhir and Ibn Abī Ḥātim
An exegesis of Q 13:11; the scribes note down individuals’ deeds.
- 317 Ibn Jarīr and Ibn al-Mundhir
An exegesis of Q 13:11; the scribes note down individuals’ deeds.
- 318 [Ibn Jarīr]² and Ibn al-Mundhir
An exegesis of Q 13:11; the angels alternate between day and night.
- 319 [Ibn Jarīr] and Ibn al-Mundhir³
An exegesis of Q 13:11 & 50:17; if the person is walking, one is in front and the other is behind; if the man is sitting, one is on the left and the other is on the right; the angel on the right, writes things down without the approval of the angel on the left, but the angel on the left has to seek approval from the angel on the right. if the man is sitting, one is on the left and the other is on the right; if the man is sleeping, one is by the man’s head and the other is by his feet.
- 320 Abū ‘l-Shaykh
An exegesis of Q 13:11; the Scribes are ordered by God to do what they do.

¹ Added in the Leiden MS; fol. 205v, ll. 12 – 14.

² Added in the Leiden MS; fol. 205v, l. 14.

³ The Leiden MS combines §318 & 319 (fol. 205v, l. 15); the DKI edition also omits *akhrāja*, so this ḥadīth appears to be a continuation of §318.

- 321 Ibn Jarīr
An exegesis of Q 50:17; there are two angels: one writes down good deeds, the other bad deeds. The angel of good deeds is on the right; the angel of bad deeds is on the left.
- 322 al-Daylamī
The two angels sit on the teeth, and the person's tongue is their pen and his spit their ink.
- 323 Abū Nu^caym
The name of the Scribe of Misdeeds is Qa^cīd.
- 324 Ibn Jarīr and Ibn Abī Ḥātim
An exegesis of Q 50:17; the scribe writes down everything that a person talks about; but on Thursday, the scribe notes down both what the individual says and does.
- 325 Ibn Abī Shayba, Ibn al-Mundhir, Ibn Abī Ḥātim, Ibn Mardawayh and al-Ḥākim
An exegesis of Q 50:17; the angel only writes down deeds and sins, it does not write down mundane things.
- 326 Ibn al-Mundhir
The angel of good deeds only writes down actions that reward and strengthen his companion.
- 327 Ibn Abī 'l-Dunyā
The scribe of good deeds is on the right and the scribe of bad deeds is on the left. When an individual does a good deed, the angel writes it down ten times; when an individual does a bad action, the angel of good deeds tells the angel of bad deeds to hold off writing it against the individual until Thursday, in case the person repents.
- 328 Ibn Abī Shayba and al-Bayhaqī
Once a man was riding a donkey and it stumbled and the man said: 'I have stumbled'; the angel of bad deeds said that it was a bad action and the angel of good deeds thought that it was a good action; the angel of bad deeds was called away, but the angel of good deeds remained and wrote it down.
- 329 Ibn al-Mundhir
The angels write down everything an individual says, even in illness.
- 330 al-Khaṭṭīb
The angels write down everything an individual says, even in illness.
- 331 Ibn Jarīr
There are two scribes at night and two during the day.
- 332 Ibn Abī 'l-Dunyā
The human's tongue is the angel's pen and his spit his ink.

- 333 Ibn Abī 'l-Dunyā
An exegesis of Q 50:17; the angel on the right writes down good deeds and the one on the left, bad deeds.
- 334 Abū 'l-Shaykh
If an individual does a sinful act, it is not recorded for three hours, so that the person can seek forgiveness.
- 335 al-Ṭabarānī and Abū Nu'aym
If an individual does a sinful act, it is not recorded for six hours, so that the person can seek forgiveness.
- 336 al-Ṭabarānī, Ibn Mardawayh and al-Bayhaqī
Good actions are written down ten times, but bad actions are only recorded once; if an individual does a sinful act, it is not recorded for six or seven hours, so that the person can seek forgiveness.
- 337 Ibn Abī 'l-Dunyā and Ibn 'Asākir
When a person dies, the angels remain with the individual in the grave, in case the person seeks forgiveness.
- 338 Ibn Abī 'l-Dunyā and al-Ḥākim
The first to know of an individual's death are the scribes, as they descend every day with the individual's *rizq*; when it is not given, they know that the person will die.
- 339 Ibn Mardawayh
When the angels hand over their reports, the angel of bad deeds leaves his records in *al-Sijjīn*.
- 340 al-Ṭabarānī
At the end of the day, the angel looks at the devil's book; if the angel finds any good actions recorded in the devil's book, the angel wipes it out and records it as a good action ten times. When individuals go to sleep they should say 33 *tabbīrs*, 34 *taḥmīds* and 33 *tasbīhs*.
- 341 Aḥmad
A man said 'Praise be to God' many times and the angel noted it down and magnified them.
- 342 'Abd Allāh and al-Dīnawarī
The angels take their records up to heaven after the evening prayers.
- 343 Ibn al-Mubārak, Ibn Abī 'l-Dunyā and Abū 'l-Shaykh
When the angels hand over their reports, the angel of bad deeds leaves his records in *al-Sijjīn* and the angel of good deeds leaves his records in *'Illiyun*.
- 344 al-Daylamī
God told the scribes not to record anything while an individual is angry.

- 345 Ibn Abī Shayba and al-Bayhaqī
The angel of bad deeds departs from an individual when he is ill, and the angel of good deeds is instructed to note down what the person normally did when he was not ill.
- 346 Ibn Abī ‘l-Dunya and al-Bayhaqī
The angel of bad deeds does not record anything when an individual is ill, and the angel of good deeds is instructed to note down what the person normally did when he was not ill.
- 347 Aḥmad, Ibn Abī Shayba and al-Bayhaqī
The angel of good deeds is instructed to note down what the person normally did when he was not ill.
- 348 Abū ‘l-Shaykh
Concerning how the angels write down their records.
- 349 al-Tirmidhī
When a servant tells a lie, the angel is separated from him by a mile from the stench which comes from him.
- 350 Ibn Abī Shayba
The angel of good deeds is instructed to note down what the person normally did when he was not ill.
- 351 Ibn ‘Asākir
The angel of bad deeds does not record anything when an individual is ill, and the angel of good deeds is instructed to note down what the person normally did when he was not ill.
- 352 al-Ḥākim
When a person is ill, God reveals to the Scribes: ‘I have bound my servant in some of my chains. If I take him, I will forgive him; if I keep him alive, during the time of his illness I will stop his sin being recorded.’
- 353 al-Ṭabarānī
The angel of good deeds is instructed to note down what the person normally did when he was not ill.
- 354 Ibn Abī Shayba, al-Ṭabarānī, al-Dāraqūṭnī and al-Bayhaqī
The angel of good deeds is instructed to note down what the person normally did when he was not ill.
- 355 Aḥmad and al-Bukhārī
When an individual stands to pray, he should not spit in front of him, for that is the direction of God; and he should not spit on his right, as there is an angel on his right; he should spit on his left or under his foot.

- 356 Saʿīd ibn Maṣṣūr
Individuals should keep their sandals on their feet or place them in front of them; there is an angel on their right and there is their brother's angel on their left.
- 357 Ibn Abī Shayba
When an individual stands to pray, he should not spit in front of him; and he should not spit on his right, as there is an angel on his right; he should spit on his left or under his foot.
- 358 Ibn Abī Shayba
The Prophet saw spit on the *qibla*, and he reproached the people and told them not to spit in front of them, or to their right.
- 359 ʿAbd al-Razzāq and Ibn Abī Shayba
Fiddling with stones causes pain to an angel.
- 360 Ibn ʿAsākir
A man is told to spit on his left, not on his right.
- 361 Ibn Abī Shayba
Fiddling with stones during prayer is a habit from the Devil.
- 362 Ibn Mājah and al-Ṭabarānī
A man says a prayer and the scribes seek confirmation from God whether it is a good or bad action.
- 363 al-Bazzār
The Scribes record all actions.
- 364 al-Ṭabarānī
Angels get embarrassed by nudity and if there are any children present when an adult reveals him or herself, the child could be taken by a devil.
- 365 al-Bayhaqī
Angels get embarrassed by nudity.
- 366 al-Bayhaqī
Angels remain with individuals constantly, except when two people have sexual intercourse.
- 367 ʿAbd al-Razzāq
Angels stay away from two things: human excrement and sexual intercourse.
- 368 al-Bazzār
Angels get embarrassed by nudity; angels stay away from three things: human excrement, those in *janāba* and those that need a major ritual ablution (*ghusl*).

- 369 Ibn Mardawayh
A man is praised for performing *tayammum*; angels stay away from an individual in two cases: when he is on the toilet and when he is with his wife; a person should conceal himself behind a wall or a camel.
- 370 al-Dīnawarī
If a man finishes the Qur'ān, the angel kisses him between the eyes.
- 371 Ibn Abī Shayba
Whoever uncovers his genitals, the angel has turned away from him.
- 372 °Abd al-Razzāq and Ibn Abī Shayba
The angels never look when you reveal yourself.
- 373 Ibn Abī Shayba
When a man goes to bed virtuously, the angel anoints him.
- 374 al-Bayhaqī
The angel of good deeds is instructed to note down what the person normally did when he was not ill.
- 375 al-Ṭayālīsī and al-Bayhaqī
The angel of good deeds is instructed to note down what the person normally did when he was not ill.
- 376 al-Ḥākim
The angel of good deeds is instructed to note down what the person normally did when he was not ill.
- 377 Abū 'l-Shaykh and al-Bayhaqī
When an individual dies, the angels go up to heaven, but God tells them to return to the graves of the faithful and worship God there.
- 378 al-Dāraqutnī
When an individual dies, the angels go up to heaven, but God tells them to return to the graves of the faithful and worship God there.
- 379 Ibn al-Jawzī
When an individual dies, the angels go up to heaven, but God tells them to return to the graves of the faithful and worship God there.
- 380 Ibn Abī 'l-Dunyā
The angels thank or curse their companion when he dies, depending on whether the person has lived a godly or ungodly life.
- 381 Ibn Abī 'l-Dunyā
The angels thank or curse their companion when he dies, depending on whether the person has lived a godly or ungodly life.

- 382 Ibn ʿAsākir
When a servant repents, God makes the Scribes forget his sin.
- 383 ʿAbd al-Razzāq, Sammūya and al-Ṭabarānī
Believers should keep their beards and teeth clean for the Scribes.
- 384 Abū Nuʿaym
Believers should keep their beards and teeth clean for the Scribes.
- 385 Abū Nuʿaym
Believers should clean their teeth, as they are the seats of the Scribes; there is nothing more harmful to them than a remnant of food.
- 386 al-Shīrāzī
Whoever takes a bath uncovered, the two angels curse him.
- 387 al-Dīnawarī
When an individual thinks about doing a good action, it is written down once; when the individual does it, it is written down ten times; when a servant thinks of doing a bad action, it is not written down, but is written down once, when he does it. The angels know about an individual's intentions by smell.
- 388 al-Dīnawarī
Every person has five angels: one on the left, one on the right, one in front and one behind and one above him.
- 389 al-Dīnawarī
An exegesis of Q 50:18; the angels are between a person's two canines.
- 389b Aḥmad
A person does not speak good things, without the angels saying much of it.
- 390 al-Daylamī
Believers should refrain from kneeling down after sunset as it is painful for the two angels.
- 391 Ibn Jarīr
There is an angel on the right, which is responsible for good deeds and which has authority over the angel on the left. If a person does a good action, it is recorded ten times; when a person does a bad action, the angel asks the one of the right if it can write the action down; the angels on the right says, 'No' as the person may seek forgiveness. The angel on the left asks the angel on the right three times, after which the angel on the right tells the angel on the left to write it down.
An exegesis of Q 50:18 & 13:11; there is an angel on a person's forehead; when he bows down, the angel raises him; when the person is proud, the angel beats him. There are two angels on a person's lips and they only record when a person says: 'God bless him and grant him salvation.' There is an angel standing on your mouth which prevents snakes from entering; and

two angels on your eyes. There are ten angels and two sets for the day and the night, making twenty angels in total.

- 392 °Abd al-Razzāq, al-Firyābī, Ibn al-Mundhir and Ibn Abī Ḥātim
An exegesis of Q 13:11; when a person dies, the angels leave an individual.
- 393 Ibn Jarīr, Ibn Abī Ḥātim and Abū ‘l-Shaykh
An exegesis of Q 13:11; the angels protect an individual from *jinn*.
- 394 Ibn Jarīr
The angels protect an individual while he sleeps; nothing can kill him until his *ajal*.
- 395 Ibn Jarīr
The angels protect an individual while he sleeps; nothing can kill him until his *ajal*.
- 396 Ibn Jarīr
The angels protect an individual while he sleeps; nothing can kill him until his *ajal*.
- 397 Abū ‘l-Shaykh
An exegesis of Q 13:11; every individual has two angels during the day and two angels during the night; they guard the individual.
- 398 Sa‘īd ibn Maṣṣūr, Ibn Jarīr, Ibn al-Mundhir and Ibn Abī Ḥātim
An exegesis of Q 13:11; concerning a variant reading of Ibn °Abbās.
- 399 Ibn Jarīr
An exegesis of Q 13:11; concerning a variant reading of Abū Ibn Ka‘b.
- 400 Sa‘īd ibn Maṣṣūr, Ibn Jarīr and Ibn Abī Ḥātim
An exegesis of Q 13:11; concerning a variant reading of Ibn °Abbās.
- 401 Ibn al-Mundhir and Abū ‘l-Shaykh
An exegesis of Q 13:11; the angels protect an individual; nothing can kill him until his *ajal*.
- 402 Abū Dā’ūd, Ibn Abū ‘l-Dunyā and Ibn °Asākir
The angels protect an individual; nothing can kill him until his *ajal*.
- 403 Ibn Abī ‘l-Dunyā
Three hundred and sixty angels are responsible for a believer, which protect him; these include: an angel for sight, seven angels who drive away events which have not been ordained. If you were able to, you would see devils everywhere stretching their hands out to take people.

- 404 Ibn Jarīr and Abū ‘l-Shaykh
If you were able to, you would see devils everywhere stretching their hands out to take people.
- 405 Ibn Abī Shayba
The angels show people the rewards of the pious and the punishments of the impious, so that they may learn.
- 406 ‘Abd Allāh ibn Aḥmad
A believer and an unbeliever go fishing. The believer says a prayer to God before casting his net, and the unbeliever prays to his gods, before casting his. The unbeliever catches many fish, but the believer does not. Eventually the believer catches a fish, but when he picks it up, it wriggles out of his hand and returns to the sea. The believer’s angel complains to God, but God shows the angel the places set for the believer and the unbeliever in heaven, and the angel sees that the believer receives a great reward.

407 – 408 The Angels Responsible for the Leaves of the Trees

- 407 al-Bayhaqī
Angels write down and record details about leaves as they fall off trees.
- 408 al-Bayhaqī
An angel helps a Muslim to find his way when he is lost on his way to Mecca.

409 – 410 Sharahīl and Harahīl

- 409 Abū ‘l-Shaykh
Sharahīl is the angel responsible for the night; Harahīl is the angel responsible for the day.
- 410 al-Ṭabarānī
Unnamed angels are responsible for the coming of the day and the night.

411 – 412 Irtiyā’il

- 411 Ibn ‘Asākir
Irtiyā’il removes grief from human hearts.
- 412 Ibn Abī ‘l-Dunyā and Ibn ‘Asākir
Irtiyā’il removes grief from human hearts.

413 – 414 The Angel responsible for Cemeteries

- 413 Ibn Baṭṭa
An angel is responsible for cemeteries; the angel calls to those burying the deceased.
- 414 al-Daylamī
An angel is responsible for cemeteries; the angel calls to those burying the deceased.

415 – 422 The Angel which bears the Fish and the Rock

- 415 al-Bazzār, Ibn ʿAddī and Abū ʿl-Shaykh
Under the earth is a sea, which is above a rock, which is above a fish.
- 416 Abū ʿl-Shaykh
Under the earth is a sea, which is above a rock, which is above a fish.
- 417 Ibn Abī Ḥātim
Under the earth is a sea, which is above a rock, which is above a fish.
- 418 Ibn Abī Ḥātim
Four angels surround the rock at the bottom of the Earth.
- 419 Ibn Abī Ḥātim
Under the earth is a sea, which is above a rock, which is above a fish.
- 420 Abū ʿl-Shaykh
There are four angels responsible for each of the corners of the rock
- 421 Ibn Abī Ḥātim
The distance between each of the earths is 500 years and under the Seventh Earth is a sea, which is above a rock, which is above a fish.
- 422 Ibn Jarīr
Q 68:1; under the earth is a fish; under the fish is a sea; under the sea is an angel; the angel is on a rock; and the rock is on the wind.

423 – 429 The Guardians of the Winds

- 423 Ibn Abī Ḥātim and al-Ḥākim
The wind is kept in the Second Earth and was released when God destroyed the people of ʿĀd.
- 424 Abū ʿl-Shaykh
The wind was released when God destroyed the people of ʿĀd.

- 425 Abū 'l-Shaykh, al-Dāraqūtnī, Ibn Mardawayh and Ibn 'Asākir
Water and wind are only dropped onto the Earth by a set amount, except for Noah's flood and the destruction of the people of 'Ād.
- 426 al-Firyābī, 'Abd ibn Ḥamīd and Ibn Jarīr
Water and wind are only dropped onto the Earth by a set amount, except for Noah's flood and the destruction of the people of 'Ād.
- 427 Ibn Jarīr
Water and wind are only dropped onto the Earth by a set amount, except for Noah's flood and the destruction of the people of 'Ād.
- 428 Abū 'l-Shaykh
The wind was released when God destroyed the people of 'Ād.
- 429 Ibn 'Asākir
The wind was released when God destroyed the people of 'Ād.

430 – 434 The Angel of the Sun

- 430 Abū 'l-Shaykh
The noblest angel is the Angel of the Sun and he is the most influential over the Angel of Death.
- 431 Ibn Abī Shayba
The sun is driven by 360 angels.
- 432 al-Ṭabarānī, Abū 'l-Shaykh and Ibn Mardawayh
Seven angels are responsible for the sun.
- 433 Ibn al-Mundhir
The sun does not rise until 70,000 angels have called out to it.
- 434 Ibn Abī Ḥātim and Abū 'l-Shaykh
Two angels are responsible for the sun.

435 The Angel of the Shade

- 435 Ibn Jarīr
Abraham was protected by the Angel of the Shade when he was thrown into the Fire of Nimrod.

436 – 443 The Angel of the Womb

- 436 Aḥmad, al-Bukhārī and Muslim
One angel is responsible for the sperm, another for the clot and another for the embryo; God predestines whether the individual will be happy or wretched, male or female, and the individual's *rizq* and *ajal*.
- 437 Aḥmad
After 40 days an angel comes to womb and writes down whether the individual will be happy or wretched, male or female, short or tall; and the individual's *rizq*, health and *ajal*.
- 438 al-Bazzār, Abū Yaʿlā and al-Dāraqutnī
God predestines whether the individual will be happy or wretched and male or female.
- 439 Muslim
After 42 days an angel comes to the womb; an account of embryogenesis; the angel writes down whether the individual will be male or female and the individual's *rizq*.
- 440 al-Ṭabarānī
After 40 days an angel comes to the womb; an account of embryogenesis; the angel writes down whether the individual will be male or female and the individual's *ajal*.
- 441 al-Bāwardī
After 72 days an angel comes to the womb; an account of embryogenesis; the angel writes down whether the individual will be male or female and the individual's *ajal*.
- 442 ʿUthmān ibn Saʿīd al-Dārimī
After 40 days an angel comes to the womb; an account of embryogenesis; the angel writes down whether the individual will be wretched or happy.
- 443 Abū Nuʿaym
An account of embryogenesis.

444 The Angel of the Foetus

- 444 Abū ʿl-Shaykh
An angel is responsible for the foetus; when the mother lies down, the angel raises the foetus' head so that it does not drown in blood.

445 – 447 The Angel responsible for the Blessing of the Prophet

- 445 al-Ṭabarānī
If a Muslim blesses the Prophet, God blesses him with a blessing that is worth ten good deeds and which cancels out ten bad deeds.
- 446 al-Ṭabarānī and al-Baghawī
Whenever anyone blesses the Prophet, the angels bless the individual tenfold.
- 447 al-Ṭabarānī
Whenever anyone blesses the Prophet, the angels bless him tenfold; whenever anyone wishes the Prophet peace, the angels wish the individual peace tenfold.

448 The Angels which Creates Jewellery for the People in the Garden

- 448 Abū 'l-Shaykh
God has an angel that makes jewellery for the inhabitants of paradise.

449 – 457 The Angel of the Prophet's Prayer

- 449 al-ʿUqaylī, al-Ṭabarānī, Abū 'l-Shaykh and Ibn al-Najjār
An angel stands on the Prophet's grave and tells the Prophet who has blessed him.
- 450 al-Ṭabarānī
An angel stands on the Prophet's grave and tells the Prophet who has blessed him.
- 451 Ibn Abī Shayba
An angel stands on the Prophet's grave and tells the Prophet who has blessed him.
- 452 al-Khaṭṭīb
An angel stands on the Prophet's grave and tells the Prophet who has blessed him.
- 453 al-Bayhaqī
An angel stands on the Prophet's grave and tells the Prophet who has blessed him.
- 454 al-Daylamī
An angel stands on the Prophet's grave and tells the Prophet who has blessed him.
- 455 al-Ṭabarānī
An angel stands on the Prophet's grave and tells the Prophet who has blessed him.

- 456 al-Bayhaqī
An angel stands on the Prophet's grave and tells the Prophet who has blessed him and extra blessings are granted for those that do so on Friday and Friday nights.
- 457 Aḥmad, al-Nasā'ī, Ibn Ḥibbān, al-Ṭabarānī, al-Ḥākim, Abū 'l-Shaykh and al-Bayhaqī
God has angels that tell the Prophet of the peace of the community.

458 – 460 The Angel of the Yemeni Corner

- 458 Ibn Abī Shayba and al-Bayhaqī
An angel prays for Muslims as they pass the Yemeni Corner of the Ka'ba.
- 459 Ibn Mardawayh
An angel prays for Muslims as they pass the Yemeni Corner of the Ka'ba.
- 460 al-Jindī
An angel prays for Muslims as they pass the Yemeni Corner of the Ka'ba.

461 The Angel responsible for the Stoning Pillars of Minā

- 461 al-Azraqī
An angel is responsible for the *jimār*.

462 – 465 The Angel responsible for the Qur'ān

- 462 Al-Ḥākim
If someone pronounces the words of the Qur'ān incorrectly whilst reciting it, an angel corrects it.
- 463 Abū Sa'īd al-Salmān
If someone pronounces the words of the Qur'ān incorrectly whilst reciting it, an angel corrects it.
- 464 al-Daylamī
If someone pronounces the words of the Qur'ān incorrectly whilst reciting it, an angel corrects it.
- 465 al-Khaṭīb
If someone pronounces the words of the Qur'ān incorrectly whilst reciting it, an angel corrects it.

466 The Angel Responsible for saying ‘The Most Merciful...’

- 466 al-Ḥākīm
An angel blesses and grants the requests of those that say: ‘The Most Merciful of those that Merciful’ three times.

467 – 470 The Angel responsible for the prayer of those hidden

- 467 Ibn Saʿd
Two angels are responsible for dealing with prayers for the deceased.
- 468 Ibn Abī Shayba, Muslim, Abū Dāʿūd and Ibn Mājah
An angel prays for someone who prays for the deceased.
- 469 Ibn Abī Shayba
An angel prays for someone who prays for the deceased.
- 470 Ibn Abī Shayba
An angel prays for someone who prays for the deceased.

471 The Angel responsible for Crying

- 471 Ibn ʿAsākir
A human does not cry until an angel rubs the individual’s liver with his wing.

472 The Angels responsible for Faith, Life and other things

- 472 al-Dinawārī
After the scattering of the people of Babel, a number of angels disperse to different areas of the world.

473 The Angel responsible for Livelihoods

- 473 al-Ḥakīm al-Tirmidhī
Angels are responsible for giving sustenance to humans.

474 The Angel responsible for Ritual Prayer

- 474 al-Ṭabarānī and al-Ḍiyāʾ al-Maqdisī
God has an angel that calls out to humans at the times of the ritual prayers.

475 – 477 The Angel responsible for funerary rites

- 475 al-Rāfiʿī
Angels walk with funerary processions.

476 Saʿīd ibn Maṣṣūr
Angels walk with funerary processions.

477 al-Bayhaqī
Angels walk with funerary processions.

478 – 484 The Angel that delights Hasan and Husayn

478 al-Ṭabarānī and Ibn ʿAsākir
Muḥammad is told that Ḥasan and Ḥusayn will be responsible for the young men in heaven.

479 Ibn Manda
Muḥammad is told that Ḥasan and Ḥusayn will be responsible for the young men in heaven and that Fātima will be responsible for the women.

480 Ibn Mandah, Abū Nuʿaym and Ibn ʿAsākir
Muḥammad is told that Ḥasan and Ḥusayn will be responsible for the young men in heaven and that Fātima will be responsible for the women.

481 Aḥmad
If an angel comes down to earth, it has never been down to earth before.

482 al-Ṭabarānī
Muḥammad is told that Ḥasan and Ḥusayn will be responsible for the young men in heaven.

483 al-Ṭabarānī
Muḥammad is told that Ḥasan and Ḥusayn will be responsible for the young men in heaven.

484 al-Bayhaqī
Muḥammad is told that Ḥasan and Ḥusayn will be responsible for the young men in heaven.

485 The Angel responsible for the plants

485 Ibn Abī Ḥātim
Angels are responsible for plants; the distance between the ankles and shoulders of the Bearers of the Throne is a distance of 500 years.

486 – 487 The Angel responsible for the Sea

486 Aḥmad and Abū ʿl-Shaykh
An angel is responsible for the sea; when it puts its foot into the sea, the sea rises and when it lifts it out, the sea falls; this is the ebb and flow of the sea.

- 487 Ibn Abī Hātim
An angel is responsible for the sea; if it did not hold it back, it would flood the earth.

488 – 489 The Angel responsible for the Noble Tomb

- 488 Abū 'l-Shaykh
Angels visit the Tomb of the Prophet.
- 489 Al-Azraqī
70,000 angels pray in the *Bayt al-ma'mūr*, then they circumambulate the Ka'ba.

490 – 491 The Cherubim

- 490 Ibn 'Asākir
On the cherubim; the distance between their collar bone and their earlobes is a distance of 500 years.
- 491 Abū 'l-Shaykh
The Spirit is under the wings of the Cherubim, who carry the Throne.

492 The Spirits

- 492 al-Bayhaqī
The spirits are in the Seventh Heaven; on the Night of Power they descend to Earth and pray for all those who are praying in the mosque.

493 – 545 On the Characteristics of the Angels

- 493 al-Ṭabarānī
An unnamed angel can devour the world in one bite.
- 494 Abū 'l-Shaykh
The distance between an unnamed angel's shoulder and ear is a distance of 100 years.
- 495 Abū 'l-Shaykh
Concerning an angel made of light and snow.
- 496 Abū 'l-Shaykh
Concerning an angel made of snow and fire.
- 497 Abū 'l-Shaykh
Concerning an angel made of snow and fire.

- 498 Abū 'l-Shaykh
The angels fall silent when they see an unnamed angel with 360 heads.
- 499 Abū 'l-Shaykh
The angels fall silent when they see an unnamed angel, which has a vast number of eyes and tongues which praise God. The Bearers of the Throne have horns, and the distance between the horns and their heads is 500 years.
- 500 Abū 'l-Shaykh
There are 70,000 angels standing in ranks.
- 501 Abū 'l-Shaykh
Concerns eight angels which praise God.
- 502 Ibn 'Asākir
The Prophet saw an angel that was the same size as the Ka'ba.
- 503 Abū 'l-Shaykh
The angels watch and comment on the behaviour of humans.
- 504 Abū 'l-Shaykh
Concerning the angel at the gate of Heaven.
- 505 Abū Ya'lā and Ibn 'Asākir
The angels say 'Praise the Holy Angel' every morning.
- 506 Ibn 'Asākir
The angels say 'Praise the Holy Angel' every morning.
- 507 al-Ṭabarānī
An angel says 'Praise the Holy Angel' every morning.
- 508 Aḥmad, al-Bukhārī, Muslim, al-Tirmidhī, Ibn Ḥibbān and Abū Nu'aym
Concerning the judgement of humans.
- 509 'Abd ibn Ḥamīd and al-Ḥākim
Angels come down from heaven and stop to listen to people remembering God.
- 510 Ibn al-Najjār
Angels come down from heaven and stop to listen to people remembering God.
- 511 Abū 'l-Shaykh
The Throne is made of rubies; angels have 70,000 wings
- 512 al-Ṭabarānī
Angels accompany cavalry detachments, except groups in which the horses are adorned with bells.

- 513 Ibn Lāl
Concerning the creation of the angels.
- 514 al-Daylamī
God has made angels responsible for the *ḥaram*.
- 515 al-Daylamī
Angels talk about what humans say.
- 516 al-Daylamī
Angels cry out every night: 'Sons of the forty seeds, the time for harvest is approaching.'
- 517 al-Ḥākim and al-Bayhaqī
The *bayt al-maʿmūr* is in the Seventh Heaven and 70,000 angels visit it everyday and will not return to it.
- 518 al-ʿUqaylī, Ibn al-Mundhir, Ibn Abī Ḥātim and Ibn Mardawayh
Gabriel enters a river of paradise and from the drops of rain, angels are created. The *bayt al-maʿmūr* is in the Seventh Heaven and 70,000 angels visit it everyday and will not return to it.
- 519 al-Ṭabarānī and Ibn Mardawayh
Concerning the *miʿrāj*; Muhammad is shown the *bayt al-maʿmūr* in the Seventh Heaven; he is told that 70,000 angels visit it everyday and will not return to it.
- 520 Ishāq ibn Rahwayh, Ibn Jarīr, Ibn al-Mundhir, Ibn Abī Ḥātim and al-Bayhaqī
The *bayt al-maʿmūr* is in the Seventh Heaven and 70,000 angels visit it everyday and will not return to it.
- 521 al-Bayhaqī
The *bayt al-maʿmūr* is in the Seventh Heaven and 70,000 angels visit it everyday and will not return to it.
- 522 al-Jindī
The *bayt al-maʿmūr* is in the Seventh Heaven and 70,000 angels visit it everyday and will not return to it.
- 523 ʿAbd al-Razzāq, Ibn Jarīr, Ibn al-Mundhir and al-Jindī
Adam is shown the *bayt al-maʿmūr* and told to build the Kaʿba in the same form.
- 524 Ibn Jarīr
The Kaʿba is built in the place where Adam descended to earth and it is in the same form as the *bayt al-maʿmūr*.
- 525 al-ʿAzraqī
When Adam feared Satan, he sought help from God and God sent angels to protect him in the Kaʿba and made it a sacred site.

- 526 Hannād al-Sārī
There are two angels in heaven who comment on hypocrisy and greed.
- 527 Ibn Mājah
Gabriel tells Muḥammad that the angels seen at the Battle of Badr were the best of the angels.
- 528 al-Ṭabarānī
Gabriel tells Muḥammad that the angels seen at the Battle of Badr were the best of the angels.
- 529 Ibn Jarīr, Abū Yaʿlā, al-Ḥākim and al-Bayhaqī
At the Battle of Badr, Gabriel came down with 1000 angels on the Prophet's right hand side, and Michael and Isrāfīl came down with 1000 angels each on the Prophet's left hand side.
- 530 Ibn Abī Shayba
Angels have not died, except at the Battle of Badr.
- 531 al-Ṭabarānī
A detachment of angels came down to Earth at the Battle of Badr, wearing white turbans; at the Battle of Ḥunayn they wore red turbans; the angels have not been hit on any day other than the Battle of Badr.
- 532 Ibn Abī Ḥātim
The angels killed at Badr by hitting people on their necks.
- 533 al-Ṭabarānī
The detachment of angels wore black turbans at the Battle of Badr and red turbans at the Battle of Ḥunayn.
- 534 Ibn Jarīr
The angels wore yellow turbans at the Battle of Badr.
- 535 Ibn Abī Shayba and Ibn Jarīr
The angels were the first rank at the Battle of Badr.
- 536 Ibn Abī Shayba, Ibn al-Mundhir and Ibn Abī Ḥātim
The angels' horses had white wool on the sides of their faces and their noses.
- 537 ʿAbd ibn Ḥamīd and Ibn Jarīr
Q 3:125; The angels' horses had white wool on the sides of their faces and their noses.
- 538 Aḥmad and Muslim
A Muslim became harassed by a polytheist and then he heard the cracking of a whip behind him, and the sound of horse and the polytheist was struck by the whip and went green. The Prophet told him it was from the auxiliaries in the Third Heaven.

- 539 Abū Nuʿaym al-Bayhaqī
At the Battle of Ḥunayn someone saw a man in white.
- 540 al-Wāḥidī and al-Bayhaqī
Muḥammad asks Gabriel about the angels at the Battle of Badr.
- 541 Abū Nuʿaym
A vision concerning Abū Bakr and ʿUmar.
- 542 al-Ḥākim
The Prophet has a dream about a black sheep; Abū Bakr interprets the vision
- 543 Ibn Saʿd
The Prophet has a vision in which he sees Ḥanzala ibn Abī ʿĀmīr being washed by angels.
- 544 al-Ṭabarānī and Abū ʿl-Shaykh
The Prophet sees a vision of an angel standing on earth, with one foot on the ground and the other on top of the sky.
- 545 Abū ʿl-Shaykh
The space between an angel's earlobe and collarbone is a distance of 7000 years.

546 – 681 General Traditions About Angels

- 546 Abū ʿl-Shaykh
Angels are created and do not have hearts.
- 547 Abū ʿl-Shaykh
Q 21:20; angels were created to glorify God.
- 548 al-Bukhārī
Angels were created to be God's servants.
- 549 Ibn al-Mundhir, Ibn Abī Ḥātim, Abū ʿl-Shaykh and al-Bayhaqī
Q 21:20; angels were created to serve and worship God.
- 550 Abū ʿl-Shaykh
A prayer of the angels.
- 551 al-Bayhaqī
Angels were created standing in ranks, kneeling and prostrating.
- 552 Aḥmad
Devils are warded off with the words 'What God wills'.

- 553 Abū 'l-Shaykh
Concerning the creation of the angels.
- 554 Abū 'l-Shaykh
The angels worship God in heaven during the night.
- 555 Abū 'l-Shaykh
God does not talk to the angels.
- 556 Abū 'l-Shaykh
The decrees of God pass through the heavens.
- 557 Abū 'l-Shaykh
Wahy sounds like ringing to the angels and when they hear it, they think it is the Day of Resurrection.
- 558 al-Ṭabarānī, Ibn Mardawayh, Abū 'l-Shaykh and al-Bayhaqī
The decrees of God pass through the heavens and *wahy* sounds like ringing to the angels; when they hear it, they think it is the Day of Resurrection.
- 559 Abū Nu'aym
An angel on earth does not go up to heaven without saying 'There is no power or strength, save in God.'
- 560 al-Khaṭṭīb and al-Daylamī
An angel on earth does not go up to heaven without saying 'There is no power or strength, save in God.'
- 561 Abū 'l-Shaykh and Ibn 'Asākir
'Umar wished to punish a hypocrite, who performed the ritual prayers sitting down.
- 562 Abū 'l-Shaykh, al-Ḥakīm and al-Bayhaqī
Angels were created standing in ranks, kneeling and prostrating; an angelic prayer.
- 563 Abū 'l-Shaykh.
Angelic prayers.
- 564 Abū 'l-Shaykh
Angelic prayers.
- 565 Abū 'l-Shaykh
A description of each of the Seven Heavens and the forms of the angels.
- 566 al-Shāfi'ī
Adam performs the pilgrimage and is told by the angels that they have been performing it for 2000 years.

- 567 Saʿīd ibn Maṣṣūr, Ibn Abī Shayba and al-Bayhaqī
Angels are present with humans when they pray.
- 568 al-Bayhaqī
Angels are present with humans when they pray.
- 569 ʿAbd al-Razzāq and Saʿīd ibn Maṣṣūr
Angels are present with humans when they pray.
- 570 ʿAbd al-Razzāq
Angels are present with humans when they pray.
- 571 ʿAbd al-Razzāq
Angels are present with humans when they pray.
- 572 Aḥmad ibn ʿAbd al-Raḥmān ibn ʿĀmir
A Muslim sees angels praying in a mosque at dawn.
- 573 Saʿīd ibn Maṣṣūr and Ibn Abī Shayba
A Muslim sees angels praying in a mosque at dawn.
- 574 Saʿīd ibn Maṣṣūr and Ibn Abī Shayba
The angels dislike those who rested on the *qibla* after two prostrations during the dawn prayers.
- 575 al-Daylamī
God made the acceptance of *tawḥīd* incumbent on humans and angels.
- 576 al-Bayhaqī
Angels pray for humans for as long as they are prostrating.
- 577 Abū ʿUbayd
ʿUmar recited *Sūrat al-Fātiḥa* and said that it was the prayer that the angels said during the night.
- 578 Saʿīd ibn Maṣṣūr
Angels are present with humans when they pray.
- 579 al-Bayhaqī
Angels are present with humans when they pray during the night.
- 580 al-Daylamī
Angels are present with humans when they pray.
- 581 al-Rāfiʿī
A description of an unnamed angel with 1000 heads, each head with a 1000 faces (*etc.*)
- 582 Mālik, al-Bukhārī and Muslim
A house with idols is not entered by angels.

- 583 Mālik, Aḥmad, al-Tirmidhī and Ibn Mājah
A house with idols is not entered by angels.
- 584 Ibn Mājah
A house with idols and dogs is not entered by angels.
- 585 al-Baghawī, al-Ṭabarānī and Abū Nuʿaym.
Angels do not accompany travellers with bells.
- 586 Aḥmad, Muslim, Abū Dāʿūd and al-Tirmidhī
Angels do not accompany travellers with bells or a dog.
- 587 Aḥmad
Angels do not accompany riding beasts with bells or go into houses with bells.
- 588 Saʿīd ibn Maṣṣūr
Angels do not enter a house with urine in it.
- 589 al-Ṭabarānī
Angels do not enter a house with urine in it.
- 590 Ibn Abī Shayba
Angels do not enter a house with a tambourine in it.
- 591 Ibn Abī Shayba
Angels do not enter a house with a tambourine in it.
- 592 al-Ṭabarānī
Angels do not enter a house with someone who is in a state of *junub* or anointed with *khāluq* in it.
- 593 Aḥmad and Abū Dāʿūd
Angels do not attend the funerals of unbelievers, or those anointed with saffron or who are ritually impure.
- 594 al-Ṭabarānī
An angel does not come near a group that has severed the bonds of kinship.
- 595 Abū Dāʿūd, al-Nasāʾī and al-Ḥākim
Angels do not enter a house with someone who is in a state of *junub* in it, or if there is a dog or idols in it.
- 596 al-Nasāʾī
Angels do not accompany travellers who are carrying a cowbell.
- 597 Abū Dāʿūd
Angels do not accompany travellers who are carrying a cowbell.

- 598 al-Bayhaqī
Angels pray for individuals for as long as their tables are set.
- 599 al-Bukhārī, Muslim and al-Bayhaqī
Angels do not go near someone who has eaten garlic, onion or leek.
- 600 al-Bayhaqī
Angels are hurt by whatever hurts humans.
- 601 Saʿīd ibn Maṣṣūr
A person is told to wash the head of someone who has died with water and to sprinkle his bed with water.
- 602 Ibn Mandah
A man says a prayer before going to bed.
- 603 al-Tirmidhī, al-Ḥākim and al-Bayhaqī
An angelic prayer.
- 604 Aḥmad
The angels are proud of pious men.
- 605 Ibn ʿAsākir
Angels reward those who bless the prophet on Thursday and Friday nights.
- 606 Ibn ʿAsākir
Angels come to Damascus on Friday nights and pray for the sick.
- 607 al-Bayhaqī
Angels reward those who bless the prophet on Thursday and Friday nights.
- 608 al-Daylamī
Angels reward those who bless the prophet on Thursday and Friday nights.
- 609 Abū ʿl-Shaykh
Adam performs the pilgrimage and is told by the angels that they have been performing it for 2000 years.
- 610 Ibn Abī Shayba
When a specific prayer of supplication is used, 70,000 angels pray for the believer to be forgiven.
- 611 Ibn Abī Shayba and al-Kharāʾīfī
People are protected from the devils if they say different prayers; the angels comment that they have acted correctly.
- 612 Ibn Ṣaṣarī
People are protected from the devils if they say different prayers; the angels comment that they have acted correctly.

- 613 Ibn Mājah
People are protected from the devils if they say different prayers; the angels comment that they have acted correctly.
- 614 al-Bukhārī, Muslim, Abū Dā'ūd, al-Tirmidhī, al-Nasā'ī and Ibn Mājah
Whoever says 'Amen' after the imam, the angels say 'Amen' and the individual's sins are forgiven.
- 615 al-Nasā'ī and Ibn Mājah
Whoever says 'Amen' after the imam, the angels say 'Amen' and the individual's sins are forgiven.
- 616 °Abd al-Razzāq
Whoever says 'Amen' after the imam, the angels say 'Amen' and the individual's sins are forgiven.
- 617 °Abd al-Razzāq
Whoever says 'Amen' after the imam, the angels say 'Amen' and the individual's sins are forgiven.
- 618 Mālik, al-Bukhārī, Muslim, Abū Dā'ūd, al-Tirmidhī and al-Nasā'ī
Whoever says 'Amen' after the imam, the angels say 'Amen' and the individual's sins are forgiven.
- 619 Sa'īd ibn Maṣṣūr and Ibn Abī Shayba
The first rank is like a rank of angels
- 620 Muslim
The ranks of angels are crammed tight, one after the other.
- 621 Ibn °Asākir
The angels bless those who wear turbans on Fridays.
- 622 al-Ṭayālīsī
The angels stretch out their wings for those who seek knowledge.
- 623 al-Bayhaqī
The angels stretch out their wings for those who seek knowledge.
- 624 al-Ṭabarānī
The angels do not see any human entertainment except for betting and fighting.
- 625 al-Daylamī
The angels wear the *izār* when they are in the presence of God.
- 626 al-Ṭayālīsī and al-Bayhaqī
The angels were wearing turbans at the battles of Badr and Ḥunayn.
- 627 Ibn °Asākir
The angels wear turbans.

- 628 al-Ṭabarānī
The angels wear turbans.
- 629 Abū 'l-Shaykh
Concerning the creation of horses.
- 630 °Abd al-Razzāq, °Abd ibn Ḥamīd and Ibn Jarīr
The angels wore yellow turbans and rode black and white horses at the Battle of Badr.
- 631 al-Bayhaqī
When a believer is ill, two angels are responsible for the individual.
- 632 Mālik and al-Bayhaqī
When a believer is ill, two angels are responsible for the individual.
- 634 al-Ṭabarānī and Ibn al-Sunnī
When someone sneezes and says 'Lord of the Two Worlds', the angels bless the individual.
- 635 al-Bayhaqī
When someone sneezes and says 'Lord of the Two Worlds', the angels bless the individual.
- 636 al-Bukhārī
The angels come down to Earth in the clouds.
- 637 al-Ṭabarānī
Angels give people wisdom.
- 638 al-Bazzār and al-Bayhaqī
Angels give people wisdom.
- 639 Abū 'l-Faṭḥ al-Azdī
God listened to the prayers of Moses.
- 640 al-Kharā'itī
On the right hand side of the Throne is someone who calls out to the Seven Heavens.
- 641 Abū Nu°aym
If God loves a servant, He casts His love into the hearts of His angels; if God hates a servant, He casts His hate into the hearts of the angels.
- 642 al-Ṭabarānī
The angels bless the child of a slave-girl.

- 643 al-Ṭabarānī
When a daughter is born to a man, the angels bless the family and cover her in their wings.
- 644 Muḥammad ibn Naṣr, Abū Yaʿlāʾ, Ibn Ḥibbān and al-Ḥākim
When someone goes to bed, an angel comes to him and encourages him to do a good action as his last action of the day; a devil also comes to him and encourages him to do a bad action as his last action of the day. Whichever action the individual chooses, the respective angel or devil remains with him for the night. The same happens when the individual wakes in the morning.
- 645 Abū ʿl-Shaykh
When someone wakes up in the morning, an angel comes to him and encourages him to do a good action as his first action of the day; a devil also comes to him and encourages him to do a bad action as his first action of the day. Whichever action the individual chooses, the respective angel or devil remains with him for the day.
- 646 al-Ṭabarānī
The angels reward the saying of a particular prayer during the ritual prayers.
- 647 al-Ṭabarānī
The angels reward the saying of a particular prayer during the ritual prayers.
- 648 al-Ṭabarānī
The angels reward the saying of a particular prayer during the ritual prayers.
- 649 al-Bayhaqī
A man should not engage in trade or military leadership until he is able to do so.
- 650 al-Bayhaqī
When God hates a servant, God sends an angel to the individual to surround him with luxury.
- 651 al-Ṭabarānī and al-Bayhaqī
God puts believers to the test.
- 652 Ibn ʿAddī
The angels rejoice in believers who dye their hair green (i.e. with henna)
- 653 ʿAbd al-Razzāq and al-Bayhaqī
A devil comes to a man in human form and befriends him. An angel also comes to him in human form and befriends him. The devil recognises that the angel is an angel, but the man does not. The angel then kills the devil. The man and the angel then receive hospitality and the angel steals a silver bowl. The man says that he can not be a friend of someone who commits murder and steals. The angel then explains to the man that the other ‘human’ was a devil who wanted to kill him.

- 654 al-Bayhaqī and Ibn °Asākir
Concerning the creation of Adam and the protests of the angels.
- 655 al-Bayhaqī
The angels do not have names in heaven.
- 656 al-Ṭabarānī
Concerning the creation of Adam and the protests of the angels.
- 657 Ibn °Asākir
Concerning the creation of Adam and the protests of the angels.
- 658 al-Bukhārī and Muslim
Angels are ashamed of nudity.
- 659 al-Ṭabarānī
Angels bear witness to God in heaven.
- 660 al-Ṭabarānī
Angels led Solomon to making the correct legal judgments.
- 661 Aḥmad and Ibn Mājah
There is no servant that prays for the Prophet, without the angels praying for him.
- 662 al-Ṭabarānī, al-Ḥākim and al-Bayhaqī
The first to enter the Garden are martyrs and the angels will praise God for them.
- 663 Aḥmad
The first to enter the Garden are martyrs and the angels will praise God for them.
- 664 Ibn Mājah
The Prophet tells someone about the Gates of Heaven.
- 665 al-Ṭabarānī
The angels are proud of the Muslims during Ramaḍān.
- 666 Aḥmad, Muslim, al-Tirmidhī and al-Nasā'ī
Muḥammad berates a group for sitting down whilst praising God and tells them that Gabriel boasts about the Muslims in heaven.
- 667 al-Bazzār, Ibn Jarīr and al-Bayhaqī
On the Day of Resurrection, God will boast to his angels about his creations.
- 668 al-Daylamī
God boasts about humans to the angels.

- 669 Ibn Ḥibbān, al-Ḥākim and al-Bayhaqī
God boasts about humans to the angels.
- 670 Aḥmad and al-Ṭabarānī
God boasts about humans to the angels.
- 671 Ibn ʿAddī, Abū Nuʿaym and al-Bayhaqī
God boasts about humans and those that circumambulate the Kaʿba to the angels.
- 672 al-Khaṭṭīb
God boasts about humans and those that fight in His path to the angels; the angels pray for a human as he fights in God’s path.
- 673 Aḥmad
When a servant sleeps whilst prostrating, God boasts about him to the angels.
- 674 al-Bayhaqī
On the Night of Power, Gabriel comes down to Earth with a troop of angels who pray for all those who are praying and remembering God. When it is ʿĪd, God boasts about them to the angels.
- 675 al-Bayhaqī
On the Night of Power, Ridwān opens the Gates of Heaven and Mālik shuts the gates of Hell. Gabriel comes down to earth with a troop of angels and places a green flag on top of the Kaʿba. Gabriel has 600 wings.
- 676 al-Bayhaqī
The angels bless those who are performing the pilgrimage and embrace those who make the journey on foot.
- 677 Aḥmad
Angels curse people who make a sign to their brother with an iron object.
- 678 Ibn Jarīr, Ibn Abī Ḥātim and Abū ʿl-Shaykh
The angels were created on Wednesday, the jinn were created on Thursday and Adam was created on Friday.
- 679 Ibn Jarīr
A narrative concerning the creation of Adam.
- 680 Ibn Abī ʿl-Dunyā
A narrative concerning the creation of Adam.
- 681 Ibn Jarīr, Ibn Abī Ḥātim and Ibn ʿAsākir
When the Earth was created, it was spread out from the Kaʿba and the angels were the first to circumambulate it.

682 – 744 On the Circumambulation of the Holy House

- 682 al-Jindī
God sent an angel to circumambulate the Kaʿba.
- 683 al-Jindī
Adam is told by the angels that they had been circumambulating the Kaʿba for 2000 years.
- 684 al-Azraqī
Concerning the creation of Adam, the protestation of the angels and the building of the Kaʿba and the *bayt al-maʿmūr*.
- 685 al-Azraqī
There are fifteen houses of God, one in each of the seven heavens and earths and God’s house. They are all directly above each other.
- 686 al-Azraqī
Angels circumambulate the Kaʿba.
- 687 al-Azraqī
Adam is told to worship God in the Kaʿba, just as the angels worship God in the *bayt al-maʿmūr*.
- 688 al-Ṭabarānī
The angels performed the first circumambulation of the Kaʿba.
- 689 Ibn Abī Shayba and al-Bayhaqī
The angels performed the first circumambulation of the Kaʿba.
- 690 al-Azraqī
Muḥammad sees Gabriel wearing a green headband, which is covered by dust. Gabriel tells him that he has been prostrating at the *bayt al-maʿmūr* and the beating of the angels’ wings beat dust into the air.
- 691 Ibn Mājah
Angels curse those who sell faulty goods.
- 692 Abū Nuʿaym
Angels are with those who finish reciting the Qurʾān.
- 693 Ibn al-Sunnī
The angels curse those who pray in a name other than their own.
- 694 Ibn ʿAsākir
The angels curse those who give religious rulings, whilst knowing that a different ruling is the correct one.

- 695 al-Dāraqutnī
No place of prayer is without an angel: one on the left and one of the right of the person praying.
- 696 Abū ‘l-Ḥusayn ibn Bashrān and Ibn al-Najjār
An angel teaches the Qur’ān to whoever had intended to learnt it by heart, but who died before being able to do so.
- 697 Abū Ya‘lā
Concerning ‘Uthmān ibn ‘Affān.
- 698 Muḥammad ibn Naṣr
Angels are with anyone who recites the Qur’ān in the Ka‘ba
- 699 Aḥmad and al-Ṭabarānī
Eighty angels were sent down with the *Sura of the Cow*.
- 700 al-Ṭabarānī and al-Mardawayh
The *Sura of the Cow* was accompanied by angels.
- 701 al-Ḥakīm [al-Tirmidhī] and al-Bayhaqī
The *Sura of the Cow* was accompanied by angels.
- 702 Aḥmad, Muslim and al-Tirmidhī
God’s commands pass through the heavens and the jinn hear, but do not pay heed them
- 703 al-Bukhārī, al-Tirmidhī and Ibn Mājah
God’s commands pass through the heavens.
- 704 Muslim
Two angels receive the soul of the deceased.
- 705 Ibn ‘Asākir
A vision of an angel.
- 706 Abū ‘l-Shaykh
Angels do not listen to humans, except with the permission of God.
- 707 al-Ḥakīm al-Tirmidhī
The houses of believers light up for the angels.
- 708 al-Bayhaqī
Houses in which the Qur’ān is being recited look like stars to the angels.
- 709 Aḥmad and al-Tirmidhī
God came to Muḥammad in the most beautiful form.

- 710 al-Ṭabarānī
There is no house in a city without an angel standing over the lintel with its sword unsheathed to prevent the Anti-Christ entering the house.
- 711 Aḥmad, al-Bukhārī and Muslim
When a woman makes the midday-bed of her husband, angels help her.
- 712 Aḥmad, Muslim, Abū Dā'ūd, al-Tirmidhī, al-Nasā'ī and Ibn Mājah
When someone is in the presence of the deceased, the angels say 'Amen' to whatever prayers are said.
- 713 al-Daylamī
If someone finishes the Qur'ān, 60,000 angels pray for him.
- 714 Aḥmad, al-Bukhārī and Muslim
Cockerels crow when they see angels; donkeys bray when they see a devil.
- 715 al-Bazzār
Angels curse a Muslim who unsheathes his sword against another Muslim.
- 716 al-Bayhaqī
Angels pray for people performing the ritual prayers for the length of time that they remain praying.
- 717 al-Khaṭṭīb
Angels are present at the ritual prayers.
- 718 Aḥmad, al-Tirmidhī, Ibn Ḥibbān and al-Bayhaqī
Angels pray for someone who is fasting who comes into the presence of food.
- 719 Aḥmad, al-Bukhārī, Muslim, al-Nasā'ī and Ibn Mājah
Angels record who attends the mosque on Fridays.
- 720 Aḥmad, Abū Dā'ūd and al-Bayhaqī
Angels record who attends the mosque on Fridays.
- 721 Aḥmad, Abū Ya'cīn and al-Ṭabarānī
Angels record who attends the mosque on Fridays.
- 722 Abū 'l-Shaykh
Angels record who attends the mosque on Fridays.
- 723 al-Ḥasan ibn Sufyān, al-Bāwardī and al-Ṭabarānī
Angels call out to Muslims on the Day of *Fītr*.
- 724 al-Ṭabarānī
The angels rejoice at the passing of winter.
- 725 al-Shīrāzī
The angels prayed for Adam.

- 726 al-Dāraqūtnī and Ibn ʿAsākir
Gabriel and the angels prayed for Adam (on the day of the prostration to Adam) and Gabriel then understood the significance of Adam's role as God's *khalīf*.
- 727 al-Daylamī
Concerning the events of the Day of Resurrection.
- 728 Ibn Mājah
Angels pray for those who attend the Friday prayers.
- 729 Ibn al-Najjār
Angels sit on the tent pegs of tented mosques.
- 730 ʿAbd al-Razzāq and al-Bayhaqī
Angels sit on the tent pegs of tented mosques.
- 731 Ibn ʿAsākir
God has knowledge of the hidden.
- 732 Muḥammad ibn Naṣr al-Marwazī
A Muslim heard someone reciting a prayer; the Prophet told him that it was an angel.
- 733 Muḥammad ibn Naṣr
A Muslim heard someone reciting a prayer.
- 734 Aḥmad and al-Ṭabarānī
God's blessings on his creations pass through the heavens.
- 735 Ibn ʿAsākir and Abū Bakr al-Wāṣitī
A Muslim sees Gabriel, Michael and other angels praying in the Kaʿba.
- 736 al-Bayhaqī
During Ramaḍān, the angels circumambulate the Kaʿba.
- 737 Saʿīd ibn Maṣṣūr, Ibn al-Mundhir and al-Bayhaqī
The angels greet people on the Night of Power.
- 738 Saʿīd ibn Maṣṣūr and Ibn al-Mundhir
During the night, the angels pass over all the believers and pray for them.
- 739 Ibn al-Mundhir
Angels beat their wings in peace on the Night of Power.
- 740 Aḥmad
On the Night of Power and other days the angels on the earth are more numerous than the pebbles.

- 741 al-Daylamī
The angels perform the ritual prayers.
- 742 al-Ṭabarānī
Angels do not like a spirit of copper.
- 743 °Abd ibn Ḥamīd, Ibn Jarīr and Ibn Abī Ḥātim
An exegesis of Q 35:1; the angels have two, three or four wings.
- 744 Ibn al-Mundhir
The angels have two to twelve wings and they are feathered. Gabriel has six wings.

Appendix G

Images of Angels in Islamic Art

Angels in Islamic Art

Six images from Islamic Art have been included below, simply to give an idea of the standard forms of angelic iconography.

Miʿrājnāma [BNF Turc 190 fol unknown]

This is one of only a few images that show the huge size of the angel Gabriel. This image is taken from an account of Muḥammad's ascension (*miʿrāj*) and he is seated on Burāq.

Source: Colby, Frederick S., *The Subtleties of the Ascension: Early Mystical Sayings on Muḥammad's Heavenly Journey* (Louisville: Fons Vitae, 2006).

Album [TSMK Hazine 2154] fol. 61v

A picture of the angel, *al-Dīk*, one of the few purely zoomorphic angels; here the image is simply that of a cockerel. In the ḥadīth, *al-Dīk* is given more angelic attributes. One of these attributes is the cockerel's great size, which can be seen to some degree in this image, as it is a twice the size of Muḥammad. The cockerel is also associated with precious stones, which cannot be seen in this image.

Source: Ettinghausen, Richard, 'Persian Ascension Miniatures of the Fourteenth Century' in Richard Ettinghausen (ed. Myriam Rosen-Alayon), *Islamic Art and Archaeology: Collected Papers* (Berlin: Gebr. Mann Verlag, 1984) pp. 244 – 267; fig. (i), p. 247.

Al-Qazwīnī, *‘Ajā’ib al-makhlūqāt* [British Library Or. 47011 fol 38r]

There are a number of illustrated manuscripts of al-Qazwīnī’s *Kitāb ‘ajā’ib al-makhlūqāt*, which have a similar form for the angels. It is often difficult to distinguish between different angels and often the only means to tell the angels apart is by their place in the Arabic text.¹

Source: Jones, Dalu *et. al.* (eds.), *The Arts of Islam: Haywood Gallery 8th April – 4th July 1976* (London: Arts Council of Great Britain, 1976), p. 347

¹ For a discussion of these images, see Baidee, Julie A. D., *An Islamic Cosmography: The Illustrations of the Sarre Qazwīnī* (PhD. Thesis, University of Michigan, 1978).

Shāhnāma [Bibliothèque Nationale de France, MS Persan 490 fol 62r]

Persian images of angels tend to have more slender wings, as in this miniature. The angels are often depicted with their hair worn up, ornamented with pearls. Although Gabriel's hair is said to look 'like white pearls' (e.g. §50), there are no ḥadīth that actually suggest that the angels' hair were adorned with them. This is likely to be a reflection of contemporary dress.

Source: Bernus-Taylor, Marthe, *L'Etrange et le Merveilleux en terres d'Islam: Paris, musée du Louvre 23 avril – 23 juillet, 2001* (Paris : Editions de la Réunion des Musées Naionaux, 2001) p. 206.

Siyar-i Nabi [Louvre MAO 149] loose leaf

This image depicts Gabriel revealing Sura 8. Angels are often exactly the same size as the humans in the miniature, as can be seen here (as well as some of the images included in this small selection). This image also shows the angel with four wings, this is quite rare as angels are usually given two wings in Islamic art.

Source: Bernus-Taylor, *L'Etrange et le Merveilleux*, p. 284.

Rashīd al-Dīn, *Jāmiʿ al-Tawārīkh* [EUL Arabic MS 20 fol 22r]

Angels are very rarely depicted in a completely anthropomorphic form, this is one of only a few examples (another good example is from a *Siyār-i Nabī* [TSMK Hazine 1222 fol. 155r]).² The image follows the description of *al-Rūḥ* (identified with Gabriel) coming to Mary as a *basharan sawīyan*; cf. Q 19:17.

Disclaimer:

Ancient occult magic was never intended to replace orthodox religion, but rather to complement it in its quest for a deeper understanding of esoteric spirituality. Through the alchemy of prayer and meditation, an individual can be transformed into an enlightened or “awakened” state of awareness.

Several of the ancient meditation practices, magical techniques and Shengong exercises described herein are currently practiced within the secret societies throughout the world, including the People’s Republic of China. These esoteric techniques can be very powerful and may in some cases be too mentally and physically demanding for some individuals. The readers should therefore use their own discretion or consult a priest or mental health professional before engaging in these exercises and meditations.

The rituals used for spiritual protection and energetic destruction are still as powerful today as they were when first introduced in ancient China. The secret of their timelessness lies in the fact that the personal power of the Celestial Immortals, various Spirit Entities, and Demonic Beings never changes. Therefore, the author, the International Institute of Daoist Magic, and the publishers are neither liable or responsible to any person or entity with respect to any loss or damage caused, or alleged to be caused, directly or indirectly by reading or following the instructions for any condition, ritual, incantation, Hand Seal, or interpreting information provided in this text.

This book describes traditional methods of both ancient and modern forms of Chinese Mysticism (Daoist occult magic and sorcery), and is not intended to persuade the readers in any way, shape or form to believe in or practice sorcery. Any person attempting such rituals is doing so at his or her own risk.

Additionally, sometimes Daoist exercises and meditations require special herbal formulas, as well as the regulation of the individual’s diet (e.g., fasting) and living environment (solidarity). It is important to note that herbal prescriptions will vary according to the individual’s constitution, condition and specific goal, and must be treated accordingly only by a doctor or herbalist qualified to prescribe Chinese medical herbs. Each state in the U.S. has their own regulations and restrictions, therefore, it is advisable for the reader to consult their own state medical board for use of proper application and liabilities of the techniques described within this text.

THE SECRET TRAININGS OF DAOIST MAGICAL INCANTATIONS

INTRODUCTION TO TRAINING DAOIST MAGIC

Born from ancient Chinese shamanism, Daoist alchemy gradually evolved to encompass all levels of human experience, the mastery of which is commonly known today as Daoist Magic. Because magic links spirit with matter, the Daoists have always used magic as part of their tradition in all cultivation, alchemy, and healing practices. Thus, it is through the understanding and application of magical practices that the Daoist sorcerers embraced the three realms of matter, energy, and spirit, seeking to unite with the Dao by gathering and manipulating the subtle energies of nature.

Through the use of magic (i.e., spirit travel, dream interpretation, controlling the weather,

divination, healing, and conjuring or removing spirit entities), the ancient Daoist sorcerers were able to train the body's life-force to sense, manipulate, and control the energetic manifestations that govern within the physical world.

HISTORY OF DAOIST MAGIC

The Daoist magic commonly taught today in China, Taiwan, Vietnam, etc. originally developed from two separate branches of Chinese mysticism (Figure 1.1). The Yin branch of Daoist magic originated from ancient knowledge that was gathered and eventually written down by the philosophers of the Warring States Period (475-221 B.C.). These

Figure 1.1. Origin of Daoist Magic

Figure 1.2. The Four Pillars of ancient Daoist sorcery

individuals withdrew into the wilderness, forests, and mountains in order to meditate upon the Dao of nature and observe its infinite manifestations. Disciples of these Daoists practices sought after a more feminine, receptive energetic knowledge, which could only arise as the fruit of a passive and yielding attitude, developed through the observation and study of nature.

The Yang branch of Daoist magic originated from shamans and sorcerers who had entered ancient China from its northern and southern borders. These individuals later gathered together and were concentrated within the northeastern coastal regions of ancient China (especially within the states of Chi and Yen). These sorcerers were eventually given the name of “Wu” (magician or wizard) and were believed to have eventually taught the Yellow Emperor.

Eventually, the two different elements of nature study and Wu sorcery combined in order to form the Daoist “religion” of later times. The Wu sorcery that was not incorporated into religious Daoism eventually became associated with the most ancient practices of Chinese folk magic, which centered around the worship of the various powers of Heaven and Shang Di (the God Above).

In these early formative stages, both science and magic were indistinguishable. Even the early “royal society” found it difficult to distinguish between science and what we now call magic. For example, up until the 16th Century, science was commonly called “Natural Magic.”

Eventually, the title “Daoist Mystic,” referred to an individual who had mastered the physical, energetic, and spiritual components of the esoteric alchemical practices of Martial Arts (Jing to Qi), Medicine (Qi to Shen), Music (Shen to Wuji), and Magic (Wuji to Dao). The study of each of these specific disciplines formed the Four Pillars of ancient Daoist sorcery, enabling the mystic to enter into ever deeper and more subtle spiritual realms of enlightenment (Figure 1.2).

THREE BODIES, THREE BREATHS & THREE MINDS

In order to avoid the risk of losing any form of cultivated magical power or jeopardizing their ability to energetically manifest, the ancient Daoist sorcerers were taught to discipline their Three Bodies (i.e., the Physical Body, Energy Body and Spirit Body). This magical training included mastering the supernatural powers and manifestations that stemmed from the energetic and spiritual bodies surrounding their core-self (located deep inside their Taiji Pole).

This disciplined practice enabled the sorcerers to control their Three Bodies and fuse them with their Three Breaths. This physical, energetic, and spiritual fusion then become powerfully directed by their Three Minds (Figure 1.3).

Then, when the Daoist sorcerer spoke a magical incantation, it was directed by the Three Minds (i.e., Physical, Energetic, and Spiritual Mind), and initiated through magical Hand Seals and/or Star Stepping patterns, which were then activated through the sorcerer’s Three Bodies (i.e., Physical, Energetic, and Spiritual Body). The energetic combination of all Three Minds and all Three Bodies was then fused with the energetic combination of all Three Breaths (i.e., Physical, Energetic, and Spiritual Breath) in order to create true magical power (Figure 1.4).

Figure 1.3. The Ancient Daoist Understanding of Internal Harmony

Figure 1.4. The Three Minds and Three Bodies fuse with the Three Breaths in order to create true magical power

MIND SECRET, SPEECH SECRET, & BODY SECRET

In ancient China, Daoist magical practices were always initiated through the combined use of three secret training known as the Mind Secret (used to train the sorcerer’s Imagination, Sensation, Intention, and Attention), the Speech Secret (used to train Breath Incantations), and the Body Secret (used to train magical Hand Seals and Star Stepping). The mastery of these three disciplines gave the Daoist sorcerers the ability to enter the Three Realms (Heaven, Earth, and the Underworld) and obtain knowledge and experience that could assist them in their goal of obtaining immortality. The three secret magical practices are described as follows:

Figure 1.5. Training The Three Types of Posture

TRAINING THE MIND SECRET

The ancient Daoists taught that the mind functions on three different planes, simultaneously orienting within the physical, energetic, and spiritual worlds. Together, these three mental planes make up the mind of an individual. In this way the three layers of mind encase the individual’s Eternal Soul in physical, energetic and spiritual matrices. Therefore, in ancient China, training the mind was divided into three stages, training the physical mind, training the energetic mind and training the spiritual mind, described as follows (Figure 1.5):

- **Training the Physical Mind:** This type of mind training is based on training the sensory input, thoughts, and analytical patterns that direct the actions and movements of the body’s physical tissues. Focus is placed on cognitive reasoning and on acquiring data.
- **Training the Energetic Mind:** This type of mind training is based on training to respond to the

energetic perceptions received from the vibrational patterns which are themselves responsible for directing and influencing the Physical Mind. Focus is placed on strengthening psychic and energetic perception in order to perceive thoughts, feelings, images, and patterns.

- **Training the Spiritual Mind:** This type of mind training is based on perceiving spiritual interactions connected to the divine, affecting the Original Soul’s primary life purpose. Focus is placed on surrendering all thoughts, feelings, and images and dissolving into the Wuji.

YIN AND YANG DIVISIONS OF THE MIND

There are two divisions of the mind (Yin and Yang), each consisting of three different levels. The Yin part of the mind belongs to the energy of the Earth and is a more body-oriented type of mind. The Yang part of the mind belongs to the energy of Heaven and is a more consciousness-oriented type of mind. The three levels of the mind are described as follows (Figure 1.6).

1. The most superficial level of the mind exists within the individual's Will (Zhi) and Intention (Yi), and represents the mind's everyday functions (i.e., cognitive thinking). The Zhi is considered the "thinking body," while the Yi is considered the "thinking mind."
2. The middle level of the mind exists within the emotional and spiritual influences of the Seven Corporeal Souls (Po) and Three Ethereal Souls (Hun), and represents the moving and active aspects of the mind (e.g., body movements, reflexes, instincts, drives, and spirit projection - when accompanied by the Yuan Shen).
3. The deepest level of the mind exists within the Prenatal foundation of the Kidney's Jing and the Heart's Shen, and represents the original and primordial energetic and spiritual form of the "Original Mind" (Yuan Shen). The "Original Mind" is manifested throughout the body via the Yin and Yang energetic natures contained within the original Prenatal Elements of Fire and Water.

These different levels of energies create the body, as well as activate the mental, emotional and spiritual transitional states of the mind. All three levels of the mind are interactive and interdependent.

THE PRENATAL AND POSTNATAL MIND

The ancient Daoists considered the Heart the Emperor of all internal organs because it stores the individual's Shen (Spirit). The Shen was further divided into two components: the Prenatal Mind known as the Yuan Shen (the intuitive congenital spirit), and the Postnatal Mind known as the Shen Zhi (the analytical acquired spirit). These two aspects of the mind are described as follows (Figure 1.7):

- **The Prenatal Mind (Yuan Shen):** This congenital aspect of the mind is inherited from the Jing, Qi, and Shen of both parents and dominates the vital activities of all the major viscera, as well as the active functioning of the body's entire energetic organism and spiritual matrix.
- **The Postnatal Mind (Shen Zhi):** This acquired aspect of the mind is developed through interactions with people and the environment after

Energetic Divisions of Qi	Yin	Yang
Psychophysical Divisions	Di (Earth) Body Orientation	Tian (Heaven) Consciousness Orientation
Superficial Level of the Mind (Zhi and Yi)	Zhi (Will) Kidneys Thinking Body	Yi (Intention) Spleen Thinking Mind
Middle Level of the Mind (Hun and Po)	Po Lungs Corporeal Soul	Hun Liver Ethereal Soul
Deepest Level of the Mind (Yuan Shen)	Jing (Essence) Kidneys Water Qi	Shen (Spirit) Heart Fire Qi

Figure 1.6. Mental and Emotional Transitional States of the Mind

Figure 1.7. The Prenatal and Postnatal Mind

birth. It dominates thought and interaction, and it engages in unlimited mental activity.

INTERACTIONS OF YUAN SHEN AND SHEN ZHI

The Yuan Shen (Original Mind) and Shen Zhi (Acquired Mind) are interactive and interdependent. If the Shen Zhi is active and chattering (sometimes called the "monkey mind"), it is difficult for the Yuan Shen to convey its intuitive information.

According to ancient Daoist texts on energetic alchemy, the Shen Zhi is meant to be a servant of the Yuan Shen. However, it is the nature of the unenlightened mind to allow the Shen Zhi to become extremely stubborn, developing a chronic, suspicious demeanor. If the activity of the Shen

Zhi becomes too self-involved, it can become completely independent. As the Shen Zhi strives for control it inhibits the development of the Yuan Shen, causing disbelief and suspicion to dominate the individual's mind and override most intuitive perceptions.

Regulating the Mind is therefore needed to bring harmony between the analytical (Zhi) and intuitive (Yuan) aspects of the mind. In ancient Daoism there is a saying, "the mind must be led by a master; the Yuan Shen must be that master and must lead the Heart's Shen Zhi as One Mind."

THE FOUR SECRET POWERS OF THE MIND

In Daoist magic, "Training the Mind," refers to cultivating and releasing the magical power that can be harnessed through the proper application and fusion of four secret powers. These four secret powers are represented through the image of Four Celestial Animals: the Green Dragon, the White Tiger, the Red Phoenix, and the Black Turtle/Snake (Figure 1.8). In training the Mind Secret, the Four Celestial Animals are attributed to different magical powers and states of consciousness:

- **The Green Dragon:** This Celestial Animal represents the powers of Heaven, the Hun, Imagination, and Yang Qi.
- **The White Tiger:** This Celestial Animal represents the powers of Earth, the Po, Sensation, and Yin Qi.
- **The Red Phoenix:** This Celestial Animal represents the powers of Fire, the Shen, Intention, and Yang Qi.
- **The Black Turtle/Snake (Dark Warrior):** This Celestial Animal represents the powers of Water, the Zhi, Attention, and Yin Qi.

In Daoist magic, the fusion of all Four Celestial Animal powers is a prerequisite for creating the true magical power of manifestation. The magical energies of the Green Dragon and White Tiger must be combined in order to create and sustain the sorcerer's Energy Body. The magical energies of the Red Phoenix and Black Turtle/Snake must be combined in order to create and sustain the sorcerer's Spirit Body. The energies of both the Energy Body and Spirit Body must combine and fuse as one in order to create true magical power (Figure 1.9).

The Four Celestial Animals are manifestations

Figure 1.8. The Four Celestial Animals and their powers

of the divine energy radiating from the sorcerer's "Most Secret Name" (i.e., the sorcerer's spiritual name of power). The power of the sorcerer's Most Secret Name is used as a magical bridge in order to connect together the two realms of spirit and matter. It is imagined and kept as a Luminous Jewel, located deep inside the core center of the sorcerer's Lower Dantian, and it is utilized whenever he or she performs Breath Incantations, Magical Hand Seals, or Star Stepping patterns.

Language, Mythology and Energetic Geometry

The training of the Four Celestial Animals of the Mind Secret also involves three important magical disciplines: Language, Mythology, and Energetic Geometry. Through these three important disciplines, the Daoist sorcerer learns the secret "trigger" mechanisms needed in order to release and control powerful magic. In the context of magic, power is defined as the ability to produce a result (i.e., how long it takes to manifest something).

These three important magical disciplines are used to help focus the sorcerer's Will (Zhi). By gathering them together with Intention (Yi), the sorcerer is creating a magical universe that he or she can use to energetically effect the three realms.

Figure 1.9. The secret powers of the Four Celestial Animals are needed to create the power of true magic

The disciplines of Language, Mythology and Energetic Geometry are defined as follows:

- **Language:** This skill encompasses the use of magical words, their pronunciations, and the methods of combining them. This discipline is externally trained through the skill of speech (verbal expression) and internally trained thought processing. It is expressed and manifested into the external world via the sorcerer's Magical Incantations.
- **Mythology:** This skill encompasses the use of the myths and legends that deal with gods, demigods, heroes, and villains surrounding people, places, and things. This discipline is energetically trained through culture and tradition. Its effect is experienced within the world of matter externally through images (energetic symbols and icons) and internally through dreams (Archetypes, Dream Travel, and visionary work). Although some mythological correspondences will remain consistent, certain energetic aspects will greatly vary depending on the sorcerer's magical tradition.
- **Energetic Geometry:** This skill encompasses the use of the sacred mathematical formulas that deals with the relative properties and measurements of solids, surfaces, lines, points, and angles. This discipline is energetically trained through vision (external sight) and is released into the world of matter externally through magical forms (i.e., Body Postures, Hand Seals, and Star Stepping) and internally through images (energetic shapes). Each of the Four Celestial Animals corre-

sponds to one of the Four Directions. Each of the Four Directions acts as a secret door that opens onto a vast hallway of interconnected meanings (i.e., each direction corresponds to a certain time, season, polarity, planet, shape, color, sound, herb, stone, Element, number, etc.). In ancient Daoism, masters of Feng Shui and Divination were extremely skilled at recognizing the magical correspondences of Energetic Geometry.

FOUR WAYS TO AVOID LOSING MAGICAL POWER

When training esoteric magic, the ancient Daoists described four primary ways that a sorcerer could lose his or her power and weaken the ability to mentally manifest. These four ways are described as follows: Leaking Magical Power Through the Mouth, Leaking Magical Power Through Vision, Leaking Magical Power Through Geometry, and Leaking Magical Power Through Sex. Because the sorcerer's magical power can be lost through one or several of these four methods, it reveals two important things about their mental training:

- First, pertaining to each of these four methods, the sorcerer's magical power can be cultivated and conserved by certain disciplined means of magical training.
- Second, the skill of intentionally creating specific manifestations can be consciously expressed through each of these four methods.

Leaking Magical Power Through the Mouth

Magical power can leak out through the mouth via undisciplined external talking and internal thought. There are Three Filters used by

sorcerers in order to build the energetic power of speech and not lose the power of words. These three filters entail three specific questions that the sorcerer asks him or herself before speaking, described as follows:

- Is it necessary to say this, or should I remain silent?
- Is it truthful (authentic), and will it create energy in the direction of where I want to go?
- Is it kind to the listener and will it help them spiritually heal and grow, or will it close their spirit and harden their heart?

These three questions are designed to transform the sorcerer's conditioned programmed mind and alter the reactive habits of the sub-personalities working within the unconscious mind. Over time, the practice of these questions dismantles the sorcerer's masks and defense mechanisms, which are designed to mislead and deceive others for the sake of the sorcerer's ego identity. The sorcerer then has access to the infinite power of his or her divine self. As the sorcerer's Acquired Mind (Shen Zhi) eventually quiets its excessive chattering, the Original Spirit (Yuan Shen) begins to automatically take over as a spiritual observer, "truly listening to what the sorcerer is listening to."

Through mastering the Three Filters, eventually the power of the sorcerer's words become so powerful that when he or she speaks any form of magical Incantation, Spell, or Mantra, the power of the words are automatically brought into manifestation. This magical power eventually transfers over to nonverbal communication and becomes evident in the manifestations of the Magical Hand Seals and Star Stepping patterns.

Leaking Magical Power Through Vision

Magical power can leak out through vision via undisciplined external sight and internal dreams. One important technique used to assist the sorcerer in avoiding the loss of magical power through vision is to train in the skill of Visualization. Visualization is simply seeing or experiencing images within your mind. By using visualization to form a mental image, you can increase your energetic potential by a factor of ten. This type of mental training builds neuromuscular connec-

Figure 1.10. The Three Steps in Mental Visualization

tions that allows you to develop a spiritual and energetic foundation from which to progress.

There are three steps in achieving a successful visualization practice: Deep Relaxation through Qigong Meditations, Clarity of Visualization, and Physical Movement and Visualization (Figure 1.10). When practicing visualization skills, it is important to keep the following points in mind:

- **Begin External, Then Progress Internal:** Keep the image or symbol external during the initial phases of training. Then, as your perceptions become more refined, utilize the more subtle image of an internal psychic symbol.
- **Choose a Familiar Symbol:** The image or symbol that you choose for visualization practice should be easily identified by your mind (i.e., it should easily attract and hold your mind's attention).
- **Do Not Change Your Symbol:** Training every day using the same visualized symbol allows the mind to create a faster energetic patterning.
- **Picture the Image With Your Eyes Closed:** Clearly visualizing your symbol with your eyes closed allows the mind to create a faster energetic re-patterning. In order to obtain clarity of visualization and generate specific images using all five senses with clarity and control, visualize internally with your senses. When using your imagination, it is important to see, feel,

hear, taste, and smell the experience that you are creating. This should be performed to the degree that you are actually experiencing what your imagination is conjuring.

Be persistent and work towards a fullness of this internal experience. Generally, the mind will progress through five transitional stages when the sorcerer's clarity of visualization is being mastered. These five stages are described as follows:

1. **Unstable:** The mind's attention and focus constantly changes; it is unstable and wavering in both thought and feeling.
2. **Inattentive:** The mind's attention and focus becomes confused, unobservant, and inattentive to the original thought-intention.
3. **Occasionally Focused:** The mind's attention and focus begins to direct its attention, becoming occasionally focused.
4. **Focused:** The mind's attention and focus begins to gather into one spot; its attention is becoming clear and focused.
5. **Mastered:** The mind's attention and focus is completely controlled and clarity of visualization is mastered.

The sorcerer can also choose to use a combination of physical movements and visualization while in a deeply relaxed yet concentrated state. This can be accomplished by external visualization. One method of training is to imagine seeing yourself on your own mental movie screen, while analyzing and correcting your performance (movements and actions) towards a successful and powerful outcome. Visualize different types of movement patterns and interactions. During this type of active visualization training, if you detect an error in movement or action, mentally rewind and replay the event until the action or movement occurs perfectly.

Leaking Magical Power Through Geometry

Magical power can leak out through Energetic Geometry via exposure to external forms (postures) and internal images (shapes).

Leaking Magical Power Through Sex

Magical power can leak out through undisciplined sexuality via the loss of Essence (Jing), Energy (Qi) and Spirit (Shen).

TRAINING THE SPEECH SECRET

The ancient Chinese believed and taught that everything in the universe was made of sound. Sound waves not only affect matter, but also affect the consciousness as well; this is the purpose of using an Incantation in meditation or chanting. Therefore, Incantations were also used to develop such psycho-kinetic feats as weather control, teleportation, and levitation, and were also continuously chanted in order to create magical amulets or talismans used for protection against illness and evil.

In Daoist magic, Training the Speech refers to cultivating and releasing the magical power that can be harnessed through the proper application or breath and sound. When the spoken sound is released through Breath via magical incantations, a powerful spiritual interaction and energetic fusion involving the Brain (Kidney Water) and Heart (Heart Fire) occurs. It is therefore important for the sorcerer's Shen to consciously guide and direct the spoken sound, as the projected voice is a direct manifestation of the sorcerer's spirit and life-force energy.

THE THREE LEVELS OF BREATH

Through proper breath and mind control, a Daoist sorcerer is able to store Qi and Shen, similar to the way a storage battery contains electricity. Many of the powers attributed to advanced Qigong and Shengong practice are largely due to the hidden knowledge and esoteric understanding of how to utilize conserved Qi and Shen and later use it for specific purposes. The ancient Daoists understood that certain forms of breathing could enable him or her the ability to energize, empower, and increase latent psychic abilities.

In order to obtain the ultimate control and utilization of stored Qi and Shen, these ancient Chinese masters of esoteric knowledge divided the skill of breath into three levels: Training the Physical Breath, Training the Energetic Breath, and Training the Spiritual Breath. These three levels are described as follows (Figure 1.11):

- **Training the Physical Breath:** This type of breathing is based on training the physical motion of the body's respiratory patterns. Focus is placed on the interaction of the Lungs, diaphragm, and abdomen.
- **Training the Energetic Breath:** This type of breathing is based on training the energetic respiratory motion for ingesting and releasing the vibrational patterns of the Five Element sounds and colors.
- **Training the Spiritual Breath:** This type of breathing is based on training the spiritual respiratory motion for ingesting and releasing Divine light vibrating within the Wuji.

THE ENERGY OF THE BREATH (WIND)

The ancient Daoists considered the Wind (Feng) to be the first and primary element in commanding the influences of Nature upon the Earth. In nature, the energy of the moving Wind can be so gentle that it can cause subtle penetration of the body's tissues and cells. The energetic currents of the Wind flow like water, moving across the body's surface, circulating, and sometimes collecting into energetic pockets and then unpredictably moving on.

In Daoist magic, the energetic flow of the Human Wind (breath) establishes the foundation of the internal environmental climate. The energy of "Human Wind" is created by the combination of the sorcerer's Yi (Intention), Shen (Spirit), and Qi (Energy). The speed and direction of the energetic flow of the Human Wind is determined by the air flow created from high (Heart Fire) and low (Kidney Water) pressure regions.

CHINESE CHARACTERS FOR WIND

The ancient Chinese ideograph depicting the character for Wind, "Feng," is described as follows (Figure 1.12):

- The Chinese character that depicts the ideograph for "Feng" is composed of two images: The character on the outside, "Fan," represents Wind. The character on the inside, "Chong," represents worms or insects that are being carried off by the wind. Together, both characters are used to depict the power and sudden, or violent impulses of the Wind's potential to carry something into extreme behavior.

Figure 1.11. Training The Three Types of Breath

Figure 1.12. Chinese Characters for Wind "Feng"

THE WIND'S EFFECTS ON MATTER

The ancient Daoists considered the human body to be like that of an empty stalk or "reed," capable of vibrational resonance through energetic stimulation via the body's own internal emotional "Winds," as well as the breath (Figure 1.13). When the Wind blows hard (i.e., the sorcerer's projected Qi and Shen are strong), the intended individual's body will resonate and vibrate like a reed, expressing one or several of the seven various internal emotions through the seven external orifices.

In the Daoist Magic, the penetrating property of the sorcerer's breath is used like the Wind, act-

Figure 1.13. The ancient Daoists considered the human body to be like that of an empty stalk or "reed."

ing as the medium to carry the specific "Messages" and sound resonances of Breath Incantations throughout the individual's tissues. This is the foundational theory of Breath Incantations used in ancient China to invoke healing, treat disease, summon and dispatch spirit entities, and remove evil states from people, places, and things.

As the projected sound and breath penetrates a person, place, or thing, it carries with it the energetic "Messages" of the sorcerer's thoughts and intentions (Figure 1.14). The infinite space contained within the energetic matrix of the intended person, place, or thing will begin to vibrate like a reed, responding to the wind of the breath as it carries specific sounds into and through the physical structure.

EXHALING COLOR, SOUND, AND BREATH

In order to maximize power, the Daoist sorcerer can also use color in combination with Breath Incantations. When directed into the tissues of an individual's body, the projected Breath Incantation will cause the internal organ's cells to vibrate. This vibration creates more space, allowing the Qi of the exhaled color to immediately fill the energetic field surrounding the cells.

CONSONANTS AND VOWELS

Both consonants and vowels are necessary to form words of power. However, the vowels are the vitality of the words, whereas the consonants merely act as a template to limit and shape the Qi into a unique pattern. According to Daoist magic, vowels are Yang and represent the masculine creative force

Figure 1.14. Each exhaled sound and breath acts as the Wind, carrying the sorcerer's projected thoughts and images into an individual's tissues and cells"

of the Dao, which embodies everything, but is itself without form. Consonants are Yin and represent the formative feminine force of the Dao, which has no inherent creativity, but enables all creation.

Consonants are considered to be Yin and correspond to matter (which is energy that has been constrained and congealed). For the most part, consonants do not have power and cannot be extended or elongated with the voice without the support of a vowel. Even those consonants that are sustainable (i.e., F, L, M, N, R, S, V, and Z) involve either compressing the lips, pressing the tongue against the teeth or palate, or tightening the throat.

Only vowels (which are considered to be Yang and correspond to spirit) have power, and can be voiced with a fully opened throat, allowing the individual to vibrate unobstructed "like a reed." Vowel sounds (which is energy that is unrestricted) can be projected with considerable power, because the column of Qi released into the environment can be energetically rooted into the Lower Dantian and spiritually directed through the Yellow Court.

THREE TYPES OF PROJECTED SOUNDS

In ancient China, the physical body was considered the crucible in which the eternal elixir of life could be cultivated. It contains the life giving energy and acts like a capacitor storing and releasing different vibrational frequencies. These frequencies can be accessed and modulated through the use of Mantras.

Figure 1.15. The Three Main Types of Mantras

There are three main types of Mantras used to initiate cellular vibration: Descriptive Sound, Meaningless Sound, and Seed Sound, described as follows (Figure 1.15):

- **Descriptive Sound:** This type of Incantation is used for achieving specific desired goals. They can be utilized for healing or spiritual growth.
- **Meaningless Sound:** This type of Incantation is used for stimulating and awakening specific energy centers in the individual's body. It is generally a collection of sound phrases and can be utilized for healing or spiritual growth. For example, the specific Incantations commonly used in Qigong exercises are types of meaningless sound incantations.

When "Descriptive" and "Meaningless" Incantations are employed, the body's energy will continue to accumulate until the energy is used or otherwise discharged.

- **Seed Sound:** This type of Incantation is used for stimulating, awakening, and creating a permanent "standing wave" of energy within the tissue cells of the body, or within a specific energy center in the brain. Seed Sound Incantations are sound phrases used for creating a continuous type of specific energetic effect, which eventually will become a coherent and accessible type of energy.

PROJECTING SOUND VIBRATION

When resonant sound penetrates an individual's body, it causes massive chaotic vibrational patterns that disrupt the body's normal energetic flow. This energetic disruption can be used in order to soften and liquefy stagnant Qi, and this is the primary reason why patients are given healing sound therapy in Medical Qigong clinics.

Figure 1.16. Increasing Projected Sound Resonances with Focused Imagery

Since thoughts and emotions are strongly affected by sound, the body defends itself against outside vibrational signals by anticipating and setting up signals which cancel out external sound vibrations. Our ability to filter out these recognizable sounds, while allowing us to maintain our own thoughts and emotions can become a major barrier to the effects of surface vibrational patterns. As soon as the thoughts and emotions begin to intrude on the dominant beliefs or established emotional patterns in an individual's tissues, his or her body automatically identifies the invading signal and filters it out.

While the body can defend itself against rhythmic signals, the suppressed attitudes and emotions are defenseless against the random sounds of a chaotic resonance emitted from a Daoist sorcerer because it is unpredictable. The projected sound resonations simply go past the individual's vibrational defenses and soften all thoughts and emotions in the target frequency range.

TRAINING SOUND PROJECTION

When projecting sound, it is important for the sorcerer to visualize the sound waves penetrating and rippling through the focused item (water, solid matter, tissues, cells, etc.). This focused visualization, combined with a long exhalation during the released tone, allows for deeper penetration of the sound's resonance and is used to disperse stagnations. The following are two popular training exercises used by Daoist sorcerers for mastering the sound projection skill.

Figure 1.17. Training Sound Resonation Projection to Ring Different Bells

USING THE IMAGINATION TO INTENSIFY SOUND PROJECTION

When projecting a magical incantation via audible sound, the sorcerer can increase the intensity of the effect of the emitted sound vibration on the individual's internal organs by utilizing focused visualization. This is accomplished by sinking and rooting the mind into the internal organ area before projecting the sound, described as follows (Figure 1.16):

1. Begin by targeting a specific internal organ. Allow the mind to sink deep into the individual's tissues and imagine and feel your hands embracing the internal organ.
2. Allow your intention to fully envelop the internal organ, feel and experience its physical, energetic, and spiritual matrix.
3. Imagine holding the internal organ and begin to project sound deep into its center. Feel the internal organ vibrating from deep inside the center of the organ's tissues.
4. Imagine and feel any stagnation located within the internal organ's tissues separating, dissolving, and dispersing.

5. After emitting several sounds, immediately purge any dispersed Toxic Qi that was released from the internal organ's tissues.

SOUND PROJECTION EXERCISE #1

In ancient China, Daoist sorcerers would sometimes train sound projection skill by directing the sound into the surface of different size bells (Figure 1.17). Each projected sound would stimulate and ring a different metal bell, causing a different tone to be released from the surface of the bell, depending on the particular tone and pitch used (high, medium, or low).

SOUND PROJECTION EXERCISE #2

In ancient China, after a Daoist sorcerer had perfected the skills acquired from training the previous exercise, he or she would then begin to train in advanced sound projection skills. These advanced projection skills allowed the sorcerer the ability to focus the specific projected sound into the tissues or internal organ systems of the body. Each projected sound would stimulate and vibrate a different type of tissue and organ system, causing it to resonate throughout the entire body. This

allowed the Daoist sorcerer the ability to simultaneously project conscious intent into the cells and tissues of matter, affecting the individual's internal organ systems, channels, and tissues.

For example, one exercise used to practice this type of energetic sound projection was to focus on the specific tissues of the hand. To begin with, the sorcerer would focus his or her attention onto the left hand and begin to project sound, vibrating the specific tissues related to that particular internal organ. This particular Sound Projection exercise is described as follows (Figure 1.18):

- **The Skin:** Focus your attention on the skin tissue wrapping the external structure of the left hand. Using focused imagination and intention, as well as breath and Qi projection, exhale the "Shang" sound into the left hand and feel all of the external structures of the left hand's skin vibrate.
- **The Muscles:** Focus your attention on the muscle tissue existing underneath the tissue of the skin of the left hand. Imagine and feel the various muscles wrapping the internal structure of the bones and connecting to the skin of the left hand. Using focused imagination and intention, as well as breath and Qi projection, exhale the "Gong" sound into the left hand and feel all of the internal structure of the left hand's muscles vibrate.
- **The Tendons and Ligaments:** Focus your attention on the tendons, ligaments and inner fascia tissues existing within the various layers of skin, muscles, and bones of the left hand. Imagine and feel the various tendons, ligaments, and inner fascia tissues wrapping and extending throughout the internal structure of the bones and skin tissues of the left hand. Using focused imagination and intention, as well as breath and Qi projection, exhale the "Guo" sound into the left hand and feel all of the internal structures of the left hand's tendons, ligaments and inner fascia tissues vibrate.
- **The Blood Vessels:** Focus your attention on the structures of blood vessels existing within the various layers of skin, muscles, tendons, ligaments and inner fascia of the left hand. Imagine and feel the various tubular struc-

Figure 1.18. The advanced projection skills allowed the Daoist master the ability to focus the specific projected sound into the tissue systems of the body (Inspired from the original artwork of Wynn Kapit).

tures of the veins and arteries wrapping and extending throughout the internal structure of the skin, muscles, tendons, ligaments, and inner fascia of the left hand. Using focused imagination and intention, as well as breath and Qi projection, exhale the "Zheng" sound into the left hand and feel all of the internal structures of the left hand's blood vessels vibrate.

- **The Bones:** Focus your attention on the structures of bones existing underneath the various layers of skin, muscles, tendons, ligaments, inner fascia, and blood vessels of the left hand. Imagine and feel the various structures of the bones being wrapped by the internal structure of the skin, muscles, tendons, ligaments, inner fascia and blood vessels of the left hand. Using focused imagination and intention, as well as

Figure 1.19. Training Sound and Breath Projection into a Bowl of Water

breath and Qi projection, exhale the “Yu” sound into the left hand and feel all of the internal structures of the left hand’s bones vibrate.

SOUND PROJECTION EXERCISE #3

In ancient China, before being taught Breath Incantations, the Daoist sorcerers trained sound projection skills by focusing the projected breath and sound into a bowl of water (Figure 1.19). Each projected sound would be carried along with the sorcerer’s projected intention and breath, and would create different energetic patterns on the surface of the water, depending on the particular tone and pitch used (high, medium or low).

1. Begin by gathering the Qi of Divine Healing Light and Sound into the Lower Dantian.
2. Allow the Qi of Divine Healing Light and Sound to overflow the Lower Dantian and enter into the Middle Dantian, filling the chest area completely.
3. Direct the Qi of Divine Healing Light and Sound to overflow the Middle Dantian and enter into the throat area.
4. From the back of the throat, release the Qi of Divine Healing Light and Sound into the water, projecting it like a beam of condensed light. Simultaneously, imagine the body melting into the Earth to increase the depth of the tone projection.

5. Alternate from a pattern of straight exhaled tone projection to a chaotic pattern of exhaled tone projection. This chaotic, staccato resonance is a dynamic approach used for breaking-up and dispersing chronic or difficult Qi, Blood, and Body Fluid stagnations.

WORDS AND MAGIC

A word is the center of an idea, just as an idea is the center of a mental image. The mind subconsciously molds itself around the prevailing mental image or attitude, and then proceeds to draw from the outer world for material from which to build in accordance to the belief. Therefore in magic, words are considered to be living beings. A word’s meaning is its spirit, and its sound is its body. If you ignore either, you weaken its innate power.

The ancient Chinese worshiped the magical power of language, and the spoken word quickly became a powerful and influential part of early Daoist sorcery. The art of speaking “magic words” was once taken seriously in ancient China. The misuse of speech in general was regarded as an unfavorable display or misuse of one’s mind. Spoken words are invocations of ideas, and they represent and express the formulation of specific concepts, plans, and actions. They are symbols of ideas, to be imagined, pictured, and comprehended within the mind.

The ancient Chinese believed that it was the energy inherent in spiritual words of power that established the foundations of all creation (spiritual, energetic, and physical). The energetic manifestations of the spoken word can become a self-fulfilling prophecy, or an energetic reality when spoken with true conviction and intention.

In the Han Dynasty (206 B.C. - 220 A.D.), Invocations and Incantations (recited words or phrases of power) were usually performed in conjunction with secret Hand Seals (also called Mudras), magical rituals (e.g., Star Stepping and Big Dipper Pacing), or the use of Healing Talismans. All of these magical skills were used in order to increase the sorcerer's confidence in overcoming disease or combating Evil Spirits.

The proper use of words (or names) was considered extremely important to the Daoist sorcerer. In Daoist magic, a name or word is very significant. When correctly vibrated by the tongue (the Shen, or spiritual Fire of the Heart) and combined with the Will of the Kidneys, the vocalized Qi comes alive. The spoken word or name then embodies the identity, the very being, of what it signifies; and a resonance is established between the living name and the thing itself. By manipulating the name, the potential of the named thing is released upon the world, both in spiritual and energetic form. This spiritual and energetic form acts as a blueprint upon which the entire universe of space and time, energy, and matter is based.

When audibly initiating a form of suggestive influence over an individual and voicing a name or phrase out-loud (i.e., "heal"), the sorcerer's spirit (Shen) imitates the initial creative act of the Divine through the utilization of sound and breath (Qi) through intention (Yi) and will (Zhi). This is sometimes known as a "declaration." A declaration is speaking something into being that was not previously there and for which there is often little or no agreement in the surrounding environment. The power of a declaration is directly related to the integrity of the sorcerer that speaks it into being.

In ancient Daoist magic, sorcerers were taught that by speaking the proper name and magical summoning words, they could cause a spirit or deity to come forth. When used skillfully, names

and words of power can summon or dispatch, attract or disperse, heal or destroy. In ancient China, powerful incantations were known to invoke the presence of supreme deities, and were used to cure the deaf and blind, give speech back to the mute, give movement back to the paralyzed, revive the dead, save lives, or banish demons.

Because of the energetic nature of the words, the intonation and rhythm of an incantation was extremely important. The proper sound and pronunciation that must be recited in the incantation were often well guarded secrets, kept by the ancient Daoist. Incantations were sometimes also used as a form of hypnotic patterning, wherein the Daoist sorcerer used language and tones lowered into a slow, melodic rhythm, in order to induce trance. The most common linguistic pattern used in this type of trance incantation was sometimes called "verbal pacing." Verbal pacing is sometimes combined with audibly stating sensory experiences (i.e., "relax," -pause- "and allow your body to sink into a quiescent state of bliss," -pause- "now feel energetic waves carrying your consciousness deeper" -pause- etc.) in order to induce altered states.

MAGICAL NAMES, WORDS, AND PHRASES

There exist certain Words of Power that are able to alter the internal and external realities of those uttering them, and the power may rest in the very sounds of the words as much as their meanings. Many of such words are names, though the meanings may have been lost or forgotten. Very many magical tools require words to be inscribed upon them and/or said over them during their construction and/or use.

Knowing the complete and true name of an object, being, or process gives a sorcerer complete control over it. A name is considered to be the definition, energetic connection, and association with that item. Knowing the complete and true name of something or someone means that you have achieved a complete understanding of its or their true nature. This is why, in most ancient cultures, individuals are given "secret names," as well as "public names." It is also why the sharing of a secret name is such an act of trust (because the secret name is considered to be very close to, if not identical with, the person's true name).

Figure 1.20. The Internally Spoken Name and the Externally Spoken Name

In ancient China, Daoist sorcerers taught that there were two important aspects of any name, word, or phrase which must be considered before using any form of incantation. They are, the Internally Spoken Name and the Externally Spoken Name, described as follows (Figure 1.20):

- **The Internally Spoken Name:** This refers to the silent internal recitation of a name, word, or phrase that occurs within your thoughts or dreams.
- **The Externally Spoken Name:** This refers to the audible expression of a name, word, or phrase when externally vocalized (i.e., whispering or speaking out loud).

Each magical system, whether Daoist, Buddhist, Indian, or Christian, has its own hidden methods of vibrating names, words, and phrases. Because these techniques are jealously guarded secrets of magical power, they are kept hidden from the public and from individuals of lower rank in every religious order. However, the universal features of languages allow us to understand commonalities in the use of the magical vibration of names, words, and phrases.

THREE TYPES OF WORDS

There are three categories of words used to formulate sentence structure and phrases, Denotative Words, Connotative Words, and Words Beyond Verse, described as follows:

- **Denotative Words:** These are words that relate to the acquired analytical mind (Shen Zhi) of the waking state. They indicate something, and are based on the critical comparisons and analytical observations of data gathered and filtered through the five senses. Denotative Words correspond to the “outer-verse,” and relate to the World of Five Elements and action.

The outer-verse (conscious day to day experiences) is eventually absorbed within the

Inner-verse (the unconscious reflection of the day’s experience). Therefore, it is said that a “small outer-verse” exists within the inner-verse (i.e., you think or dream about what happened during the day).

- **Connotative Words:** These are words that relate to the congenital original mind (Yuan Shen) of the dream state. They are suggestive in their meaning and convey or express ideas through metaphors based on the experiences or influences of the unconscious mind. Connotative Words correspond to the “inner-verse,” and relate to the will (Zhi) and imagination (Hun).

Because your imagination energetically creates within your mind, the magical effects of a Mantra, Spell, or Incantation can be immediately experienced and felt in the inner-verse - which then creates action within the outer-verse.

- **Words Beyond Verse:** These are words that relate to the realm of magic and are commonly expressed in Mantras, spells, and incantations. They entail magical words and sounds relating to the creation, tonification, regulation, purgation, or destruction of something.

THE POWER OF WORDS

The magical spells and incantations used in Daoist Magic are initiated in order to influence events, objects, people, and physical phenomena by mystical, paranormal, or supernatural means. The Words of Power that a Daoist sorcerer utters to accomplish such magical spells and incantations are generally rooted in ancient sounds and syllables. These magical sounds and syllables are used in order to bind or release energy.

The best-known type of magical practice is the “spell,” defined as a ritualistic formula intended to bring about a specific effect. When a spell is spoken to create a positive manifestation over a

Figure 1.21. The best-known type of magical practice is the "spell," defined as a ritualistic formula intended to bring about a specific effect.

person, place or thing (i.e., invoke and/or confer praise, honor, and unconditional love), it is known as a "blessing." When a spell is spoken in order to create a negative manifestation over a person, place or thing (i.e., complain, criticize, or condemn) it is known as a "curse" (Figure 1.21).

Spells can be spoken, written, or physically constructed using a multitude of ingredients (i.e., stones, plants, talismans, etc.). The failure of a spell to work in the way that it was designed may be attributed to many causes, such as failure to follow the exact formula, general circumstances being un-conducive, or lack of magical ability.

Words of Power may be classified into five different categories that overlap in their definition and function. These five categories are: Words of Creation, Mantras and Incantations, Magical Passwords, Spells and Invocations, and Healing-Charms. Examples of each of these five intermingled categories are described as follows (Figure 1.22):

- **Words of Creation:** These are magical Words of Power that are used to bring forth creation, manifesting and materializing the sorcerer's thoughts and ideas into the world of matter.
- **Mantras:** These are magical Words of Power that are used for the purpose of affecting matter, energy, and spirit through the repetitive recitation of the secret names of various gods and supernatural beings.

Every Mantra spoken under the right circumstance creates some magical effect (either good or bad). A curse once uttered, for example, must eventually attach itself onto something (i.e., the person, place or thing that it was originally directed towards). If the curse is countered, it can be energetically turned back and directed towards the individual who originated the spell.

To the ancient Daoists, Mantras were believed "to enchain the power of the gods themselves." There was nothing that could resist their magical effect. These Words of Power were believed to be charged with the ability to provide either a blessing or a curse. At their bidding, the demons will enter a man or be cast out of him, and the only test of their efficacy is supplied by the unique powers of the Mantras themselves, since a stronger Mantra can neutralize a weaker Mantra.

The ancient Daoists believed that, in the hands of those who have the key to their true pronunciation, certain Mantras are capable of providing the sorcerer with special supernatural powers. Nothing was impossible for the sorcerers who knew how to use and apply these magical Words of Power.

One popular antidote used by a sorcerer to reverse a spell after it has begun its magical task (for example, the sorcerer suddenly develops a change

Figure 1.22. The Five Categories of Words

of heart), is to speak the Mantra backwards in order to reverse the spell. By pronouncing the same words of a spell backwards - the sorcerer can undo the energetic effects of any hastily spoken inauspicious Words of Power.

- **Magical Passwords:** These are magical "Words of Power" that are used to "open" or "close" energetic portals, and provide the sorcerer with safe passage through other spiritual dimensions (i.e., the Gates of the Underworld). In ancient China, it was believed that Daoist sorcerers could energetically constructed magical gateways, and use these Gateways in order to sojourn to every corner of the known world and beyond. It is said that because the knowledge of these magical portals could be used for both good as well as evil purposes, the Magical Passwords used in "Gatecraft" spells were jealously guarded. In certain Daoist traditions, the secret of constructing and utilizing these magical portals have become completely lost.

- **Spells and Invocations:** These are magical Words of Power that are used for conjuring up the spirits of the dead, exorcising demons, or for removing spells from off of the living.

Throughout China's ancient history, there are numerous examples of magical spells and incantations used for raising the various grades of spirits (i.e., from the ghost of a suicide to the innumerable company of demons). In each case, the effectiveness of the spell or incantation depends on the utterance of magical Words of Power (which are sometimes a combination of strange, manufactured tones).

When a Daoist sorcerer, turning to the four quarters, calls upon the names of the "Gods of the Four Directions" (Mo Li Hung, Mo Li Shou, Mo Li Chung, and Mo Li Hai), the summoned spirit gods will stand before him in human form to do his bidding. The Gods of the Four Directions can bestow onto the sorcerer the gift of invisibility, foreknowledge of the weather, knowledge of the raising and calming of storms, and the ability to understand the language of birds.

- **Healing Charms:** These are magical Words of Power that are used for healing.

NORMAL AND MAGICAL CONVERSATIONS

All conversations are based on the understanding of words, and in modern societies, speech is used to interact with others and exchange thoughts and beliefs. For the sake of simplicity, we can divide conversation into two basic categories: Normal Conversation and Magical Conversation.

In both Normal Conversation and Magical Conversation there is an exchange of information or ideas that has been constructed together based on the understanding of words, phrases, and vocabulary. The terminology, definitions, and expressions of these words specifically express the ideas of the individuals and their particular fields of expertise. These two categories can be described as follows:

- **Normal Conversation:** This category entails conversation used for Greeting and Grooming (surface conversations used in superficial greetings, and in saying good-bye), Finding Resources (conversations used for acquiring information and searching out possibilities), and Action (conversations used for making a recommendation, request, commitment, promise, or declaration).
- **Magical Conversation:** This category entails conversation used for Spells and Incantations, Invocations, Trance Induction, Healing, etc.

There is an ancient magical saying that states, "the sentences that we use are the ones we serve or live out." All sentences vary in power due to the syntax used to construct their verbal actions. In Daoist Magic, the Training the Speech Secret centers around the correct use of the magical power of words and their energetic definitions.

Figure 1.23. The Three Manifestations of Speech

For example, a Spell or “Invocative Phrase” is used in order to paint a “word picture” and invoke powerful feelings as well as gather energetic resources.

THE MANIFESTATIONS OF SPEECH

Speech can be further divided into three levels of energetic manifestation, depending on the integrity and De (Virtue) of the individual. These three levels are, Speech That Inaccurately Describes Reality, Speech That Accurately Describes Reality, and Speech That Creates and Causes Reality, described as follows (Figure 1.23):

- **Speech That Inaccurately Describes Reality:** These are words of deception, that misuse their function of conveying the truth. In this type of speech, the words that are used are inaccurate and incongruent, and are expressed through lying or misleading statements. When used in this manner, speech creates obstacles, and gives birth to deranged fantasies and disillusionions.
- **Speech That Accurately Describes Reality:** These are words of truth, that are accurate, exact, and complete in their description.
- **Speech That Creates and Causes Reality:** These magical words create. They cause the truth to manifest, and don’t depend or rely on the current reality, because they come from the infinite space of the Dao.

RHYME AND RHYTHM

Rhyme and rhythm are two important tools used to empower the magical incantation. In ancient China, rhymes were used as an important

tool for memory, allowing the disciples to retain the secret lineage information that was passed down orally from master to student. Many of the popular rituals still practiced today in China revolve around the recitation of some of these ancient rhymed chants and magical incantations.

Rhymes act as magical correspondences that energetically turn the lines of the spell back in onto itself, increasing its magical potency in an enchanting yet orderly fashion. Rhymes can also be used to unite and bind words of power together in a tightly formed energetic net, designed to capture whatever the sorcerer directs his or her attention onto.

The rhythm of an incantation or spell is its energetic meter. The number of characters (or words) used to construct the magical rhythm and tempo of the incantation will vary, depending on the sorcerer’s specific goal. The importance of an Incantation is manifested within its rhythm and overall vibration created, which is attributed to the specific magical powers contained within the sorcerer’s true self. The continuous recitation of an Incantation helps to induce an altered state of consciousness and can be utilized to commune with the Divine, to achieve a state of ecstasy, to summon psychic powers for esoteric energetic practices, to exorcise spirits or demons, or for healing purposes.

The chanting of an Incantation is sometimes practiced in continual cadence (with musical modulation), which creates a specific pattern of energy and power. When sounding an Incantation, the rhythm of the tone or phrase can be released either through fast or slow repetitions:

- **Fast Release:** When an Incantation is sounded

through fast release, it can generate an incredible amount of energy. The fast release is generally chosen to overcome inertia, disrupting a pathogenic uniform pattern that has become toxic to the individual. For example, shouting "No!" at someone in order to stop their energetic and physical patterns.

- **Slow Release:** When an Incantation is sounded through slow release, it can bring about a calm state of relaxation and peace. The slow release is generally chosen to sedate an active state of energetic agitation. For example, calmly speaking "relax" to someone in order to quiet and sedate their energetic and physical patterns.

Whenever composing an incantation needed to accompany a magical Hand Seal or Star Stepping pattern, the three guidelines below should be strictly followed:

- First, do not rush through the construction of the rhyme. Consider its magical purpose and energetic function and write its "life purpose" down on paper.
- Second, when composing the rhyme, consider any and all magical correspondences and word options that could apply to augment and empower its energetic construction.
- Third, devise the most lyrical rhyme that conveys the incantation's intention and "life purpose."

FOUR LEVELS OF SPEECH

The ancient Daoists believed that only when the Invocations or Incantations were spoken solemnly, through four levels of speech, would the vibrational essence of the magical sounds manifest and reveal their deepest secrets and powers. Each degree of speech transmits a different level of energetic "message," allowing for a deeper type of energetic manifestation. The four levels of speech are described as follows (Figure 1.24):

1. **Jing (Verbal) Speech:** This is considered the physical speech of the conscious mind. It is the expression of the "power of action," and focuses on specific activities such as past, present, or future exploits. It is the external, audible manifestation of phonemes (units of speech) that refers to, or is directed towards, physical, external sense objects through pronunciation, inflection and the melody of words. This type of

Figure 1.24. The Four Levels of Speech

speech is considered Jing (Essence) Speech, and it is released into the world through the mouth via the tongue and vocal cords.

2. **Qi (Mental) Speech:** This is considered the dreaming consciousness speech of the subconscious mind. It is the internal monologue and dialogue verbalized within one's mind. It is the expression of the "power of one's knowledge and wisdom." It is directed towards mental objects (objects of the inner senses) through the experiences and passions of the heart. It is considered the medium between the external verbal speech and the internal convictions of the single-minded speech. This type of speech is considered Qi (Energy) Speech, and it is released into the world through the nose via the breath.
3. **Shen (Single-Minded) Speech:** This is considered the speech of dreamless sleep, that occurs when the unconscious mind takes over. It is a perceptible but not particularized type of speech (not distinguishing between subject and object). It is the vehicle for the "power of desire and projected intentions," released through the concentration of Qi into a single-minded vision or "message." It is considered the medium between the mental speech and the divine speech. This type of speech is considered Shen (Spirit) Speech, and it is released into the world through the eyes via the spirit.
4. **Dao (Divine) Speech:** This is considered the speech of the super-conscious mind, composed of all three speeches (Jing, the speech of the conscious mind; Qi, the speech of the subconscious mind; and Shen, the speech of the unconscious mind). It is considered pure intention, expressed through the will of the Divine, flowing directly from the Wuji. It is beyond all objects,

motionless, external, internal, and peaceful. It is a speech that is telepathic, materializing directly from the individual's intuitive awareness, and it can only be perceived by those who are highly evolved spiritually.

Spoken or written words generate mental or internal dialogues which add patterned Qi to the words in order to energize the information. The Qi activates the words allowing them to become vital and "alive." The ancient Daoists believed that if you lose your ability to access the higher levels of speech, you distance yourself from the Heavenly Truth (Universal knowledge and wisdom) and Earthly Truth (Human understanding). This separation produces confusion, doubt, and cynicism, generating misconceptions and distortions of the "truth."

When treating individuals with the energetic art and skill of "Faith Projection" or "Divine Incantations," full spectrum speech (Jing, Qi, Shen, and Dao) must be utilized in order to transmit and convey all four levels of the Daoist Mystic's intention. When full spectrum speech is projected, it reaches into the four energetic receptive levels of an individual's listening ears (Jing, Qi, Shen, and Dao).

INCANTATIONS

An incantation is defined as the speaking of magical words, during a ritual (either as a hymn or prayer), in order to invoke or praise a deity, or with the intention of casting a spell on a person, place, or thing. The term derives its meaning from the Latin word "incantare," meaning "to chant (a magical spell) "upon," or "into" a person, place, or thing.

Magical Incantations are spoken spells. The ancient Daoists compared them to "a string of magical pearls." Each magical pearl (word) contains its own innate energetic form and meaning. The magical rhythm of the syllables, the repetition of certain consonants and vowels, and the rhymes that bind the ends of each line in a magical incantation reverberate the sorcerer's intention into the Three Worlds.

In all magical disciplines, incantations have certain similar qualities, for example:

- Many incantations have a strong reliance on performative language, including repetition, and formulaic composition.

- Most incantations are metrical in one of several poetic forms of the language in which they are written. Some use an unusual verse form of composition (i.e., incantations that are spoken or written in ordinary spoken language is somewhat rare).
- Almost all incantations invoke the aid of a divine or semi-divine being, or some other form of spirit entity.
- The "information packing" in an incantation is generally extremely tight. Sometimes the magical metaphors in an incantation are difficult to understand. This is because they are either designed to be deliberately meaningless, or because the sorcerer intended the metaphor to carry more semantic weight than usual.
- Many incantations contain nonsense words. These words may be mantras, "barbarous words," or strings of vowels or other non-linguistic sounds.
- Most incantations require some sort of physical action performed by the sorcerer in order for the magical power of the incantation to work. These actions may be described as part of the spell. In some instances, it is difficult to tell if the description of the actions is also to be incanted as part of the spell.

SOUND RESONANCE AND INCANTATIONS

The skill of reciting powerful Jue (Incantations or Mantras) is essential for the Hand Seals or Star Stepping to be functional in Daoist Magic. Incantations or Invocations are words charged with vibrational power. They have long been practiced as a secret esoteric tradition for conjuring and casting spells, and certain words of power were only taught to select disciples within the ancient Daoist sects.

An Incantation is a word, phrase, abstract musical tone or combination whereof that is used to emanate or initiate a spiritual and energetic message within the body's tissues. Each Incantation or Mantra has two important qualities: form and color. Similar to prayer, when an Incantation is continually chanted, it reprograms the individual's spirit, emotion, mind, and body. When spoken aloud for several minutes, an Incantation can vibrate silently in the mind and body of the individual for several

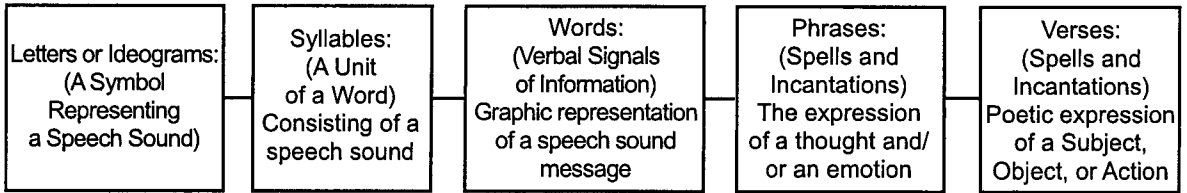

Figure 1.25. The energetic structure of a magical spell or incantation can be divided into five parts.

hours, carrying with it the imprinted message of the Incantation's vibration, image, and meaning.

Certain Incantations, when performed correctly with focused intent, are considered the manifestation of "sacred sounds," and they connect the individual with a particular deity or energy form. Other Incantations are designed to activate certain Dantians or Chakra areas and empower the sorcerer with specific energetic and spiritual powers. These types of Incantations can be sometimes harnessed in order to create or destroy. This skill was particularly used in secret Chinese internal martial arts societies.

Each Incantation contains a specific sound or collection of sounds that can vibrate the infinite space within matter, alter energetic patterns, and affect specific tissues within different parts of the body. The ancient Daoists viewed the mind as an energetic force that was not limited to only psychological interactions. All forms of creation or matter were believed to be nothing more than the manifestations of an individual's thoughts (projected consciousness) and energy. Therefore, every thought was believed to have a corresponding image or energetic form, and every image or energetic form was believed to have a corresponding vibrational tone or sound.

Through the released vibrational tones resonating from within the Incantation, the method of repetition used when sounding an Incantation aligns the sorcerer's consciousness with a particular energetic form. The repeated sound carries a specific type of energy that can be used for healing or protecting the cells, tissues, organs, body, mind, emotion or spirit of the individual.

It is important to note that certain Incantations do not have any specific comprehensive meaning (on the gross material plane). Their power is con-

Figure 1.26. Magical Words are used as powerful verbal signals of information.

tained not within the specific words themselves, but in the sound vibration created when the Mantra is uttered verbally or when it takes form in the mind.

THE STRUCTURE OF A SPELL OR INCANTATION

The energetic structure of a magical spell or incantation can be divided into five parts (Letters or Ideograms, Syllables, Words, Phrases and Verses). Each of the four sections contains a specific function, described as follows (Figure 1.25):

- **Letters and Ideograms:** In magic, letters and ideograms are considered to be the powerful magical symbols of a speech sound and form the basis of all talismans. All humans are affected by these symbols, which are created and further energized by speech.
- **Syllables:** In magic, syllables are considered to be small magical units of a speech sound.
- **Words:** In magic, words are used as powerful verbal signals of information. Words express

Figure 1.27. The Five Element Correspondences of Magical Phrases and Verses

the graphic representation of a speech sound message, and they are used to create, hide, reveal, regenerate and sustain, or destroy something (Figure 1.26).

- **Phrases:** In magic, phrases are used in the form of Mantras, Spells, Incantations, or Poems as the manner of expressing magical power. They consist of two or more grammatically related words that form a sense unit, expressing a thought and/or an emotional action.
- **Verses:** In magic, a verse is constructed of several phrases, and is expressed in the manner of a metrical (sometimes poetic) form of Mantra, Spell, or Incantation. The magical power of a verse is expressed through a subject, object and action.

THE FIVE ELEMENTAL CORRESPONDENCES TO A SPELL OR INCANTATION

All things existing within the physical realm can be attributed to one or several Elemental correspondences. Likewise, magical incantations (i.e., Magical Phrases and Verses) can be attributed to the specific powers and energetic manifestations of Wuji, Air, Fire, Water, and Earth, and can be described as follows (Figure 1.27):

- **Wuji:** Words corresponding to the infinite space of the Wuji magically open, awaken, ini-

tiate, create, or transform a person, place, or things energetic existence.

- **Air:** Words corresponding to the Air Element magically gather, nourish, and create a magnetic attraction towards a person, place, or things energetic existence.
- **Fire:** Words corresponding to the Fire Element magically quell, decrease (contract and shrink), consume, eat, obstruct, bind, stop, or destroy a person, place, or things energetic existence.
- **Water:** Words corresponding to the Water Element magically harmonize, protect, balance and pacify a person, place, or things energetic existence.
- **Earth:** Words corresponding to the Earth Element magically cause something to expand, increase, grow, multiply, and enhance a person, place, or things energetic existence.

THREE MAIN COMPONENTS OF AN INCANTATION

The ancient Daoists believed that everything in life is interconnected in energetic patterns, webbed together in universal order. In order to create the esoteric power of true magic, these ancient sorcerers consciously placed their Intention (Yi) in the central moment of "Now," allowing time and space to diffuse and internal Wisdom and Will to passionately create.

Just as there are three different levels in the universe (i.e., the spiritual, the material, and the energetic consciousness that moves between them), so too are there three components to a magical spell or incantation. These three components are the Prayer, the Means, and the Intention, described as follows:

- **The Prayer:** This magical component directs the sorcerer's consciousness towards a specific deity, God, or spirit entity for assistance. All magic depends on this divine spiritual force in order for it to be effective. Where there is no life, there is no spirit, and where there is no spirit, magic is impossible. Therefore, magical incantations almost always involve a prayer, invocation, offering, or some other form of intentional connection with a deity or other spiritual being. It is important to know that the principles of magic are universal, the main changes from one religion to another are generally the names of the divinities to whom the sorcerer directs his or her prayer.
- **The Means:** This magical component is used to actively manipulate physical symbols (i.e., various objects, words, letters, Elements, Trigram patterns, Hand Seal gestures, Star Stepping patterns, etc.) in order to make the idea manifest within time and space. This energetic pattern is based on the Law of Correspondence.

In Daoist sorcery, the Law of Correspondence relates all energetic patterns and universal connections. These magical laws characterize all things according to their energetic function, and they allow the sorcerer's magical tools, talismans, spells, and incantations to become operational and function within the material realm. They are the Means through which all magical protection and healing are initiated. For example, when practicing Mineral Magic, the sorcerer will use certain vibrant red stones in order to enhance his or her energetic connection with the Fire Element.

The fundamental idea in using the Law of Correspondence to create an incantation is to focus on the central theme of the magical spell, while creating numerous supporting and interlinking items to feed the spell (like the

Figure 1.28. The four magical components of a sorcerer's inner nature

many roots supporting a powerful tree). There is an ancient Daoist saying that states, "*The hub of a wheel is an empty hole, you can know it only by the spokes that surround it.*" Meaning, the specific words and symbols used within an incantation to express its idea are not the archetype itself. They are simply material manifestations, facets, aspects, or forms of a transcendent idea that exists in the spirit realm, beyond space and time. Just as there is a central reason behind every note of a musical composition and every color placed within a painting, so too is there a reason behind every ingredient placed within a magical Incantation and ritual.

- **The Intention:** This magical component unites the prayer with the means. It is the sorcerer's own intention (Yi) that must be impassioned enough to gather together and focus the energetic powers of the four magical components of his or her Prenatal Inner Spirit (Figure 1.28). It is also this inflamed Intention that strongly unites spirit with matter and makes the magical patterns of the Hand Seals and Star Stepping functional. The more emotion and focused intention that is applied to an incantation, the more powerful it becomes.

In order to become successful in using Hand Seals and Star Stepping, the ancient Daoists had to not only master the art of speaking magical words or “Words of Power,” but they also had to use their Intention (Yi) to master their Will (Zhi) in order to transform their thoughts and emotions (Shen) into magical energy (Ling Qi). This magical energy was then channelled outward and directed into the surrounding environment via the incantation and magical Hand Seal, affecting spirit, energy, and matter.

FIVE REQUISITES FOR INCANTATION TRAINING

When practicing Incantations, the sorcerer normally chooses to energetically link its specific magical function with a particular Hand Seal. In ancient Daoism, there were five disciplines needed in order to achieve significant energetic manifestation using Incantations. These five disciplines are Location, Time, Number, Focus, and Control, described as follows (Figure 1.29).

- **Location:** When sounding an Incantation, the sorcerer should stay in one location and not travel about. It is also encouraged that the sorcerer face the same direction, sit in the exact same place and use the exact same posture and Hand Seal each day.
- **Time:** When sounding an Incantation, the sorcerer should determine a specific time for practice. It is encouraged that the sorcerer meditate at the exact time every day (limiting training time to no more than five minutes when first beginning). To be effective, some Incantations need to be repeated for a certain number of days (i.e. 40 days).
- **Number:** When sounding an Incantation, the sorcerer should determine the number of repetitions he or she will be sounding (24, 36, 48, 72, 96 or 108). It is also encouraged that the sorcerer practice the same number each day.
- **Focus:** When sounding an Incantation, the sorcerer should focus his or her mind, imagination, and intention on the resonant vibration of the Incantation. Most Incantations also have complex visualizations or concentration techniques that the sorcerer is required to practice along with the recitation. It is also encouraged that the sorcerer maintain a serious, reverent

Figure 1.29. The Five Disciplines of Incantations needed in order to achieve energetic manifestation

attitude when imprinting the Incantation with the specific Hand Seal and magical application.

- **Control:** When sounding an Incantation, the sorcerer should maintain complete control of his or her sexual organs (a woman should not perform Incantations when she is menstruating). This is to ensure that as the spiritual energy of the Incantation builds up over the course of the training, and his or her Jing (Essence) is stimulated, the sorcerer is able to guide the transformation upward into the desired energetic or spiritual manifestation.

BREATH INCANTATIONS

In Daoist sorcery, it is taught that the reciting of any magical incantation must be spoken and imprinted with the sorcerer’s Vital Breath (originating from the Yellow Court), and in conjunction with the visualization of the related spirits entity summoned to reinforce the spell. This way of reciting magical incantations is known as a Breath Incantation.

Breath Incantations has always been an important part of the ancient Chinese system of Magical Skills used in Daoist Sorcery. In the 24 rank registers of the *Tradition of the Mighty Commonwealth of Zheng Yi*, there is even a book called, “The Ritual of the Breath Incantation.”

Because blood and breath bridge the realms of spirit and matter, they have always been perceived as powerful vehicles of magic by the ancient Dao-

ists. In fact, in ancient China, it was believed that the Vital Breath could be projected from the body, affecting people and objects to the degree that they could be energetically controlled or transformed. This energetic skill was known as "Breath Sorcery." When combined with the creative visualization of a specific deity (imagined and realized within one's mind), the Breath Sorcery would become so powerful that it could be used to restrict, control, or paralyze, and it was sometimes used to kill ghosts, evil spirits or demonic beings.

In ancient China, the famous Daoist sorcerer Zhao Ping used "Breath Sorcery" to charm streams so the degree that the water-level would suddenly drop as much as 20 feet. He was also known to use "Breath Sorcery" in order to light cooking fires on thatched roofs without setting fire to the building, prevent boiling water from scalding, and to prevent dogs from barking.

Since speech is older than writing, the use of spells and incantations is believed to be older than the uses of written charms and talismans. The energetic combination of an Incantation together with "Breath Sorcery," created an even more powerful tool known as a "Breath Incantation," which could be used to captivate and control the energy of an individual's spirit, mind, or body.

In ancient China, Daoist master Ge Hong of the Jin Dynasty (221-206 B.C.) wrote in the *Inner Book of the Master Who Embraces Simplicity* that in certain areas within the Wu and Yue province Breath Incantations were commonly used and have been quite effective. However, according to recent archaeological discoveries, the popularity of Breath Incantations also extended to the Chu and Shu kingdoms as well. According to master Ge Hong's records, Breath Incantations were widely practiced for the use of becoming immune to contagious diseases, curing diseases, dispelling demons, reversing the flow of water, and stopping tigers, leopards, snakes and poisonous bees.

Breath Incantations are able to alter an individual's energetic and spiritual field, intrinsically connecting the one who utters the incantation with the force or concept of its power. These words, sounds or phrases are believed to have accumulated enormous power through the investment of many

individuals having persistently practiced the Incantation over many thousands of years.

INTRODUCTION TO BREATH INCANTATIONS

The *Tai Yi Zheng Yi Book of Incantations for Dispelling Ghosts* states, "I have the vital breath of Heaven and Earth. As I recite the incantations, ghosts will be killed, wood will be broken, and the divine gods will fasten themselves; moreover, gold will melt, water will dry out, fire will extinguish itself, ghosts will kill themselves, ulcers will be cured, and poison will disappear. Supplications will stop, and curses will be worthless."

The ancient Daoists believed that if they recited certain incantations and mantras, celestial deities with strong magical powers would appear to them, and impart the incantation's secret meanings and esoteric powers that have been "hidden in Heaven." It was commonly taught that when a Daoist sorcerer recited certain incantations, thousands of millions of Celestial Warriors and Divine Generals would come to protect and to serve the sorcerer. As a result, throughout the various dynasties more and more incantations were added to the repertoire of Daoist mantra skills, which eventually became widely practiced.

INCANTATIONS IN RELIGIOUS DAOISM

According to the teachings of Religious Daoism, there can be no magical skills without the use of incantations. The most common incantations recited in religious Daoism are:

- Incantations for Setting Up the Altar
- Incantations for Purifying the Altar
- Incantations for Protecting the Altar
- Incantations for Protecting the Soul (when approaching the Altar)
- Incantations for Offering Petitions
- Incantations for Writing Talismans
- Incantations for Pacing the Big Dipper
- Incantations for Opening the Scriptures
- Incantations for Reading Scriptures.
- Incantations for Invoking Celestial Immortals
- Incantations for Invoking the Divine Generals
- Incantations for Invoking the Celestial Officers
- Incantations for Killing Ghosts
- Incantations for Controlling Devils and Arresting Demons

Additionally, the practice of reciting incantations have permeated into the daily life of the religious Daoists, even to the degree of reciting incantations when washing the hands, having meals, taking baths, having the hair cut, etc.

CHARACTERISTICS OF DAOIST INCANTATIONS

Magical incantations have always been an essential part of Chinese sorcery, originating from the ancient understanding of the magic power of words. Religious Daoism inherited and further developed the use of these ancient magical incantations, and also included certain Buddhist incantations into their magical "tool-box" for use in the spirit realm.

In Daoist incantations, there are certain "magical statements" that make the spells unique (i.e., ending the statement using imperial commands) and are different in design from Buddhist incantations (which employ the names of Buddha when recited). For example, in Daoist incantations there are often such terms as "in accordance with the statutes and ordinances," "quickly, quickly, as this is Law," or "the Supreme Sovereign, quickly, quickly, in accordance with the statutes and ordinances" added to the end of the incantation. The reason for this, is because during the Han Dynasty (206 B.C.-220 A.D.), the phrase "in accordance with the statutes and ordinances" was found in all imperial decrees and declarations of war. The phrase "in accordance with the statutes and ordinances" meant "to execute the orders like an imperial decree," which implied that if anyone disobeyed them, he or she will be seriously punished. Such official proclamations, used in state decrees, statutes and ordinances, were eventually adopted by the sorcerers of folk magic. Powerful witches and wizards all began incorporating the use of these imperial mandates into their magical incantations.

In the Eastern Han Dynasty (25 B.C.-220 A.D.), witches and wizards often applied "writs for dispelling evil" when performing magical rituals to "separate humans and ghosts," and to protect themselves from being hurt by ghosts at funerals. Such magical writs usually ended with the fixed expression "in accordance with the statutes and

ordinances." One simple pattern used as a magical write was "Dispel all of the spells in accordance with the statutes and ordinances."

At the end of some of the magical incantations there are such words as "act as regent," "imperial order," or "quickly" to show that the spirit entity must follow the orders of the incantation without delay. For example, when invoking the Divine Generals and Celestial Warriors to destroy evil, the Daoist sorcerer repeated the "Incantation for Opening the Flag," spoken as follows:

**"The Valiant General of the Five Thunders
and The Generals of the Fire Chariots
Soar Up to the Heavens
and Down to the Earth.**

**Drive Thunder and Clouds
Open the Flags to Quickly Invoke
the Thousands of Divine Warriors
and Command Them Without Delay.**

**Quickly, Quickly,
In Accordance With
the Statutes and Ordinances"**

This particular incantation addresses the Divine Generals of the Thunder Agency first, and then describes power of these great conquering generals. It also explains their duty and then opens the "Command Flag" in order to invoke them to come. It orders them to descend without delay, and ends with the fixed expression "Quickly, quickly, in accordance with the statutes and ordinances!"

In order to be effective, the energetic pattern of Daoist incantations focus their content on communicating with and summoning Celestial Deities, Divine Generals, etc. For example, the incantation can be used to address the Supreme Venerable Sovereign, the Jade Emperor of the Divine Heaven, or the Celestial Master. In this way, the titles of the revered spirits are addressed directly, and are spoken in order to invoke the Divine Generals for controlling evil spirits and devils.

The reciting of the religious Daoist incantations is closely related to the Daoist Pantheon, and it is believed that even those spirits of comparatively lower spiritual ranks can be controlled by

Figure 1.30. Incantation Training is Divided into Yang Sounds (Audible Toning) and Yin Sounds (Inaudible Toning)

the ritual masters, who directly address each of them by their names (this is done to show that the ritual masters has the ability to control the spirit). The incantations are orders to work these spirits, and in them the phrase “in accordance with the statutes and ordinances” is used in order to stress that these orders must be executed immediately, otherwise, the spirits will be punished.

FOUR TYPES OF BREATH INCANTATION

When practicing sound emission in the form of a Breath Incantation, the sorcerer can exhale the tone either audibly (Jing), sub-audibly (Qi), inaudibly (Shen), or “Transcended” (Wuji). The decision to use either audible, sub-audible, or inaudible Breath Incantations or to initiate transcended sound incantations will generally depend on the specific sound or phrase and the sorcerer’s intended goal (Figure 1.30).

AUDIBLE (JING) INCANTATIONS

When the Audible Incantation is released through loud chanting, it creates a strong vibration within the body, at the level of Jing and Qi. However, the more subtle the sound, the deeper its effect on the individual and his or her surrounding environment.

The audible released sound (externalized) allows the individual the ability to express, in gross material force, the energetic nature of the Incantation. The audible released sound can be further divided into Yin and Yang pronunciations: Vocalized (Yang) Sound and Nasalized (Yin) Sound:

- **Vocalized Incantation Sound (Yang):** This is a spoken or vocalized Incantation, using sounds or phrases
- **Nasalized Incantation Sound (Yin):** This is an inner cranial Incantation, using individual nasalized syllables

SUB-AUDIBLE (QI) INCANTATIONS

When practicing sub-audible Incantations, the Daoist sorcerer will softly speak the audible released sound (externalized) in a whispered voice, creating a subtle vibration within the body at the Qi and Shen level. This allows the mouth to move (still forming the sound or phrase) and the breath to release the Incantation’s energetic vibration.

INAUDIBLE (SHEN) INCANTATIONS

Incantations can also be internally and soundlessly toned. Silent chanting creates a subtle vibration within the body, at the level of Qi and Shen. When chanting an Incantation, there is a silent sound that proceeds the audible sound. The ancient Daoists believed that these subtle sounds comprise the energetic forces responsible for creating the Elements and allow for their ten thousand manifestations.

The inaudible released sound (internalized) allows the sorcerer the ability to initiate control over the focused item and its essence. The inaudible released sound can be further divided into Yin and Yang pronunciations: Mental (Yang) Sound and Telepathic (Yin) Sound.

- **Mentally Repeated Incantation (Yang):** This is a internal sounding Incantation, wherein the Incantation is repeated inside the sorcerer's Mind (Shen)
- **Telepathic Repeated Incantation (Yin):** This is a form of telepathic speech, in which only the sorcerer's Intention (Yi) and Willpower (Zhi) is conveyed.

The actual meditative writing of an Incantation or mantra (usually practiced through ancient Chinese calligraphy) was considered to be one of the most powerful conscious releases of energetic sound vibration. The skill of meditative Incantation writing required the ancient Daoist sorcerer to combine all three energetic approaches (Jing, Qi, and Shen) of the Incantation in order to impregnate the sound's vibrational resonance into the material substance of paper.

TRANSCENDED (WUJI) INCANTATIONS

This most secret type of Incantation is also internally and soundlessly toned. In this most advanced stage, the silent chanting creates a subtle vibration within the sorcerer's spirit body. This most subtle vibration allows the sorcerer to dissolve into the very essence of the Mantra's energetic matrix, and allows him or her to merge with the original source of sound and light. At this most subtle level, the sorcerer's Shen dissolves into the infinite space of the Wuji and fuses with the Dao.

When chanting this type of Transcended Incantation, the "listening" of the Mantra sound is experienced from the realm of existence, and total surrender is required in order to "realize and awaken" to this type of spiritual fusion. At this stage of transcended awareness, the sorcerer will also be sending and receiving, into his or her presence, the infinite sounds of everyone who has ever spoken that specific Mantra. The ancient Daoists believed that these most subtle transcended sounds comprise the energetic forces responsible for creating the infinite space of the Wuji.

BREATH INCANTATION TECHNIQUE

The human body is "made of dust" only in the sense that our material tissues are constructed from the various elements of the Earth. The shape of our souls, however, was determined by the ex-

Figure 1.31. Performing Breath Incantations

pressed "Word" in the vital breath of the Divine. When expressed through Breath Incantations, "Words" have the power to affect not only the mind of the hearer, but also inanimate objects as well, particularly if they represent archetypal, astrological, or divine forces or beings.

The efficacy of Breath Incantations is greatly magnified when they are uttered by a sorcerer who has been purified by prayer and ritual practices. The ancient Daoists believed that the virtue (De) inherent in the "Word" is augmented by the personal virtue of the individual's voicing it. It is important to note that magical virtue refers to the quality of concentration and purification of the will, and has little to do with virtue in the conventional sense of propriety. In this context, De, could also be understood as having few or no open loops (incomplete tasks, communications, or relationships). This gives the sorcerer a much greater degree of frequency coherence (everything in his or her physical, energetic and spiritual bodies is in agreement); then when he or she focuses, it is

much more concentrated and directly harmonized with the Dao.

The Breath Incantations preformed by Daoist sorcerers in China utilize the ancient Four Levels of Speech techniques. These Four Levels of Speech are spoken solemnly through focused intention and assist the sorcerers in influencing or controlling the thoughts and actions of individuals by means of psychic hypnotic influence. Through the use of positive commands or thoughts, subtle insinuations can be used to reprogram the individual's chronic detrimental beliefs and initiate healing.

In order to perform the Breath Incantation technique, the Daoist sorcerer will proceed as follows:

1. After performing the "One Through Ten Meditation" and the "Three Invocations," imagine that divine healing light is flowing through your Taiji Pole into the Lower Dantian (Figure 1.31).
2. Roll both of your eyes upwards into the Celestial Chamber as you begin to draw a specific talismanic symbol on the center of your upper pallet using your tongue. The upper pallet is the position of the Wood Element and is one of the Hun's access points through the Taiji Pole into the Celestial Chamber. The tongue represents the spiritual nature of the Heart's Shen and the desired projection of the Yuan Shen (Figure 1.32).
3. Inhale the energetic powers of Heaven Qi and Earth Qi through the nose to activate the energetic nature of the talismanic symbol located at the top of the mouth, on the middle of the upper pallet (Figure 1.33).
4. Swallow and bring this combined Qi down into your Yellow Court area and mix it with the combined energetic and spiritual natures of the Wu Jing Shen (Hun from the Liver, Shen from the Heart, Yi from the Spleen, Po from the Lungs, and Zhi from the Kidneys).
5. Bring the divine healing light up from your Lower Dantian through the Taiji Pole into the Yellow Court and combine it with the Qi of the Wu Jing Shen, Talismanic energy, and breath. Once these four energies have com-

Figure 1.32. For the Wood position, which is related to the Liver, the tongue is placed on the middle of the upper palate at the center of the roof of the mouth.

Examples of Various Symbols used for Breath Incantations

Figure 1.33. The energetic nature of the talismanic symbol (drawn with the tongue at the top of the mouth) is activated by the sorcerer's thought intention. Each energetic pattern has a specific meaning and type of power, and it can be accompanied by a Mudra used to activate that power.

bined, exhale them out the mouth with the intention of the projected sound or spoken word.

6. The projected sound or spoken word should include the energetic thought and spirit projection of your Jing (Verbal) Speech, Qi (Mental) Speech, Shen (Single-Minded) Speech, and Dao (Divine) Speech. This projected word should also be combined with the mystic's Hypnotic Influence (audible and thought projection), which is initiated by the voice, attitude, tone, words, mannerism, appearance, and demeanor.

USING BREATH INCANTATIONS FOR PROTECTION

There is an important relationship between sound, Qi, and creation. In the act of creation, (before anything manifests), there must first be the Divine Mind in which time, space, and energy exists as one single point. This dynamic convergence creates form. This is considered by the ancient Daoist sorcerers to be the "seed of creation."

Therefore, through the vehicle of the spoken word (or sound), the fusion of breath (Qi) impregnated with mind (Shen) brings sound.

There are several ways that a Breath Incantation can be used to protect the Daoist sorcerer. Two of the more popular techniques used to energetically and spiritually protect the physically body are Single Sound Breath Incantations and Multiple Sound Breath Incantations, described as follows:

SINGLE SOUND BREATH INCANTATION

One advanced way of spiritual protection is to fill the sorcerer's Wei Qi field with a particular divine incantation (sound or phrase), thereby allowing it to repel any and all incoming destructive negative energetic attacks. This technique especially works well against dark sorcery and psychic attacks coming from Spirit-Spell Incantations (incantations that summon and dispatch evil spirit entities to attack a victim). In ancient China, this technique was known as, "using the divine sound to combat a destructive sound."

- Begin by performing the 1-10 Meditation and Three Invocations (See Chinese Medical Qigong Therapy: Volume 3, Chapter 28). After performing the third invocation, focus the mind's attention on gathering the divine healing light into the Lower Dantian. Imagine and feel the divine light energizing your physical body, energetic body, and spiritual body. Hold this image until you feel all three bodies completely full of the divine healing light.
- Next, reconnect with the Divine and imagine creating an Energy Ball between both hands. Both hands are to be positioned facing each other, with the base of the palms roughly located at the same height as the middle of the chest, fingers pointing upwards (Figure 1.34).
- Create a talisman at the roof of the mouth with the tongue. As the tongue draws the talisman on the soft palate, begin to chant the mantra in your mind that you wish to use for generating divine power and sacred protection. It is important to have a powerful emotional connection to the specific Incantation or phrase used for spiritual protection. By emotionally focusing on the Incantation's specific

Figure 1.34. Direct the Lower Dantian Qi into the palm and imagine creating an energy ball of divine healing white light

energetic and spiritual powers, you ensure a powerful fusion of Qi and Shen.

- As you inhale, imagine divine light flowing in through the nose, stimulating and energizing the talisman (whose image is now drawn on the top of the mouth at the upper soft palate). While continuing to inhale, imagine pulling the energetic and spiritual power of the talisman into the chest, Heart, and Middle Dantian area.
- Begin to connect and fuse the energetic and spiritual powers of the specific Incantation with the energetic and spiritual powers of the Five Yin Organs, specifically the five Prenatal virtuous energies emanating from the Wu Jing Shen (i.e., compassion from the Hun and Liver, peace and order from the Yuan Shen and Heart, integrity from the Po and Lungs, trust and truthfulness from the Yi and Spleen, willpower and wisdom from the Zhi and Kidneys).
- After combining and fusing the spiritual and energetic power of the Incantation with the spiritual and energetic power of the Wu Jing Shen and five internal organs, focus your at-

Figure 1.35. Fill the Wei Qi field with a particular Incantation and allow it to repel any incoming destructive negative energy

tention on bringing the divine light up from the Lower Dantian into the Middle Dantian. Imagine and feel all of these energetic and spiritual powers combining and fusing within the area of your Yellow Court.

- Next, bring the Qi upwards from the Yellow Court into the back of the throat, and exhale this infused spiritual energy combined with the specific Incantation phrase or sacred sound into the energy ball between your hands. Audibly or Inaudibly speak the divine sacred sound as a Breath Incantation, and completely fill and empower the energy ball with the spiritual energy and power of the divine word.
- Focus your mind and intention on feeling the power of the Incantation vibrating between your hands. Imagine and feel the energetic and spiritual vibration becoming extremely bright and powerful. Then, raise the energy ball upwards in front of your Yintang (Third Eye area), releasing its light and power to expand outward, filling your three Wei Qi fields (Figure 1.35).

Figure 1.36. Imagine and feel the Physical, Energetic and Spiritual Bodies dissolving into the light and vibration of the Incantation, until all that inhabits the space of your three Wei Qi fields is the energetic light and sound of the divine vibration.

- Imagine and feel the divine light and power of the energy ball Incantation vibrating throughout your three Wei Qi fields, expanding light and sound vibration to the front, back, right, left, above, and beneath your body (protecting all six directions of space).
- Focus on your body being completely submerged and bathed in the vibrational resonance and power of this divine Incantation, until you feel the physical body slowly dissolve into this powerful energetic field of light and sound.
- Next, feel your energetic body dissolve into this energetic field. Then finally, feel your spiritual body dissolve until all that inhabits the space of your three Wei Qi fields is the energetic light and sound of the divine vibration (Figure 1.36).

MULTIPLE SOUND BREATH INCANTATION

Another variation used to counter Spirit-Spell Incantations is to encircle the divine incantation (sound or phrase) in several energetic spheres and

Figure 1.37. Fill the Wei Qi field with six energetic Breath Incantation orbs, allowing them to repel any incoming destructive negative energy

place them in six directions, surrounding the Daoist sorcerer's body. Each energetic orb resonates outward filling the sorcerer's Wei Qi field. Each of the energetic orbs will also resonate with the other energetic spheres, creating a multilayered reciprocal vibrational field. This multilevel energetic field allows the sorcerer the ability to be protected through the three Wei Qi fields and the six directions of space (Figure 1.37).

IMPRINTING WITH INCANTATIONS

Everything that exists in nature is a part of the energy and the consciousness that formed it. Matter can be regarded as an extension of consciousness, or as a particular form that consciousness has assumed. Therefore in order to learn to materialize (create, mold, form), or dematerialize (dissolve, disperse) Qi and Shen through Hand Seals or Star Stepping, it is important for the sorcerer to be able to create and imprint with magical words by first mastering the four primary properties of Qi. Once these are mastered, the sor-

cerer will then be able to excel in effecting and manipulating the energetic and spiritual levels of vibrational patterns and forms. This will enable the sorcerer to locate and materialize energy in order to strengthen deficient conditions or dematerialize energetic stagnations.

The Daoist sorcerer will use the power of words in order to energetically Create (design, manifest and bring into existence), Imprint (effect and influence), Feel (perceive, examine and ascertain), and Activate (energize, vitalize and animate its energetic function). These four energetic actions are known as the Four Functional Properties of Energy.

FOUR FUNCTIONAL PROPERTIES OF ENERGY

When molding and forming Qi, the ancient Daoist sorcerers would utilize the four energetic actions for mastering the four primary properties of Qi: Create (Chuangzao), Feel (Ganjue), Imprint (Mingli), and Activate (Shi Huodong); described as follows (Figure 1.38):

- **Create (Chuangzao) - Forming the Energetic Blueprint:** The word "Chuangzao" translates as "to create," and it describes the Creative property of Qi. It refers to the production of the energetic form, as well as to the forces and energy associated with it. It makes life itself and the phenomena of materialization and dematerialization possible. Within the body, the Creative property of Qi is responsible for the construction, maintenance, and re-configuration of the body (i.e., electrons, cells, tissues). When materializing Qi, the Creative property of Qi is used to construct the energetic form: its shape, size, and texture (color, sound, solid, liquid, vapor or light).
- **Feel (Ganjue) - The Sensate Property of Qi:** The word "Ganjue" translates as "to feel or sense," and it describes the aspect of "feeling" the energetic quality of the created item. It is considered the manifestation of the "sensory" aspect or property of the Created Qi, and refers to the tangible feeling of the energetic form or substance, as well as the specific forces and energy associated with it (hot, cold, heavy, light, etc.).

Figure 1.38. The Four Primary Properties of Qi

By mastering the Feeling aspect of Qi, the sorcerer can energetically dissolve into the Wuji and experience every cell or particle of material existence; or feel the ebb and flow of the subtle energetic fields that permeate an individual's physical body (by dissolving into the spiritual matrix that exists in-between the individual's energetic particles and cells). Ganjue makes the sorcerer's energetic feelings, sentiments, and sense experiences substantially real.

Within the body, the Feeling property of Qi makes it possible for an individual to enjoy the sensations of physical pleasure or suffer from physical pain. When materializing energy, the Feeling property of Qi allows the sorcerer to fully experience the quality of the subtle vibrations resonating within the energetic form that he or she has created. The energetic form will generally manifest through the Eight Energetic Touches (feeling hot, cold, heavy, light, expanded, contracted, vibrating, and spiralling).

- **Imprint (Mingli) - Tasking the Energetic Form:** The word "Mingli" translates as "to imprint," and it describes the energetic aspect

of imprinting and spiritually "inscribing" the sorcerer's intention into the energetic form. Mingli allows the energetic form to retain specific instructions and perform required tasks. Tasking is considered a type of encoding the energetic form, and it includes all energetic and spiritual forces associated with the thoughts, emotions, and intentions that have impregnated the created object (i.e., Tonify, Purge, Regulate, protect, destroy, bind, heal, etc.).

Imprinting makes the energetic construction of all thought forms and spiritual images possible. It is used after the sorcerer has shaped the energetic form through visualization. When recording images, it is the "Imprinting" quality of energy that helps the sorcerer to observe, memorize, and retain various shapes, sizes, and colors. Within the body, the Imprinting property of Qi makes it possible for every particle and cell of the body's tissues to become energized and strengthened, and to maintain a specific energetic structure.

- **Activate (Shi Huodong) - Awakening the Vibrational Property of Qi:** The term "Shi Huodong" translates as "to activate," and it is used as a term to describe the activity of formally "starting" the energetic and spiritual function of the Created object. The Activation of Qi makes the energetic movement and vibration possible. It is sometimes considered the awakening of the vibrational motion contained within the energetic form, as well as the specific powers (or forces of energy) associated with that awakening.

The Activation of Qi is used as the means for transporting the sorcerer's projected energetic field. Within the body, the Activating property of Qi is responsible for all activities, both conscious (walking, physical coordinations, and eye movements) and unconscious (the energetic function of the circulatory system, respiratory system, vascular system, nervous system digestive system, etc.).

CREATING, FEELING, IMPRINTING, AND ACTIVATING QI MEDITATION

The sorcerer should master the Four Primary properties of Qi by practicing Shengong exercises that use powerful visual images. When creating an "Energy Ball," for example, the sorcerer will utilize all Four primary properties of Qi, described as follows (Figure 1.39):

- **Create (Chuangzao):** The Creative property of Qi is used to construct the shape and size of the energy ball.
- **Feel (Ganjue):** The Feeling property of Qi allows the sorcerer to feel and acknowledge the energetic quality contained within the energy ball, (Hot, Cold, heavy, light, vibrating, spiralling, etc.).
- **Imprint (Mingli):** The Imprinting property of Qi allows the sorcerer the ability to impregnate the energy ball with a specific task or function (Tonify, Purge, Regulate, protect, destroy, bind, heal, etc.).
- **Activate (Shi Huodong):** The Activating property of Qi awakens the energy ball's vibrational movement, giving it life.

To assist the disciple in acquiring the skills needed for materializing Qi, the ancient Daoist masters would instruct the apprentice in "Imprinting and Feeling" Shengong meditations. The following is an example of an "Imprinting and Feeling" Shengong meditation:

1. **Create:** Begin from a seated posture, close your eyes and perform the "One Through Ten" meditation (see Chinese Medical Qigong Therapy: Volume 3, Chapter 28). Connect with the Divine and imagine pulling an energetic cord into your right palm from the Heavens. Feel the divine energetic cord mold into a powerful luminous ball. Imagine a luminous ball of white light energy molding into the size of a tennis ball. This type of imagery exercises the Creative property of Qi.
2. **Feel:** Feel the weight of luminous ball of white light energy in your hand. Feel it alive, electrical, hot, and vibrating; feel it rolling around in your palm like liquid mercury. This will train you in mastering the Feeling property of Qi.
3. **Imprint:** Now that you have created an ener-

Figure 1.39. The Four Primary Properties of Qi Used to Create an Energy Ball

getic form of thought, it can be imprinted with additional messages (tasked to perform specific functions like gathering Toxic Qi or rebuilding a diseased internal organ). The energy ball can be inserted into a specific internal organ inside a patient's body for Tonification or Purgation, or it can be used for long distance healing. You can also focus your mind on a patient who is suffering from a particular illness and send this ball of white light energy to cover the patient's entire body. The greater your ability to concentrate on the formation of this thought form, the stronger its therapeutic value. This type of creative imagery exercises the Imprinting property of Qi.

When utilizing this energetic modality for healing, it is important to realize that when divine light used to construct the energy ball, it will automatically fill the orb with healing light; this is considered the "Imprinting of the Divine's Creative property of Qi." This dynamic transformation initiated by the Divine Imprinting is necessary to alter the preexisting energetic pattern of the disease and change the patient's energetic fields.

4. **Activate:** Once the energy ball has been Created, its energetic power has been realized and felt, and its energetic form Imprinted with a specific "message," all that is left is to Activate its energetic function and give it life by giving it the mental command to begin.

THOUGHTS, FEELINGS & ENERGETIC IMPRINTING

Thoughts and feelings have power; they are created through "Mind" and have shape, form, and energy. Thoughts can be felt; they have weight and color, can be expressed through different variations of light and vibration, and can be perceived or "seen" by those who possess psychic sight.

Our thoughts and feelings are energies that we project into the environment. These thought forms (projected from the conscious or subconscious) can assume a variety of shapes and colors, and differ from one another in form, energy, and power. Desires and emotions in their energetic thought forms can either be positive (as in sending a healing prayer) or negative (as in sending a curse).

The Imprinting of all Daoist Magical Hand Seals, Star Stepping, Magical Tools, etc. is accomplished through the use of the Four Functional Properties of Energy. When utilizing the Four Functional Properties of Energy, the sorcerer must consider the purpose of the formed energetic object. It is important that the sorcerer understand the exact reason for which the energetic object was created and its specific function; keeping these ideas in mind as a basis for maintaining and refining its energetic materialization.

MATERIALIZING ENERGETIC MATTER

The key to mastering energetic materialization is in the sorcerer's ability to concentrate and mold energetic matter. To materialize or dematerialize an object, the sorcerer must first construct and energetically form it within his or her mind through undisturbed, intense concentration using the Creative and Feeling properties of Qi. The object must then be infused and charged with an energetic task (i.e., to tonify or disperse) with divine light, using the Imprinting property of Qi.

When an energy ball is Activated, it is then released or projected into an individual's tissues using the Activating property of Qi. For example, when an energy ball is created for the purpose of dissolving a tumor, the reaction within the tissues (once the energy ball is inserted), is considered the manifestation of the Activating property of Qi.

Every material form has its own vibratory pat-

Figure 1.40. The Five Energetic Fields

tern which regulates its existence. In order to manifest or alter a specific energetic form, it is necessary for the sorcerer to adjust his or her vibrational rate to correspond with the frequency of the energetic matter. This requires the sorcerer to sometimes raise or lower his or her vibrational rate in order to resonate with the energetic form, thereby maintaining its existence after it has been materialized (or erasing its existence after it has been dematerialized).

- **Raising the Vibrational Rate:** Raising the vibrational rate allows the energetic field to become more subtle, faster, stronger, and brighter. To begin with, the sorcerer must first relax his or her body and mind, and place his or her Yuan Shen into the infinite space of the Wuji. This allows the sorcerer to access the center of space and time. Next the sorcerer will focus his or her intention on leading the vibrational rate of the focused item's energetic field through an ascending, prenatal progression (Jing - Qi - Shen - Wuji - Dao). This Shen-gong training includes enveloping the item and fusing with the gross material object, while simultaneously guiding and leading it through the various realms of matter towards the upper energetic realms of Qi, ending at the more subtle spiritual realms of Shen (Figure 1.40). Once the energetic shift is experi-

enced, the sorcerer will then begin to work according to his or her initial purpose.

- **Lowering the Vibrational Rate:** Lowering the vibrational rate allows the energetic field to become more slower, pronounced, and to take on form. To begin with, the sorcerer must first relax his or her body and mind, and place his or her Yuan Shen into the infinite space of the Wuji. This allows the sorcerer to access the center of space and time. Next the sorcerer will focus his or her intention on leading the vibrational rate of the focused items energetic field through a descending, postnatal progression (Dao - Wuji - Shen - Qi - Jing). This Shen-gong training includes enveloping the item and fusing it with the upper, more subtle realms of Shen, while simultaneously guiding and leading it through the various energetic fields, to the slower realms of gross matter. Once the energetic shift is experienced, the sorcerer will then begin to work according to his or her initial purpose.

THREE TYPES OF CREATIVE ENERGETIC MATERIALIZATION

There are three types of creative energetic materialization: The Invisible and Tangible Energetic Form, The Visible but Intangible Energetic Form, and The Visible and Tangible Energetic Form (Figure 1.41).

Figure 1.41. Three Types of Creative Energetic Materialization

1. **The Invisible and Tangible Energetic Form:** This type of materialization involves the construction of solid but invisible substances. It has the greatest force and potential when working within the three dimensional world of matter. This type of materialization allows the sorcerer to disperse energetic stagnations and tonify deficient conditions that would normally require several months of conventional Western medical treatment.

In the Medical Qigong clinic, it is quite common for a patient to feel the doctor's hands moving inside his or her body, even though the doctor may be several feet away from the

patient. One example of Invisible and Tangible Energetic Form is the physical sensations felt within the patient's tissues when a Qigong doctor is using the "Invisible Needle" Technique.

Another example of Invisible and Tangible Energetic Form is experienced when a Qigong doctor purges grief from the patient's Lungs; the energetic composition of grief is invisible yet has a thick, slimy, tangible energetic form.

2. **The Visible but Intangible Energetic Form:** This type of materialization has no physical power to directly affect solid objects. One example of Visible but Intangible Energetic Forms are the energetic colors and visions that manifest within an individual's aura field, as well as specific energetic forms or spiritual entities that can surround an individual's body or living space.

Visible but Intangible Energetic Forms can sometimes be spiritual images projected by a sorcerer onto a individual's Subconscious

Mind. These energetic images can be used to assist an individual in spiritual transformations and emotional growth, as well as to provide him or her with support in times of need.

Another example of this type of materialization can be when a sorcerer is Soul Traveling (also known as astral projection). The sorcerer who is Soul Traveling can appear to someone in a ghostly form (like a mist) to give encouragement. Although the image may appear to be as solid as matter, it is possible to pass a hand completely through it.

3. **The Visible and Tangible Energetic Form:** This type of materialization is solid and visible and requires advanced training in order to master its skill.

When Soul Traveling, for example, a sorcerer can construct and materialize the image of a visible and tangible energetic form by simply lowering the vibrational rate of his or her Energy Body to such a degree that he or she can influence and move solid objects).

ENCHANTMENT

An Enchantment (sometimes known as Bewitchment) is the state of being under the hypnotic influence of a magical charm or incantation. An enchantment of a magical spell can be attached (generally on a relatively-permanent basis) to a specific person, place, or thing, so that it alters that thing's physical, energetic, and spiritual qualities. Sorcerers are frequently depicted as being able to seduce or control an individual by means of magical enchantments.

An enchantment with negative characteristics is usually referred to as a curse. Conversely, enchantments can also be spells used to deceive people, either by directly affecting their thoughts or by using some kind of projected illusion. Other forms of negative enchantments include deceiving people into believing that they have suffered a magical transformation (e.g., an energetic/spirit induced diseased state), or that the terrifying supernatural phenomena they are observing and/or experiencing is real.

An enchantment can also be used to manifest positive characteristics. It can shape and alter an individual's self-perceptions to the degree that they view the world in a "new," positive way. When the individual awakens from the trance state, he or she will then experience a new hope in life. This practice is seen in modern hypo-therapy.

TRANCE INDUCTION

A "trance" can be defined as "being lost in a state of mystical absorption." It is the by-product of coming under the hypnotic power of an Enchantment (known as Trance Induction) created from a magical charm, spell, or Incantation.

We are surrounded by an ocean of vibrations that are simultaneously resonating in different dimensions. When an Incantation is directed towards any person, place, or thing (and constantly repeated), the process of withdrawing the mind from the senses begins. As the focus of the mind continues to be directed onto the specific point of intention, both Qi and Shen gather. Once the process of sense withdrawal is complete, the sorcerer's mind can then hold on to and envelop

the item of his or her focused intention. The spiritual, energetic, and physical fields of the item can now be influence through the directed mental power of the sorcerer's cultivated Qi and Shen.

For centuries, ancient Daoists have believed that an individual could be influenced (both positively and negatively) through the utilization of a powerfully controlled Shen. This type of influence could either occur accidentally, or be directly initiated through focused intention. It entails the influencing or controlling of the thoughts and actions of an individual by means of a using an audible command, or through the subtle insinuation of the desired thought. These types of suggestive and psychic influences allows the sorcerer's conscious mind to initiate an effect upon the individual's subconscious mind and can be effectively used to re-patterning beliefs and actions.

In Daoist sorcery, there are generally three forms of psychic influence used to override an individuals defensive mechanisms, reprogram their belief, and initiate new energetic patterns; Audible Suggestive Influence, Thought Suggestive Influence and Hypnotic Suggestive Influence, described as follows:

AUDIBLE SUGGESTIVE INFLUENCE

This is considered the first level of psychic influence, and it is initiated by the sorcerer's voice, attitude, tone, words, mannerism, appearance, and demeanor. The individual's mind receives and accepts as truth the sorcerer's words and affirmations, and he or she then changes specific internal patterns, acting in accordance to the degree of his or her receptivity. The verbal suggestion is often necessary in order to initiate a deep impression on the subconscious mind and cause the individual to accept the new belief pattern. This type of audible suggestive influence becomes even more powerful and gains additional influence by having the individual repeat the audible affirmations or suggestions.

Traditionally, once the individual mastered the way of vibrating names, words, or phrases of power, he or she was then taught how to employ them in the use of the "commanding voice," which allows the "speaking intention" of Audible Suggestive Influence to be effective. The "command-

ing voice" is vibrated from the Lower Dantian in a deep forceful tone (either audible or inaudible) with an open throat. It affects the mind on the subconscious level (below the level of conscious thought) and can cause individuals to immediately react without understanding why. It is for this reason (the ability to implant thoughts and commands directly into another's subconscious mind) that the power of the commanding voice is kept from the general public, and given only to those life is devoted towards the divine and healing the suffering of humanity.

When initiating an Audible Suggestive Influence, it is important that the individual receiving the energetic input maintain a receptive state of mind for the interaction to be considered successful. In order to increase the potential for success, it is important that the sorcerer to constantly monitor the recipient's receptivity. Always focus and direct the mind's attention to initiate the specific repetitions of certain keywords that positively stimulate the recipient's conscious and subconscious mind. When initiating this type of auto-suggestion, there are three primary things that the sorcerer must monitor. These three things are the Recipient's Receptivity, Focused Attention, and Repetition, described as follows:

- **The Recipient's Receptivity:** When performing any type of Audible Suggestive Influence, it is imperative that the recipient maintain a quiet, relaxed, and peacefully receptive attitude. A certain percent of the effectiveness of this type of interaction depends on the degree of receptivity in the recipient's conscious and subconscious mind.
- **Focused Attention:** The recipient should be encouraged to give the sorcerer his or her undivided attention. A certain percent of the effectiveness of this type of interaction also depends on the degree of attention given by the recipient's conscious and subconscious mind.
- **Repetition:** The recipient should be encouraged to constantly repeat the sorcerer's suggestions. The constant repetition of various phrases in the form of suggestive "keywords" fastens the new energetic and spiritual pat-

tern firmly onto the recipient's conscious and subconscious Mind.

When initiating an Audible Suggestive Influence, it is important for the sorcerer to maintain a certain quiescent state of mind for the interaction to be considered successful. In order to increase the potential for success, it is important that the sorcerer to constantly monitor his or her own attitude, voice, and eyes, as well as express images in the form of "word pictures" in order to deepen the energetic and spiritual imprinting on the recipient's conscious and subconscious mind. These four points of attention are described as follows:

- **Attitude:** The sorcerer should pay attention to his or her attitude and have the recipient's best interest at heart ("people don't care what you know, until they know that you care").
- **Voice:** The sorcerer should pay attention to his or her voice and should be able to project feeling and sincerity into the expressed words. The sorcerer's Qi and Shen should permeate his or her tone to the degree that the recipient feels the words vibrating within their body and mind when the suggestion is being planted.

A softly spoken Mantra that maintains a particular rhythm can also be used in order to induce a hypnotic trance.

- **Eyes:** The sorcerer should pay attention to his or her gaze, and should look firmly yet compassionately through the recipient, seeing into his or her center core to communicate with the recipient's Soul. The focus of the sorcerer's eyes will allow for stronger concentration of thought, holding and maintaining the recipient's attention.

A common preliminary to hypnotic induction is the requirement for the recipient to fix his or her attention on a particular spot above eye level (sometimes the recipient was instructed to look upward into the dark celestial pool of a starry sky). This technique quickly has the effect of tiring the eyes and inducing a sensation of relaxation and sleepiness, which can easily be transformed into trance.

Additionally, a "flat" (featureless) environment can aide the sorcerer in quickly bring-

ing an individual into a trance state due to the lack of sensory stimuli.

The fixation of the gaze, the uninteresting environment, and the rhythm of the spoken mantra synchronized with rhythmic breathing all combine to become powerful tools for hypnotic induction.

- **Word Pictures:** The sorcerer should pay attention to his or her verbal descriptions when implanting autosuggestions. It is important that the recipient feel the desired condition with a mental picture of him or her living the outcome of the projected intention (e.g., being restored back to health).

THOUGHT SUGGESTIVE INFLUENCE

This is considered the second level of psychic influence, and it is initiated by the sorcerer's inaudible projected thought and intention. The stronger the sorcerer's Qi and Shen, the greater the result. These conscious and subconscious thought projections stemming from the sorcerer's mind can only be effective if the individual is open and receptive to the thought waves directed towards him or her. This type of thought suggestive influence becomes powerful and gains additional influence by having the sorcerer perform certain Hand Seals and magical rituals.

HYPNOTIC SUGGESTIVE INFLUENCE

This is considered the third level of psychic influence, and it is a combination of the first two suggestive influences. It is initiated through the sorcerer's focused Qi and Shen emission, whereby the individual is enveloped and "bathed" in a constant flow of thought intention. This type of hypnotic influence becomes even more powerful and gains additional influence over the recipient when the sorcerer performs Breath Incantations.

Hypnotic Suggestive Influence can also be used when speaking magical incantations, in order to fuse the sorcerer's mind and intention with that of a recipient. This is an energetic skill in which various repetitions of powerful incantations are initiated in the form of auto suggestions or affirmations, spoken by the sorcerer into the recipient's physical, energetic, and spiritual bodies.

In Hypnotic Suggestive Influence, the pro-

jected mental attitude of the sorcerer is energetically impressed into the individual's tissues via the sorcerer's words, attitude, tone, and demeanor. As the sorcerer begins to audibly and telepathically pour "thought intention" into the mind of the individual, a strong positive current of uplifting, strengthening and healing thought is created. The fusion of both minds (the sorcerer's and the recipient's) is directed towards a common purpose, producing a powerful conscious and subconscious healing pattern.

The "hypnotic suggestion" induced by the trance is the main tool that a sorcerer uses to reprogram the mind of an individual. A hypnotic suggestion is defined as a statement of explicit instruction given in trance to do or experience something (e.g., relax the body, feel the body sink, feel a specific area become numb, etc.).

There are four main trance states induced by "hypnotic suggestion" that an individual can experience. These four trance states are described as follows:

- **Light Trance:** In this state of trance, the eyes are closed, the facial muscles are relaxed, and the individual is breathing deeply.
- **Medium Trance:** In this state of trance, the eyes are closed, the facial muscles are relaxed, the head and body slump, the responses are slower, the breathing is deep, and the individual experiences a reduced awareness of their surround environment.
- **Deep Trance:** In this state of trance, the eyes are closed, the facial muscles are relaxed, the head and body slump, the responses are slower, there is a reduced awareness of the surround environment, and there is deeper abdominal breathing.
- **Somnambulism Trance:** In this state of trance, the individual experiences paralysis, loss of sensation, or catalepsy (i.e., rigidity, lack of response to stimuli, and mutism). During this trance state, the individual may experience sensations as if they are awake (similar to sleep walking). Consequently, when awakened the individual generally will not retain the hypnotic suggestion in either their conscious or unconscious memory.

Figure 1.42. The four stages used to lead an individual into trance

The conscious mind thinks quantitatively using words, numbers, logic, and sequential thinking. The unconscious mind uses images, memories, feelings, intuitions, dreams, and abstract non-sequential thinking. At increasingly deeper levels of trance, the individual becomes more open to his or her unconscious mind and more receptive the hypnotic suggestions planted by the sorcerer's intention or contained within the magical incantation.

When you dissociate from your feelings you enter into a trance state (e.g., day-dreaming is a form of Light Trance state). In Daoist magic, the hypnotic suggestions contained within certain magical incantations are used to cause an individual to dissociate from his or her conscious mind in order to reprogram the unconscious mind. At this state, the unconscious mind can be flooded with various sensory images in order to elicit a creative experience, resulting in either a positive or negative emotional response (e.g., traveling through space, standing in the center of a beautiful field of flowers; or suddenly being surrounded by aggressive snakes, insects, fire, ghosts, etc.).

Once the individual is in a state of hypnotic trance, the sorcerer will proceed to deepen the trance state. The deeper the trance state, the more successful the "imprinting" process of the hypnotic suggestion will be on the individual's unconscious mind. These imprinted suggestions are then transformed by the individual's unconscious mind and integrated as part of their own ideas or conscious will.

FOUR STAGES USED TO INDUCE TRANCE

Psychic influence is a term used to indicate when one individual's mind is directed towards purposely influencing another. Every individual's mental state is accompanied by certain vibrations that resonate on the energetic and spiritual planes. The plane of physical vibrations arising from the human brain and nervous system has energetic counterparts that manifest through the vibrational resonance of the energetic and spiritual planes.

The effect of an individual's psychic influence is initiated through the energetic principle of "induction," which manifests on all three planes (physical, energetic and spiritual). The principle of induction is described as "that inherent quality or attribute of energy by which the manifestation of energy tends to reproduce itself in a second object by setting up a corresponding vibration, even though there is no direct contact between the two objects." For example, the vibrational manifestation of heat generated in one object tends to induce the vibrational response of heat in other objects that are within its range of induction. Likewise, the vibrational resonance of light striking another object can render it capable of additionally radiating light; and through induction, a magnet can induce magnetism into a piece of steel suspended nearby, even though the two objects do not actually touch each other. In the same way, an object which carries an electromagnetic charge can induce electricity in another object situated some distance away.

In every form or manifestation of energy, including thoughts and emotions, we can see the principle of induction operating. It is commonly held that no individual is able to influence another person through induction unless the individual being influenced already possesses within him or herself a similar thought or emotion.

A sorcerer will use four stages of induction to lead an individual into trance, Eliciting a Response, Leading, Suggesting, and Trance. Each of these four stages are described as follows (Figure 1.42):

- **Eliciting a Response:** In magic, this refers to finding an energetic connection to the individual that emotionally links their mind and spirit with the sorcerer's will. This energetic connection can either be spoken (e.g., through Mantras, Spells, or Incantations) or written (e.g., through Talismans, Icons, Symbols, etc.).

Through eliciting a response, the sorcerer draws out something hidden from within the individual's unconscious mind. The extraction of this information can be subtle, yet it contains an important subconscious key that can be used to unlock the individual's unconscious mind.

- **Leading:** After eliciting an energetic response, the sorcerer builds on the energetic connec-

tion by leading the individual into a deeper trance state. In order to help the individual disassociate from the "normal" world of superficial relationships, the sorcerer issues a series of predictable response patterns. These energetic patterns are used to build trust in the sorcerer, and to develop control over the individual's will. For example, if the individual is sitting, the sorcerer will respond, "Now that you are sitting, you can relax yourself, and if you want - begin to feel your tissues getting heavy."

- **Suggestion:** After successfully leading the individual's Shen (thoughts and emotions), the idea is to take the individual into deeper trance states. This is accomplished through insisting or indicating a suggestion. The suggestion is introduced to the individual as the undertone of something (i.e., a feeling or recollection) associated in the individual's mind with a particular person, place, or thing. For example, "Feel the outside world slowly begin to fade away as you continue to listen to my voice."
- **Trance:** Once the individual enters into a deep trance, the sorcerer is now able to create an energetic link directly to and within the individual's unconscious mind.

TRAINING THE BODY SECRET

Training the Body refers to cultivating and releasing the magical power that can be harnessed through the proper application of the Body Posture Training (i.e., Lying, Sitting, and Standing Postures), Magical Hand Seal Training (i.e., Single and Double Hand Seal applications), and Star Stepping Training (Walking Posture applications).

In traditional Daoist magic, all Hand Seals are activated through the act of speaking incantations while secretly drawing a magical talisman with the tongue on the roof of the sorcerer's upper palate, and then exhaling the breath to "activate."

THE THREE TYPES OF POSTURE

In ancient China, training the posture was divided into three stages, training the physical posture, training the energetic posture, and training the spiritual posture, described as follows (Figure 1.43):

- **Training the Physical Posture:** This type of posture is based on training the structural integrity and alignment of the body's physical tissues. Focus is placed on the proper placement of the Bones, muscles, tendons, nervous system, internal organs and energetic systems.
- **Training the Energetic Posture:** This type of posture is based on training the energetic matrix which supports and moves the physical tissues of the body. Focus is placed on

Figure 1.43. Training The Three Types of Posture

strengthening the energetic fields, cavities and energetic casings (orbs) that create and support the body's physical structure.

- **Training the Spiritual Posture:** This type of posture is based on training the normally unconscious spiritual patterns that create the blueprint for the body's energetic matrix.

DAOIST MAGICAL HAND SEAL TRAINING

INTRODUCTION TO HAND SEALS

In Daoist magic, all Hand Seals are traditionally activated through the act of speaking incantations, while secretly drawing a magical talisman with the tongue on the roof of the sorcerer's upper palate. The Hand Seal represents the physical activation of "Earth" magic, energy internally moving from Essence (Jing) to Energy (Qi); the drawing of a magical talisman on the roof of the upper palate represents the spiritual activation of "Heaven" magic, energy moving from the Spirit (Shen) to the infinite space of the Dao (Wuji); and the exhaled Breath Incantation represents the energetic activation of "Man" magic, wherein the combined energies of Heaven and Earth move from internal thoughts, feelings, and intentions to external manifestation.

Because the Heart houses the Eternal Soul (located within the Taiji Pole), it contains the major energy field of the body. The secondary energy fields responsible for moving the body's energy are located within the hands and head. Therefore the heart (Man), hands (Earth) and head (Heaven) are all incorporated when constructing and implementing magical Hand Seals.

The energetic skill of the Hand Seal was one of the most secret of the Daoist esoteric practices of ancient China. They were respected as the key to the true magic which existed between the energetic and spiritual realms of Earth and Heaven. There are twelve types of alchemical transformations created from the proper magical application of Daoist Hand Seals:

1. **Purification:** These Hand Seals were used to remove toxic Qi and Shen
2. **Regulation:** These Hand Seals were used to balance and stabilize Yin and Yang
3. **Tonification:** These Hand Seals were used to Energize and strengthen Qi and Shen
4. **Rooting:** These Hand Seals were used to ground the body's Qi and Shen
5. **Meditation:** These Hand Seals were used to quiet the body's Qi and Shen, allowing the mystic to enter into the infinite space of the Wuji.

6. **Worship:** These Hand Seals were used to help the mystic energetically and spiritually connect with the Dao.
7. **Summon:** These Hand Seals were used to demanding or requesting the presence or service of a spirit entity
8. **Protection:** These Hand Seals were used to defend and ward-off harmful Qi and Shen, as well as evil spirits
9. **Binding:** These Hand Seals were used to stop, envelop, bind and restrain evil spirits
10. **Attacking:** These Hand Seals were used to striking, defeating and destroying evil spirits
11. **Imprisoning:** These Hand Seals were used to detain and confine evil spirits
12. **Sealing:** These Hand Seals were used to initiate energetic "closure" to a magical ritual

When applying any form of magical Hand Seal, in order for the energetic application to become effective, the Hand Seal must be activated through Breath Incantation. The magical incantation (directed by the Three Minds) must be applied with the proper Hand Seal (activated through the Three Bodies), and both powers of Mind and Body must fuse with the Ling Shen (Magical Spirit) of the Three Breaths in order to work (refer back to Figure 1.4).

TYPES OF HAND SEALS

Ancient Chinese sorcerers often used the finger gestures of specific Hand Seals in order to represent the energetic and spiritual functions of the universe, the mysteries of nature, the positions of space and the changes of time. According to the ancient *Book of Secret Correspondence*, "while making the various finger gestures of esoteric Hand Seals, the Daoist disciple feels the energetic form of the universe and knows that the transformations of all things are under his control. The contracted scene of the universe is visible on his hand."

The Daoist Hand Seals (called "Shou Jue") and Buddhist Mudras (called "Shou Yin") have been used in personal and communal rituals since the Southern Dynasty Period (420-588 A.D.) for the pur-

poses of exorcism, controlling spiritual entities, and healing diseases.

A Hand Seal or "Mudra" (Mudra is the Sanskrit word for "Seal" or "Gesture") is a specific hand posture used to form a specific symbol which serves to empower and enhance energetic and spiritual interactions and transformations. The primary meaning of a "Seal" implies stamping, marking, impressing or imprinting the engraving of a sign, image or text. Hand Seals were commonly used by both the ancient Daoist and Buddhist Qigong masters (Figure 1.44).

There are three types of magical hand seals used in Zheng Yi Daoist ceremonies: Fa Jue (Law Seals), Dou Jue (Star Seals), and Shen Jue (Spirit Seals). The skill of the Hand Seal also involves the use of both Single-Handed Finger Gestures (Dan Jue) and Double-Handed Finger Gestures (Shuang Jue).

The Zheng Yi Daoist systems have collected and used at least 70 different types of magical Hand Seals. Some of these magical seals include the famous Left and Right Thunder Block Hand Seal, the Big Golden Light Double Hand Seal, the Binding Collar Double Hand Seal, the Immortal Sword Single Hand Seal, etc.

Beginning students were generally taught simple Single and Double-Handed Seals first. This allowed the student to focus his or her mind's intention on manifesting and controlling specific forms of energetic and spiritual states.

Once the Daoist student had mastered gathering, embodying and projecting the elemental realms of the Bagua powers, he or she was then allowed to progress further into the more advanced Single and Double-Handed Hand Seals.

SPECIFIC FUNCTIONS OF THE HAND SEALS

The Single Hand Seal was commonly used in developing certain energetic powers, and for spiritual exorcisms. When performing spiritual exorcisms and other forms of Daoist rituals, the Single Hand Seals were generally created with the Daoist's left hand, while his or her right hand was used in order to conjure and control specific spirit deities (Figure 1.45).

The energetic finger formations of specific Hand Seals were used in combination with fo-

Figure 1.45. In the "Three Fans Technique," the "Second Fan" moves towards the right in order to create the "Auspicious Qi."

cused intention and were sometimes combined with incantations in order to receive and transmit ancient shamanistic energetic skills.

Hand Seals were also associated with protection from disasters. The Daoist classic *Tianhuang Zhidao Taiqing Yuce* (the Jade Volume of Great Clarity on the Utmost Way of the Heavenly Sovereign), compiled in the early Ming Dynasty (in 1444 A.D.) with a preface by the royal Ming prince Zhu Quan, states, "Hand Seals (Twist Signs) are used to communicate with the perfected Dao; summon protective celestial generals; control, exorcise, or destroy demons and malicious spirits; and affect the healing of disease."

The use of pseudo-Sanskrit seed words or phrases, and the complicated two-handed Hand Seals became very popular among the Daoists during the Tang (618-907 A.D.) and early Song Dynasties (960-1279 A.D.). Many of the energetic practices of Tantric Buddhism were integrated in the rapidly developing "Thunder Magic" techniques popularized by the Mao Shan Daoists during the mid-Song period in China.

The skill needed for the "divination of thunder" was already well established in ancient China by the Han Dynasty (206 B.C.-220 A.D.). During this time period, the ancient Daoist magicians were famous for their ability to summon thunder, rain and lightning. It is believed that the "Thunder Magic" techniques were developed by the ancient Mao Shan Daoists in order to harness both the benevolent and destructive power of thunder, thereby acquiring the ability to access and utilize the power of Heavenly Fire (lightning) needed to counter the effects of black magic, expel demons and destroy demons; the power of Heavenly Water (rain) was used to bring relief in times of drought.

When performing the various Single and Double Hand Seals, it is important for the Daoist disciple to pay strict attention to the flexibility of his or her wrist and fingers. All of the joints of the bones of the wrists and fingers should rotate smoothly, and the finger transitional movements of the various Hand Seals should be evenly connected. The mind should be focused on imagin-

ing and feeling the body's internal Qi creating or embodying the specific power and force of the energetic form that the Hand Seal represents. It is also important that, within this divine state of mind, the disciple take advantage of the infinite power placed at his or her disposal and therefore use the various Hand Seals with complete confidence and belief in the outcome.

Traditionally, a Daoists priest will make the appropriate finger gestures of specific Hand Seals, when he or she is performing the following rituals:

- Reading Daoist scriptures
- Reciting Incantations
- Pacing the Big Dipper
- Setting up the Altars
- Invoking the Celestial Martial Generals
- Practicing Vital Breath Incantations
- Arresting evil spirits
- Curing Illnesses
- Praying for Happiness
- Offering Sacrifices to Avoid Disasters
- Offering Sacrifices to Dispel Evil Spirits

The ancient Daoist text, *The Supreme Essential Secret of General Perfection to Help the Empire and Save the People* says that the disciples must make the finger gestures of specific Hand Seals when they "walk, inquire about illnesses, harness devils, enter temples, cross rivers, go into mountains and write talismans."

Since ancient times, the secret finger gestures used in making esoteric Daoist Hand Seals has been passed down together with the art of Breath Incantations. In the course of development and refinement, the ancient Daoists often changed and corrected the original finger gestures of certain Hand Seals, so that the finger gestures expanded into a comprehensive magical system.

COMBINING HAND SEALS AND INCANTATIONS

From a Daoist perspective, the ancient Chinese skill of spell-recitation is complex and multidimensional. However, when treating disease, there is nothing better than using an "Energetic Seal." Energetic Seals were used in ancient China to imprint the specific energy of a deity's spiritual power onto the Breath Incantation.

The main focus on utilizing the energetic power of a seal lies in combining visualizations with breath incantations, spirit projection and proper timing. The ancient Daoist ritual of exorcistic Energetic Seal imprinting was generally practiced as an oral tradition, passed from master to disciple. It is said that the ancient Daoist master Fan Li practised this method "causing mountains to crumble, rivers and seas to flow backwards, Spirit-demons to tremble with fear and thunderclaps to resound."

Both Quiescent and Dynamic Postural training utilizes various hand postures designed to stimulate and increase the body's physical, energetic and spiritual potential. In ancient times, both Daoist and Buddhist mystics would sometimes combine the various Hand Seals with incantations (Mantras) in order to empower their intention, focus, and direction of Qi. Every specific Hand Seal had its own sound formula that required the master to combine physical practices relating to posture, breath and mind (i.e., pulling up on the anal sphincter while inhaling, clapping the teeth, swallowing saliva, spitting, etc.) with the energetic and spiritual practices of prayer and incantation (i.e., chanting a specific tone, reciting a prayer, using a specific incantation while exhaling, inhaling specific types of Heavenly and Earthly Qi powers, etc.).

Daoist Hand Seals are based on a theoretical construction of Yin and Yang, wherein the left hand is considered Yang and pure, and dominates the hand postures. Buddhist Mudras, however, originate from the Indian culture, which is predominantly right handed, therefore in the Buddhist system the right hand is seen as pure and dominates the hand Mudra postures.

ESOTERIC STUDY AND TRAINING

If the Hand Seals or incantations are not performed correctly, then the disciple will not receive the response that he or she is seeking (e.g., the ability to command the Thunder Martial Generals and their officers to apprehend demons or evil spirits). Therefore, when a disciple performs the Fa Jue Hand Seals (the Hand Seals that invoke the

power of the Law), he or she should understand all of the symbolic meanings that each seal represents in the spiritual realm as well as within the Celestial Immortal World. If the disciple does not understand the secret meanings of each Fa Jue Hand Seal, he or she will not be able to access the hidden power that lays concealed within the body's own energetic and spiritual realms, and will also be unable to summon the Thunder Martial Generals to defeat, capture, control or destroy demons and evil spirits.

When starting to perform the various Hand Seals, the disciple must take advantage of his or her cultivated Jing, Qi and Shen, and fuse both the internal and external energetic fields in order to access the spirit realm of the Immortal World and make it respond to his or her own personal will (internal thoughts and desires). All of the "disciples of immortality" in the Zheng Yi Heavenly Masters Mansion are taught to pay strict attention to this advice and to not take the study of the three various schools of Hand Seals for granted. Traditionally, each disciple is not allowed to perform any of the Hand Seals and incantations without first completely understanding and mastering the external and internal influences of each Hand Seal and its particular energetic and spiritual potential.

The combination of Hand Seals and Breath Incantations is the key to connecting the mind and spirit with the movements of the hands; this allows the Shen (mind and heart) to converge with the movements of the human form in order to gather the ancestral spirits (Prenatal Wujingshen) into the body.

According to ancient Daoist records, the magical power of certain hand seal incantations was maximized during the time when the Pole Star (located in the center of the Heavens) was directly aligned with the Moon when it was positioned in the West. However, some of these most powerful secret Hand Seals used to create miraculous acts of transformation were not passed along from master to disciple, and therefore certain esoteric "secrets of Heavens" were lost.

DOUBLE HANDED SEALS

The purpose for using Double-Handed Hand Seals is to allow the Daoist mystic's body (Jing), energy (Qi), and mind (Shen) to combine and be directed towards one purposeful goal. In ancient China, Daoist mystics would commonly use the Double-Handed Bagua (Eight Trigram) Hand Seals in order to summon the powers of specific elements.

FORMING THE BA GUA HAND SEALS

The ancient Daoists understood that from the Wuji, the Dao creates Yin and Yang, which in turn give birth to four phases of universal energy (Greater Yang, Lesser Yang, Greater Yin and Lesser Yin). The four phases of universal energy give birth to the eight natural forces of the Bagua (Heaven, Thunder, Water, Mountain, Earth, Wind, Fire and Lake). These four phases also form the energetic basis of the prenatal and postnatal transformations, manifested in the form of eight energetic actions (known as the Bagua Trigrams). These eight energetic patterns are therefore symbolized by combinations of Yin and Yang lines (Yao). Traditionally, a Yin line is represented as a broken line (---), and a Yang line is represented as a solid line (—). A Yao Trigram is composed of three lines, constructed with either Yin Yaos, Yang Yaos, or a combination of both Yin and Yang Yaos (Figure 1.46). These eight prenatal and postnatal energetic actions act as a template for all creation and can be further combined in order to form the ever-changing energetic patterns of the 64 Hexagrams of the Yi-Jing (Figure 1.47).

In ancient China, Daoist Mystics would summon the powers of specific Elements through connecting their fingers in various patterns in order to form Hand Seals in accordance with the energetic principles of the Eight Trigrams. Accessing the Eight Trigram power was initiated through connecting the fingers of both hands in various patterns in order to form Hand Seals in accordance with the energetic principles of the Bagua. The Double-Handed Bagua (Eight Trigram) Hand Seals are formed through the corresponding Yin and Yang configurations of the fingers.

The ancient Daoists believed that each energetic pattern would "open a gateway" to the

Figure 1.46. Yin and Yang Yao Trigram

Trigram Element's energetic nature and allow an individual to absorb, manipulate, or control the Element's energetic and spiritual nature. The Bagua Trigrams can be organized and arranged according to either the Prenatal System of Fu Xi or the Postnatal System of King Wen Wang.

The Ancient Daoist Hand Seals used to access and control the energetic natures of the Ancient Five Elements is an extremely well guarded secret. The purpose for secrecy is due to the ability of controlling both the creative and destructive forces of these Elements. When combined with the colorful images and vibrational resonances of ancient Daoist Invocations (Mantras), these ancient Daoist Hand Seals can be used to initiate a powerful influence on the environmental energetic fields.

EIGHT TRIGRAM DOUBLE-HAND SEALS USED FOR YI-JING DIVINATION

The ancient Daoist Mystics also used the Prenatal and Postnatal Bagua Trigrams for Yi-Jing divination. This skill required the Daoist Mystic to dissolve his or her energetic and spiritual matrix into the infinite space of the Wuji while deep in a meditative state. Specific Hand Seals were used for assisting the Daoist Mystic in entering into the state of "No-Mind." This state of being an impartial, passive observer (non-judgemental) was needed for the divination to be effective.

1. To begin, start from a sitting posture, with both hands resting on the lap directly in front of your Lower Dantian. After performing the "One Through Ten" meditation and "Three Invocations" (in order to create a sacred training space), the divination practice begins. First relax, then concentrate and imagine dissolving into the infinite space of the Wuji, established within the "center of space" and "center of time."

Figure 1.47. The Ancient Daoist Concept of Yin and Yang Expressing the Four Phases of Universal Energy and Manifesting Through the Prenatal and Postnatal Bagua Trigrams (Pre-Five Element Theory).

Figure 1.48. The Ancient Chinese Yi-Jing Hologram Structure of the Eight Trigrams in relationship to the Sixty-Four Hexagrams

While experiencing the energetic field and infinite space of the Wuji, completely surround your physical, energetic and spiritual body with the Prenatal and Postnatal Bagua Trigram formations (which will eventually combine to form the sixty-four hexagrams of the Yi-Jing). First surrounds your body with the energetic fields of the Prenatal Bagua Trigrams. Once the power of this energetic field is acknowledged, honored, and experienced, then surround the Prenatal Bagua Trigrams with an outside energetic field of the Postnatal Bagua Trigrams. (Figure 1.48).

2. Then begin to spin both Bagua Trigrams according to the following patterns:

- The Prenatal Trigrams, located in the inside of the circle, spin in a clockwise direction. This represents the Prenatal creative cycle of Heaven's Yang energetic field.

- The Postnatal Trigrams, located on the outside of the circle, spin in a counterclockwise direction. This represents the Postnatal cycle of Earth's Yin energetic field (Figure 1.49).

3. As both circles continue to spin, join only the tips of the thumbs and the tips of the little fingers (the middle six fingers are not allowed to touch, but simply face each other) and imagine forming a bright energetic circle. This energetic circle represents the infinite space of the Wuji. Once an "Energy Ball" has formed between the palms, then allow the energy to build, creating a brilliant white light orb. The connected thumbs on top of the circle represent the Qi of Heaven, the connected little fingers on the bottom of the circle represent the Qi of Earth (Figure 1.50).
4. Next begin to focus and concentrate on the specific question or purpose for the divina-

tion. While spinning, the outside and inside circles of the Prenatal and Postnatal Bagua Trigrams will slowly begin to stop their movements and begin to form a Hexagram (containing six Yaos). The Hexagram is constructed of three Yaos from the inner Prenatal Bagua Trigram circle combined with three Yaos from the outer Postnatal Bagua Trigram circle.

5. After observing the Hexagram, end the meditation and consult the Yi-Jing's book of commentaries for the proper interpretation of his or her reading.

EIGHT TRIGRAM DOUBLE-HAND SEALS FOR GATHERING POWER

To control the powers of the Eight Elements, the ancient Daoist Mystics used the Eight Trigram Hand Seals in order to create energetic portals or spiritual doorways into the infinite void of the Wuji. Before using the Double-Hand Seals to gather and control these specific powers, the Daoist Mystic must first change his or her relationship to each Element's fundamental characteristic. This understanding must be experienced on all three levels (physical, energetic and spiritual). Then, when practicing the exact meditation used for entering into the energetic and spiritual fields of each Element, the Daoist Mystic uses the proper Hand Seal for creating and controlling the Element's specific nature.

The following ancient Daoist Hand Seals are used to effectively conjure and control the ancient elements active within the Eight Trigrams. However, due to the innate dangers involved, the specific Incantations that are used to accompany the Hand Seals in conjuring and controlling the ancient elements must only be obtained through the careful guidance of a qualified master.

1. To begin the meditation used for summoning and controlling the power of the ancient Daoist Bagua Trigrams, start from a sitting posture, with both hands resting on the lap directly in front of your Lower Dantian. Then perform the "One Through Ten" meditation and "Three Invocations" in order to create a sacred training space in which to practice.

Both the Prenatal Trigrams and Postnatal Trigrams surround the Daoist Mystic to form the Sixty-Four Hexagrams of the Yi-Jing

The Postnatal Trigrams, located in the outside of the circle, spin in a counterclockwise direction.

The Prenatal Trigrams, located in the inside of the circle, spin in a clockwise direction.

Figure 1.49. The Cycles of Heavenly and Earthly Energetic Forces Expressed Through the Bagua Trigrams Represent the External Energetic Manifestations of Divine Thought

Figure 1.50. Bagua "Energy Ball" Hand Position

Relax, concentrate and imagine existing within the "center of space" and the "center of time."

While experiencing the energetic field and infinite space of the Wuji, completely surround your physical, energetic and spiritual body with an energetic field of divine light.

2. Next, join the tips of the thumbs and the tips of the little fingers and imagine forming an energetic circle. The middle six fingers are not

Figure 151. Ancient Daoist Hand Seal for Qian (Complete Yang, Heaven, Sky, Creativity, Strength and Power, Activity, Immaterial, Universal, Formless, Energy, Infinite Space). This Hand Seal is used by the Daoist Sorcerer to increase personal power by fusing energetic powers of all three Treasures (Heaven, Earth and Man) into his or her body. This Trigram is also used to dissolve into the infinite space of the Sun, Moon and Star constellations

Figure 1.52. Ancient Daoist Hand Seal for Kun (Complete Yin, Earth, Yielding, Receptive, Passivity, Material, Universal, Form, Dense Matter). This Hand Seal is used by the Daoist Sorcerer to create density and solid mass. Because it is constructed with three Yin Yaos, this Trigram is also used to assist the sorcerer in obtaining a deeper state of receptivity. The Kun Trigram is considered to be the primary Hand Seal used for connecting with the energetic realm of the Earth Element

allowed to touch, but simply face each other. Once an "Energy Ball" has formed between the palms, allow energy to build, creating a brilliant white light orb. The connected thumbs on top of the circle represent the Qi of Heaven, the connected little fingers on the bottom of the circle represent the Qi of Earth (refer back to Figure 1.50).

3. Each of the eight configurations can be developed and formed through the combined effort of the middle six fingers, depending on the specific needs of the individual. After a significant amount of energy has accumulated between the palms, then arrange the middle six fingers to form the intended Bagua Trigram. By touching and connecting the middle six fingers, it is possible to create any of the various Bagua Trigram formations and initiate the energetic fields of these various powers. Each specific configuration acts as a template for conjuring, creating, absorbing or generating energy, described as follows:

- **Ancient Daoist Hand Seal for Qian (Heaven, Sky, Creativity, Strength and Power):** This Hand Seal is used by the Daoist Sorcerer to increase personal power by fusing energetic

powers of all three Treasures (Heaven, Earth and Man) into his or her body. This Trigram is also used to dissolve into the infinite space of the Sun, Moon and Star constellations (Figure 1.51).

- **Ancient Daoist Hand Seal for Kun (Earth, Yielding, Receptive and Dense):** This Hand Seal is used by the Daoist Sorcerer to create density and solid mass. Because it is constructed with three Yin Yaos, this Trigram is also used to assist the sorcerer in obtaining a deeper state of receptivity. The Kun Trigram is considered to be the primary Hand Seal used for connecting with the energetic realm of the Earth Element (Figure 1.52).
- **Ancient Daoist Hand Seal for Zhen (Thunder, Movement and Growth):** This Hand Seal is used by the Daoist Sorcerer to gather and control thunder and lightning, as well as to create earthquakes. This Trigram is also used to facilitate spiritual growth (Figure 1.53).
- **Ancient Daoist Hand Seal for Sun (Wind and Air, Penetrating and Sensitivity):** This Hand Seal is used by the Daoist Sorcerer to gather or create Wind in order to bring or remove clouds, rain, snow, hail and tornados. The Sun

Figure 1.53. Ancient Daoist Hand Seal for Zhen (Strong Yang, Thunder, Exciting, Impetus, Vitality, Organic, Movement, Fertilization, Growth and Power). This Hand Seal is used by the Daoist Sorcerer to gather and control thunder and lightning, as well as to create earthquakes. This Trigram is also used to facilitate spiritual growth

Figure 1.54. Ancient Daoist Hand Seal for Sun (Strong Yin, Wind and Air, Penetrating, Sensitivity, Assimilation, Pervasiveness, Organic, Gaseous, Perceptive Intuition). This Hand Seal is used by the Daoist Sorcerer to gather or create Wind in order to bring or remove clouds, rain, snow, hail and tornados. The Kan Trigram is considered to be the primary Hand Seal used for connecting with the energetic realm of the Wind/Air Element

Figure 1.55. Ancient Daoist Hand Seal for Kan (Middle Yang, Water, Dark, Formless, Lunar Forces, Elementary, Cold, Fluid, Space and Movement). This Hand Seal is used by the Daoist Sorcerer to create coldness and darkness (in order to enter into the "shadow world"). This Trigram is also used to assist the sorcerer in obtaining an evasive state of formlessness. The Kan Trigram is considered to be the primary Hand Seal used for connecting with the energetic realm of the Water Element

Figure 1.56. Ancient Daoist Hand Seal for Li (Middle Yin, Fire, Bright, Formed, Solar Forces, Elementary, Heat, Incandescence, Penetrating Light). This Hand Seal is used by the Daoist Sorcerer to create fire, heat and light. The Li Trigram is considered to be the primary Hand Seal used for connecting with the energetic realm of the Fire Element

Trigram is considered to be the primary Hand Seal used for connecting with the energetic realm of the Wind / Air Element (Figure 1.54).

- **Ancient Daoist Hand Seal for Kan (Water, Formless Fluid and Coldness):** This Hand Seal is used by the Daoist Sorcerer to create coldness and darkness (in order to enter into the "shadow world"). This Trigram is also used to assist the sorcerer in obtaining an evasive state of formlessness. The Kan Trigram

is considered to be the primary Hand Seal used for connecting with the energetic realm of the Water Element (Figure 1.55).

- **Ancient Daoist Hand Seal for Li (Fire, Heat and Light):** This Hand Seal is used by the Daoist Sorcerer to create fire, heat and light. The Li Trigram is considered to be the primary Hand Seal used for connecting with the energetic realm of the Fire Element (Figure 1.56).

Figure 1.57. Ancient Daoist Hand Seal for Gen (Lesser Yang, Mountain, Tranquil and Quiescent, Steady, Heaviness, Inertia, Inorganic, Resistance, Solid Stability). This Hand Seal is used by the Daoist Sorcerer to create stillness and peace of mind. This Trigram is also used to facilitate deeper states of spiritual quiescence

Figure 1.58. Ancient Daoist Hand Seal for Dui (Lesser Yin, Lake, Mist, or Rain, Reflective, Weightless, Evaporation, Inorganic, Changeability, Clairvoyant Observation). This Hand Seal is used by the Daoist Sorcerer to create or gather mist, fog or rain. This Trigram is also used to dissolve into the infinite space of the mist or fog in order to observe people and places

- **Ancient Daoist Hand Seal for Gen (Mountain, Solid, Tranquil and Quiescent):** This Hand Seal is used by the Daoist Sorcerer to create stillness and peace of mind. This Trigram is also used to facilitate deeper states of spiritual quiescence (Figure 1.57).
- **Ancient Daoist Hand Seal for Dui (Mist or Rain, Reflection and Observation):** This Hand Seal is used by the Daoist Sorcerer to create or gather mist, fog or rain. This Trigram is also used to dissolve into the infinite space of the mist or fog in order to observe people and places (Figure 1.58).

THREE DANTIAN DOUBLE HAND SEALS

These Double Hand Seals require the Daoist sorcerer to use the energetic finger combinations of both hands in order to stimulate the Three Dantians. In these particular Mudras, both hands are united to form a powerful energetically focused union, similar to two streams combining to form a mighty river. The following are examples of popular Double-Handed Mudras used to energize, stimulate and focus energy into each of the Three Dantians.

STIMULATING THE LOWER DANTIAN:

This Double-Handed Mudra is traditionally practiced in either a sitting or standing posture. This specific hand posture is used to stimulate the individual's Lower Dantian and is normally practiced for the transformational stage of changing the Kidney Jing into Kidney Qi, and filling the Sea of Marrow. This energetic stimulation and transformation is also known to increase the individual's intellect, willpower, bravery, determination and courage (Figure 1.59).

STIMULATING THE MIDDLE DANTIAN:

This Double-Handed Mudra is traditionally practiced in either a sitting or standing posture. This specific hand posture is used to stimulate the individual's Middle Dantian, and is traditionally practiced in order to stimulate the transformation of Qi to Shen occurring within the inner chambers of the Yellow Court and Middle Dantian. This energetic stimulation and transformation is also known to increase the energy to the individual's Lungs, Heart and thymus gland, and is sometimes known as the "Lotus Flower" Hand Seal (Figure 1.60).

STIMULATING THE UPPER DANTIAN:

This Double-Handed Mudra is traditionally practiced in either a sitting or standing posture. This specific hand posture is used to stimulate the individual's Upper Dantian, and is traditionally practiced in order to stimulate the transformation of Shen to Wuji. This energetic stimulation and transformation is also used to develop the student's Yintang (Third Eye), and to increase his or her psychic abilities (Figure 1.61).

Figure 1.59. Lower Dantian Hand Position

Figure 1.60. Middle Dantian Hand Position

Figure 1.62. "Three Pure Ones"

HAND SEALS AND RITUALS

There are certain Hand Seals that are used in the Zheng Yi Daoist rituals for communing with the three major types of Celestial Immortals: The Perfected Immortals of Anterior Heaven, The Patriarchs (sometimes called Missionaries) and The Celestial Generals. There are also specific Animal Hand Seals and Magical Instrument Hand Seals that are used for invocation of the various Perfected Immortals of Anterior Heaven.

HAND SEALS RELATED TO THE PERFECTED IMMORTALS OF ANTERIOR HEAVEN

The finger gestures used in these Hand Seals are sometimes related to the worship of or communion with the three Daoist immortal gods, known as the "Three Pure Ones" (Figure 1.62). According to ancient Daoism, the Three Pure Ones (Highest Purity, also known as the Highest Em-

peror or the Celestial Worthy of Numinous Treasure; Jade Purity, also known as the Jade Emperor or the Celestial Worthy of Primordial Beginning; and Supreme Purity, also known as the Supreme Emperor or the Celestial Worthy of the Dao and Its Virtue) are emanations of the Dao, and they rule over the highest three celestial realms. Connection to these upper celestial realms is initiated via the utilization of either the Jade Emperor Hand Seal, Highest Emperor Hand Seal, or Supreme Emperor Hand Seals. These magical Hand Seals are formed when the Daoist priest offers ritual "Report" petitions, commands the Celestial Martial Generals and their horses, and when commanding the "God of Plague" (the Emperor of the North). These Three Immortal Gods also represent the three different Zheng Yi Daoist branches and their powers. The corresponding Hand Seals are described as follows (Figure 1.63):

Figure 1.63. The "Three Pure Ones" Hand Seals.

- **Yu Qing (Jade Purity) Hand Seal:** This finger gesture is applied at the last (third) joint of the middle finger in order to invoke Jade Clarity Celestial Soldiers (spirit warriors) and their horses. The pinching of the nail on the middle finger is also used when inquiring of illnesses.
- **Shang Qing (Highest Purity) Hand Seal:** This finger gesture is generally applied at the second joint of the middle finger in order to invoke Highest Clarity Celestial Soldiers (spirit warriors) and their horses.
- **Tai Qing (Supreme Purity) Hand Seal:** This finger gesture is applied at the first joint of the middle finger in order to invoke Supreme Clarity Celestial Soldiers (spirit warriors) and their horses.

ANIMAL HAND SEALS

Sometimes the Hand Seals related to the Perfected Immortals of Anterior Heaven are not directly called by the celestial names of the deities, but are instead represented by the images of their celestial animals (e.g., horses, cranes, tigers, dragons, lions, pigs, frogs, etc.) or magical instruments (e.g., immortal swords, golden bridges, golden lights, jade rings, etc.). For example, during the "Refinement and Salvation" ritual, when the Supreme Oneness

Figure 1.64. The Immortal Mother of the Big Dipper

Figure 1.65. The divine animal that draws the carriage of the Immortal Mother of the Big Dipper is named the "Horned Pig"

Lord of Heaven is invited to descend to the altar, the ritual master forms the finger gestures of the Lion Double Hand Seal. As the two palms are crossed, the thumb of the left hand folds while the other nine fingers remain straight. These extended fingers represent nine horses for the Supreme Oneness Lord of Heaven to ride to the altar.

There are also various finger gestures used for symbolizing the spiritual power of the Big Dipper descending to the Earth and energetically covering (or filling) the body of the disciple. For example, the Immortal Mother of the Big Dipper often sits on a lotus (Figure 1.64), and the divine animal that draws her carriage is named the "Horned Pig" (Figure 1.65). Therefore, Hand Seals

that form the images of either a lotus or of a pig are used to welcome the Immortal Mother of the Big Dipper and invite her to descend to the altar (Figure 1.66). These specific Hand Seals can be used in rituals of worship, protection or healing by forming the Lotus Flower Double Hand Seal, the Lotus Treasury Seat Double Hand Seal, or the Big Pigs Head Double Hand Seal.

MAGICAL INSTRUMENT HAND SEALS

Sometimes the Hand Seals relate to magical instruments (e.g., immortal swords, golden bridges, golden lights, jade rings, etc.). For example, certain finger gestures, such as the Tiger Hand Seal and the Ghost Hand Seal are both named after evil spirits. Other types of finger gestures such as the Hand Seals used for Dispelling Ghosts, Controlling Ghosts, and for Controlling Thunder are named after their specific function and the purpose of the ritual. And the finger gesture of the Fork (Trident) Hand Seal, the Immortal Sword Hand Seal, and the Golden Bridge Hand Seal, are named after the divine instruments that are held by the ritual master or the specific energetic methods that he uses when conducting the rituals.

There are also other finger gestures which symbolize the various Hand Seals of the Sun Sovereign, the Moon Sovereign and the Dippers of the Five Directions. The number of Hand Seals used for controlling various objects and summoning immortals is difficult to calculate, as there are so many types of magical skills used in Daoist mysticism for refinement, cultivation, salvation, spreading the divine Vital Breath, curing illness, dispelling evil, inviting or invoking spirits, controlling ghosts, and praying to avoid disasters.

HAND SEALS AND THE MARTIAL GENERALS

There are so many Celestial Generals in Daoism that the Hand Seals representing the Martial Generals are the most numerous of all the various types of finger gestures. Also complicating things, is the fact that different Daoist sects prefer to use different Celestial Generals when practicing their magical skills.

The most important of the Patriarch finger gestures are the Celestial Master Hand Seals, which represent the descending of the Celestial

Figure 1.66. The Lotus Flower Double Hand Seal

Master or the founder of a specific sect. When using these Hand Seals, the ritual master visualizes himself as the Celestial Master commanding the Celestial Soldiers to dispel the evil spirits.

The most important Hand Seals used to summon the Celestial Martial Generals are as follows:

- **The Supreme Commander Hand Seal:** This Hand Seal is used for summoning the Commanders of the Thunder Agency.
- **The Heavenly Warrior Hand Seal:** This Hand Seal is used for summoning the powerful Celestial Soldiers of Heaven.
- **The Inspector Hand Seal:** This Hand Seal is used for summoning the Inspectors of the Warriors and their Horses, and is used in order to control the Celestial Soldiers.
- **The Celestial Officer Hand Seal:** This Hand Seal is used for summoning the celestial officers who invoke the divine ones responsible for managing the files.

DAOIST ESOTERIC DOUBLE-HAND SEALS

The following is a description of the most common Double Hand Seals used in the various Zheng Yi sects of Daoist mysticism. The Zheng Yi sect is composed of three main branches of ancient Daoist magic, which are energetically united in what is known as the "Three Mountains Drop of Blood Alliance." Each drop of blood represents one of the following Zheng Yi branches, each located in the South-Eastern part of China:

- Celestial Master Daoism (Tian Shi sect) from Long Hu Shan, located in the Jiangxi Province.
- Highest Purity Daoism (Shang Qing sect) from Mao Shan, located in the Jiangsu Province.
- Magical Treasure Daoism (Ling Bo sect) from Ge Zao Shan, located in the Jiangxi Province.

These particular Double Hand Seals can be divided into three main categories according to their magical uses: Hand Seals used for Worship, Hand Seals used for Summoning, and Hand Seals used for Attacking and Defending.

HAND SEALS USED FOR WORSHIP

The following Double Hand Seals are used in Zheng Yi Daoist rituals for the alchemy of Worship. The primary goal is one of energetic and spiritual transformation brought about through prayer and meditation.

- **The Golden Dragon Double Hand Seal:** This Double Hand Seal is used for Worship (Figure 1.67). It energetically represents the fusion of the combined energies of Yin (the two fingers of the right hand) and Yang (the three fingers of the left hand).
- **The Big Golden Light Double Hand Seal:** This Double Hand Seal is used for Worship. It energetically represents the shining golden light of the spirit body, and is used to connect the human body to the spirit (immortal) body in large ceremonies (Figure 1.68).
- **The Golden Bridge Double Hand Seal:** This Double Hand Seal is used for Worship. It energetically represents two Yin and Yang Golden Hooks that are combined together in order to fuse the celestial energies of the Pre-

Figure 1.67. The Golden Dragon Double Hand Seal

Figure 1.68. The Big Golden Light Double Hand Seal

Figure 1.69. The Golden Bridge Double Hand Seal

Figure 1.70. The Small Golden Light Double Hand Seal

natal Qi (represented by the left Yang palm) and Postnatal Qi (represented by the right Yin palm). This energetic fusion magically creates a Golden Bridge that the Daoist mystic uses to cross over from the material realm into the celestial realm (Figure 1.69).

- **The Small Golden Light Double Hand Seal:** This Double Hand Seal is used for Worship. It energetically represents the shining golden light of the spirit body, and is used in small ceremonies in order to connect the physical body to the spirit (immortal) body (Figure 1.70).
- **The Small Pig Pass Double Hand Seal:** This Double Hand Seal is used for Worship. It symbolizes the pathway that the immortals use to travel to Heaven, and it is energetically used to open the esoteric spiritual pathway into the Wuji (Figure 1.71).

Figure 1.71. The Small Pig Pass Double Hand Seal

Figure 1.72. The Double Jade Ring Double Hand Seal

Figure 1.73. The White Crane Double Hand Seal

- **The Double Jade Ring Double Hand Seal:** This Double Hand Seal is used for Worship. It represents the Qi of the Ancestral Master's Palace, and it is energetically used to change an individual's fate to become an immortal (Figure 1.72).
- **The White Crane Double Hand Seal:** This Double Hand Seal is used for Worship. It represents the immortal crane and is energetically used to cross the spiritual waters of the afterlife. The Daoist sorcerer travels to the celestial realm while riding on the back of the crane (Figure 1.73).

HAND SEALS USED FOR SUMMONING

The following Double Hand Seals are used in Zheng Yi Daoist rituals for the energetic and spiritual purpose of Summoning. The primary goal of Summoning is that of demanding or requesting the presence or service of one of the five types of Immortals (Ghost Immortals, Human Immortals, Earth Immortals, Spiritual Immortals or Celestial Immortals).

- **The Double Star Double Hand Seal:** This Double Hand Seal is used for Summoning. It energetically represents the prebirth Palace of Dou Mu (Figure 1.74), and is used when human beings of the mundane world need the help from Mother Dou Mu. Dou Mu is the Mother of the seven stars of the Big Dipper (refer back to Figure 1.64). She is generally depicted with three eyes in each of her four faces (one in each major direction). She has four arms on each side of her body. Two of her hands are held together, palm to palm, while the other six hold a sun, moon, bell, golden seal, bow, and halberd. Dou Mu is regarded as holding a very senior position in the Daoist hierarchy, and she is credited with the ability to save people from many types of evil and trouble. Her birthday is celebrated on the 9th day of the 9th lunar month.
- **The Lotus Flower Double Hand Seal:** This Double Hand Seal is used for Summoning. It represents the magical Lotus Flower, and is energetically used to send signals and contact Mother Dou Mu (Figure 1.75).
- **The Heavenly Mother's Palace Double Hand Seal:** This Double Hand Seal is used for Summoning. It symbolizes the seal of Dou Mu Palace, and is energetically used for seeking approval of the Celestial Court (Figure 1.76).
- **The Treasury Seat Double Hand Seal:** This Double Hand Seal is used for Summoning. It is energetically used to invite Mother Dou Mu to sit on the throne of the altar (Figure 1.77).
- **The Big Pig's Head Double Hand Seal:** This Double Hand Seal is used for Summoning. It symbolizes the immortal beast ("Horned Pig;" refer back to Figure 1.65) of Mother Dou Mu,

Figure 1.74. The Double Star Double Hand Seal

Figure 1.76. The Heavenly Mother's Palace Double Hand Seal

Figure 1.77. The Treasury Seat Double Hand Seal

Figure 1.78. The Big Pigs Head Double Hand Seal

Figure 1.79. The Lions Incantation Double Hand Seal

and is energetically used to Summon the animal down into the human world (Figure 1.78).

- **The Lion's Incantation Double Hand Seal:** This Double Hand Seal is used for Summoning. It energetically symbolizes one of Mother Dou Mu's celestial animals (Figure 1.79).
- **The Elephant's Trunk Double Hand Seal:** This Double Hand Seal is used for Summoning. It energetically symbolizes the trunk of the elephant, and represents one of Mother Dou Mu's celestial animals (Figure 1.80).
- **The Welcoming The Immortals Double Hand Seal:** This Double Hand Seal is used for Summoning. It is energetically used to welcome the celestial immortals to the altar (Figure 1.81).
- **The Lotus Treasury Seat Double Hand Seal:** This Double Hand Seal is used for Summoning. It symbolizes the Treasury Seat of the immortals, and is energetically used to welcome celestial immortals to the altar (Figure 1.82).
- **The Summoning the Immortals Double Hand Seal:** This Double Hand Seal is used for Summoning. It is energetically used as a signal for Summoning and gathering the celestial immortals to the altar (Figure 1.83).

Figure 1.87. The Summoning Clouds Double Hand Seal

Figure 1.88. The "An Da" Double Hand Seal

- **The He He (Gathering and Harmonizing) Double Hand Seal:** This Double Hand Seal is used for Summoning. It is energetically used for gathering celestial powers by Summoning and gathering the Immortal Martial Generals to the altar (Figure 1.84).
- **The Big Golden Command Block Double Hand Seal:** This Double Hand Seal is used for Summoning. It is energetically used to Summon the Immortal Martial Generals to the altar (Figure 1.85).
- **The Immortal Whirlwind Double Hand Seal (Front):** This Double Hand Seal is used for Summoning. It symbolizes the rolling of a magical whirlwind, spiraling in energetic circles like a wheel. It is energetically used for quickly sending messages to the celestial mansion (Figure 1.86).
- **The Summoning Clouds Double Hand Seal:** This Mao Shan Double Hand Seal is used for Summoning clouds in order to bring rain. It

represents the image of a wild mountain and a field (Figure 1.87).

- **The "An Da" Double Hand Seal:** This Double Hand Seal is used for ending the Summoning Ritual. The left fist represents the celestial energy of the Sun, the right Immortal Sword represents the celestial energy of the Moon (Figure 1.88). The An Da Double Hand Seal is generally used before or after speaking magical incantations (i.e., the magical incantation is energetically shouted quickly followed immediately with the "An Da" Double Hand Seal to offer a form of energetic completion).

Figure 1.89. The Left and Right Eight Immortal Guards Double Hand Seal

HAND SEALS USED FOR ATTACKING AND DEFENDING

The following Double Hand Seals are used in Zheng Yi Daoist rituals for the energetic and spiritual purpose of Attacking and Defending. These skills are commonly incorporated in esoteric Daoist rituals used for exorcism (removing evil spirits from a person, place or thing).

The training involved in the energetic and spiritual art of Attacking and Defending is divided into six primary stages: Protection, Obstruction, Attacking, Binding, Imprisoning, and Sealing. These six stages are described as follows:

PROTECTION

The energetic goal of Protection Double Hand Seals is to create an energetic field strong enough to provide for the safety for the disciple's person (self, family, loved ones, etc.), place (house, worship area, etc.) or things (items of significance and importance).

- **The Left and Right Eight Immortal Guards Double Hand Seals:** This Double Hand Seal is used for Attacking and Defending. It sym-

Figure 1.90. The Double Tiny Light Double Hand Seal

bolizes the eight Heavenly Martial Generals, and is energetically used for the protection of people, places and things (Figure 1.89).

- **The Double Tiny Light Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It is used to represent the electrical light that illuminates within the energetic particles contained within the field of Yin and Yang (which envelops the infinite space of the Wuji). It is used for protection by creating a shining golden light that purifies, illuminates, and shines divine light over a person, place or thing (Figure 1.90).

Figure 1.91. The Copper Tent Double Hand Seal

Figure 1.93. The Sword Trees Double Hand Seal

Figure 1.92. The Knife Mountain Double Hand Seal

OBSTRUCTION

The energetic goal of Obstruction Double Hand Seals is to create an energetic field strong enough to stop or inhibit a evil spirit or demonic entity from further antagonistic actions.

- **The Copper Tent Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It symbolizes a tent, and is energetically used to create a protective covering over a person, place or thing (Figure 1.91).
- **The Knife Mountain Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It represent a mountain covered with sharp knives and spears. It is used as an energetic barrier to block and stop (or cut off) the pathway of people, animals or evil spirits (Figure 1.92).
- **The Sword Trees Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. This double-handed Hand Seal represents 10,000 magical immortal swords.

Figure 1.94. The Mount Tai Double Hand Seal

It is used as an energetic barrier to block and stop (or cut off) the pathway of people, animals or evil spirits (Figure 1.93).

- **The Mount Tai Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. This double Hand Seal represents the energetic power of a huge and imposing mountain. It is used as an energetic barrier to block, cover, squash and stop (or cut off) the pathway or movement of people, animals or evil spirits (Figure 1.94).

Figure 1.95. The Big Golden Light Double Hand Seal

Figure 1.96. The Magical Gun Double Hand Seal

ATTACKING

The energetic goal of Attacking Double Hand Seals is to create an energetic field strong enough to initiate a direct attack onto the spirit entity, whereby its energetic form will be captured, defeated, or destroyed.

- **The Big Golden Light Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. Although this Double Hand Seal can also be used for Worship (see Figure 1.68), it can also be used for attacking and paralyzing (or freezing) spirit entities when combined with a specific Incantation (Figure 1.95).
- **The Magical Gun Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It represents the blasting power of an ancient Chinese fire weapon (similar to that of a gun). It is energetically used as a fierce attack, and is similar to an energetic punch. It is usually energetically released by stomping the back foot, punching towards the intended en-

Figure 1.97. The Magical Cannon Double Hand Seal

Figure 1.98. Two Dragons Pierce the Mountain Double Hand Seal

emy and shouting a specific incantation or mantra (Figure 1.96).

- **The Magical Cannon Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It represents the explosive power of an ancient Chinese fire weapon. It is energetically used for a fierce attack, and is similar to an energetic bomb. It is usually energetically released by stomping the back foot, punching towards the intended enemy, and shouting a specific incantation or mantra (Figure 1.97).
- **Two Dragons Pierce the Mountain Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It is used to energetically penetrate through mountains or into the depths of the Earth. It is used to energetically cut through, chase-after and catch evil spirits (Figure 1.98).

Figure 1.99. The Twisting and Binding Double Hand Seal

BINDING

The energetic goal of Binding Double Hand Seals is to create an energetic field strong enough to envelop, enclose, and restrain an evil spirit. "Binding" can also be used to keep someone from doing something - almost like putting an energetic wall between them and the chosen thing. This is a very restrictive form of magic, and is never to be taken lightly. A "Binding" spell can be very powerful and long lasting.

- **The Twisting and Binding Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It causes the surrounding energetic fields to envelop and twist around the spirit entity like bamboo reeds, and is energetically used for binding people, places and things, especially spirit entities and ghosts (Figure 1.99).
- **The Binding Collar Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It energetically represents the shackling of a secure steel collar around a prisoners neck, and is used for binding and restraining people, places, and things, especially evil spirits and ghosts (Figure 1.100).
- **The Heaven and Earth Net Double Hand Seal (Front):** This Double Hand Seal is used for Attacking and Defending. It energetically represents a huge net that is extended between the Yang of Heaven and the Yin of Earth, used to ensnare people, animals, or evil spirits (Figure 1.101).
- **The Stone Weighted Scale Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It represents the stone

Figure 1.100. The Binding Collar Double Hand Seal

Figure 1.101. Heaven and Earth Net Double Hand Seal

Figure 1.102. The Stone Weighted Scale Double Hand Seal

that is attached to the end of an ancient Chinese scale. It is energetically used to envelope, bind and block people, animals or evil spirits (Figure 1.102).

Figure 1.103. The Copper Fence Double Hand Seal

IMPRISONING

The energetic goal of Imprisoning Double Hand Seals is to create an energetic field strong enough to energetically detain and confine an evil spirit.

- **The Copper Fence Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It symbolizes a prisoner's cage, and it is energetically used to detain and confine people, places, things, and evil spirits (Figure 1.103). The only difference between the Copper Tent and the Copper Fence Double Hand Seal is the extension of the thumb and angle of the fingers (see Figure 1.91).
- **The Pit Incantation Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It symbolizes a pit used to capture defeated demons, and it is energetically used to incarcerate people, demons and evil spirits (Figure 1.104).

SEALING

The energetic goal of Sealing Double Hand Seals is to create an energetic field strong enough to provide the final energetic sealing needed after the incantation has imprisoned the evil spirit into a confined area.

- **The Magical Lock Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It energetically represents the sealing and confining some person, place or thing with a magical lock (Figure 1.105). It is sometimes energetically used after binding an evil spirit in order to contain and imprison its energetic form (e.g., sealing after the incantation has imprisoned the evil spirit into a confined area).
- **The Magical Seal Double Hand Seal:** This Double Hand Seal is used for Attacking and

Figure 1.104. The Pit Incantation Double Hand Seal

Figure 1.105. The Magical Lock Double Hand Seal

Figure 1.106. The Magical Seal Double Hand Seal

Defending (Figure 1.106). It represents the combined energies of Yin and Yang converging onto one specific item (e.g., a person, place, or thing). It is sometimes energetically used after binding an evil spirit in order to contain and imprison its energetic form (e.g., sealing after the incantation has imprisoned the evil spirit into a confined area).

When creating a powerful spiritual talisman or an energetic "tool," this Double Hand Seal can also be used for the construction of both the energetic "Opening" (before the initial imprinting) and the energetic "Closing" (e.g., sealing after the incantation is imprinted its function and purpose).

SINGLE HAND SEALS

Every specific Hand Seal has its own particular sound formula (incantation) that combines the use of ingesting specific types of Heaven Qi and Earth Qi powers. The Daoist mystic chants a specific incantation, employs a specific Hand Seal and then exhales to activate the supernatural powers.

Generally, Double Hand Seals were taught first in order to help the Daoist Mystic focus his or her concentration onto a specific object, deity, thought form or Eight Trigram power. After the individual became proficient in gathering and controlling the thought form or Trigram power with both hands, then Single Hand Seals were introduced. The purpose of Single Hand Seals being to use the left hand in order to summon spirits and gain control of specific powers, while the right hand was used to embody, command, task and dispatch the supernatural power.

The Daoist master's energetic hand seal can be used to force any member of the numerous demonic population to appear in visible form. With a seal in the left hand and a sword in the right the Daoist master is fully equipped to summon, question, and interrogate whatever demon he wishes.

DAOIST SINGLE-HAND SEALS

In Daoist magic, certain points on the left palm or specific areas on the joints of the fingers of the left hand are used in order to cultivate, gather and control specific energies and spiritual powers. Each of the finger joints symbolizes and corresponds to one of the specific energetic powers of The Five Elements, Five Planets, Five Directions, Five Yin Organ Spiritual Energies, Eight Trigrams, Seven Stars of the Big Dipper, Twelve Earthly Branches and Twelve Organ Channels. Therefore, when a Daoist mystic pinches a certain finger position, it symbolizes that he or she is accessing and controlling the energetic and spiritual powers through the utilization of one of the following Hand Seals:

- **The Five Element Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within either the energetic realms of the infinite space of the Wuji, Air/Wind, Fire, Water, and Earth; or through

the energetic power and manifestations contained within the Elements of Wood, Fire, Earth, Metal and Water.

- **The Five Planet Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within energetic celestial powers of Jupiter, Mars, Saturn, Venus and Mercury.
- **The Five Directions Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within celestial and terrestrial energetic powers of the five directions (Front, Back, Left, Right and Center).
- **The Wu Jing Shen Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within the Five Virtues of Compassion, Order, Integrity, Trust and Wisdom.
- **The Eight Trigram Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within the eight powers of Heaven, Mist/Rain, Thunder, Mountain, Earth, Water, Fire and Wind/Air.
- **The Seven Stars of the Big Dipper Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within the Big Dipper, manifesting through the seven star celestial powers of influence (Lusty Wolf, Giant Gate, Store of Wealth, Civil Chief, Pure and Chaste, Military Chief and Troop Destroyer).
- **The Twelve Earthly Branches Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within the specific powers of the Twelve Earthly Branches (Yin, Wu, Xu, Hai, Mao, Wei, Shen, Zi, Chun, Si, You and Chou).
- **The Twelve Organ/Channel Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within body's twelve primary internal organ channels (the Jing, Qi and Shen of the Liver - Gall Bladder, Heart - Small Intestine, Spleen - Stomach, Lungs - Large Intestine, Kidneys - Urinary Bladder, and Pericardium - Triple Burner Channels).

Figure 1.107. The Five Element Organ Energy Pattern was used to access the energy of the Wu Jing Shen (Five Essence Spirits) contained within the Five Yin Organs). The ancient Daoist would use his or her left hand in order to absorb the organ Qi and Shen into the Lower Dantian or body's energetic field. This arrangement was also used to control the Ancient Five Elements.

FIVE ELEMENT ORGAN PATTERN

In ancient China, the following hand chart of the Five Element Organ Pattern was used to access the energy of the Prenatal Wu Jing Shen (Original Five Essence Spirits) contained within the Five Yin Organs. This particular Daoist Hand Seal system was originally taught only to advanced disciples. When applying its energetic function to internal cultivation, the disciple would use his or her thumb to touch each individual finger in order to connect with the specific Element power. Likewise, the neutral position, located at the base of the fingers allowed the disciple to connect with the Earth Element (Figure 1.107).

The ancient Daoist would use the left hand in order to absorb the intended organ's Qi and Shen into the Lower Dantian or into the body's surrounding energetic field. The energy could then be released out the Daoist's body via the right palm. This energetic transformation was also used to control the Five Elements.

The left palm could also be used for gathering and absorbing the twelve channel energies of the Five Yin Organs. As the disciple's left thumb

Figure 1.108. The Five Element - Twelve Channel Two Hour Time Period. The left palm is used for gathering and absorbing the 12 Channel energies of the Five Yin Organs. As the individual's thumb touches the specific areas on the fingers, the energy is gathered into the Lower Dantian and released out from the right palm.

touched the specific areas on the fingers or palm, the energy was gathered into the Lower Dantian and then released out of the body via the disciple's right palm (Figure 1.108).

DAOIST THREE DANTIAN SINGLE HAND SEALS

In ancient Daoism, the single Hand Seals were commonly used to access and command the body's internal Seas of Energy, or Dantian energies. The following descriptions are of Single Hand Seals used in two separate branches of Daoist Mysticism:

Mao Shan Hand Seals (Zheng Yi Branch)

In the Highest Purity sect of Daoism, from the Zheng Yi tradition, the thumb represents the celestial powers of the Heaven, while the little finger represents the terrestrial powers of the Earth (as explained in the Eight Trigram Double-Hand Seals for Gathering Power, Figure 1.109). When combined (the thumb touches the little finger), the body's energy is regulated within the center Taiji Pole and the Three Dantians are balanced.

Traditionally, the ancient Mao Shan Daoist used a left handed Hand Seal that portrayed the

Figure 1.109. Bagua "Energy Ball" Hand Position

ideogram "Shan" (Figure 1.110). The magical image of the mountain was used in order to access and stimulate the internal Seas of Qi contained within the Three Dantians.

When cultivating internal power, the ancient Mao Shan sorcerers would train to access the magical powers of Heaven and Earth by blending these energies within their Three Dantians. This form of magical cultivation was initiated by energetically blending the Yang of Heaven (i.e., the descending celestial energy of the Green Dragon, represented by the sorcerer's "Imagination") and the Yin of Earth (i.e., the ascending terrestrial energy of the White Tiger, represented by the physical feelings of the energetic "Sensations"). The magical Hand Seals and their secret access points used by the ancient Mao Shan sorcerers to activate each Dantian is described as follows:

- **The Lower Dantian:** When training to transform Jing to Qi in the Lower Dantian, the Daoist sorcerer would press the second crease (down from the top) of the ring finger on his or her left hand. While pressing the Lower Dantian point, the sorcerer would also pull up on his or her lower perineum and the centers of both feet in order to draw Earth Qi (the energy of the Earthly White Tiger) up the legs and into the Lower Dantian. The sorcerer would place his or her tongue on the Fire position (this requires that the tongue be placed on the hard palate at the front of the upper palate behind the teeth and gum line - Figure 1.111) and inhale the energy of the Heavenly Green Dragon down the front of the body into

Figure 1.110. In ancient Daoism, the Single-handed Hand Seals were commonly used to access and command the body's internal Seas of Dantian Energy (an example of Mao-Shan Daoist training from the Zheng Yi tradition)

Figure 1.111. The Fire tongue position used for activating the Lower Dantian

the Lower Dantian. As the Green Dragon (imagination) and White Tiger (sensation) began to "play," the energetic sensation of heat and vibration would be created within the Lower Dantian.

- **The Middle Dantian:** When transforming Qi to Shen in the Middle Dantian, the Daoist sorcerer would press the first crease (down from the top) of the middle finger on his or her left hand. While pressing the Middle Dantian point, the sorcerer would also pull up on his or her lower perineum and the centers of both feet in order to draw Earth Qi (the energy of the Earthly White Tiger) up the legs and spine into the back of the heart at the Middle Dantian area. The sorcerer would place his or

Figure 1.112. The Wood tongue position used for activating the Middle Dantian

Figure 1.113. The Water tongue position used for activating the Upper Dantian

her tongue on the Wood position (this requires that the tongue be placed on the hard palate, at the middle of the upper palate at the center of the roof of the mouth - Figure 1.112) and inhale the energy of the Heavenly Green Dragon down the front of the body into the Middle Dantian. As the Green Dragon (imagination) and White Tiger (sensation) began to "play," the energetic sensation of heat and vibration would be created within the Middle Dantian.

- **The Upper Dantian:** When transforming Shen to the infinite space of the Wuji via the Upper Dantian, the Daoist sorcerer would press the second crease (down from the top) of the first (index) finger on his or her left hand. While pressing the Upper Dantian point, the sorcerer would also pull up on his or her lower perineum and the centers of both feet in order to draw Earth Qi (the energy of the Earthly White Tiger) up the legs and spine into the back of the head at the base of the Upper Dantian. The sorcerer would place his or her tongue on the Water position (this requires that the tongue be placed on the soft palate at the back of the upper palate - Figure 1.113) and inhale the energy of the Heavenly Green Dragon down the top of the head into the Upper Dantian. As the Green Dragon (imagination) and White Tiger (sensation) began to "play," the energetic sensation of heat and vibration would be created within the Upper Dantian.

Figure 1.114. In ancient Daoism, the Single-handed Hand Seals were commonly used to access and command the body's internal Seas of Dantian Energy (an example of Wu Dang Shan Daoist training from the Quen Zhen tradition)

When performing these meditations, all the Daoist sorcerer needed to do was simply connect his or her thumb with each of the Dantian's access points, place the tongue in the secret Dantian position, and simultaneously draw the Qi of Heaven and Earth into the respected Dantian area in order begin energetic cultivation.

Wu Dang Shan Hand Seals (Quen Zhen Branch)

In the Pole Star sect of Daoism, from the Quen Zhen tradition, the thumb and little finger positions used to represent the power of the Heavens and Earth are reversed. In this particular Daoist system, the thumb represents the terrestrial powers of the Earth, while the little finger represents the celestial powers of the Heaven. When combined (the thumb touches the little finger), the body's energy is regulated within the center Taiji Pole and the Three Dantians are balanced.

When cultivating internal power, the ancient Wudang masters used the first (index) finger to represent the access point of the Lower Dantian; the middle finger to represent the access point of the Middle Dantian; and the ring finger to represent the access point of the Upper Dantian. When meditating, all the Daoist master needed to do was simply connect his or her thumb with each Dantian's access point in order to tap into its cultivated power (Figure 1.114).

BAGUA SINGLE HAND SEALS

In ancient China, after a Daoist Mystic learned how to control the energy of the Bagua through Double Handed Hand Seals, he or she would transfer the eight energetic powers of the Bagua to their left palm. The progression from using double hands to a single hand allowed the Daoist Mystics the ability to summon and gather the energetic and spiritual powers of the specific Bagua into their body with their left hand, while extending and emitting the Qi with the right hand.

Hidden within the construction of the Bagua Trigram formation are the energetic patterns of the Nine Palaces (also known as the Magic Square). The ancient Daoist would use his or her left palm as a medium for conjuring the energetic structure of the Magic Square formation and "opening the gate to the supernatural world." After the Spirit Gate was opened, the Daoist mystic would initiate a specific incantation for conjuring the supernatural powers released from the Celestial Elements or Eight Trigrams. This was initiated by placing either the thumb or fingers of the left hand onto the specific Trigram location. Combined with a specific incantation, the supernatural powers of the Trigram could then be activated and summoned.

As the ancient Daoist performed the specific ritual for spiritual incantation, pacing through positions of the Nine Palaces of Heaven, he or she could use the same numeral sequence on the left palm as the Magic Square patterns by tracing the "magic steps of Yu" with the left thumb (Figure 1.115).

The Nine Palaces are arranged in an eight direction box formation with an additional number in the center. Each palace position is assigned a number, a specific color and a star (one of the seven stars of the Big Dipper, the extra star and the North Star). Each star is associated with a specific Prenatal energy flow related to one of the original Extraordinary Vessels and one of the Nine Chambers located in each one of the Three Dantians. The numbers and their correspondences are described as follows:

1. **The Trigram Kan:** This point is located at the base of the middle finger. Kan is assigned to the number 1 and its color is white.

Figure 1.115. In ancient China, the Postnatal Heavenly Bagua pattern of the "Magic Square" was superimposed on the left palm allowing Daoist mystics the ability to summon and gather the energetic and spiritual powers of the Bagua into the body, while extending and emitting the gathered Qi with his or her right palm.

2. **The Trigram Kun:** This point is located on the first superior digit of the ring finger. Kun is assigned to the number 2 and its color is black.
3. **The Trigram Zhen:** This point is located on the second digit of the index finger. Zhen is assigned to the number 3 and its color green/blue.
4. **The Trigram Sun:** This point is located on the first superior digit of the index finger. Sun is assigned to the number 4 and its color is blue.
5. **The Bright Hall (Ming Tang):** This point is located on the center digit of the middle finger. The Ming Tang (Bright Hall) is associated

Figure 1.116. In Ancient China, the numbers of the Magic Square also related to the Three Realms of Heaven, Man, and Earth, and were used for Divination.

- with the Taiji Pole and the middle space of the Magic Square; the Ming Tang is assigned to the number 5 and its color is yellow.
- The Trigram Qian:** This point is located at the base of the middle finger. Qian is assigned to the number 6 and its color is white.
 - The Trigram Dui:** This point is located on the second digit of the ring finger. Dui is assigned to the number 7 and its color is red.
 - The Trigram Gen:** This point is located at the base of the index finger. Gen is assigned to the number 8 and its color is white.
 - The Trigram Li:** This point is located on the first superior digit of the middle finger. Li is assigned to the number 9 and its color purple. It should be noted that the middle number "5" does not correspond to a Trigram because it is the unifying number placed in the center to represent balanced internal energy.

MAGIC SQUARE AND DIVINATION

In ancient China, the specific numbers of the Magic Square could also relate to the energetic manifestations that occur within the three realms of

Imagine a cord of divine light descending from the Heavens and penetrating the center of the left palm

Figure 1.117. Heaven and Earth Posture

Heaven, Earth and Man. Because of this, the ancient Daoists sometimes used the Magic Square for Divination described as follows (Figure 1.116):

- While meditating, form a "Heaven and Earth" standing posture (Figure 1.117).
- Imagine a cord of divine light descending from the Heavens and penetrating the center

of the lower left palm creating the energetic pattern of the Magic Square previously described (refer back to Figure 1.116). The left palm (Magic Squares) should be placed horizontally in front of your Yellow Court (fingers pointing towards the right). This energetic position relates to the power of Earth.

- Next, with your right hand, form the Thunder Bolt Hand Seal (Figure 1.118) above the Magic Square, at the Heart and Middle Dantian area. This energetic position relates to the power of Heaven. The right hand's index finger should point towards the left direction, while the little finger should point downward into the numbers of the Magic Square positioned inside the left palm.
- Focus your mind's intention on a specific individual and perform magical Invocations over the Magic Square according to the specific intention of the divination. Begin to ask specific questions related to that individual's past, present or future while spiralling the Qi downward in a descending clockwise direction (moving from Heaven to Earth) using the tip of the Thunder Bolt Hand Seal (i.e. the little finger of the right hand).

EARTHLY BRANCHES AND DAOIST ALCHEMY

The ancient Daoists viewed the body as a small and complete universe unto itself and understood that the internal organs are influenced by the celestial movements of the sun, moon, planets and stars. The Governing and Conception Vessels in particular are influenced by these Heavenly cycles (Figure 1.119).

Figure 1.118. In this Thunder Fist Hand Seal, the thumb touches the base of the ring finger and roots the Lung Qi and the Po.

In ancient China, the day was divided into twelve separate time divisions. Each time division encompassed two hours of the day and was named after one of the Twelve Earthly Branches. The ancient Daoists discovered that the body's Qi and Blood mirror the Earth's seasonal ebb and flow, rising and falling like the lunar tides.

Each time period in the Twelve Earthly Branches system is regarded as having a specific influence on each of the twelve gates of the body's chakra system. The rhythmic variations of the waxing and waning of Qi and Blood are associated with the waxing and waning of Yin and Yang energy, and with the circulation of Qi along the Microcosmic Orbit (Fire) cycle.

Each of the Twelve Chakra Gates relates to one of the Twelve Earthly Branches following the Fire Cycle of the Microcosmic Orbit. These twelve chakra gates extend their energy outward.

80

MAO SHAN HAND SEALS USED FOR HEALING OR PROTECTION

In the ancient Mao Shan Daoist monasteries, Hand Seals were used for bringing Qi from a specific internal organ or celestial direction into a vessel of water for healing (Figure 1.120). This Hand Seal technique is then followed with a specific Breath Incantation. If a Daoist mystic wishes to gather Heavenly Qi from which to strengthen the Liver, he or she will repeat the following Breath Incantation

**“Dong fang wuji fei tian shen
wang su jiang Gan Qi yu wu sui zhong.”**

Which translates as “Eastern Palace infinite flying heavenly god, quickly bring down the Liver Qi into my water - do this as it is law.”

The Incantation is then sealed by shouting “An Da” while simultaneously forming the An Da Double Hand Seal (Figure 1.121).

- **The “An Da” Double Hand Seal:** This Double Hand Seal is used for ending the Summoning Ritual. The left fist represents the celestial energy of the Sun, the right Immortal Sword represents the celestial energy of the Moon (Figure 1.105). The An Da Double hand Seal is generally used before or after speaking magical incantations (i.e., the magical incantation is energetically shouted quickly followed immediately with the “An Da” Double Hand Seal to offer a form of energetic completion).

The Breath Incantation is changed according to the Daoist Mystic’s needs, substituting the specific Palace and the specific internal organ Qi. Each of the palaces also has corresponding times, Ele-

Figure 1.120. Hand Seal pattern used for bringing Qi from a specific Organ and direction into a glass of water for healing.

Figure 1.121. The “An Da” Double Hand Seal

Palace	Time	Element	Organ	Alter Gift	Immortal
Eastern Palace: <i>Dong Fang</i>	5-7 P.M. Sunrise	Wood Element	Liver <i>Gan</i>	Incense: <i>Xiang</i>	Green/Blue Immortal
Southern Palace: <i>Nan Fang</i>	11-1 Noon	Fire Element	Heart <i>Xin</i>	Light: <i>Deng</i> (Candles)	Red Immortal
Western Palace: <i>Xi Fang</i>	5-7 A.M. Sunset	Metal Element	Lungs <i>Fei</i>	Flowers: <i>Hua</i>	White Immortal

ments of control, organ energies, altar gifts, and governing immortals (Figure 1.122).

SEVEN STARS OF THE BIG DIPPER #1 SINGLE HAND SEALS

In ancient Daoism Mysticism, the advanced Single Hand Seals (Mudras) were sometimes used to access the power of one of the seven specific stars of the Big Dipper. The following is one esoteric version of accessing the hidden power of the Seven Big Dipper Stars (Figure 1.123):

1. **The Gui Star:** The access point for gathering and cultivating the magical energy of this star is located at the second segment of the index finger.
2. **The Gou Star:** The access point for gathering and cultivating the magical energy of this star is located on the first segment of the index finger.
3. **The Fan Star:** The access point for gathering and cultivating the magical energy of this star is located on the first segment of the middle finger.
4. **The Shou Star:** The access point for gathering and cultivating the magical energy of this star is located on the third digit of the middle finger.
5. **The Bi Star:** The access point for gathering and cultivating the magical energy of this star is located on the second digit of the ring finger.
6. **The Pu Star:** The access point for gathering and cultivating the magical energy of this star is located on the second digit of the little finger.
7. **The Piao Star:** The access point for gathering

Figure 1.123. The Seven Stars of the Big Dipper can be accessed through the mystic's left hand.

and cultivating the magical energy of this star is located on the third digit of the middle finger.

SEVEN STARS PATTERN OF THE NORTHERN DIPPER SINGLE HAND SEALS

Certain advanced Single Hand Seals were sometimes used to access the combined power of the seven stars of the Northern Dipper by performing specific stepping rituals. In the advanced training, these esoteric stepping rituals could be performed on the Daoist mystic's left hand. The above is one version of a Northern Big Dipper

Figure 1.124. The Seven Stars of the Northern Dipper can be accessed through the mystic's left hand.

Seven Star Stepping Pattern initiated on the Daoist mystic's left hand (Figure 1.124).

SEVEN STARS PATTERN OF THE SOUTHERN DIPPER SINGLE HAND SEALS

Certain advanced Single Hand Seals (Mudras) were sometimes used to access the combined power of the seven stars of the Southern Dipper by performing stepping rituals. In advanced training, these esoteric stepping rituals could be performed on the left hand of the Daoist mystic. The above is one version of a Southern Dipper Seven Star Stepping Pattern initiated on the Daoist mystic's left hand (Figure 1.125).

THE "FIVE THUNDERS EXPLODE" HAND SEAL

When performing Thunder Magic, the Daoist sorcerer will draw the Five Thunder Mountains on the center of his or her left palm, while reciting a magical incantation used to gather the power of the guardians of the Five Sacred Mountains. The sorcerer will draw five circles around the center of a "Thunder" character and speak the following incantation to call and dispatch the Five Thunder Generals from the Five Thunder Mountains (Figure 1.126):

"Dong Qi Tai Shan Lei
(The Eastern Energy of the Tai Shan Thunder);
Nan Qi Heng Shan Lei
(The Southern Energy of the Heng Shan Thunder);

Figure 1.125. The Seven Stars of the Southern Dipper can be accessed through the mystic's left hand

Xi Qi Hua Shan Lei
(The Western Energy of the Hua Shan Thunder);
Bei Qi Heng Shan Lei
(The Northern Energy of the Heng Shan Thunder);
Zhong Qi Song Shan Lei
(The Center Energy of the Song Shan Thunder)"

DAOIST ESOTERIC SINGLE HAND SEALS

The following is a description of the most common Single Hand Seals used in the various Zheng Yi sects of Daoist mysticism. The Zheng Yi sect is composed of three main branches of ancient Daoist magic, which are energetically united in what is known as the "Three Mountains Drop of Blood Alliance." Each drop of blood represents one of the following Zheng Yi branches, each located in the South-Eastern part of China:

- Celestial Master Daoism (Tian Shi sect) from Long Hu Shan, located in the Jiangxi Province.
- Highest Purity Daoism (Shang Qing sect) from Mao Shan, located in the Jiangsu Province.
- Magical Treasure Daoism (Ling Bo sect) from Ge Zao Shan, located in the Jiangxi Province.

These particular Single Hand Seals can be divided into three main categories according to their magical uses: Hand Seals used for Worship, Hand Seals used for Summoning, and Hand Seals used for Attacking and Defending.

SINGLE HAND SEALS USED FOR WORSHIP

The following is a list of popular Single Hand Seals used in Zheng Yi Daoist rituals for the alchemy of Worship. The primary goal is one of energetic and spiritual transformation, brought about through prayer and meditation.

- **The White Crane Single Hand Seal:** This Single Hand Seal is used for Worship. It is energetically used to show respect to the celestial immortals. The last three fingers symbolize an offering of three incense to the celestial immortals (Figure 1.127). The first finger and thumb represent the eternal circle and the infinite space of the Wuji through which to access the Di (Divine or God).
- **The Willow Branch Single Hand Seal:** This Single Hand Seal is used for Worship. It symbolizes the Willow Branch and is energetically used in rituals to purify the water at the altar, or to dip into the altar cup to flick holy water onto specific items for purification (Figure 1.128).
- **The Tiny Light Single Hand Seal:** This Single Hand Seal is used for Worship. It is used to represent the electrical light that illuminates within the energetic particles contained within the field of Yin and Yang (which envelops the infinite space of the Wuji). It is energetically used for protection by purifying, illuminating and shining divine light over a person, place or thing (Figure 1.129).
- **The Trident Single Hand Seal:** This Single Hand Seal is used for Worship. It symbolizes three prongs and is energetically used to support the purified water cup on the altar during purification rituals, and is sometimes used

Figure 1.132. The Jade Ring Single Hand Seal

Figure 1.133. The Magical Root Single Hand Seal

Figure 1.134. The Two Lotus Joining Single Hand Seal

- for holding or support other altar tools (Figure 1.130).
- **The Magical Toad Single Hand Seal:** This Single Hand Seal is used for Worship. It represents an image of the immortal three legged toad from the Moon Palace, and is energetically used to bring about the fragrant smell of the celestial world into the realm of the human world (Figure 1.131).
 - **The Jade Ring Single Hand Seal:** This Single Hand Seal is used for Worship. It is used to energetically represent a magical bracelet of the Celestial Mother Dou Mu, and used to show respect to the Palace of Dou Mu (the Mother of the seven stars of the Big Dipper). She is generally depicted as having three eyes in each of her four faces (one facing each of the four major direction). She has eight arms (four arms on each side of her body). Two of her hands are held together, palm to palm, while the other six hold a Sun, Moon, bell, golden seal, bow and halberd. Dou Mu is regarded as a senior Daoist immortal and is credited with the ability to save people from many types of evil and trouble (Figure 1.132).

- **The Magical Root Single Hand Seal:** This Single Hand Seal is used for Worship. It represents the fusion of Qi and Shen, and is the energetic and spiritual foundation used to send reports to Mother Dou Mu in order to request for auspicious times (Figure 1.133).
- **The Two Lotus Joining Single Hand Seal:** This Single Hand Seal is used for Worship. It is energetically used to invite Wang Mu Niang Niang (Mother of the Heavenly Emperor), welcome her to the altar and offer her respect as she appears (Figure 1.134).

SINGLE HAND SEALS USED FOR SUMMONING

The following is a description of popular Single Hand Seals used in Zheng Yi Daoist rituals for the energetic and spiritual purpose of Summoning. The primary goal of Summoning is that of demanding or requesting the presence or service of one of the five types of Immortals (Ghost Immortals, Human Immortals, Earth Immortals, Spiritual Immortals and Celestial Immortals).

- **The Gathering The Hun Single Hand Seal:** This Single Hand Seal is used for Summoning. It is used in rituals to energetically gather the soul of the dead (Hun) to the altar (Figure 1.135).
- **The Flying Hun Crosses the Sea Single Hand Seal:** This Single Hand Seal is used for Summoning. It symbolizes flying over the ocean, and is energetically used for gathering the soul of the dead and bringing it back to the altar area (Figure 1.136).
- **The Golden Lotus Single Hand Seal:** This Single Hand Seal is used for Summoning. It energetically represents the Golden Lotus Flower where the Great Ancestral Master will show his appearance (Figure 1.137).
- **The Small Gold Metal Single Hand Seal:** This Single Hand Seal is used for Summoning. It is energetically used as a "Grand Order" (or command) for the Great Ancestral Master to come and protect you by terrifying and defeating evil spirits (Figure 1.138).
- **The Single Star Single Hand Seal:** This Single Hand Seal for Summoning. It energetically represents the Dan Dou (Single Star) and is used to request that Mother Dou Mu command or Summon the Heavenly Court to dispatch the Celestial Generals (Figure 1.139).
- **The Small Pig's Head Single Hand Seal:** This Single Hand Seal is used for Summoning. It resembles a small pig's head and is energetically used in small ceremonies to summon the "Horned Pig" of Mother Dou Mu down into the human world (Figure 1.140).
- **The Jade Left Single Hand Seal:** This Single Hand Seal is used for Summoning. It symbol-

izes the celestial Jade Palace and is energetically used to gather the celestial immortals to the altar (Figure 1.141).

- **The Four Heavenly Immortal Generals Single Hand Seal:** This Single Hand Seal is used for Summoning. It symbolizes the bringing the four Thunder Martial Generals to your side and is energetically used for protection (Figure 1.142).
- **The Magic Tiger Single Hand Seal:** This Single

Hand Seal is used for Summoning. It represents the Martial Generals' Magical Tiger and is energetically used to summon the General's Magical Tiger to the altar (Figure 1.143).

- **The Blue-Green Spirit Single Hand Seal:** This Single Hand Seal is used for Summoning. It is energetically used to represent the celestial post from which Martial General Wen Qiong will rein in his Celestial Horse (Figure 1.144).

SINGLE HAND SEALS USED FOR ATTACKING AND DEFENDING

The following is a list of popular Single Hand Seals used in Zheng Yi Daoist rituals for the energetic and spiritual purpose of Attacking and Defending. These skills are commonly incorporated in esoteric Daoist rituals used for exorcism (removing evil spirits from a person, place, or thing).

The training involved in the energetic and spiritual art of Attacking and Defending is divided into six primary stages: Protection, Obstruction, Attacking, Catching, Imprisoning and Sealing. These six stages are described as follows:

- **Protection:** The energetic goal of Protection Single Hand Seals is to create an energetic field strong enough to provide for the safety of the disciple's person (self, family, loved ones, etc.), place (house, worship area, etc.) or things (items of significance and importance).
- **Obstruction:** The energetic goal of Obstruction Single Hand Seals is to create an energetic field strong enough to stop or inhibit a evil spirit or demonic entity from further antagonistic actions.
- **Attacking:** The energetic goal of Attacking Single Hand Seals is to create an energetic field strong enough to initiate a direct attack onto the spirit entity, whereby its energetic form will be captured, defeated, or destroyed.
- **Binding:** The energetic goal of Binding Single Hand Seals is to create an energetic field strong enough to envelop, bind, and restrain an evil spirit.
- **Imprisoning:** The energetic goal of Imprisoning Single Hand Seals is to create an energetic field strong enough to energetically detain and confine an evil spirit.
- **Sealing:** The energetic goal of Sealing Single Hand Seals is to create an energetic field strong enough to provide the final energetic sealing needed after the incantation has imprisoned the evil spirit into a confined area.

PROTECTION

- **The Magic Scissors Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It represents the celestial scissors

Figure 1.145. The Magic Scissors Single Hand Seal

Figure 1.146. The "Sai Nian" Single Hand Seal

of the eternal law of the Dao and is energetically used to cut and separate the good from the energetic "cords" attached to the body via evil (dark) people, places or things (Figure 1.145).

OBSTRUCTION

- **The "Sai Nian" Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It symbolizes a cork or stopper and is energetically used to block or stop the energetic leakages that occur from holes in an individual's Wei Qi (Aura) field. These energetic holes cause the individual life-force to become vulnerable to being stolen via people, places or things (energetic parasites). The Sai Nian Hand Seal is also used for obstructing psychic attacks and chasing away evil spirits (Figure 1.146).

Figure 1.147. The Immortal Sword Single Hand Seal

Figure 1.148. The Left Thunder Block Single Hand Seal

ATTACKING

- **The Immortal Sword Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It is used to energetically represent the magical power of the Immortal Sword. The magical power released from this Single Hand Seal is energetically used to draw talismans and esoteric characters for protection, defence or attack. It is also commonly used for cutting and defeating evil spirits and demons (Figure 1.147).
- **The Left Thunder Block Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It represents the power of Heavenly Thunder and is energetically used to terrify, attack and kill evil spirits (Figure 1.148).

When forming the Left Thunder Block fist, the left thumb touches the base of the second (ring) finger before the last two fingers lock and seal the energy of the palm. The thumb is placed on the Gall Bladder Channel (Wood Element) access point (see Figure 1.108), and the Qian (Heaven) Trigram (see Figure 1.115) which allows the Daoist priest's Hun the ability to access the celestial energetic power of the lightning bolts that have been stored within the priest's Gall Bladder during the Thunder Magic rituals (used for gathering the celestial energy of thunder during the first storms of Spring).

When using both the Left and Right Thunder Blocks (Lei Jue) to "attack and bind the evil

Figure 1.149. The Right Thunder Block Single Hand Seal

with the sound of Thunder" the ancient Daoist teachings state that the disciples "eyes become like lightning and the voice becomes like thunder" when he or she stomps, shouts and releases the power of the celestial thunder.

- **The Right Thunder Block Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It represents the power of Heavenly Thunder and is energetically used to terrify, attack and kill evil spirits (Figure 1.149).

When forming the Right Thunder Block fist, certain Daoist schools will place the right thumb onto the base of the first (little) finger before the last two fingers lock and seal the energy of the palm. The thumb is placed on the Triple Burner Channel (Fire Element) access point (see Figure 1.114), which allows the Daoist priest the ability to access the energetic

Figure 1.150. The Mount Tai
Single Hand Seal

power of the fire and light that have been stored within the priest's Taiji Pole during the Thunder Magic rituals (used for gathering the celestial energy of thunder during the first storms of Spring).

- **The Mount Tai Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It is used to energetically represent picking up Mount Tai, lifting it 10,000 Zhuang (miles) in the air and then slamming it down hard on top of evil spirits and ghosts in order to energetically crush them (Figure 1.150).
- **The Purple Star Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It energetically represents the Shi Wei (Purple Star) of the Heavens. Energetically, its power is so immense that is used to place on top of fierce ghosts and evil spirits in order to dissolve them like acid (Figure 1.151).
- **The Demanding Knife Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It represents the magical knife (Dao Tao) and is energetically used for chopping demons, cutting evil and destroying ghosts (Figure 1.152).
- **The Ghost Beating Stick Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It represents the immortal stick used for beating demons and is energetically used to beat the evil spirits into submission (Figure 1.153).

Figure 1.151. The Purple Star
Single Hand Seal

Single Hand Seal

Figure 1.153. The Ghost Beating Stick
Single Hand Seal

Figure 1.154. The Medical Fork Single Hand Seal

Figure 1.155. The Magic Needle Single Hand Seal

CATCHING

- **The Medical Fork Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It energetically symbolizes a fatal poisonous weapon that is used to stop and kill evil things. This hand seal is commonly used in order to entice and bring spirit entities out of hiding into the "light," to then be paralyzed (or frozen) before beginning an exorcistic inquisition (Figure 1.154).
- **The Magic Needle Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It represents an immortal's needle, which has magical powers, and it is energetically used to chase, search and penetrate evil spirits and ghosts (Figure 1.155).
- **The Single Dragon that Pierces the Mountain Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It is used to energetically penetrate through mountains and into the depths of the Earth. It is used to energetically cut through, chase-after and catch evil spirits (Figure 1.156).

Figure 1.156. The Single Dragon that Pierces the Mountain Single Hand Seal

Figure 1.157. The Five Blacks Single Hand Seal

SEALING

- **The Five Blacks Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It is used to energetically represent the final seal (black cover), meaning to place a powerful energetic cover over a pit once it is closed (Figure 1.157). It is energetically used as the final or finishing technique for binding of an evil spirit inside a pit or cave (as in the final imprisoning of a demonic entity).

DAOIST MAGICAL STAR STEPPING PATTERNS

CYCLES OF THE STARS

To the ancient Daoists, the days of greatest importance (according to their calendar of magical events) was not assigned to a traditional month and day, but the specific day and hour on which a certain astronomical event took place. This knowledge of the Heavens required the sorcerer to be completely aware of the most subtle energetic movements that transpire within his or her environment, completely in tuned with the energetic movements of the Sun, Moon, Planets, and Stars.

The ancient Chinese divided Heavenly energy into different classes of Yin and Yang: the Sun was seen as being the essence of Yang, the Moon as being the essence of Yin, and the Stars as being a combination of both Yin and Yang. The Stars were believed to have a great influence upon the energetic matrices of Earth and Man. The term "Stars" in ancient China, referred to the visible stars in the Northern Hemisphere; namely the Big Dipper, Polaris, the five planets, and the twenty-eight star constellations.

The Chinese ideograph for star, "Xing," is composed of two characters (Figure 1.158). On the top is the character "Ri" meaning "Sun," on the bottom is the character "Sheng" meaning "to give birth to." It depicts the purest embodiment of refined matter which ascended into the Heavens and crystallized into Stars.

The ancient Chinese believed that stars and planets were energetically Yang, born from the Original (Yuan) Qi of Heaven and were considered to be the condensation of Fire, while the Milky Way was considered to be the condensation of Water. The ancient Chinese name for Milky Way is "Tianchong," meaning "Highway of Heaven."

The pure aspects of these stars were believed to form the universal patterns that are responsible for the manifestation of form and matter. Thus, the ancient Chinese also believed that everyone was born under the guardianship of the stars. Certain stars would have a great influence over an individual's life, determining whether he or she

Figure 1.158. In Ancient Chinese Ideograph for the word "Star"

would be born as a human or animal, live long or die young, be rich or poor, etc.

The ancient Daoists believed that the energetic matrix of the Spirit Body was composed of certain energetic substances that were common with, and peculiar to, the stars. These energetic substances constantly created and activated stellar manifestations within the body's energetic fields. These stellar manifestations expressed themselves within the spiritual sheath that enveloped an individual's spiritual, energetic, and physical bodies. Once an individual had awakened to the esoteric stellar power that was contained within their energetic field, they could successfully accelerate the formation of their Spirit Body, and free themselves from the realm of matter.

In an individual's everyday life, it was believed that all actions under Heaven would unavoidably incur consequences. How an individual thinks and acts was reported by the man's or woman's Yuan Shen to the stars that govern longevity and destiny, and years of life were subtracted for bad deeds performed. If the celestial vapor was eventually taken from the individual (i.e., due to misuse of life-force energy), then the terrestrial vapor contained within the individual's Spirit Body would slowly suffocate his or her life-force energy and death would follow.

HISTORY OF DAOIST STAR STEPPING

The ancient Daoist discovered that performing a ritual or speaking an incantation in a natural power spot (i.e., a place in the Earth where energy naturally accumulates) would tremendously enhance the magical power of the ritual and dramatically increase its energetic potency. This was one of the primary reasons why the skill of Feng Shui was so important to the ancient Daoists.

These energetic centers of the Earth were considered to be areas where matter intersects with spirit. They represented "cracks" in visible matter, that allowed the hidden spiritual energy to shine through. Once the power spot was discovered, the sorcerer could then use the energetic field of his or her own body to additionally increase the magical power of that area. This was initiated during a magical ritual by performing esoteric dance, chanting, or Star Stepping.

Daoist Star Stepping began in ancient China, when the shaman sorcerers would dance certain ritualistic steps in order to open the Celestial Gate and contact the various immortals living within the spirit world. These stepping patterns allowed the ancient Daoists to summon a spiritual entity from another plane of existence, causing it to manifest as a visible entity in either the energetic plane or the physical plane. These shuffling trance-like movements are variously known as "the Dance of the Wu," "the Steps of Yu," "Steps of the Big Dipper," or "Daoist Star Stepping."

In modern times, the ritual master (Fa Shi), wearing cloud shoes, imagines the diagram of the Big Dipper on ground, in front of the central altar, covering about ten square feet. The magical diagram of the Big Dipper symbolizes the nine levels of Heaven (sometimes called the "Nine Heavens").

Generally accompanied by Daoist music, the ritual master continues to visualize the Nine Heavens while performing the "Steps of the Big Dipper." This star stepping pattern is performed to correspond with the positions of the Dipper Stars and the 28 Constellations, and is utilized in conjunction with the magical diagrams of the Nine Palaces and the Eight Trigrams. The ancient Daoists believed that through the various stepping rituals, the spirit soul (Hun) of the priest could accomplish the following:

- **Spirit Travel:** To the ancient Daoists, the Northern Dipper was a celestial bridge that existed between Heaven and Earth. It was the path of celestial travel, the gateway to the Underworld, and the field of creative transformation. The sorcerer could therefore ascend into the Nine Heavens and deliver petitions ("reports") to the Celestial Immortals.

- **Controlling:** The Big Dipper was also used as a form of protective power, keeping the sorcerer safe from all manner of demonic influence that were sure to become attracted to the sorcerer's occult studies and rituals. The sorcerer could therefore receive various powers to control the energetic realms of nature, as well as to control the various actions of evil spirits and demons.
- **Destroying:** The sorcerer could invoke the magical power of Thunder in order to destroy the energetic and physical realms of people, places and things (specifically an evil spirit or demon).

THE GATE OF HEAVEN

In ancient China, it was traditionally believed that the Celestial Gate (or Gate of Heaven) was the energetic portal that an individual's soul entered into at the time of death, thus leading the deceased into another dimension. This magical gate could also be accessed and opened by an experienced Daoist sorcerer.

The Gate of Heaven is believed to be an actual spiritual "place," that exists as a physical location, and as a magical event. It can be accessed through the tail of the Big Dipper which serves as a "pointer," informing the sorcerer of the exact location from which to orient his or her magical rituals.

For example, during the evenings of the winter months (i.e. November), the Big Dipper seems to hanging "upside down" from its tail. It is during this time period, when the magical powers Heaven naturally descend upon the Earth, that the "Lu" Ordination is performed for the Zheng Yi Daoist priesthood, held in the Celestial Master's Mansion of Lung Hu Shan.

The ancient Daoist sorcerers would perform the magical Steps of Yu (also known as the "Steps of the Big Dipper") in order to open the Gate of Heaven. This magical ritual is based on the esoteric concept that "in order to create an invisible phenomenon, a sorcerer must first create its visible counterpart (i.e., constructing a magical circle and altar); and in order to create a visible phenomenon, a sorcerer must first create its invisible counterpart (i.e., casting the spell and reciting the incantations needed to open the energetic gate)."

THE THREE GODS OF THE GATE OF HEAVEN

When performing the Steps of Yu, and attempting to enter into the Gates of Heaven, there are three Celestial Gods that preside over the Gate of the Northern Dipper in Mao Shan Daoism. These three gods are collectively known as the "Three-in-One," and are sometimes describes as the Male (the White Tiger), the Female, and the Great One (the Primordial King Ying Er, Ruler of the Gate of Life). The Great One is also sometimes known as "the King of the Yellow Court."

In certain Daoist sects, the Three-in-One gods are sometimes represented as the manifestations of Jing (Essence), Qi (Energy), and Shen (Spirit). Other Daoist sects equate them to the psychic energies of the subconscious, conscious, and superconscious mind. Still other Daoists express the Three-in-One as the gods of the Three Dantians ("Three Cinnabar Fields").

These three separate, yet related powers are susceptible to the prayers and invocations of the Daoist sorcerers. They are viewed as the primordial gods of creation, representing the subtle forces and influences that modern society has all but forgotten.

INCANTATION USED FOR CAUSING THE SPIRIT TO LEAVE THE PHYSICAL BODY

Before beginning the Steps of Yu, the Daoist sorcerer would normally say the "Chu Shen Zhou" ("Bring the Spirit Out of the Body") magical incantation. This magical incantation was recited when offering prayers and supplications to the Jade Emperor. This incantation was not only used to receive permission to enter the celestial realm, but it also prepared the sorcerer's Spirit for the long journey into the stars. The "Chu Shen Zhou" magical incantation is described as follows:

**"Yuan Wo Shen Shen Chu Wo Shen Xing.
Ling Wo Long Shen Shang Da Di Ting.
Ji Ji Ru Lu Ling"**

**"Allow my Spirit to come out of my body.
Command my True Spirit to reach
the Jade Court.
Quickly - As this is Law"**

Figure 1.159. The "Steps of Wu," is used for invocation. This pattern, originally used to demonstrate the energetic and spiritual union of Heaven and Earth, shows the combined circular "Tread" pattern of "Terrestrial Regulation" and the Big Dipper "Flight" pattern of "Celestial Rules."

INCANTATION USED FOR RETURNING THE SPIRIT BACK INTO THE PHYSICAL BODY

After completing the Steps of Yu, the Daoist sorcerer would normally say the "Ru Shen Zhou" ("Bring the Spirit Back into the Body") magical incantation. This magical incantation was recited after completing the ritual, and before dispersing the celestial deities. The "Ru Shen Zhou" magical incantation is described as follows:

**"Yuan Wo Shen Shen Ru Wo Shen Xing.
Ling Wo Zhu Shi Bao Wo Chang Sheng.
Yi Ru Sheng Qi Jun Lu Ling."**

**"Allow my Spirit to return to my body."
"Command my spirit to live in this world
and protect my long life.
As this is the command
of General Sheng Qi Jun."**

Figure 1.160. The Pathway of the Earth Through the Twenty-Eight Constellations. The positioning of the stars is considered to be the spiritual and energetic matrix (celestial diagram) of certain areas of the Heavens

THE STEPS OF YU

To the ancient Chinese, the Steps of Yu (also known as the "Paces of Yu") represented access to a magical "star gate." In ancient China, each of the seven stars of the Big Dipper related to one of seven magical gates, and also corresponded to one of the seven planets (Sun, Moon, Mercury, Venus, Mars, Jupiter, and Saturn).

It is generally believed that the "Steps of the Big Dipper" stepping pattern was originally developed from the "Steps of Yu" (Figure 1.159). According to the *Magical Utterances* written by Yang Xiong of the Han Dynasty (206 B.C.-220 A.D.), "Because he often scaled high mountains and forded deep streams, when Emperor Yu had finished harnessing the water and the land, he suffered from a foot disease and would therefore walk with a limp." According to this source, the "Steps of the Big Dipper" are a result of the imitation of Emperor Yu's way of walking.

However, the actual "Steps of Yu" appeared quite early in China's ancient history and also incorporated the ancient art of Breath Incantation. According to the *Inner Book of the Master Who Embraces Simplicity* and the *Book of Original Changes of the Pervasive Divine Eight Emperors*, "After Emperor Yu had harnessed the water and the land, he observed a huge bird along the ocean that had mastered Breath Incantations. The bird walked in

Figure 1.161. The Twenty-Eight Star Constellations

a strange manner, and its steps could turn huge stones upside down. Emperor Yu studied the bird's stepping pattern and transformed the bird's strange way of walking into an effective method of acquiring magical skill." Therefore, the stepping pattern was called the "Steps of Yu," after its founder.

It is also said that Yu spent three years learning Breath Incantations and later used the magical power of Breath Incantations to match the star stepping patterns. The positioning of the stars is considered to be the spiritual and energetic matrix (celestial diagram) of certain areas of the Heavens (Figure 1.160 and Figure 1.161). Therefore, as his feet stepped within the celestial patterns of the Nine Dipper stars, Emperor Yu used Hand Seals and Breath Incantations to absorb the energetic and spiritual powers of the various stars.

ANCIENT STAR STEPPING RITUALS

When practicing the Steps of Yu or any star stepping pattern, the sorcerer will follow certain magical protocols used for preparation and application. Each Daoist school will vary in its unique approach to performing the magical star stepping patterns.

Because some Daoist priests have reportedly been “instantly struck dead” by inadvertently “miss-stepping” during magical star stepping rituals, it is advised to adhere to the following list of precautions and advice used by many Daoist sorcerers when performing the ancient star stepping rituals. These esoteric practices were designed to assist the sorcerer in developing a powerful Spirit Body, capable of safely making the celestial voyage into the stars:

- Before beginning, the sorcerer must first prepare him or herself by performing “cleansing and purifying” rituals (bathing and fasting). These preparation rituals generally last three days, and sometimes require sexual abstinence, fasting, and the consumption of magical elixirs or Holy Waters (depending on the specific needs and functions of the magical ceremony).
- It is advised to first double-lock the ritual or meditation room before performing the magical rite. This helps insure complete privacy and avoids distractions.
- Certain rituals must take place at midnight, the hour when the Yang Qi begins to rise (11:00 pm - 1:00 am). Therefore, be aware of the specific time of year, month, day, and hour that the magical rite must take place (e.g., magical

Wood
Element
Tongue
Position

Figure 1.162. The Wood Element Tongue position is related to the spiritual energy of sorcerer's Hun.

rituals are regularly performed during the solstices and equinoxes).

- The sorcerer will make sure that statues of a male and female celestial immortal has been placed in plain view on the altar. Any pair of deities representing the dual energies of Yang and Yin is suitable, however, they should represent a combination of Power and Spirituality (i.e., your greatest spiritual strength, combined with your most noblest aspirations). Care must be taken to invoke the celestial powers of both of these deities when performing this specific magical Star Stepping magical.
- Begin by creating a three ring Magical Circle for protection.
- Then, after the red altar candles and incense has been lit, the sorcerer should immediately grind and knock his or her teeth 36 times. This particular teeth knocking practice is used in order to stimulate the Kidneys, awaken the Yang Qi, and protect the sorcerer's body from ingesting Hou Qi (turbid or toxic energy).
- After knocking the teeth, the sorcerer will place his or her tongue in the Wood Element position. The Wood Element Tongue position is related to the spiritual energy of sorcerer's Hun. Connecting the tongue in this manner is a popular technique used by the ancient Daoist sorcerers for connecting with the Taiji Pole and releasing the spirit. It requires that the tongue be placed on the middle of the upper hard palate, at the center of the roof of the mouth (Figure 1.162).

Figure 1.163. The Proper Hand Position

- After gathering Earth Qi into the Lower Dantian, the sorcerer will form the Yin and Yang Hand Seal. This particular Hand Seal is used to develop a strong electromagnetic charge in the sorcerer's Lower and Middle Dantians, and is naturally utilized by the mystic's body to balance the Yin and Yang currents (Figure 1.163).
- Next, the sorcerer will inhale, and with a slow concentrated breath, lead the Qi from the Lower Dantian to the Middle Dantian and heart area. It is important to keep the energy gathered and focused in the heart area, while the hands continue to rise upward towards the Yin Tang (Third Eye) area.
- The sorcerer will now imagine the Celestial God Tai Shang Lao Jun (Figure 1.164) hovering above his or her head, as a Divine ball of illuminating light, radiating powerful celestial light into his or her body (from the crown). Once the sorcerer experiences the illuminating light sensation, he or she will say the following "Mantra of Intention" three to seven times. Once the Mantra is completed, the sorcerer's mind should be completely empty:

"Tai Shang Si Bei
Wu Liang Du Ren."

"Divine Presence, fill me with compassion,
so that I may help others without restraint."

- After the "Mantra of Intention" is spoken, the sorcerer will slowly lower his or her hands. While the hands are descending from the Yin Tang (Third Eye) area, the sorcerer will con-

Figure 1.164. The Celestial God Tai Shang Lao Jun (also known as Lord Lao or Laozi)

tinue to imagine the energy from the Celestial Deity Tai Shang Lao Jun descending into his or her body, fusing with the energy of the heart. The fused energy of Heaven (i.e., the Divine light) and Earth (i.e., the Heart's Shen) will continue descending the body, along with the hands, until it reaches the Lower Dantian. When the combined energies reach the Lower Dantian, imagine and feel the energy immediately transform into steam, and fill the extremities with energy and power.

- After completing the Mantra of Intention, the sorcerer will then summon the magical powers of the Celestial Yin and Yang, as well as the Four Celestial Animals of the Four Directions and offer burnt incense to these deities.
- Then, while facing East (i.e., the Green Dragon), the sorcerer will close his or her eyes and visualize the seven stars of the Big Dipper descending on top of his or her body (with the celestial handle of the Big Dipper pointing towards the Eastern direction). Daoist star stepping rituals require the sorcerer to protect his or her body by arranging the magical power of the seven stars in specific configurations in or around the body (see The Stars of the Big Dipper).
- The sorcerer will now turn his or her eyes "inward," and begin to visualize and experience surrounding and transforming the entire cen-

ter core (i.e., energetic area surrounding the Taiji Pole) into the reflective image of a magic mirror.

- Next, the eight magical powers of the Bagua are then invoked and visualized surrounding each of the sorcerer's Three Dantians. Each of the three realms (spirit, energy, and matter) of the eight magical powers represent the Twenty-Four Perfected Immortals. The celestial powers of the Twenty-Four Perfected Immortals will energetically combine and begin to illuminate the sorcerer's three bodies (physical, energetic, and spiritual).
- The powerful illumination created from the eight magical powers of the Bagua is then reflected outward via the image of the Magic Mirror surrounding the sorcerer's center core. At this point, the locked meditation room will now become completely filled with the radiating celestial light emanating from the sorcerer's body.
- The Five Pure Lights that surround the sorcerer's Eternal Soul will now emerge from his or her Taiji Pole and heart area as five "Illuminating Pearls." These five magical orbs will additionally shine their powerful lights and further illuminate the four corners of the meditation room and the central space of the Magic Circle.
- At this moment, the radiating spiritual light pouring from the sorcerer's center core begins to lift the sorcerer's spirit body out of his or her physical body, towards the Heavens.
- In the incense smoke above the altar, the sorcerer will eventually see the First Gate open. After the password is presented, the sorcerer's spirit body can begin to enter into the celestial realm and begin its journey among the stars.
- Now is the time when the sorcerer will perform the magical Star Stepping patterns required in the ritual. This experience should feel like rising on a ladder of light, and strolling among the seven stars of the Northern Dipper.

ANCIENT STEPPING PATTERNS

The following are examples of the primary magical stepping patterns used in the various Zheng Yi sects of Daoist mysticism. The Zheng Yi sect is composed of three main branches of ancient Daoist magic, which are energetically united in what is known as the "Three Mountains Drop of Blood Alliance." Each drop of blood represents one of the following Zheng Yi branches, each located in the South-Eastern part of China:

- **Celestial Master Daoism (Tian Shi Sect):** This Zheng Yi system is located in Long Hu Shan (Dragon Tiger Mountain), in the Jiangxi Province.
- **Highest Purity Daoism (Shang Qing Sect):** This Zheng Yi system is located in Mao Shan (Mao Mountain), in the Jiangsu Province.
- **Magical Treasure Daoism (Ling Bo Sect):** This Zheng Yi system is located in Ge Zao Shan, in the Jiangxi Province.

Daoist Stepping patterns can be divided into several categories according to their magical uses. The most popular are: Big Dipper Stepping, Seven Star Stepping, Nine Palace Stepping, Twenty-Eight Star Constellation Stepping, Bagua (Eight Trigram) Stepping, Five Element Stepping, Three Stepping Patterns, and the Magical Esoteric Star Stepping Patterns, are described as follows.

INTRODUCTION TO THE BIG DIPPER

Much of what has been written in ancient China about the magical powers of the Big Dipper was preserved in the classic Daoist works on alchemy originating from the Mao Shan (Shang Qing) Daoist school during the Jin Dynasty period (265 - 420 A.D.). Shang Qing translates as "Highest Clarity," and refers to the "Nine Heavens" of ancient Daoist cosmology. The term "Nine Heavens" refers to the seven stars of the Big Dipper plus the two invisible stars, Fu and Bi. The Nine Heavens was sometimes called the "Abode of the Great One," who was believed to be the "Father of the Dao," and was older than the Heavens and Earth.

The Big Dipper (also known as The Emperor's Chariot or The Celestial Gate) was considered to be the "place of origin and of return." It was accepted as a magical gate by the ancient Daoists and was

Figure 1.165. Facing the direction of the North Star and Big Dipper at night allowed the ancient Daoists the ability to accurately tell time.

used as the passageway into Heaven. According to the ancient Daoists, the Northern Ladle (Big Dipper) was the Chariot of the Celestial Emperor, who was believed to ride around the Celestial Pole Star continually overseeing his earthly kingdom. According to Mao Shan Daoist tradition, the Celestial Pole Star can only be approached through Seven Gates of the Big Dipper, which represents the highest attainment possible for earthly beings, hence the name Shang Qing, "Highest Clarity."

Since they associated it with Death, Enlightenment, Soul Travel, and the worship of the Celestial Immortals, the ancient Mao Shan Daoists continually worshipped and invoked the magical powers of the Big Dipper. While the Sun, Moon, and Five Planets were used as a kind of "cosmic timetable," effective as a means of foretelling the Macrocosmic changes within the Heavens and Earth or for predicting future events, the Big Dipper served another purpose entirely. It was used as a means through which the Daoist sorcerer could enter into the supernatural realm.

In ancient times, it was believed that the Heavens revolved around the Earth. This is one reason why the ancient Daoists believed the Big Dipper to be circumpolar (i.e., constantly circulating the North Star and never appearing below the horizon). Because it appears to rotate once around the North Star every twenty-four hours, the ancient

Figure 1.166. Dou Mu, The Immortal Mother of the Big Dipper

Chinese were able to tell time from the position of the Dipper at night, give or take a few (four) minutes (Figure 1.165).

In Daoist cosmology, the Sun corresponds to the Middle Dantian, the Heart and the Element of Fire, the Moon corresponds to the Lower Dantian, the Kidneys and the Element of Water, and the Big Dipper corresponds to the Yellow Court, the Spleen, and the Element of Earth.

In some ancient Daoist sects, the Big Dipper is viewed as a female deity Dou Mu (the Immortal Mother of the Stars of The Dipper), and she is considered to be the "Governor of the Pavilion of Heavenly Treasure." She is said to have the most "brilliant eyes of all the Heavens." She, along with the Stars of the Dipper as her terrestrial spirit, and water celestial spirit, is in charge of life (Figure 1.166).

In the ancient Chinese Daoist book of the *Fundamental Destiny, Life-Prolonging Heart Scripture of the Great Sagely Primordial Sovereign of the Supreme Mysterious and Numinous Big Dipper*, it is written that, "with her great merit of medicine and healing, the Big Dipper manages and harmonizes the Five Elements, regulates the Yin and Yang Vital Breaths, dissolves stagnations and eliminates dark and Evil Qi. Under her mercy, those individuals who miss their time of salvation may redeem themselves. She is also in charge of the safety of

Figure 1.167. In Ancient China, the Handle of the Big Dipper was used to Determine the Season (The North Star was always positioned in the center of the diagram).

pregnancy and birth, as well as the healing of diseases. Seated on her throne, the Immortal Mother of the Big Dipper peacefully cultivates divine perfection, refines celestial and terrestrial spirits, concentrates the Vital Breath with an empty mind and enters the Mystery of Mysteries. Breathing the numinous Wind, gathering the purple Wuji energy, she has attained the mysterious and numinous Sublime Dao, and releases infinite subtle rays, penetrating the Pool of Essence."

ANGLE OF THE BIG DIPPER

In ancient Chinese mysticism, the Big Dipper represents the foundational base for the "Gate of Access," which is considered the spiritual passageway between life and death. Through this gate the individual may obtain knowledge and insight concerning past, present, and future events. The ancient Daoists believed that the Heavenly Gate of Destiny or Life (Mingmen of Heaven) is located in the direction that the handle of the Big Dipper is pointing. In ancient China, the tip of the Big Dipper handle was sometimes called the "horse," because it leads the novice (the rider) to the Heavenly Gate of Destiny. The location of the Heavenly Gate of Destiny indicates the directions from which prayers and blessings are to be initiated,

and exorcisms performed. It is also considered the place from which the soul of a deceased person can escape from the underworld.

As the Earth orbits the Sun, the angle at which the Big Dipper can be viewed changes on a daily, monthly, and yearly basis (Figure 1.167). These changing angles correspond to the different cycles of the Moon as they are arranged in the Twelve Earthly Branches, and repeat themselves after completing an orbit (360° rotation of twelve Moon cycles). These twelve lunar cycles determine the twelve seasonal periods (Figure 1.168). The beginning part of each month marks the beginning of the seasonal periods of the Twelve Earthly Branches and the beginning of the energy cycle of that month.

When the Big Dipper points to a specific direction in accordance to the "lunar month," a practitioner can face the direction that the handle is pointing to invigorate internal energy. The Big Dipper is related to the energetic transformations of germinating, beginning, and growing.

SPIRITUAL POWER OF THE BIG DIPPER

The ancient Daoists believed that the Gate of Life/Destiny indicates the directions from which prayer is to be initiated and is also the place through

Figure 1.168. The beginning of the seasonal periods of the Twelve Earthly Branches and the twelve Moon cycles is determined by the angle of the Big Dipper.

which the soul of a deceased individual could escape the underworld. The Gate of Life/Destiny is found in different locations during the various times of the year (Figure 1.169 through Figure 1.172).

Because the Gate of Life/Destiny is located at the exact point of the tip of the handle of the Pole Star constellation, it also indicates the precise directions from which the Daoist Mystic would gather his or her celestial energy in the form of Thunder Magic cultivation.

Furthermore, the ancient Daoists also believed that the Stars of the Big Dipper move in the center of the Heavens and look down to control the four directions, four seasons and Five Elements. In ancient times, there were three specific kinds of spiritual practice centered around the Stars of the Big Dipper, described as follows:

1. The first consists of invoking its power for protection by having the celestial stars surround and cover the body with divine light.

2. The second consists of ascending into it in order to access the infinite knowledge contained within the realm of Big Dipper.

3. The third involves gathering the star's essence or star cream into the body to energize the Nine Chambers of the Three Dantians.

In ancient China, the Big Dipper was considered the bridge between the energies of the Sun, the Moon, and the source of "10,000 things." According to the *Seven Slips of a Cloudy Satchel*, "the Nine Stars are the luminous root of the Nine Heavens, the bright bridge of the Sun and Moon, and the ancestral abyss of all things." The Sun and Moon are together considered to create a bipolar energy field, whereas the Big Dipper is considered unipolar. The Sun corresponds to the Heart and Fire energy, which is related to the front area of the body. The Moon corresponds to the Kidneys and Water energy, which is related to the back area of the body. The Big Dipper corresponds to

Figure 1.169. In the Shen, Zi, and Chen months (known in Daoist Mysticism as the months of the Middle Original) the tip of the Big Dipper handle points to Yin and the Spirit passes through the Gate of Life/Destiny through Mao. The Three Evil Breaths located at the open top of the Dipper are at Si, Wu, and Wei.

Figure 1.170. In the Yin, Wu, and Xu months (known in Daoist Mysticism as the months of the Supreme Original) the tip of the Big Dipper handle points to Shen and the Spirit passes through the Gate of Life/Destiny through Yu. The Three Evil Breaths located at the open top of the Dipper are at Hai, Zi, and Chou.

Figure 1.171. In the Si, You, and Chou months (known in Daoist Mysticism as the months of the Lower Original) the tip of the Big Dipper handle points to Hai and the Spirit passes through the Gate of Life/Destiny through Zi. The Three Evil Breaths located at the open top of the Dipper are at Yin, Mao, and Chen.

Figure 1.172. In the Hai, Mao, and Wei months (known in Daoist Mysticism as the months of the Upper Original) the tip of the Big Dipper handle points to Si and the Spirit passes through the Gate of Life/Destiny through Wu. The Three Evil Breaths located at the open top of the Dipper are at Shen, You, and Xu.

Figure 1.173. The Big Dipper is considered a reservoir of heavenly energy, collecting Qi from all of the other stars and constellations as it moves through the sky.

the Spleen and the center Earth Element, which is related to the Taiji Pole.

The energy from the Stars of the Big Dipper can also be used to balance the body's Five Agents (stored within the body's Five Yin Organs) and can be arranged internally to enhance perception of space and time. The Seven Po are also said to relate to the seven Stars of the Big Dipper.

THE STARS OF THE BIG DIPPER

The "Steps of Yu" enacted a Daoist sorcerer's magical journey from star to star through the various realms of the Northern Dipper. This sacred journey began with the "First Star" (located on the outer lip of the bowl of the Dipper), and continued to the last star, ending at the Celestial Gate (located on the very end of the handle).

The ancient Chinese believed that each person was born under the protection of one of the spirits who reside in each star of the Big Dipper. When pacing the "Steps of Yu," the sorcerer would therefore stop at each star and invoke the spirit's magical name, using the appropriate Words of Power in order to open each magical Seal. The ancient Daoists believed that there was a energetic memory encoded and contained within this magical ritual, allowing the Words of Power to automatically trigger and open the energetic portal of each star's celestial Gate.

As this encoded memory begins to awaken the deepest layers of the sorcerer's unconscious mind, it eventually works its way upward into his or her consciousness. Once the conscious mind experiences this spiritual awakening, the sorcerer's Spirit Body begins to conform itself around this encoded memory. At that moment of recognition, the sorcerer's Yang Body begins to absorb and envelop itself in the energetic material of the stars. Then, the sorcerer's Yang Body along with his or her consciousness begins to separate itself from its attachment to the dense energetic form of the Yin Body, and Soul Travel is manifested.

The names of the Big Dipper stars and their planetary correspondences are described as follows (Figure 1.173):

- **The First Star in known as the "Clarity of Yang:"** It is the star located at the lip of the Dipper's bowl, and it is sometimes called "The Pivot of the Sky." In the ritual of "Walking the Dipper," the sorcerer begins at the midnight hour, starting at the "Clarity of Yang," when the Yang energy begins to rise.

This star is also known as "The Gate of the Moon," and it represents entry into the spirit realm. When working specifically with just the "Clarity of Yang" star as a magical portal, the altar should face the North. It is also important

that the magical Seal used to open the celestial gate be engraved onto a silver talisman, during one of the three days of the Full Moon, and that no sunlight ever be permitted to shine onto this Seal. The incense used to access the spirit realm of the First Star is Camphor.

- **The Second Star in known as the "Essence of Yin:"** It is the star located at the outer bottom edge of the Dipper's bowl, and it is sometimes called "The Revolver of the Sky." This star is also known as the "Gate of Mercury."
- **The Third Star in known as the "True One:"** It is the star located directly on the "floor" of the Dipper's bowl, just before the star known as the Underworld, and it is sometimes called "The Rotator of the Sky." This star is also known as the "Gate of Venus."
- **The Fourth Star in known as the "Underworld:"** It is the star located at the outer edge of the Dipper's bowl, and it is sometimes called "The Lever of the Sky." This star is also known as the "Gate of the Sun." It is considered to be the energetic portal to the "land of the Midnight Sun," and was sometimes known by the name "Mysterious Darkness" and "Black Obscurity."
- **The Fifth Star in known as the "Red One:"** It is the star located on the Dipper's panhandle, and it is sometimes called "The Balance of the Sky." This star is also known as the "Gate of Mars."
- **The Sixth Star in known as the "Northern Bridge:"** It is the star located on the Dipper's panhandle, and it is sometimes called "The Generator of the Sky." This star is also known as the "Gate of Jupiter." The Northern Bridge leads directly to the Celestial Gate. It also contains an "invisible" star that orbits the Northern Bridge.
- **The Seventh Star in known as the "Celestial Gate:"** It is the star located on the tip of the Dipper's panhandle, and it is sometimes called "The Harmonizing Light of the Sky." The Celestial Gate provides the Daoist sorcerer with the final entrance to the celestial realms. This star is also known as the "Gate of Saturn."

Figure 1.174. The ancient Daoists would sometimes use the energy of the Big Dipper for invoking its powerful protection.

USING THE DIPPER STARS FOR PROTECTION

One method used in ancient China for invoking the powerful protection of the Big Dipper energy is for the individual to cover him or herself with the Stars of the Big Dipper. This was accomplished by first surrounding the body's outer energetic field with the four primary directions of the Earth Qi, then surrounding the central internal organs and energetic fields with the energy of the Postnatal Eight Trigrams.

Next, visualize the Big Dipper Stars descending from the Heavens and arranging themselves in a specific order around the center Taiji Pole of the body's core (Figure 1.174). After the inner core has been filled with the celestial power emanating from the Big Dipper Stars, the individual can be further protected by arranging the Stars in four specific ways:

- Shining above the individual's head, saturating through his or her entire body
- In front of or behind the doctor's body and radiating through his or her tissues

- Vibrating the nine chambers within the individual's Three Dantians
- As a celestial receptacle, with the bowl of the Dipper in the Lower Dantian in order to receive celestial light and the handle along the spine to strengthen one's destiny and virtue

The doctor imagines placing the stars of the Big Dipper into the center of his or her body. The Stars' energetic function is to govern the front, back, right, and left of the body, thus regulating the individual's Yin and Yang energy. The Stars' energetic function can also be used for absorbing energy from the four seasons into the individual's body.

Usually, meditations dealing with gathering energy from the Sun and Moon are followed by meditations involving the Big Dipper to further stimulate and energize the body's energetic fields. The Stars of the Big Dipper are also considered to be responsible for opening the seven orifices of the embryo's body, and for giving the embryo life. These stars also correspond to the Nine Chambers in the Three Dantians and the seven primary chakras.

The ancient Zheng Yi Daoists also believed that the Nine Emperors of the Dao Body (Heavenly Emperor, Purple Subtlety, Lusty Wolf, Giant Gate, Store of Wealth, Civil Chief, Pure and Chaste, Military Chief, and Troop Destroyer) were connected to the Nine Stellar Sovereigns of the Big Dipper.

THE NINE DARK STARS OF THE BIG DIPPER

The ancient Daoists also believed in the existence of certain "anti-stars," stars that could not be seen with the eyes but existed as counterparts to the visible stars. They therefore positioned the existence of these invisible Dipper stars around the location of the visible stars.

Just as there were invisible stars forming and invisible Dipper, so are there invisible planets forming an invisible solar system. The magical rituals employed by the ancient Daoists to summon the forces of these stars also work to summon the invisible forces into the sorcerer's own body.

According to ancient Daoist texts, the nine stars of the Big Dipper constellations are doubled in number by virtue of their association with a

Figure 1.175. The Big Dipper, surrounded by the Dark Stars and Preceded by the Three Terraces

group of nine dark stars, which cast a "black light," or "light that does not shine." This is a type of sacred darkness floating around the North Pole. The black light is also associated with the "floating darkness" where nothing external or internal can be seen.

These nine dark stars are actually the stars of the celestial Hun and Po, or Ling Ming (Magical Light) wherein female deities known as the "Nine Empresses of the Great Yin" dwell (Figure 1.175). The Nine Empresses of the Great Yin are associated with the condition of *Wu Wei*, in which the forces of nature are gathered and hidden. They were also believed to assist the Daoist adept in the art of advanced physical, energetic, and spiritual transformation.

In ancient times, the Daoist adepts would direct the focus of their prayers and meditations toward these nine female deities in order to acquire the power of invisibility. Some of their names include, "She Who Hides by Transformation and Escapes into the Origin," "She Who Hides Her Traces and Disperses Her True Form," and "She Who Changes Her Body and Transforms Her Brilliance."

Within the physical body, these nine dark stars correspond and dwell within the Ming Tang of the Upper Dantian, while the nine visible stars of the Big Dipper correspond and dwell within the Heart and Middle Dantian.

Figure 1.176. The ancient Daoist believed that the Pole Star was the absolute center of the Heavens. Pictured here (through time-lapse photography) the stars seem to trace concentric circles around the Pole Star.

THE POLE STAR AND THE BIG DIPPER

In 3000 B.C., the Celestial North Pole pointed to the star Thuban, in the constellation known as “Draco,” or the Dragon. Draconis was considered to be the most important constellation at that time, and it seemed to pivot around the Heavens via one of its own stars, Thuban (also known as Alpha Draconis). Over time, the gradual change from Draconis to the Great Bear (Big Dipper) signified a energetic shift that occurred on the planet many centuries ago.

Currently, the Celestial North Pole corresponds to an area in space very close to the star known as Polaris (the North Star). According to ancient Daoist texts, the Pole Star (North Star) is the absolute center of the Heavens (Figure 1.176). It was further believed that the Pole Star axis, stemming from the North Star, traveled downward from the center of Heaven to connect with the Earth’s center core through the North and South poles. The North pole was regarded as the peak (or Baihui) of the Earth, and was believed to be comprised of seven Stars, composing a fifth realm (differentiated from the Four Directions of Heaven).

The energies of each of the four directional animals and their seven constellations moved around the Earth’s central Pole to create the Five Element changes in weather. If the weather changes progressed in their expected order, they

were considered normal; however, if the weather transition occurred either earlier, later, stronger, or weaker than expected, it was considered to be an environmental Evil Qi.

Therefore, the ancient Chinese believed that one could predict the changes of weather by studying the interrelationships between the Five Elements and the cycles of the Sun, Moon, the Pole Star, the Five Planets, and the Twenty-Eight Constellations.

BIG DIPPER STEPPING PATTERNS

The Big Dipper is also called the “Celestial Matrix” and the “Earthly Pattern.” Therefore, the basic function of Pacing the Dippers is to symbolize leaving the Earth and crossing over the “Nine Quarters” of the Nine Heavens, patrolling the universe, and flying over the realm of the Immortals. Once the priest has entered into the celestial realm, he or she can receive assistance in prohibiting evil things, and controlling evil spirits. The Steps of Yu and the Pacing of the Big Dippers also had the additional function of creating supernatural powers, and enhancing the ability to prohibit and control spirit entities.

Within the course of their development, the specific functions of the stepping patterns became specialized. Some of the stepping patterns were mainly practiced in order to allow the mystic the ability to fly over the Nine Heavens, others were specifically used to control the spirits. For example:

- The pacing of the Dipper for “Destroying Hell and Invoking Thunder,” was used as a skill in Thunder Magic. The stepping pattern was believed to be able to remove the Yin Vital Breath from the body and allow the disciple to be able to discharge Yang spiritual power (causing the frightening sound of thunder to be heard).
- Pacing the “Dipper of Spirit Possession” as a exorcistic skill for “Summoning and Interrogating Spirits” caused the spirit to attach itself to a specified children medium or other designated individual.
- The “Pacing The Numinous Dipper of the Divine Tiger of the Life-invoking Roar” was

Figure 1.177. The Seven Stars of the Northern Dipper can be accessed through the mystic's left hand.

used in order to invoke the Divine Tiger General, who pursued and controlled souls lost in the darkness. This stepping pattern was commonly used when performing the ritual of "Refinement and Salvation for Destroying the Darkness."

- Dipper pacing can also be performed in order to access the Nine Quarters (Nine Continents) of the Earth. In ancient times, the Nine Quarters referred to the nine distinct regions of Earth: Yong, Liang, Yan, Yang, Qing, Xu, Yu, and Ji, which surrounded the "center" kingdom of ancient China. By symbolizing the entire country while pacing the Nine Quarters, the ancient Daoist mystic was able to spiritually travel and energetically patrol all the land on the Earth.

The foundation of Daoist magic lies in the ability to transform and use supernatural powers while controlling the resulting energetic changes with the aid of supernatural forces (via the Celestial Immortals who live within the Heavens or within the Immortal Mountains). A Daoist mystic must also develop powerful supernatural abilities if he or she desires to enter the supernatural world. Pacing the Dipper was thought to be an effective "tool" in helping the Daoist priest enter into the realm of the Immortals.

Figure 1.178. The Pacing of the "Big Dipper of the Mysterious Pivot"

PACING THE BIG DIPPER AND HAND SEALS

The Pacing the Big Dipper is usually practiced together with specific Hand Seals (refer to Figure 1.177). It is said that during the Tang Dynasty (618-907 A.D.) and the Song Dynasty (960-1279 A.D.), there were over 700 kinds of Steps of the Big Dipper and Hand Seal patterns.

In spite of the huge variety of stepping patterns, there are only a few types of magical skills conjured from the Pacing the Big Dipper that are commonly used in Daoist mysticism. The most common stepping pattern used when Pacing the Big Dippers is called the "Big Dipper of the Mysterious Pivot" (Figure 1.178). In this particular stepping pattern, there are only seven Dipper stars used. The names of these stars are used as the names of each steps while pacing forward, and the names of the stars' Rulers (the controller over the stars' specific power) are used as the names of each steps while pacing back.

In the Eastern Han Dynasty (25-220 A.D.), the *Tradition of the Mighty Commonwealth of Orthodox Oneness* taught the "Three-Five Big Dipper Register," which describes the skills of the Pacing of the Dippers of the East, South, West, North and Center. Later the "Skills of Pacing the Dippers of the Twenty-Eight Constellations" (Figure 1.179) and the "Five Big Dippers of the Sun and the Moon" were commonly used in the Zheng Yi traditions.

Figure 1.179. The Three-Five Big Dipper Stepping Patterns of the Twenty-Eight Star Constellations

SEVEN STAR STEPPING PATTERNS

The ancient Chinese divided the Heavenly energy of the cosmos into different classes of Yin and Yang: the Sun was seen as being the essence of Yang, the Moon as being the essence of Yin, and the Stars as being a combination of both Yin and Yang. The Stars were believed to have a great influence upon the energetic matrices of Earth and Man. The term "Stars" in ancient China referred to the visible stars in the Northern Hemisphere; namely the Big Dipper, Polaris, the five planets and the twenty-eight star constellations.

The pure aspects of these Stars were believed to form the universal patterns that are responsible for the manifestation of form and matter. Thus, the ancient Chinese also believed that everyone was born under the guardianship of the Stars. Certain Stars would have a great influence over an individual's life, determining whether he or she would be born as a human or animal, live long or die young, be rich or poor, etc.

The following stepping patterns are based on the placement of the various star constellations.

Figure 1.180. The "Big Star Stepping"

These various stepping patterns are attributed to the "star powers" of the twenty-eight celestial mansions and their movements within the Heavens.

"BIG STAR STEPPING"

This Stepping Pattern uses the stars to summon the magical help of Celestial Immortal Ne Zha (The Fire Wheel Child). According to legend, the Celestial Immortal Ne Zha, riding on his fire wheels can travel everywhere (over rivers and seas, Heaven and hell, etc.) making his task of fighting evil much easier (Figure 1.180).

The Jade Emperor honored him and conferred upon him the title "First Leader of the 36 Immortal Warriors, the Heavenly Marshal who guards the Gates of Heaven."

Figure 1.181. Seven Star Stepping #1:
"Summoning the Immortal Ne Zha" Stepping

SEVEN STAR STEPPING #1:

"SUMMONING THE IMMORTAL NE ZHA" STEPPING

This Stepping Pattern uses the stars to summon the magical help of Celestial Immortal Ne Zha (The Fire Wheel Child). According to legend, the Celestial Immortal Ne Zha, riding on his fire wheels can travel everywhere (over rivers and seas, Heaven and hell, etc.) making his task of fighting evil much easier (Figure 1.181).

This stepping pattern is performed while reciting the following incantation:

**"My body raises up
to offer respect to
the Big Master Teacher
Who Leads the Ghosts"**

SEVEN STAR STEPPING #2:

"REMOVING THE EVILS" STEPPING PATTERN

This Stepping Pattern is used to capture and remove demons and evil spirits (Figure 1.182).

This stepping pattern is performed while reciting the following incantation:

**"I summon
the White Yi
of the Great Heaven
to capture and remove
the demon hoards"**

Figure 1.182. Seven Star Stepping #2:
"Removing The Evils" Stepping

Figure 1.183. Seven Star Stepping #3:
"Summoning the Magical Officers" (First Version)

SEVEN STAR STEPPING #3:

"SUMMONING THE MAGICAL OFFICERS" (#1)

This Stepping Pattern is used for the purpose of summoning the magical help of the Celestial Marshal Generals and their Celestial Soldiers (Figure 1.183).

This stepping pattern is performed while reciting the following incantation:

**"Dispatch the order
and summon the Heavenly Fire
that Demands Respect
and Commands Victory"**

SEVEN STAR STEPPING #4:

"SUMMONING THE MAGICAL OFFICERS" (#2)

This Stepping Pattern is used for the purpose of summoning the magical help of the Celestial Marshal Generals and their Celestial Soldiers (Figure 1.184).

This stepping pattern is performed while reciting the following incantation:

**"With the Fire of Thunder
and My Penetrating Shout
I cause the Heavens and Earth to Move"**

SEVEN STAR STEPPING #5:

"SUMMONING MARSHAL YIN" STEPPING

One example of a general ritual used for summoning Celestial Marshal General Yin to Bind Evil Spirits and Demons is described as follows:

- First, the Daoist disciple transforms his body into that of a Hua Shen ("Immortal Deity"). Next the disciple gathers the energy of his Prenatal Wu Jing Shen (i.e., the spiritual energy of his Five Yin Organs) to merge with his original soul energy (Ling Shen). Both energies are combined in order to form the "true spirit body" (also known as the "Golden Luminosity" body).
- The disciple begins to circulate the spiritual energy by transforming his tissues through the alchemy of mind and respiration. As this circular process continues, the disciple will imagine the exteriorizing of the deities within (by breathing out) and the interiorizing of the Golden Luminosity (by breathing in). The disciple will continue in this manner until he transforms the his body and mind into the spiritual state of an immortal, known as the "Mysterious Lord" (Xuan Di). As the Mysterious Lord, the disciple now has the spiritual status and power to communicate with and summon Celestial Marshal General Yin (or any other celestial deity).
- Next, the disciple purifies the brush used for writing talismans and focuses his attention onto the celestial name of the deity he wishes to summon (Marshal General Yin). The disciple then performs the Seven Star Stepping Pattern for "Summoning Marshal Yin" (Figure 1.185), while saying the following incantation:

Figure 1.184. Seven Star Stepping #4: "Summoning the Magical Officers" (Second Version)

Figure 1.185. Seven Star Stepping #5: "Summoning Martial Yin" Stepping

**"With deep respect I reach
and completely receive
the Magical Power of the Black Ink"**

- On a three and one-half meter blue banner (whose bottom end has been cut into five pennant-shaped ribbons and weighted with small stones), the disciple will draw a large talisman associated with Celestial Marshal Gen-

Figure 1.186. General Yin's Talisman:
Used for Binding Evil Spirits and Demons

eral Yin (Figure 1.186). Marshal General Yin is considered to be the "Star God of the Center Sky," and is summoned from the "Earthly Palace of Supreme Age."

- On the bottom of the large talisman, the disciple then writes in smaller characters the specific talismans associated with several dozen deities and tens of dozens of celestial names in an effort to summon all these celestial deities to attend the ritual.
- The disciple will write each name, one after the other, on top of one another (so as to form a dense circle of black ink at the bottom of the large talisman).
- After writing these names, the disciple then writes a talisman on the ends of each of the five pennants on the bottom of the banner.
- The ceremonial master and his acolytes will then hoist the banner on the end of a 10-meter bamboo pole.
- Charged with talismans and celestial names that have been written by a disciple with spiritual power, the banner waves in the wind, and

INCANTATIONS, HAND SEALS AND STAR STEPPING

Figure 1.187. Seven Star Stepping #6:
"Southern Star" Stepping

summons Celestial Marshal General Yin and the rest of the celestial deities to the altar space.

- When Celestial Marshal General Yin arrives, he ties into knots the pennants at the end of the banner. This energetically symbolizes that he has responded to the summons.
- After all five pennants are securely knotted, the banner is taken down and placed in the center of the main altar.
- Through the use of the Talismanic Brush, Breath, Hand Seal, Star Stepping, Incantation and Banner, the disciple (having become a deity) is now able to summon the celestial Marshal Generals and other deities.

SEVEN STAR STEPPING #6: "SOUTHERN STAR" STEPPING

This Stepping Pattern is used to capture evil spirits or demons (Figure 1.187). The ancient Chinese believed that the energy of the Southern Dipper was in charge of life, while the energy of the Northern (Big) Dipper was in charge of death. While the Northern Dipper represents the realm of the Underworld, the Southern Dipper leads the skillful practitioner to eternal life. Therefore, the celestial deities of the Northern Dipper are invoked in order to help the disciple pass for registration in the Southern Dipper, where the true registers of immortality are kept.

This stepping pattern is performed while reciting the following incantation:

**"I Summon the White Yi
of the Wood Element
to secretly persuade the masses"**

SEVEN STAR STEPPING #7:**"NORTH STAR" STEPPING**

The Northern Dipper (also known as the Northern Bushel, Big Dipper, and Ursa Major) was and is the central object of important visualization techniques in Daoist mysticism (as well as being one of the main celestial divinities). It is the center and source of all things, establishing the inherent order of the universe and foundation of the world. The Dipper is seen as the pivot of all creative transformations. It is the vertical axis of the universe that is aligned with the Spleen and Yellow Court in the human body. It establishes the rhythms of the seasons, distinguishes good and evil and controls good fortune and disaster.

Most importantly, the Northern Dipper is seen as the "Gate of Access" to the Heavens. Believers must invoke its divinities to pass from death into life. The ancient Daoists believed that in order to live longer, an individual needed to pray to the Immortal of the Big Dipper to take one's name off the Death Registration.

The Dipper is the symbol and home of the Great Unity, the Daoist god "Taiyi," and is part of a triad formed between the Sun, Moon and Stars. The Northern Dipper is made up of 9 stars (2 of which are visible only to skillful practitioners), each star inhabited by a particular male divinity. In addition, each star in the Dipper has a corresponding location in the human body. For example, the first star is located in the Heart.

Moreover, the Northern Dipper has beside it a corresponding counterpart/mirror image made up of "Black stars." The spouses of the male divinities of the Northern Dipper live in these stars. This "black" constellation forms the material and spiritual soul of the Northern Dipper (Figure 1.188). In the *Bu Tiangan Jing* (Scripture on Pacing the Heavenly Guideline), stars of the Dipper are known by the following names: Yangming (Yang Brilliance), Yinjing (Yin Quintessence), Xuanming (Mysterious and Dark), Danyuan (Cinnabar Origin), Beiji (Northern Culmen), Tianguan (Heavenly Gate), and are joined by two "dark" stars that serve as the Hun and Po souls of Dipper (Fuxing and Bixing) which help form an esoteric "outer" Bushel.

Figure 1.188. The Big Dipper, surrounded by the "Black Stars" and preceded by the "Stars of the Three Terraces"

Figure 1.189. Seven Star Stepping #7: "Northern Star" Stepping

This Stepping Pattern is used to remove, evict, and capture evil spirits and demons (Figure 1.189). This stepping pattern is performed while reciting the following incantation:

**"The White Yi of Heaven
Secretly Persuades the Masses
to Purify their Spirit"**

**SEVEN STAR STEPPING #8:
"ESCORTING AND ASCENDING" STEPPING**

This Stepping Pattern is used for escorting and sending the official reports to the Heavens (Figure 1.190).

This stepping pattern is performed while reciting the following incantation:

**"The Receptacle of the Heavenly Ding
Falls Auspiciously onto those
in the Divine State of Mysticism"**

**SEVEN STAR STEPPING #9:
SUMMONING THE MAGIC TIGER STEPPING**

This Stepping Pattern is used to summon the Celestial General's Magic Tiger (Figure 1.191).

The ancient Chinese considered the Tiger to be the prince of the wild mountain beasts (the four stripes on his forehead form the character "Wang," or Prince), believing that "its powerful roar stirs up the wind in the valley." It is the magical animal which signifies the Yin that calls forth the actions of the Yang, therefore tiger talismans are used to keep away disease and evil, and its images are painted on the walls of homes and temples to keep away evil spirits.

The tiger is also associated with autumn, when it comes down from the mountains into villages, and is personified by the constellation Orion, which is prominent in autumn. Immortal deities who ride on the back of tigers include:

Figure 1.192. Zhang Daoling, the First Celestial Master of the Zheng Yi Daoist Sect

- **Zhang Daoling:** Zhang Daoling (the First Celestial Master of the Zheng Yi Daoist sect), is depicted as riding a tiger and carrying a demon-dispelling sword as he escorts the dead to their final destination (Figure 1.192).
- **The God of Wealth:** The God of Wealth, Marshal Chao Gongming, is depicted as riding a black tiger while holding a silver ingot.
- **The Goddess of the Wind:** The Goddess of the Wind, Feng Po-po, symbolizes the elements of air and water, storms, precipitation and moisture. She is depicted as an old, wrinkled woman, sitting on the back of a tiger, riding on a path made of clouds.

The tiger represents the greatest earthly power as well as protection over human life. It chases away the "Three Disasters" (fire, thieves and ghosts). As the enemies of evil spirits, especially those who torment the dead, tigers are carved on tombs and monuments.

This stepping pattern is performed while reciting the following incantation:

**"Transform the Original Flying Li
of the Heavenly White Star
and fly to the finish"**

NINE TRACES OF THE BIG DIPPER

The Daoist Book of the *Flowing Drops of the Golden Lock* states that the Big Dipper was the Middle Dipper (which was a star). As the Middle Dipper descended, it became the Nine Souls (which inhabit the Nine Palaces). In order to fuse the spiritual powers of these Nine Souls, the nine traces are performed when Pacing the Dipper (these are demonstrated by following the nine patterns of the Big Dipper stars). It is important to note that the nine traces are represented by the seven stars of the Big Dipper, plus the two extra Dipper stars "Fu" and "Bi."

It is also believed that the original Steps of Yu and the pacing of the Big Dipper corresponded to the energetic and spiritual powers contained within the Nine Palaces and Eight Trigrams. In ancient China, this was called "the three steps and the nine traces which construct the Kan (Water) Trigram and the Li (Fire) Trigram."

Figure 1.193. In ancient China, the Post-Heaven Bagua pattern of the "Magic Square" was superimposed on the left palm allowing the Daoist mystic the ability to summon and gather the energetic and spiritual powers of the Bagua into his or her body.

A common diagram used as a template for stepping in the Nine Palaces and Eight Trigrams, is the "Great River Chart Dipper of the Open Valley" diagram, which was originally used as the stepping pattern diagram of the Big Dipper. The seven stars of the Dippers and the two stars Fu and Bi compose this Big Dipper Diagram, and are regulated by the Post-Heaven positions of the Bagua (Eight Trigrams) listed on the "River Chart" (Figure 1.193). There are two specific types of stepping patterns displayed:

- **Kan (Water) Trigram Stepping Pattern:** This pattern is used after the Winter Solstice. At the time of the Winter Solstice, Yang energy is born, and subsequently increases its power each day. During this time period, the ritual master starts from the Kan (Water) Trigram and moves to the Li (Fire) Trigram.
- **Li (Fire) Trigram Stepping Pattern:** This pattern is used after the Summer Solstice. At the time of the Summer Solstice, Yin energy is born, and subsequently increases its power each day. During this time period, the ritual master moves from the Li (Fire) Trigram to the Kan (Water) Trigram.

Because the original three steps and nine traces of the Steps of Yu were thought to have the shape of the Big Dipper, they were associated with Pacing the Big Dipper. Later, the original "Steps of Yu" was diversified into different types of stepping patterns (i.e., the "Twelve Traces" and the "Three-Five Traces"). Since there are so many kinds of Big Dipper diagrams and patterns, new Dipper steps were constantly created and compiled based on specific ritual contents, needs and functions. In modern times, there are now many names given to these star stepping patterns

THE NINE PALACES OF HEAVEN

Each of the nine numbers listed on the "River Chart" represent one of the nine areas of the Heavens or the Nine Palace Constellations (Figure 1.194). The following is an explanation of the energetic natures of the Nine Stars, as well as their specific Elements and divinational forecasts:

1. **Tian Peng (Water Element):** This star corresponds to Kan Trigram. It energetically has a

Figure 1.194. The "River Chart"

close connection to the occurrence of theft, and it is therefore considered to be an inauspicious star. When the Tian Peng star falls in one palace, people should construct dams, defence facilities, or strengthen the stronghold in order to prevent calamity from happening. It is also not a good time to travel far or conduct business (due to the potential of theft).

2. **Tian Rui (Earth Element):** This star is Yin, and it has a close connection with epidemic. It is sometimes called the disease star. When the Tian Rui star stays in one palace, people should receive teachings or admonishment, make friends, stay in the original place, abstain from the deployment of armed forces, not marry, and avoid quarreling, traveling, new construction, etc.
3. **Tian Cong (Wood Element):** This star is Yang, and it has a close connection with kind donations, doing kind deeds, and agricultural activities. It is considered to be an auspicious star. When Tian Cong dwells in one palace, it is considered to be a good time for military action, battle or fighting.
4. **Tian Fu (Wood Element):** This star is Yang, and it has a close connection with cultural education. It is considered to be a very auspicious star. When Tian Fu dwells in one palace, it is auspicious for traveling, business, marriage, construction, studying, and elevating one's social status, as well as for cultural and educational development.

5. **Tian Qin (Earth Element):** This star is Yang, and it is considered to be auspicious for all things because it dwells in the "Central Earth Palace" which can give rise to all.
6. **Tian Xin (Metal Element):** This star is Yin, and it has a close connection with leadership capability, scheming, treatment of disease, and military deployment. It is considered to be an auspicious star.
7. **Tian Zhu (Metal Element):** This star is Yin, and it has close connection with killings, strange things, mysterious matters, damage and destruction. It is considered to be an inauspicious star. When Tian Zhu falls in one palace, people should strengthen their garrison, train their forces, and prepare for the bad times. It is not a good time for traveling far or doing business, otherwise loss, injury and unfortunate things will happen.
8. **Tian Ren (Earth Element):** This star is Yang, and it is considered to be an auspicious star. When Tian Ren dwells in one palace, it is a good time for offering teaching to the general public, pacifying individuals, and cracking down on rebellious individuals or gangsters. It is also an auspicious time for business, marriage and social status.
9. **Tian Ying (Fire Element):** This star is Yin, and it has a close connection with outrageous behavior, heated situations, fire, and blood. It is considered to be a neutral star. When Tian Ying dwells in one palace it is good for planning and visiting high officials. However, it is not an auspicious time for making fortunes, social status possession, marriage or travel.

INCANTATIONS FOR THE NINE PALACES OF HEAVEN

In ancient China, the ritual master would recite specific incantations while pacing any one of the nine magical stars, pointing out the direction in which he is moving, reciting the symbolic meaning of the specific Dipper and manifesting the power of his magic skill. For example, the incantation used when pacing the Dipper after the Winter Solstice says:

**"The Dipper is sublime
at the 12 two-hour periods,
Therefore I take the Big Dipper
flying over to exhibit mighty power
with Vital Breath like the clouds.**

**The seven stars move
to interact with the Heavens,
so that we know the changes
of good or ill luck.**

**Pacing the Dipper by its rhythms,
I move into the Dipper,
and through the 28 Constellations,
through the Heavenly Pass
with the changing of time.**

**Moving from Tianying up to Tianren,
I feel cold as if the land
has sunk down into a deep valley.**

**Leaning by Tianzhu and bracing Tianxin,
I ascend to Tianqin from Tianxin.
I pass by Tianfu and look at Tianchong,
going into Tianrui and out of Tianfeng.**

**The passage of the Dippers is open,
and the strong and weak
mutually assist each other.
Happiness and good fortune are increased
and are passed on to the descendants.**

**I have stayed in the darkness
for hundreds of years.
I follow your steps after the Yang.**

**The Dipper of the Open Valley is divine,
so that it can dispel the devils.
As a result, one can avoid the evils
at the mouth of the Dipper.**

**Quickly, quickly,
In accordance with
the statues and ordinances!
Act as this is my command!"**

Through understanding this ancient Daoist incantation, we may see that Pacing the Big Dipper mainly symbolizes flying in the Heavens, with the supernatural function of dispelling disasters and avoiding evils. The Dipper of the Twenty-

Eight Constellations and the Five Big Dippers of the Sun and the Moon represent certain mystical areas of Heavens. The ritual master visualizes these celestial scenes while pacing the Dipper steps.

OFFERING INCENSE WITH "THE DIPPER OF BRIGHT STARS AND PEARLS" INCANTATION

Each time the Daoist priest offers incense at the Central Altar, he or she will perform the "Dipper of Bright Stars and Pearls" stepping patterns. These stepping patterns can be paced in either of two ways; through the "Eight Stepping Patterns" or through the "Three Stepping Patterns."

As the Daoist paces through these steps, and offers the incense, he or she will recite the following incantation:

**"The imperial order of Jade Clarity is simple,
with the separate images
of the Great Divine.**

**The original Dippers
are flowing and changing with the stars
and pearls over and around them.**

**Quickly, Quickly,
In accordance with the statues and
ordinances as the imperial order"**

While reciting the incantation, the ritual master visualizes the three magical realms of the Jade Clarity, Supreme Clarity, and Highest Clarity, where the Immortal Gods of the Three Pure Ones reside.

The incantation of "Pacing the Big Dipper" mentions that by burning the incense, the Daoist priest transforms the energy of normal starlight into spiritual power within the realm of the mortal world (the World of the Dead). The ancient Daoists believed that the priest could succeed in accomplishing such a supernatural task with the aid of speaking such an incantation.

NINE PALACE STEPPING PATTERNS

When the Eight Trigrams were arranged into a nine-chambered square pattern, with the center representing the magical "Bright Palace," it was commonly known as the "Magic Square." The

ancient Chinese attached great significance to this magical pattern, as it involved manifesting endless variations of mathematical calculations that could be used to explain the energetic flows of Heaven and Earth. So influential was this magical pattern that the Imperial Palace in China was divided into a Magic Square containing nine chambers. In each appropriate chamber, sacrifices were performed in accordance with the times and seasons of nature.

The "Nine Chambers of the Emperor's Palace," (or Nine Palaces) was first introduced publicly in ancient China in the *Book of Rites*. This ancient book described each celestial palace, with its unique color and time of season. The ancient system of "Nine House Divination" (based on the celestial patterns of the Nine Palaces) and the unique patterns of energetic interactions stemming from the "Magic Square" were also introduced to the public during this time period.

Nine Palace Stepping Pattern, also known as the "Walk of Taiyi Through the Nine Palaces," is represented by eight trigrams positioned around the center of the Luo Diagram. The esoteric rituals pertaining to this "Magic Square" configuration may be seen in the Celestial Masters *Shangqing Huangshu Guodu Yi* (Initiation Rite of the Yellow Writings), which consists of twenty ritual units to be performed by a male-female pair, literally pacing the Earthly Branches, the Five Elements, and the Nine Palaces on the cosmicized body of each of the partners.

During the Spring and Autumn Period (770-476 B.C.), the famous Daoist poet Lu Buwei wrote, "Heaven has nine fields, Earth has nine regions, the country has nine mountains, the mountains have nine passes." The ancient Daoist Star Stepping patterns follow these nine passes, allowing the sorcerer the ability to access the most subtle realms of Heaven and Earth.

According to the ancient writings on the *Xu Zhen Tu* (the Chart of True Cultivation), Heaven, Earth and Man are energetically joined in a continuous interaction of correspondences. These subtle correspondences relate to the esoteric patterns hidden within matter, energy, and spirit. For example, the "Nine Palaces" correspond to the

Figure 1.195. Nine Palace Stepping #1:
"Magic Square Stepping"

nine energetic influences of Heaven, the "Nine Continents" correspond to the nine energetic influence of the Earth, and the "Nine Orifices" correspond to the nine energetic influences of Man.

The following Nine Palace Stepping Patterns are arranged according to specific energetic patterns unique to the Magic Square and are practiced in order to allow the Daoist disciple access into the energetic realms of the Jade Emperor's "Nine Celestial Palaces."

NINE PALACE STEPPING PATTERN #1: "MAGIC SQUARE STEPPING"

This stepping pattern is traditionally used in Daoist rituals for the purpose of conjuring and summoning the specific powers of celestial Immortals, Planetary Immortals, Spirit Soldiers, etc. By following the Nine Palace stepping patterns, the disciple can progress into the most subtle realm of the celestial world (Figure 1.195).

As with all of the other stepping patterns, when using the Magic Square for attacking, defending, summoning, or dispatching, the disciple will eventually transfer the energetic pattern onto his or her left hand, in order to use the right hand to hold Daoist magical "tools."

Figure 1.196. Nine Palace Stepping #2:
"Hero Stepping (Nine Purple Stepping)"

Figure 1.197. "Nine Palace Stepping"

NINE PALACE STEPPING PATTERN #2: "HERO STEPPING (NINE PURPLE STEPPING)"

This stepping pattern is traditionally used in Daoist rituals for the specific purpose of sending a "Report" back to the Heaven. By following the Nine Palace stepping patterns, the disciple can progress into the most subtle realm of the celestial world (Figure 1.196).

This stepping pattern is performed while reciting the following incantation:

**"My hidden energy
flows like silk
It rushes to assist me
It leaves my stable heart and mind
allowing me to complete
a hero's task"**

NINE PALACE STEPPING PATTERN #3: "SENDING THE REPORT"

This stepping pattern is used in rituals in order to send reports back to Heaven (Figure 1.197).

TWENTY-EIGHT STAR CONSTELLATIONS

In China, manuscripts uncovered from the cave monasteries of Tun Huang have included some of the oldest star maps in existence. Since the year 2000 B.C., the ancient Chinese Qigong Masters have observed and used the energetic movements of the Twenty-eight Star Constellations, flowing in 24 hour cycles and yearly cycles. The ancient Chinese also placed careful attention on the Sun and Moon, and the Five Planets with the Chinese zodiac to forecast auspicious times for matters of state and war, and to predict weather and natural disasters. Each of these energetic systems has its own cyclic pattern, as well as a direct and indirect influence on human life.

The Chinese practiced gathering energy from the Heavenly Stars, believing that the study of astrology, like alchemy, united the body's inner world with that of the outer. According to ancient divination practices, the celestial bodies exert forces and exhibit personalities that influence people and events on Earth. A person's character and destiny throughout life is based upon the positions of the planets and constellations at the exact time and place of conception and birth. These influences can be determined by mapping the positions of the twenty-eight constellations in the sky at various times.

In ancient China, the Emperor was considered to be the high priest of the Heavens, and he frequently made sacrifices to the Stars to maintain harmony with the universe. The four corners of the Emperor's palace represented the cardinal points in space (the equinoxes and solstices). To be in harmony, the Emperor and his family would move from one corner to another as the seasons changed.

In ancient China, the Heavens were divided into 28 areas matched with 28 corresponding signs, which are called the constellations as the symbols of Heaven (7 constellations in each direction). The pacing of the Twenty-Eight Star Constellations therefore represents stepping within the 28 constellations, throughout the four directions of the Heavens.

STARS OF THE TWENTY-EIGHT CONSTELLATIONS

In ancient China, the Twenty-Eight Star Constellations (Xiu) were commonly observed as "Star Patterns" (Xingxiang), and were considered to be the eter-

	Jupiter	Mercury	Saturn	Sun	Moon	Mars	Mercury

	Thursday	Friday	Saturday	Sunday	Monday	Tuesday	Wednesday

Figure 1.198. The Seven Divisions of the Twenty-Eight Star Constellations Arranged According to Celestial Energies of the Five Elements and the Sun and Moon

nal abode of immortals and gods. Specifically, the gods of Prior Heaven were believed to live within the Twenty-Eight Star Constellations, at one with the eternal Dao. These gods were divided into three groups corresponding to Heaven, Earth and Man.

The ancient Chinese Daoists would thus use the Twenty-eight star constellations for summoning specific gods, immortals, and spirits. Generally, the Twenty-Eight Star Constellations were categorized by Heavenly divisions, each division containing several constellations associated with one of the Five Element phases, a ruling color, and one of the Four Palaces with its associated celestial animal spirit.

Each of the Twenty-Eight Star Constellation spirits has his or her own post, unit, and garrison name. The ancient Daoists would construct a Bagua circle consisting of twenty-eight "standards" from which to conjure the spirits from the Twenty-Eight Star Constellations. A "standard" is a list drawn on silk of each of the twenty-eight star constellations' energetic Elements, colors, and animals. A description of the "Seven Celestial Divisions" of the Twenty-Eight Star Constellations

arranged according to Celestial Energies of the Five Elements and the Sun and Moon is described as follows (Figure 1.198):

1. **These star constellation spirits are subservient to the Wood Element;** they are drawn on standards constructed of green/blue silk:
 - **The Jiao Constellation:** with the spiritual animal form of a Rain Dragon
 - **The Dou Constellation:** with the spiritual animal form of a Unicorn
 - **The Kui Constellation:** with the spiritual animal form of a Wolf
 - **The Jing Constellation:** with the spiritual animal form of a Wild Dog
2. **These star constellation spirits are subservient to the Metal Element;** they are drawn on standards constructed of white silk:
 - **The Gang Constellation:** with the spiritual animal form of a Dragon
 - **The Nui Constellation:** with the spiritual animal form of an Ox
 - **The Lou Constellation:** with the spiritual animal form of a Domestic Dog
 - **The Gui Constellation:** with the spiritual animal form of a Sheep (Goat)
3. **These star constellation spirits are subservient to the Earth Element;** they are drawn on standards constructed of golden-yellow silk:
 - **The Di Constellation:** with the spiritual animal form of a Badger
 - **The Nu Constellation:** with the spiritual animal form of a Bat
 - **The Wei Constellation:** with the spiritual animal form of a Ring-Neck Pheasant
 - **The Liu Constellation:** with the spiritual animal form of a Roebuck
4. **These star constellation spirits are subservient to the Sun;** they are drawn on standards constructed of dark, ruby-red silk:
 - **The Feng Constellation:** with the spiritual animal form of a Rabbit
 - **The Zu Constellation:** with the spiritual animal form of a Rat
 - **The Mao Constellation:** with the spiritual animal form of a Rooster
 - **The Xing Constellation:** with the spiritual animal form of a Horse
5. **These star constellation spirits are subservient to the Moon;** they are drawn on standards constructed of deep-blue silk:
 - **The Xin Constellation:** with the spiritual animal form of a Fox
 - **The Wei Constellation:** with the spiritual animal form of a Swallow
 - **The Bi Constellation:** with the spiritual animal form of a Crow
 - **The Zhang Constellation:** with the spiritual animal form of a Stag
6. **These star constellation spirits are subservient to the Fire Element;** they are drawn on standards constructed of purplish-red silk:
 - **The Wei Constellation:** with the spiritual animal form of a Tiger
 - **The Shi Constellation:** with the spiritual animal form of a Pig
 - **The Zu Constellation:** with the spiritual animal form of a Monkey
 - **The Yi Constellation:** with the spiritual animal form of a Snake
7. **These star constellation spirits are subservient to the Water Element;** they are drawn on standards constructed of black silk:
 - **The Qi Constellation:** with the spiritual animal form of a Leopard
 - **The Bi Constellation:** with the spiritual animal form of a Snail
 - **The Shen Constellation:** with the spiritual animal form of an Ape
 - **The Zhen Constellation:** with the spiritual animal form of an Earthworm

After constructing the Bagua circle and arranging the constellations in their proper places, the Daoist would then position him or herself in the center of the circle, acting as the coordinating general for all of the spirits summoned. It was important for the ancient Daoist to place the "great standard" (a talismanic charm needed to control the twenty-eight constellation spirits) in the center of the circle in order to command the spirit soldiers. To command and dispatch the spirit soldiers, the Daoist would use specific Hand Seals formed on his or her left hand, combined with the recitation of specific incantations and the drawing of talismanic charms.

Figure 1.199. Face the direction of the North Star and Big Dipper, and try to feel the energetic nature of each of the four quadrants of Stars.

GATHERING ENERGY FROM THE TWENTY-EIGHT STAR CONSTELLATIONS

At nighttime, when the Moon is not suitable for absorbing Qi (i.e., during the new Moon), the Daoist mystic can focus on absorbing the energy of the twenty-eight star constellations into his or her body (Figure 1.199). The absorption of the star energy is used in order to strengthen the Yuan Qi of mystic's internal organs and tissues.

In ancient China, the energy of all Five Planets and Twenty-eight star constellations was traditionally drawn into a Daoist master's body via the Tian Wu Zang meditation. The Tian Wu Zang meditation allowed the master to absorb celestial

energy through the five Thrusting Channels. These Channels flow through the center of the body, connecting the top of the head to the perineum, enveloping and supporting the center Taiji Pole.

The twenty-eight day star constellation cycle was also arranged externally on the Daoist master's body along the Governing and Conception Vessels. The "ecliptical" path of the Sun follows the Fire Cycle of the Microcosmic Orbit, which influences an individual's emotional, mental, and physical health.

Figure 1.200. The Pacing of the “Twenty-Eight Star Constellations”

“PACING THE 28 CONSTELLATIONS” STEPPING PATTERN

The pacing of the Twenty-Eight Star Constellations also symbolizes the rotation of the Dipper turning around and crossing the Ji Constellation, as it moves around the Heavens (Figure 1.200).

“DIPPERS OF THE 28 CONSTELLATIONS” STEPPING PATTERN

On the outside of this star stepping pattern are the Twenty-Eight Constellation Stars, on the inside right is the Southern Star, and on the inside left the North Dipper Star. This stepping pattern is used in ancient rituals to show respect to the Celestial Immortals and the Celestial Palace (Figure 1.201).

The Eight Trigrams	Heaven Qian	Mist, Rain Dui	Fire Li	Thunder Zhen	Earth Kun	Mountain Gen	Water Kan	Wind/Air Xun
Yang and Yin	Yang	Yang	Yang	Yang	Yin	Yin	Yin	Yin
General Principles	Creative	Reflective	Bright	Exciting	Receptive	Steady	Dark	Penetrating
	Activity	Weightless	Formed	Impetus	Passivity	Heaviness	Formless	Sensitivity
Principles of Nature	Immaterial	Evaporation	Solar Forces	Vitality	Material	Inertia	Lunar Forces	Assimilation
	Universal	Inorganic	Elementary	Organic	Universal	Inorganic	Elementary	Pervasiveness
	Formless	Changeability	Heat	Mobility	Form	Resistance	Cold	Organic
	Energy	Evaporation	Incandescence	Fertilization	Matter	Inertia	Fluidity	Gaseous
	Infinite Space	Clairvoyant Observation	Penetrating Light	Growth and Power	Dense Matter	Solid Stability	Space and Movement	Perceptive Intuition

Figure 1.203. The Prenatal Bagua Trigram Powers According to the Universal Forces of Yin and Yang (System of Fu Xi)

“Eight Trigrams,” and is considered a template for the basic laws of all energetic movements and transformations (Figure 1.203).

Each trigram is composed of three “yao” lines: a solid yao line (—) is considered Yang, a broken yao line (- -) is considered Yin. Each “yao” represents a basic unit of the Eight Trigrams, and has three meanings: sunlight, moonlight and the mutual projection of the sun and moon. The Yao Trigram itself is the symbol of the movement of the sun and moon.

PRENATAL AND POSTNATAL TRIGRAMS

The unique powers of the Bagua can be divided into two separate schools or systems of thought: The Prenatal Bagua of Fu Xi, and the Postnatal Bagua of King Wen.

The Prenatal Bagua of Fu Xi

Fu Xi is believed to have lived a thousand years before King Wen, during the Age of the Five Rulers (2852 B.C.). The Bagua system of Fu Xi focuses on the fundamental principles of light and darkness, which revealed to him the polar nature of the universe (Figure 1.204). The Heavenly prin-

Figure 1.204. The Prenatal Bagua Trigrams (Eight Dimensions or Phases of Energy Polar Opposites): Yin (1-4) across from Yang (5-8). This Cycle of Harmony Relates to the World of Thoughts and Ideas. The Opposition of Energetic Forces is Responsible for the Creation of All Phenomena.

Figure 1.205. The Postnatal Bagua Trigrams: The Energetic Cycles of Forces are the External Manifestations of Divine Thought (The World of Phenomena or Senses)

ciples expressed within the system of Fu Xi reflect the multidimensional symbols which govern our life. Therefore Heaven is placed at the top of the trigram and Earth is placed at the bottom of the trigram. The specific focus of Prenatal Fu Xi Bagua is the expression of two mutually dependent powers, compensating each other, for example:

- Heaven-Earth
- Fire-Water
- Mountain-Lake
- Thunder-Wind

As energetic principles, the multidimensional powers are inseparable, although one power may temporarily predominate. In Fu Xi's Bagua system, the eight fundamental forces constantly seek to balance each other.

Postnatal Bagua of King Wen

King Wen is believed to have lived in the Zhou Dynasty (1028-221 B.C.). The Bagua system of King Wen focuses on the fundamental principles of the Earthly transformations (Figure 1.205). They

are arranged according to the expression of increasing or decreasing qualities of physical life (beginning at Zhen and following a clockwise progression). The Earthly principles expressed within the system of King Wen are not only separated in time, but they are also thought of as being energetically "in sequence" around the periphery of the Bagua instead of matching powers through opposite polarity alignment. Because Fire (light and heat) and Water (dark and cold) appear as the most prominent and visible of all Earthly forces, in King Wen's Bagua configuration Fire is placed at the top of the trigram and Water is placed at the bottom.

BA GUA STEPPING PATTERNS

The following Stepping Patterns allow the Daoist disciple access into the energetic realm of the various Eight Trigram Powers.

BAGUA STEPPING #1:

"THE ANCIENT RIVER CHART"

This circular stepping pattern is used both in Daoist alchemic cultivation, and in summoning rituals. It represents the unification of the Yin and Yang energies described within the ancient River Chart (Lo Diagram), and it contains the esoteric energetic patterns of the "Magic Square" (Figure 1.206). When walking the circular stepping pattern, the Daoist mystic would envision the Prenatal celestial energies and the Postnatal terrestrial energies combining within the energetic space of the center of the circle.

According to the historic records, in ancient China the world was believed to be made up of Nine Continents. Eight of these continents (Yong, Liang, Yan, Yang, Qing, Xu, Yu, and Ji,) surrounded the "center" kingdom of ancient China. As the Daoist mystic stood in the middle of the "Central Continent" (represented by the image of the River Chart) and fused with the interacting energies of Heaven and Earth within these eight continents (represented by the eight mountains which circle the River Chart), he or she could access an energetic portal and spirit travel to any place in the physical world.

Offering The Report

When using the circle walking method for "Offering the Report," the disciple is taught to step through each of the Eight Trigrams and focus on their various celestial powers. As the disciple steps, he or she imagines approaching the Celestial Courts. After walking the circle counter-clockwise through nine complete rotations, the disciple eventually comes to a halt by forming a "T-Stance" at the "Stars of Three Terraces," located by the Qian Trigram (North-West). The three stars of the Three Terraces were believed to be a staircase connecting Heaven to the Earth. The disciple proceeds from star to star, after having first circled around the Dipper three times (totaling nine rotations), the ultimate goal being to mount up to the Shangqing Heavens.

When walking, it is important that the disciple imagines him or herself being covered in a sealed bubble of purple mist. Once the disciple reaches the "Stars of Three Terraces," he or she "transforms their energetic form," and mounts the back of an enormous white crane (while forming the White Crane Double Hand Seal) to fly towards the Gate of Heaven and meet with the Jade Emperor. After the encounter, the disciple is to return from the Gate of Heaven by walking the circle nine times (three rotations per each Terrace) in a clockwise direction, ending at the Earth Door (located at the South-West corner of the altar).

BAGUA STEPPING #2:

"THE YI-JING - WU XING STEPPING"

This circular stepping pattern is used both in Daoist alchemic cultivation, and in summoning rituals. It represents the "Blending of the Three and Five" manifesting through 64 changes of the Yi Jing Divination (Figure 1.207).

When pacing the circular steps of the Yi-Jing - Wu Xing Stepping pattern, the energetic and spiritual natures of the Earthly body's Jing, Qi, Shen fuse with the celestial energies of the individual's cultivated Heavenly virtues. These combined energies then fuse with the subtle energies of the Five Elements, allowing the awareness of the physical body to dissolve into the infinite space of the spiritual realms.

Figure 1.206. Bagua Stepping #1:
"The Ancient River Chart"

Figure 1.207. Bagua Stepping #2:
"Yi Jing-Wu Xing Stepping"

Figure 1.208. Bagua Stepping #3:
"Ba Gua - Yi Jing Stepping"

Figure 1.209. Bagua Stepping #4:
"Prenatal Bagua Stepping"

BAGUA STEPPING #3: "BA GUA - YI JING STEPPING"

This circular stepping pattern is used both in Daoist alchemic cultivation, and in summoning rituals. It represents the blending of the "Eight Original Trigram Powers" with the powers of the "Sixty-four Hexagram Changes."

These combined energies then fuse with the subtle energies of the Five Elements, allowing the awareness of the physical body to dissolve into the more powerful spiritual realms (Figure 1.208).

When pacing the circular steps of the Ba Gua - Yi Jing Stepping pattern, the energetic and spiritual natures of the eight original trigram powers become manifested within the disciple's body, giving birth to the energetic veil through which to observe one's destiny and life purpose.

BAGUA STEPPING #4: "PRENATAL BA GUA STEPPING"

This circular stepping pattern is used both in Daoist alchemic cultivation, and in summoning rituals. The Prenatal Bagua Trigrams represent Eight Dimensions or phases of energy (Figure 1.209). The specific powers of the trigrams are polar opposites (Yin across from Yang). This "cycle of harmony" relates to the world of thoughts and ideas. In the Prenatal Bagua Trigrams, the opposite energetic forces are responsible for the creation of all phenomena.

The Prenatal stepping pattern is traditionally begun with circular clockwise stepping. It is practiced in the early morning, during the time of the "Ascent of Yang" (from 12:00 midnight to 12:00 noon), with the focus placed on the cultivation of the eight specific powers of the Bagua.

Figure 1.210. Bagua Stepping #5: "Prenatal Bagua Stepping"

BAGUA STEPPING #5:
"PRENATAL BAGUA STEPPING"

This stepping pattern is traditionally used in Daoist rituals for the specific purpose of sending a "Report" back to the Heaven. By following the Prenatal Bagua stepping patterns, the disciple can progress into the most subtle realm of the celestial world (Figure 1.210).

BAGUA STEPPING #6:
"POSTNATAL BAGUA STEPPING"

This stepping pattern is traditionally used in Daoist rituals for the specific purpose of sending a "Report" back to the Heaven. By following the Postnatal Bagua stepping patterns, the disciple can progress into the most subtle realm of the celestial world (Figure 1.211).

The Postnatal Bagua Trigrams represent the energetic cycles of the eight original powers. Their powers are expressed as the external manifestations of Divine Thought. The Postnatal Bagua Trigrams represent the spark of life, responsible for the creation of the world of phenomena (or senses).

BAGUA STEPPING #7:
"POSTNATAL BAGUA STEPPING"

This stepping pattern is traditionally used in Daoist rituals for the specific purpose of sending

Figure 1.211. Bagua Stepping #6: "Postnatal Bagua Stepping"

Figure 1.212. Bagua Stepping #7: "Postnatal Bagua Stepping"

a "Report" back to the Heaven. By following the Postnatal Bagua stepping patterns, the disciple can progress into the most subtle realm of the celestial world (Figure 1.212).

THE WU XING: FIVE ELEMENTS

In the ancient Chinese characters for Wuxing (the five energetic phenomena of life), the character "Wu" translates as "five," and the character "Xing" translates as "movement, process, manifestation, or phase" (Figure 1.213). Together, the term "Wuxing" can be translated as "Five Elements," and is considered an energetic template based on the study of five manifestations, phases or processes of Qi transformations. The Five Elements are represented by the physical, energetic and spiritual natures of the Wood, Fire, Earth, Metal, and Water Elements (Figure 1.214).

The Five Elements classify all tangible and intangible substances into five specific categories (five senses, five viscera, five postnatal emotions, five prenatal virtues, five flavors, five seasons, five directions, five phases of energetic transition, etc.).

The Five Elements can additionally be classified according to three levels of energetic manifestation and influence. These three levels pertain to the crude, subtle and ethereal states of Jing, Qi and Shen, and are described as follows:

- **The Material Components of Five Elements:**

These relate to the gross material realm, and correspond to the waking state of consciousness. The material aspect of the Five Elements refers to the most dense and material forms of the Five Element natures; they affect the individual's physical body.

- **The Energetic Components of Five Elements of Energy:**

These relate to the energetic realm, and correspond to the dream state of consciousness. The energetic aspect of the Five Elements refers to the subtle Five Element natures; they affect the individual's energetic body.

Figure 1.213. The Chinese Characters for "Wuxing," The Five Elements

Figure 1.214. The Five Elements

- **The Spiritual Components of the Five Elements:**

These relate to the spiritual realm, and correspond to the sleeping state of consciousness. The spiritual aspect of the Five Elements refers to the most subtle of the Five Element natures; they affect the individual's spirit body.

Figure 1.215. Five Element Stepping #1:
"Five Element Power Stepping #1"

**FIVE ELEMENT STEPPING #1:
"FIVE ELEMENT POWER STEPPING"**

This Stepping Pattern is used to gather the Powers of the Five Elements that are stored within the Elements of Wood, Fire, Earth, Water, and Metal (Figure 1.215).

This stepping pattern is performed while reciting the following incantation:

**"The Mystical Smoke
of ____ arises
at the Gate of the Dead"**

**THE FIVE ELEMENT STEPPING #2:
"FIVE ELEMENT POWER STEPPING"**

This Stepping Pattern is also used to gather the Powers of the Five Elements that are stored within the Elements of Wood, Fire, Earth, Water, and Metal (Figure 1.216).

This stepping pattern is performed while reciting the Five Element Creative Cycle:

**"Wood Creates Fire
Fire Creates Earth
Earth Creates Metal
Metal Creates Water"**

Figure 1.216. Five Element Stepping #2:
"Five Element Power Stepping #2"

Figure 1.217. Five Element Stepping #3:
"Five Element Virtues Stepping"

**THE FIVE ELEMENT STEPPING #3:
"FIVE ELEMENT VIRTUES STEPPING"**

This Stepping Pattern is used to respect, purify, and gather the energy of the Five Virtues stored within the Five Yin Organs: Heart (Peace), Liver (Compassion), Spleen (Truth), Lungs (Integrity), and Kidneys (Wisdom) (Figure 1.217).

This stepping pattern is performed while reciting the following incantation:

**"The Essence of Evil
is Taken Away
and ____ Dies"**

**THE FIVE ELEMENT STEPPING #4:
"FIVE STAR STEPPING"**

This Stepping Pattern is used to respect and gather the energy of the Five Prenatal Stars (the Supreme Yang, Supreme Yin, Heavenly Stars, Southern Stars, and Northern Stars) (Figure 1.218).

This stepping pattern is performed while reciting the following incantation:

**"The Pure and Serious
Follow the Cloudy Road
to Divine Illumination"**

**THE FIVE ELEMENT STEPPING #2:
"FIVE SOUNDS STEPPING"**

This Stepping Pattern is used to respect and gather the Qi of the Five Postnatal energy sound vibrations ("Xu" of the Liver, "He" of the Heart, "Hu" of the Spleen, "Si" of the Lungs, and "Chui" of the Kidneys) (Figure 1.219).

This stepping pattern is performed while reciting the following incantation:

**"I Draw Towards and Acquire
Shang Qing"**

THREE PACE STEPPING PATTERNS

The following Three Pace stepping patterns (known as San Bu Gan) are commonly used in Zheng Yi rituals for summoning the Celestial Martial Generals.

**THREE PACE STEPPING PATTERN #1:
"FA YI STEPPING (WIND AND FIRE STEPPING)"**

This Stepping Pattern is known as Wind and Fire Stepping. It used to show respect to the stars, and to summon Celestial General Fa Yi (Figure 1.220).

This stepping pattern is performed while reciting the following incantation:

**"I Move the Wind
and Gather Thunder
to Release Heavenly Fire"**

This is a fast magical step. After three quick steps, take the "Thunder Block" in the right hand and write the following Chinese character for "Bind" (Figure 1.221). At the same time form a left hand "Jade Incantation" Hand Seal by placing the thumb of the left hand on to the "Yi" posi-

Figure 1.218. Five Element Stepping #4:

Figure 1.222. The "Jade Incantation" Hand Seal.

tion (located on the second crease) of the left middle finger (Figure 1.222).

THREE PACE STEPPING PATTERN #2: "THREE ALTAR STEPPING"

This Stepping Pattern is used for sending the report back to the Celestial Palace. When performing rituals, it is sometimes used as a "connecting" step, in order to link the Nine Purple Stepping with the Five Stepping patterns (Figure 1.223).

This stepping pattern is performed while reciting the following incantation:

**"On the Lower Altar
Three Blues
Cut the Demons and
Remove the Ghosts."
On the Upper Altar
One Yellow Removes the Evil.
On the Middle Altar
Two Whites Protect the Body
and the Property."**

SUMMONING THE SPIRITS OF THE DEAD

The following stepping patterns are commonly used in Zheng Yi rituals for summoning or retrieving the Ethereal Soul (Hun) of the dead.

The Hun represent the body's spiritual consciousness, provide the energetic movement of the mind, and are associated with the Qi of Heaven and the Prenatal Five Element Virtues (also known as the Five Agents). Although they reside in the

Figure 1.223. Three Stepping Pattern #2
"Three Altar Stepping"

Liver Orb, the Hun also resonate from the Three Dantians (like a vaporous mist extending from the Liver and filling the body's three Dantians).

The Hun (Ethereal Soul) and Po (Corporeal Soul) influence the body's "Original Soul" (Yuan Shen). The ancient Chinese believe that, in the presence of a disorder (whether physical, mental, emotional or spiritual) the Hun sometimes fly away (like startled birds in a yard). This vacancy of the Hun causes the body's Corporeal Soul (Po) to either stir about thoughtlessly in the absence of effective control (clinically known as "disassociation" or commonly called "spacing out"), or to become animalistic in nature and attack or flee for the sake of survival.

Traditionally, the ancient Daoists believed that the three Hun originated from Heaven, and were considered to be a part of the spiritual aspect of an individual that can project and travel. Dreams are an example of the information gathered during the Hun's out of body travels.

The Hun store the sum total of past experiences. The expressions of the Hun are manifested through images, symbols and ideas stemming from the Divine, or through the energetic state of the Wuji. These images, symbols, and ideas are stored in the individual's mind, affecting his or her spiritual life. Without this interaction, a person's inner mental and spiritual life would become deficient in ideas, images and dreams.

The Hun spiritually and energetically respond to the energetic grids of Heaven (universal energetic fields). The stars and planets within these Heavenly grids exert an influence on the Hun, causing each individual's body to react to certain astrological configurations (full moon, new moon, equinox, solstice, etc.). An individual's positive or negative emotional reactions are sometimes based on the affinity of the vibrational rate of the Hun with the energies of a particular astrological alignment.

The Hun are classified as Yang spirits; they can be cultivated and refined. Imagination, visualization and positive affirmation in the form of prayer and incantations, meditation, and Hand Seals are traditionally used to awaken and establish an active relationship with the Three Ethereal Souls.

Upon the death of the body, the energetic spiritual essence of the Hun ascends back to Heaven. According to ancient Daoist tradition, upon death, the Hun exit the body through the Baihui at the top of the head and ascend to the Big Dipper. While at the Big Dipper, the Hun report the individual's actions, thoughts and deeds from his or her lifetime to the celestial spirits that preside over the individual's destiny. The celestial spirits will then determine the degree to which the individual had cultivated virtue during that incarnation.

In China, when an individual dies, there is a traditional ceremony performed called, "Zhao Hun" or "the calling of the Hun." This ceremony entails someone (a relative or loved one) going to the roof of the deceased individual's house and calling to the deceased person's Hun, begging it to return to its body. If the Hun do not return, then the Po will then begin their descent into the Earth and the body's tissues will start to decay.

In order to ensure that the Po stay in the body after it has been buried (and that they will not come out to annoy the living) the relatives seal all of the orifices (exits) of the body, in order to trap the Po inside. Generally, the orifices of the body are plugged with either jade or rice (depending on the deceased individual's financial status).

Figure 1.224. Summoning the Spirits of the Dead #1
"Gathering the Hun Stepping"

When performing a magical ritual used to hunt for a deceased individual's Hun, bring the soul out of hell, and lead it upward into Heaven, the Daoist sorcerer will traditionally repeat the following incantation:

**"An Fa,
Zha Fa Feng
Pu She
Zhong You Hun"**

The sorcerer will then end the incantation with:

"JI JI Ru Lu Ling"
("Quickly, Quickly - As this is Law")

"GATHERING THE HUN STEPPING"

This Stepping Pattern is used to call and gather the Hun (The Soul of the Dead) (Figure 1.224).

This stepping pattern is performed while reciting the following incantation:

Figure 1.225. Summoning the Spirits of the Dead #2
"Gathering and Hiding the Hun Stepping"

**"God of the Heavens,
Gather to Yourself
the Flying Hun
So that it may Safely Pass
Over Your Infinite Sea
Seize Any Demon
That Seeks to Hinder its Flight"**

"GATHERING AND HIDING THE HUN STEPPING"

This Stepping Pattern is used to gather, hide and keep the Hun (Figure 1.225).

This stepping pattern is performed while reciting the following incantation:

**"Seven Demon Generals,
Are Enveloped
By the Seven
Awe-inspiring Celestial Officers
Of the Complete _____"**

Figure 1.226.
"Summoning the Celestial Immortals
Stepping Pattern #1"

MAGICAL ESOTERIC STAR STEPPING PATTERNS

The following stepping patterns are commonly used in Zheng Yi rituals for summoning various Celestial Immortals.

**SUMMONING THE CELESTIAL IMMORTALS
STEPPING PATTERN #1**

This Stepping Pattern is used to evict, remove, and control evil spirits (Figure 1.226).

This stepping pattern is performed while reciting the following incantation:

**"My hidden energy
flows like silk.
It rushes to assist me,
It leaves and stops
at the stable task of a hero
who has overcome his ghost"**

Figure 1.227.
"Summoning the Celestial Immortals
Stepping Pattern #2"

SUMMONING THE CELESTIAL IMMORTALS STEPPING PATTERN #2

This Stepping Pattern is used to evict, remove, and control evil spirits (Figure 1.227).

SUMMONING THE CELESTIAL IMMORTALS STEPPING PATTERN #3

The following stepping patterns are commonly used in Zheng Yi rituals for summoning various Celestial Immortals in order to control the various Elemental powers of nature.

Figure 1.228. Controlling Nature
"Nine Wind Stepping"

"NINE WIND STEPPING"

This Stepping Pattern is used to control the power of water (Figure 1.228).

This stepping pattern is performed while reciting the following incantation:

**"The Nine Essence Thunder,
of the Heavenly Cart Star
Brings the Immortal Sword
of the Upper Thunder Wind"**

Figure 1.229.
"Celestial Master Zhang Stepping"

"SUMMONING MISSIONARY ZHANG STEPPING"

This Stepping Pattern is used for summoning Celestial Master Zhang (Figure 1.229).

The first Celestial Master was the famous Daoist Master Zhang Daoling (refer back to Figure 1.188). The basic doctrines of Celestial Master Zhang concentrated on the use of the twenty-four Auspicious Alliance registers, or list of spirits, which allowed the Zheng Yi Daoists to summon, command, dispatch, or destroy demons and spirit entities. These twenty-four registers categorized spirit entities by name and description. The twenty-four registers are categorized according to 24 Daoist Monasteries located in the Cheng Du province, and were originally created and organized by Celestial Master Zhang Daoling.

This stepping pattern is performed while reciting the following incantation:

**"From the Heavens,
Over the Lake
and through the Mountain,
The Force of Fire
From the Northern Man
Arouses the Power
of Wind and Thunder"**

Figure 1.230. "He He
(Harmonize and Gather Stepping)"

Figure 1.231. "The Intertwining Fence Stepping"

"HE HE (HARMONIZE AND GATHER) STEPPING"

This stepping pattern is used in rituals in order to send reports back to Heaven (Figure 1.230).

"THE INTERTWINING FENCE STEPPING"

This Stepping Pattern is used to remove the filthy things and purify the altar court area. This stepping patterns is sometime known as "Pacify the Dragon and Respect the Earth" (Figure 1.231).

"THE SECOND STAR OF THE DIPPER PROTECTS THE BODY STEPPING"

This star stepping pattern is commonly used in Daoist Thunder Magic rituals and is described in the *Absorb the Riches of the Profound Text*. It includes both the Ghost Names and the Destiny Names of the Seven Stars of the Big Dipper (Figure 1.232). After performing "The Second Star of the Dipper Protects the Body" Stepping Pattern, the Daoist priest will then say the following Five Animal Protection incantation (Figure 1.233):

**"The Green Dragon protects me on the left with his bold and powerful laws.
The White Tiger commands the celestial soldiers and protects me on the right.
The magical light of the Red Sparrow
is in front of me,
The mysterious Dark General (Turtle/Snake)
holds the bright light behind me."**

**The Heavenly Generals ride about
on golden wheels of fire
They dispatch their celestial soldiers
who play their Heavenly drums,
creating a powerful Heavenly sound.
Everyone knows of life and death,
they all understand the profound
chances and opportunities"**

**"Let the Three and Five Marshal
Generals and their celestial soldiers
come together with the public.
Let their sunshine and the brightness
come upon us
"Quickly, quickly, do this
as it is my command."**

Disclaimer:

Ancient occult magic was never intended to replace orthodox religion, but rather to complement it in its quest for a deeper understanding of esoteric spirituality. Through the alchemy of prayer and meditation, an individual can be transformed into an enlightened or “awakened” state of awareness.

Several of the ancient meditation practices, magical techniques and Shengong exercises described herein are currently practiced within the secret societies throughout the world, including the People’s Republic of China. These esoteric techniques can be very powerful and may in some cases be too mentally and physically demanding for some individuals. The readers should therefore use their own discretion or consult a priest or mental health professional before engaging in these exercises and meditations.

The rituals used for spiritual protection and energetic destruction are still as powerful today as they were when first introduced in ancient China. The secret of their timelessness lies in the fact that the personal power of the Celestial Immortals, various Spirit Entities, and Demonic Beings never changes. Therefore, the author, the International Institute of Daoist Magic, and the publishers are neither liable or responsible to any person or entity with respect to any loss or damage caused, or alleged to be caused, directly or indirectly by reading or following the instructions for any condition, ritual, incantation, Hand Seal, or interpreting information provided in this text.

This book describes traditional methods of both ancient and modern forms of Chinese Mysticism (Daoist occult magic and sorcery), and is not intended to persuade the readers in any way, shape or form to believe in or practice sorcery. Any person attempting such rituals is doing so at his or her own risk.

Additionally, sometimes Daoist exercises and meditations require special herbal formulas, as well as the regulation of the individual’s diet (e.g., fasting) and living environment (solidarity). It is important to note that herbal prescriptions will vary according to the individual’s constitution, condition and specific goal, and must be treated accordingly only by a doctor or herbalist qualified to prescribe Chinese medical herbs. Each state in the U.S. has their own regulations and restrictions, therefore, it is advisable for the reader to consult their own state medical board for use of proper application and liabilities of the techniques described within this text.

THE SECRET TRAININGS OF DAOIST MAGICAL INCANTATIONS

INTRODUCTION TO TRAINING DAOIST MAGIC

Born from ancient Chinese shamanism, Daoist alchemy gradually evolved to encompass all levels of human experience, the mastery of which is commonly known today as Daoist Magic. Because magic links spirit with matter, the Daoists have always used magic as part of their tradition in all cultivation, alchemy, and healing practices. Thus, it is through the understanding and application of magical practices that the Daoist sorcerers embraced the three realms of matter, energy, and spirit, seeking to unite with the Dao by gathering and manipulating the subtle energies of nature.

Through the use of magic (i.e., spirit travel, dream interpretation, controlling the weather,

divination, healing, and conjuring or removing spirit entities), the ancient Daoist sorcerers were able to train the body's life-force to sense, manipulate, and control the energetic manifestations that govern within the physical world.

HISTORY OF DAOIST MAGIC

The Daoist magic commonly taught today in China, Taiwan, Vietnam, etc. originally developed from two separate branches of Chinese mysticism (Figure 1.1). The Yin branch of Daoist magic originated from ancient knowledge that was gathered and eventually written down by the philosophers of the Warring States Period (475-221 B.C.). These

Figure 1.1. Origin of Daoist Magic

Figure 1.2. The Four Pillars of ancient Daoist sorcery

individuals withdrew into the wilderness, forests, and mountains in order to meditate upon the Dao of nature and observe its infinite manifestations. Disciples of these Daoists practices sought after a more feminine, receptive energetic knowledge, which could only arise as the fruit of a passive and yielding attitude, developed through the observation and study of nature.

The Yang branch of Daoist magic originated from shamans and sorcerers who had entered ancient China from its northern and southern borders. These individuals later gathered together and were concentrated within the northeastern coastal regions of ancient China (especially within the states of Chi and Yen). These sorcerers were eventually given the name of “Wu” (magician or wizard) and were believed to have eventually taught the Yellow Emperor.

Eventually, the two different elements of nature study and Wu sorcery combined in order to form the Daoist “religion” of later times. The Wu sorcery that was not incorporated into religious Daoism eventually became associated with the most ancient practices of Chinese folk magic, which centered around the worship of the various powers of Heaven and Shang Di (the God Above).

In these early formative stages, both science and magic were indistinguishable. Even the early “royal society” found it difficult to distinguish between science and what we now call magic. For example, up until the 16th Century, science was commonly called “Natural Magic.”

Eventually, the title “Daoist Mystic,” referred to an individual who had mastered the physical, energetic, and spiritual components of the esoteric alchemical practices of Martial Arts (Jing to Qi), Medicine (Qi to Shen), Music (Shen to Wuji), and Magic (Wuji to Dao). The study of each of these specific disciplines formed the Four Pillars of ancient Daoist sorcery, enabling the mystic to enter into ever deeper and more subtle spiritual realms of enlightenment (Figure 1.2).

THREE BODIES, THREE BREATHS & THREE MINDS

In order to avoid the risk of losing any form of cultivated magical power or jeopardizing their ability to energetically manifest, the ancient Daoist sorcerers were taught to discipline their Three Bodies (i.e., the Physical Body, Energy Body and Spirit Body). This magical training included mastering the supernatural powers and manifestations that stemmed from the energetic and spiritual bodies surrounding their core-self (located deep inside their Taiji Pole).

This disciplined practice enabled the sorcerers to control their Three Bodies and fuse them with their Three Breaths. This physical, energetic, and spiritual fusion then become powerfully directed by their Three Minds (Figure 1.3).

Then, when the Daoist sorcerer spoke a magical incantation, it was directed by the Three Minds (i.e., Physical, Energetic, and Spiritual Mind), and initiated through magical Hand Seals and/or Star Stepping patterns, which were then activated through the sorcerer’s Three Bodies (i.e., Physical, Energetic, and Spiritual Body). The energetic combination of all Three Minds and all Three Bodies was then fused with the energetic combination of all Three Breaths (i.e., Physical, Energetic, and Spiritual Breath) in order to create true magical power (Figure 1.4).

Figure 1.3. The Ancient Daoist Understanding of Internal Harmony

Figure 1.4. The Three Minds and Three Bodies fuse with the Three Breaths in order to create true magical power

MIND SECRET, SPEECH SECRET, & BODY SECRET

In ancient China, Daoist magical practices were always initiated through the combined use of three secret training known as the Mind Secret (used to train the sorcerer’s Imagination, Sensation, Intention, and Attention), the Speech Secret (used to train Breath Incantations), and the Body Secret (used to train magical Hand Seals and Star Stepping). The mastery of these three disciplines gave the Daoist sorcerers the ability to enter the Three Realms (Heaven, Earth, and the Underworld) and obtain knowledge and experience that could assist them in their goal of obtaining immortality. The three secret magical practices are described as follows:

Figure 1.5. Training The Three Types of Posture

TRAINING THE MIND SECRET

The ancient Daoists taught that the mind functions on three different planes, simultaneously orienting within the physical, energetic, and spiritual worlds. Together, these three mental planes make up the mind of an individual. In this way the three layers of mind encase the individual’s Eternal Soul in physical, energetic and spiritual matrices. Therefore, in ancient China, training the mind was divided into three stages, training the physical mind, training the energetic mind and training the spiritual mind, described as follows (Figure 1.5):

- **Training the Physical Mind:** This type of mind training is based on training the sensory input, thoughts, and analytical patterns that direct the actions and movements of the body’s physical tissues. Focus is placed on cognitive reasoning and on acquiring data.
- **Training the Energetic Mind:** This type of mind training is based on training to respond to the

energetic perceptions received from the vibrational patterns which are themselves responsible for directing and influencing the Physical Mind. Focus is placed on strengthening psychic and energetic perception in order to perceive thoughts, feelings, images, and patterns.

- **Training the Spiritual Mind:** This type of mind training is based on perceiving spiritual interactions connected to the divine, affecting the Original Soul’s primary life purpose. Focus is placed on surrendering all thoughts, feelings, and images and dissolving into the Wuji.

YIN AND YANG DIVISIONS OF THE MIND

There are two divisions of the mind (Yin and Yang), each consisting of three different levels. The Yin part of the mind belongs to the energy of the Earth and is a more body-oriented type of mind. The Yang part of the mind belongs to the energy of Heaven and is a more consciousness-oriented type of mind. The three levels of the mind are described as follows (Figure 1.6).

1. The most superficial level of the mind exists within the individual's Will (Zhi) and Intention (Yi), and represents the mind's everyday functions (i.e., cognitive thinking). The Zhi is considered the "thinking body," while the Yi is considered the "thinking mind."
2. The middle level of the mind exists within the emotional and spiritual influences of the Seven Corporeal Souls (Po) and Three Ethereal Souls (Hun), and represents the moving and active aspects of the mind (e.g., body movements, reflexes, instincts, drives, and spirit projection - when accompanied by the Yuan Shen).
3. The deepest level of the mind exists within the Prenatal foundation of the Kidney's Jing and the Heart's Shen, and represents the original and primordial energetic and spiritual form of the "Original Mind" (Yuan Shen). The "Original Mind" is manifested throughout the body via the Yin and Yang energetic natures contained within the original Prenatal Elements of Fire and Water.

These different levels of energies create the body, as well as activate the mental, emotional and spiritual transitional states of the mind. All three levels of the mind are interactive and interdependent.

THE PRENATAL AND POSTNATAL MIND

The ancient Daoists considered the Heart the Emperor of all internal organs because it stores the individual's Shen (Spirit). The Shen was further divided into two components: the Prenatal Mind known as the Yuan Shen (the intuitive congenital spirit), and the Postnatal Mind known as the Shen Zhi (the analytical acquired spirit). These two aspects of the mind are described as follows (Figure 1.7):

- **The Prenatal Mind (Yuan Shen):** This congenital aspect of the mind is inherited from the Jing, Qi, and Shen of both parents and dominates the vital activities of all the major viscera, as well as the active functioning of the body's entire energetic organism and spiritual matrix.
- **The Postnatal Mind (Shen Zhi):** This acquired aspect of the mind is developed through interactions with people and the environment after

Energetic Divisions of Qi	Yin	Yang
Psychophysical Divisions	Di (Earth) Body Orientation	Tian (Heaven) Consciousness Orientation
Superficial Level of the Mind (Zhi and Yi)	Zhi (Will) Kidneys Thinking Body	Yi (Intention) Spleen Thinking Mind
Middle Level of the Mind (Hun and Po)	Po Lungs Corporeal Soul	Hun Liver Ethereal Soul
Deepest Level of the Mind (Yuan Shen)	Jing (Essence) Kidneys Water Qi	Shen (Spirit) Heart Fire Qi

Figure 1.6. Mental and Emotional Transitional States of the Mind

Figure 1.7. The Prenatal and Postnatal Mind

birth. It dominates thought and interaction, and it engages in unlimited mental activity.

INTERACTIONS OF YUAN SHEN AND SHEN ZHI

The Yuan Shen (Original Mind) and Shen Zhi (Acquired Mind) are interactive and interdependent. If the Shen Zhi is active and chattering (sometimes called the "monkey mind"), it is difficult for the Yuan Shen to convey its intuitive information.

According to ancient Daoist texts on energetic alchemy, the Shen Zhi is meant to be a servant of the Yuan Shen. However, it is the nature of the unenlightened mind to allow the Shen Zhi to become extremely stubborn, developing a chronic, suspicious demeanor. If the activity of the Shen

Zhi becomes too self-involved, it can become completely independent. As the Shen Zhi strives for control it inhibits the development of the Yuan Shen, causing disbelief and suspicion to dominate the individual's mind and override most intuitive perceptions.

Regulating the Mind is therefore needed to bring harmony between the analytical (Zhi) and intuitive (Yuan) aspects of the mind. In ancient Daoism there is a saying, "the mind must be led by a master; the Yuan Shen must be that master and must lead the Heart's Shen Zhi as One Mind."

THE FOUR SECRET POWERS OF THE MIND

In Daoist magic, "Training the Mind," refers to cultivating and releasing the magical power that can be harnessed through the proper application and fusion of four secret powers. These four secret powers are represented through the image of Four Celestial Animals: the Green Dragon, the White Tiger, the Red Phoenix, and the Black Turtle/Snake (Figure 1.8). In training the Mind Secret, the Four Celestial Animals are attributed to different magical powers and states of consciousness:

- **The Green Dragon:** This Celestial Animal represents the powers of Heaven, the Hun, Imagination, and Yang Qi.
- **The White Tiger:** This Celestial Animal represents the powers of Earth, the Po, Sensation, and Yin Qi.
- **The Red Phoenix:** This Celestial Animal represents the powers of Fire, the Shen, Intention, and Yang Qi.
- **The Black Turtle/Snake (Dark Warrior):** This Celestial Animal represents the powers of Water, the Zhi, Attention, and Yin Qi.

In Daoist magic, the fusion of all Four Celestial Animal powers is a prerequisite for creating the true magical power of manifestation. The magical energies of the Green Dragon and White Tiger must be combined in order to create and sustain the sorcerer's Energy Body. The magical energies of the Red Phoenix and Black Turtle/Snake must be combined in order to create and sustain the sorcerer's Spirit Body. The energies of both the Energy Body and Spirit Body must combine and fuse as one in order to create true magical power (Figure 1.9).

The Four Celestial Animals are manifestations

Figure 1.8. The Four Celestial Animals and their powers

of the divine energy radiating from the sorcerer's "Most Secret Name" (i.e., the sorcerer's spiritual name of power). The power of the sorcerer's Most Secret Name is used as a magical bridge in order to connect together the two realms of spirit and matter. It is imagined and kept as a Luminous Jewel, located deep inside the core center of the sorcerer's Lower Dantian, and it is utilized whenever he or she performs Breath Incantations, Magical Hand Seals, or Star Stepping patterns.

Language, Mythology and Energetic Geometry

The training of the Four Celestial Animals of the Mind Secret also involves three important magical disciplines: Language, Mythology, and Energetic Geometry. Through these three important disciplines, the Daoist sorcerer learns the secret "trigger" mechanisms needed in order to release and control powerful magic. In the context of magic, power is defined as the ability to produce a result (i.e., how long it takes to manifest something).

These three important magical disciplines are used to help focus the sorcerer's Will (Zhi). By gathering them together with Intention (Yi), the sorcerer is creating a magical universe that he or she can use to energetically effect the three realms.

Figure 1.9. The secret powers of the Four Celestial Animals are needed to create the power of true magic

The disciplines of Language, Mythology and Energetic Geometry are defined as follows:

- **Language:** This skill encompasses the use of magical words, their pronunciations, and the methods of combining them. This discipline is externally trained through the skill of speech (verbal expression) and internally trained thought processing. It is expressed and manifested into the external world via the sorcerer's Magical Incantations.
- **Mythology:** This skill encompasses the use of the myths and legends that deal with gods, demigods, heroes, and villains surrounding people, places, and things. This discipline is energetically trained through culture and tradition. Its effect is experienced within the world of matter externally through images (energetic symbols and icons) and internally through dreams (Archetypes, Dream Travel, and visionary work). Although some mythological correspondences will remain consistent, certain energetic aspects will greatly vary depending on the sorcerer's magical tradition.
- **Energetic Geometry:** This skill encompasses the use of the sacred mathematical formulas that deals with the relative properties and measurements of solids, surfaces, lines, points, and angles. This discipline is energetically trained through vision (external sight) and is released into the world of matter externally through magical forms (i.e., Body Postures, Hand Seals, and Star Stepping) and internally through images (energetic shapes). Each of the Four Celestial Animals corre-

sponds to one of the Four Directions. Each of the Four Directions acts as a secret door that opens onto a vast hallway of interconnected meanings (i.e., each direction corresponds to a certain time, season, polarity, planet, shape, color, sound, herb, stone, Element, number, etc.). In ancient Daoism, masters of Feng Shui and Divination were extremely skilled at recognizing the magical correspondences of Energetic Geometry.

FOUR WAYS TO AVOID LOSING MAGICAL POWER

When training esoteric magic, the ancient Daoists described four primary ways that a sorcerer could lose his or her power and weaken the ability to mentally manifest. These four ways are described as follows: Leaking Magical Power Through the Mouth, Leaking Magical Power Through Vision, Leaking Magical Power Through Geometry, and Leaking Magical Power Through Sex. Because the sorcerer's magical power can be lost through one or several of these four methods, it reveals two important things about their mental training:

- First, pertaining to each of these four methods, the sorcerer's magical power can be cultivated and conserved by certain disciplined means of magical training.
- Second, the skill of intentionally creating specific manifestations can be consciously expressed through each of these four methods.

Leaking Magical Power Through the Mouth

Magical power can leak out through the mouth via undisciplined external talking and internal thought. There are Three Filters used by

sorcerers in order to build the energetic power of speech and not lose the power of words. These three filters entail three specific questions that the sorcerer asks him or herself before speaking, described as follows:

- Is it necessary to say this, or should I remain silent?
- Is it truthful (authentic), and will it create energy in the direction of where I want to go?
- Is it kind to the listener and will it help them spiritually heal and grow, or will it close their spirit and harden their heart?

These three questions are designed to transform the sorcerer's conditioned programmed mind and alter the reactive habits of the sub-personalities working within the unconscious mind. Over time, the practice of these questions dismantles the sorcerer's masks and defense mechanisms, which are designed to mislead and deceive others for the sake of the sorcerer's ego identity. The sorcerer then has access to the infinite power of his or her divine self. As the sorcerer's Acquired Mind (Shen Zhi) eventually quiets its excessive chattering, the Original Spirit (Yuan Shen) begins to automatically take over as a spiritual observer, "truly listening to what the sorcerer is listening to."

Through mastering the Three Filters, eventually the power of the sorcerer's words become so powerful that when he or she speaks any form of magical Incantation, Spell, or Mantra, the power of the words are automatically brought into manifestation. This magical power eventually transfers over to nonverbal communication and becomes evident in the manifestations of the Magical Hand Seals and Star Stepping patterns.

Leaking Magical Power Through Vision

Magical power can leak out through vision via undisciplined external sight and internal dreams. One important technique used to assist the sorcerer in avoiding the loss of magical power through vision is to train in the skill of Visualization. Visualization is simply seeing or experiencing images within your mind. By using visualization to form a mental image, you can increase your energetic potential by a factor of ten. This type of mental training builds neuromuscular connec-

Figure 1.10. The Three Steps in Mental Visualization

tions that allows you to develop a spiritual and energetic foundation from which to progress.

There are three steps in achieving a successful visualization practice: Deep Relaxation through Qigong Meditations, Clarity of Visualization, and Physical Movement and Visualization (Figure 1.10). When practicing visualization skills, it is important to keep the following points in mind:

- **Begin External, Then Progress Internal:** Keep the image or symbol external during the initial phases of training. Then, as your perceptions become more refined, utilize the more subtle image of an internal psychic symbol.
- **Choose a Familiar Symbol:** The image or symbol that you choose for visualization practice should be easily identified by your mind (i.e., it should easily attract and hold your mind's attention).
- **Do Not Change Your Symbol:** Training every day using the same visualized symbol allows the mind to create a faster energetic patterning.
- **Picture the Image With Your Eyes Closed:** Clearly visualizing your symbol with your eyes closed allows the mind to create a faster energetic re-patterning. In order to obtain clarity of visualization and generate specific images using all five senses with clarity and control, visualize internally with your senses. When using your imagination, it is important to see, feel,

hear, taste, and smell the experience that you are creating. This should be performed to the degree that you are actually experiencing what your imagination is conjuring.

Be persistent and work towards a fullness of this internal experience. Generally, the mind will progress through five transitional stages when the sorcerer's clarity of visualization is being mastered. These five stages are described as follows:

1. **Unstable:** The mind's attention and focus constantly changes; it is unstable and wavering in both thought and feeling.
2. **Inattentive:** The mind's attention and focus becomes confused, unobservant, and inattentive to the original thought-intention.
3. **Occasionally Focused:** The mind's attention and focus begins to direct its attention, becoming occasionally focused.
4. **Focused:** The mind's attention and focus begins to gather into one spot; its attention is becoming clear and focused.
5. **Mastered:** The mind's attention and focus is completely controlled and clarity of visualization is mastered.

The sorcerer can also choose to use a combination of physical movements and visualization while in a deeply relaxed yet concentrated state. This can be accomplished by external visualization. One method of training is to imagine seeing yourself on your own mental movie screen, while analyzing and correcting your performance (movements and actions) towards a successful and powerful outcome. Visualize different types of movement patterns and interactions. During this type of active visualization training, if you detect an error in movement or action, mentally rewind and replay the event until the action or movement occurs perfectly.

Leaking Magical Power Through Geometry

Magical power can leak out through Energetic Geometry via exposure to external forms (postures) and internal images (shapes).

Leaking Magical Power Through Sex

Magical power can leak out through undisciplined sexuality via the loss of Essence (Jing), Energy (Qi) and Spirit (Shen).

TRAINING THE SPEECH SECRET

The ancient Chinese believed and taught that everything in the universe was made of sound. Sound waves not only affect matter, but also affect the consciousness as well; this is the purpose of using an Incantation in meditation or chanting. Therefore, Incantations were also used to develop such psycho-kinetic feats as weather control, teleportation, and levitation, and were also continuously chanted in order to create magical amulets or talismans used for protection against illness and evil.

In Daoist magic, Training the Speech refers to cultivating and releasing the magical power that can be harnessed through the proper application or breath and sound. When the spoken sound is released through Breath via magical incantations, a powerful spiritual interaction and energetic fusion involving the Brain (Kidney Water) and Heart (Heart Fire) occurs. It is therefore important for the sorcerer's Shen to consciously guide and direct the spoken sound, as the projected voice is a direct manifestation of the sorcerer's spirit and life-force energy.

THE THREE LEVELS OF BREATH

Through proper breath and mind control, a Daoist sorcerer is able to store Qi and Shen, similar to the way a storage battery contains electricity. Many of the powers attributed to advanced Qigong and Shengong practice are largely due to the hidden knowledge and esoteric understanding of how to utilize conserved Qi and Shen and later use it for specific purposes. The ancient Daoists understood that certain forms of breathing could enable him or her the ability to energize, empower, and increase latent psychic abilities.

In order to obtain the ultimate control and utilization of stored Qi and Shen, these ancient Chinese masters of esoteric knowledge divided the skill of breath into three levels: Training the Physical Breath, Training the Energetic Breath, and Training the Spiritual Breath. These three levels are described as follows (Figure 1.11):

- **Training the Physical Breath:** This type of breathing is based on training the physical motion of the body's respiratory patterns. Focus is placed on the interaction of the Lungs, diaphragm, and abdomen.
- **Training the Energetic Breath:** This type of breathing is based on training the energetic respiratory motion for ingesting and releasing the vibrational patterns of the Five Element sounds and colors.
- **Training the Spiritual Breath:** This type of breathing is based on training the spiritual respiratory motion for ingesting and releasing Divine light vibrating within the Wuji.

THE ENERGY OF THE BREATH (WIND)

The ancient Daoists considered the Wind (Feng) to be the first and primary element in commanding the influences of Nature upon the Earth. In nature, the energy of the moving Wind can be so gentle that it can cause subtle penetration of the body's tissues and cells. The energetic currents of the Wind flow like water, moving across the body's surface, circulating, and sometimes collecting into energetic pockets and then unpredictably moving on.

In Daoist magic, the energetic flow of the Human Wind (breath) establishes the foundation of the internal environmental climate. The energy of "Human Wind" is created by the combination of the sorcerer's Yi (Intention), Shen (Spirit), and Qi (Energy). The speed and direction of the energetic flow of the Human Wind is determined by the air flow created from high (Heart Fire) and low (Kidney Water) pressure regions.

CHINESE CHARACTERS FOR WIND

The ancient Chinese ideograph depicting the character for Wind, "Feng," is described as follows (Figure 1.12):

- The Chinese character that depicts the ideograph for "Feng" is composed of two images: The character on the outside, "Fan," represents Wind. The character on the inside, "Chong," represents worms or insects that are being carried off by the wind. Together, both characters are used to depict the power and sudden, or violent impulses of the Wind's potential to carry something into extreme behavior.

Figure 1.11. Training The Three Types of Breath

Figure 1.12. Chinese Characters for Wind "Feng"

THE WIND'S EFFECTS ON MATTER

The ancient Daoists considered the human body to be like that of an empty stalk or "reed," capable of vibrational resonance through energetic stimulation via the body's own internal emotional "Winds," as well as the breath (Figure 1.13). When the Wind blows hard (i.e., the sorcerer's projected Qi and Shen are strong), the intended individual's body will resonate and vibrate like a reed, expressing one or several of the seven various internal emotions through the seven external orifices.

In the Daoist Magic, the penetrating property of the sorcerer's breath is used like the Wind, act-

Figure 1.13. The ancient Daoists considered the human body to be like that of an empty stalk or "reed."

ing as the medium to carry the specific "Messages" and sound resonances of Breath Incantations throughout the individual's tissues. This is the foundational theory of Breath Incantations used in ancient China to invoke healing, treat disease, summon and dispatch spirit entities, and remove evil states from people, places, and things.

As the projected sound and breath penetrates a person, place, or thing, it carries with it the energetic "Messages" of the sorcerer's thoughts and intentions (Figure 1.14). The infinite space contained within the energetic matrix of the intended person, place, or thing will begin to vibrate like a reed, responding to the wind of the breath as it carries specific sounds into and through the physical structure.

EXHALING COLOR, SOUND, AND BREATH

In order to maximize power, the Daoist sorcerer can also use color in combination with Breath Incantations. When directed into the tissues of an individual's body, the projected Breath Incantation will cause the internal organ's cells to vibrate. This vibration creates more space, allowing the Qi of the exhaled color to immediately fill the energetic field surrounding the cells.

CONSONANTS AND VOWELS

Both consonants and vowels are necessary to form words of power. However, the vowels are the vitality of the words, whereas the consonants merely act as a template to limit and shape the Qi into a unique pattern. According to Daoist magic, vowels are Yang and represent the masculine creative force

Figure 1.14. Each exhaled sound and breath acts as the Wind, carrying the sorcerer's projected thoughts and images into an individual's tissues and cells"

of the Dao, which embodies everything, but is itself without form. Consonants are Yin and represent the formative feminine force of the Dao, which has no inherent creativity, but enables all creation.

Consonants are considered to be Yin and correspond to matter (which is energy that has been constrained and congealed). For the most part, consonants do not have power and cannot be extended or elongated with the voice without the support of a vowel. Even those consonants that are sustainable (i.e., F, L, M, N, R, S, V, and Z) involve either compressing the lips, pressing the tongue against the teeth or palate, or tightening the throat.

Only vowels (which are considered to be Yang and correspond to spirit) have power, and can be voiced with a fully opened throat, allowing the individual to vibrate unobstructed "like a reed." Vowel sounds (which is energy that is unrestricted) can be projected with considerable power, because the column of Qi released into the environment can be energetically rooted into the Lower Dantian and spiritually directed through the Yellow Court.

THREE TYPES OF PROJECTED SOUNDS

In ancient China, the physical body was considered the crucible in which the eternal elixir of life could be cultivated. It contains the life giving energy and acts like a capacitor storing and releasing different vibrational frequencies. These frequencies can be accessed and modulated through the use of Mantras.

Figure 1.15. The Three Main Types of Mantras

There are three main types of Mantras used to initiate cellular vibration: Descriptive Sound, Meaningless Sound, and Seed Sound, described as follows (Figure 1.15):

- **Descriptive Sound:** This type of Incantation is used for achieving specific desired goals. They can be utilized for healing or spiritual growth.
- **Meaningless Sound:** This type of Incantation is used for stimulating and awakening specific energy centers in the individual's body. It is generally a collection of sound phrases and can be utilized for healing or spiritual growth. For example, the specific Incantations commonly used in Qigong exercises are types of meaningless sound incantations.

When "Descriptive" and "Meaningless" Incantations are employed, the body's energy will continue to accumulate until the energy is used or otherwise discharged.

- **Seed Sound:** This type of Incantation is used for stimulating, awakening, and creating a permanent "standing wave" of energy within the tissue cells of the body, or within a specific energy center in the brain. Seed Sound Incantations are sound phrases used for creating a continuous type of specific energetic effect, which eventually will become a coherent and accessible type of energy.

PROJECTING SOUND VIBRATION

When resonant sound penetrates an individual's body, it causes massive chaotic vibrational patterns that disrupt the body's normal energetic flow. This energetic disruption can be used in order to soften and liquefy stagnant Qi, and this is the primary reason why patients are given healing sound therapy in Medical Qigong clinics.

Figure 1.16. Increasing Projected Sound Resonances with Focused Imagery

Since thoughts and emotions are strongly affected by sound, the body defends itself against outside vibrational signals by anticipating and setting up signals which cancel out external sound vibrations. Our ability to filter out these recognizable sounds, while allowing us to maintain our own thoughts and emotions can become a major barrier to the effects of surface vibrational patterns. As soon as the thoughts and emotions begin to intrude on the dominant beliefs or established emotional patterns in an individual's tissues, his or her body automatically identifies the invading signal and filters it out.

While the body can defend itself against rhythmic signals, the suppressed attitudes and emotions are defenseless against the random sounds of a chaotic resonance emitted from a Daoist sorcerer because it is unpredictable. The projected sound resonations simply go past the individual's vibrational defenses and soften all thoughts and emotions in the target frequency range.

TRAINING SOUND PROJECTION

When projecting sound, it is important for the sorcerer to visualize the sound waves penetrating and rippling through the focused item (water, solid matter, tissues, cells, etc.). This focused visualization, combined with a long exhalation during the released tone, allows for deeper penetration of the sound's resonance and is used to disperse stagnations. The following are two popular training exercises used by Daoist sorcerers for mastering the sound projection skill.

Figure 1.17. Training Sound Resonation Projection to Ring Different Bells

USING THE IMAGINATION TO INTENSIFY SOUND PROJECTION

When projecting a magical incantation via audible sound, the sorcerer can increase the intensity of the effect of the emitted sound vibration on the individual's internal organs by utilizing focused visualization. This is accomplished by sinking and rooting the mind into the internal organ area before projecting the sound, described as follows (Figure 1.16):

1. Begin by targeting a specific internal organ. Allow the mind to sink deep into the individual's tissues and imagine and feel your hands embracing the internal organ.
2. Allow your intention to fully envelop the internal organ, feel and experience its physical, energetic, and spiritual matrix.
3. Imagine holding the internal organ and begin to project sound deep into its center. Feel the internal organ vibrating from deep inside the center of the organ's tissues.
4. Imagine and feel any stagnation located within the internal organ's tissues separating, dissolving, and dispersing.

5. After emitting several sounds, immediately purge any dispersed Toxic Qi that was released from the internal organ's tissues.

SOUND PROJECTION EXERCISE #1

In ancient China, Daoist sorcerers would sometimes train sound projection skill by directing the sound into the surface of different size bells (Figure 1.17). Each projected sound would stimulate and ring a different metal bell, causing a different tone to be released from the surface of the bell, depending on the particular tone and pitch used (high, medium, or low).

SOUND PROJECTION EXERCISE #2

In ancient China, after a Daoist sorcerer had perfected the skills acquired from training the previous exercise, he or she would then begin to train in advanced sound projection skills. These advanced projection skills allowed the sorcerer the ability to focus the specific projected sound into the tissues or internal organ systems of the body. Each projected sound would stimulate and vibrate a different type of tissue and organ system, causing it to resonate throughout the entire body. This

allowed the Daoist sorcerer the ability to simultaneously project conscious intent into the cells and tissues of matter, affecting the individual's internal organ systems, channels, and tissues.

For example, one exercise used to practice this type of energetic sound projection was to focus on the specific tissues of the hand. To begin with, the sorcerer would focus his or her attention onto the left hand and begin to project sound, vibrating the specific tissues related to that particular internal organ. This particular Sound Projection exercise is described as follows (Figure 1.18):

- **The Skin:** Focus your attention on the skin tissue wrapping the external structure of the left hand. Using focused imagination and intention, as well as breath and Qi projection, exhale the "Shang" sound into the left hand and feel all of the external structures of the left hand's skin vibrate.
- **The Muscles:** Focus your attention on the muscle tissue existing underneath the tissue of the skin of the left hand. Imagine and feel the various muscles wrapping the internal structure of the bones and connecting to the skin of the left hand. Using focused imagination and intention, as well as breath and Qi projection, exhale the "Gong" sound into the left hand and feel all of the internal structure of the left hand's muscles vibrate.
- **The Tendons and Ligaments:** Focus your attention on the tendons, ligaments and inner fascia tissues existing within the various layers of skin, muscles, and bones of the left hand. Imagine and feel the various tendons, ligaments, and inner fascia tissues wrapping and extending throughout the internal structure of the bones and skin tissues of the left hand. Using focused imagination and intention, as well as breath and Qi projection, exhale the "Guo" sound into the left hand and feel all of the internal structures of the left hand's tendons, ligaments and inner fascia tissues vibrate.
- **The Blood Vessels:** Focus your attention on the structures of blood vessels existing within the various layers of skin, muscles, tendons, ligaments and inner fascia of the left hand. Imagine and feel the various tubular struc-

Figure 1.18. The advanced projection skills allowed the Daoist master the ability to focus the specific projected sound into the tissue systems of the body (Inspired from the original artwork of Wynn Kapit).

tures of the veins and arteries wrapping and extending throughout the internal structure of the skin, muscles, tendons, ligaments, and inner fascia of the left hand. Using focused imagination and intention, as well as breath and Qi projection, exhale the "Zheng" sound into the left hand and feel all of the internal structures of the left hand's blood vessels vibrate.

- **The Bones:** Focus your attention on the structures of bones existing underneath the various layers of skin, muscles, tendons, ligaments, inner fascia, and blood vessels of the left hand. Imagine and feel the various structures of the bones being wrapped by the internal structure of the skin, muscles, tendons, ligaments, inner fascia and blood vessels of the left hand. Using focused imagination and intention, as well as

Figure 1.19. Training Sound and Breath Projection into a Bowl of Water

breath and Qi projection, exhale the “Yu” sound into the left hand and feel all of the internal structures of the left hand’s bones vibrate.

SOUND PROJECTION EXERCISE #3

In ancient China, before being taught Breath Incantations, the Daoist sorcerers trained sound projection skills by focusing the projected breath and sound into a bowl of water (Figure 1.19). Each projected sound would be carried along with the sorcerer’s projected intention and breath, and would create different energetic patterns on the surface of the water, depending on the particular tone and pitch used (high, medium or low).

1. Begin by gathering the Qi of Divine Healing Light and Sound into the Lower Dantian.
2. Allow the Qi of Divine Healing Light and Sound to overflow the Lower Dantian and enter into the Middle Dantian, filling the chest area completely.
3. Direct the Qi of Divine Healing Light and Sound to overflow the Middle Dantian and enter into the throat area.
4. From the back of the throat, release the Qi of Divine Healing Light and Sound into the water, projecting it like a beam of condensed light. Simultaneously, imagine the body melting into the Earth to increase the depth of the tone projection.

5. Alternate from a pattern of straight exhaled tone projection to a chaotic pattern of exhaled tone projection. This chaotic, staccato resonance is a dynamic approach used for breaking-up and dispersing chronic or difficult Qi, Blood, and Body Fluid stagnations.

WORDS AND MAGIC

A word is the center of an idea, just as an idea is the center of a mental image. The mind subconsciously molds itself around the prevailing mental image or attitude, and then proceeds to draw from the outer world for material from which to build in accordance to the belief. Therefore in magic, words are considered to be living beings. A word’s meaning is its spirit, and its sound is its body. If you ignore either, you weaken its innate power.

The ancient Chinese worshiped the magical power of language, and the spoken word quickly became a powerful and influential part of early Daoist sorcery. The art of speaking “magic words” was once taken seriously in ancient China. The misuse of speech in general was regarded as an unfavorable display or misuse of one’s mind. Spoken words are invocations of ideas, and they represent and express the formulation of specific concepts, plans, and actions. They are symbols of ideas, to be imagined, pictured, and comprehended within the mind.

The ancient Chinese believed that it was the energy inherent in spiritual words of power that established the foundations of all creation (spiritual, energetic, and physical). The energetic manifestations of the spoken word can become a self-fulfilling prophecy, or an energetic reality when spoken with true conviction and intention.

In the Han Dynasty (206 B.C. - 220 A.D.), Invocations and Incantations (recited words or phrases of power) were usually performed in conjunction with secret Hand Seals (also called Mudras), magical rituals (e.g., Star Stepping and Big Dipper Pacing), or the use of Healing Talismans. All of these magical skills were used in order to increase the sorcerer's confidence in overcoming disease or combating Evil Spirits.

The proper use of words (or names) was considered extremely important to the Daoist sorcerer. In Daoist magic, a name or word is very significant. When correctly vibrated by the tongue (the Shen, or spiritual Fire of the Heart) and combined with the Will of the Kidneys, the vocalized Qi comes alive. The spoken word or name then embodies the identity, the very being, of what it signifies; and a resonance is established between the living name and the thing itself. By manipulating the name, the potential of the named thing is released upon the world, both in spiritual and energetic form. This spiritual and energetic form acts as a blueprint upon which the entire universe of space and time, energy, and matter is based.

When audibly initiating a form of suggestive influence over an individual and voicing a name or phrase out-loud (i.e., "heal"), the sorcerer's spirit (Shen) imitates the initial creative act of the Divine through the utilization of sound and breath (Qi) through intention (Yi) and will (Zhi). This is sometimes known as a "declaration." A declaration is speaking something into being that was not previously there and for which there is often little or no agreement in the surrounding environment. The power of a declaration is directly related to the integrity of the sorcerer that speaks it into being.

In ancient Daoist magic, sorcerers were taught that by speaking the proper name and magical summoning words, they could cause a spirit or deity to come forth. When used skillfully, names

and words of power can summon or dispatch, attract or disperse, heal or destroy. In ancient China, powerful incantations were known to invoke the presence of supreme deities, and were used to cure the deaf and blind, give speech back to the mute, give movement back to the paralyzed, revive the dead, save lives, or banish demons.

Because of the energetic nature of the words, the intonation and rhythm of an incantation was extremely important. The proper sound and pronunciation that must be recited in the incantation were often well guarded secrets, kept by the ancient Daoist. Incantations were sometimes also used as a form of hypnotic patterning, wherein the Daoist sorcerer used language and tones lowered into a slow, melodic rhythm, in order to induce trance. The most common linguistic pattern used in this type of trance incantation was sometimes called "verbal pacing." Verbal pacing is sometimes combined with audibly stating sensory experiences (i.e., "relax," -pause- "and allow your body to sink into a quiescent state of bliss," -pause- "now feel energetic waves carrying your consciousness deeper" -pause- etc.) in order to induce altered states.

MAGICAL NAMES, WORDS, AND PHRASES

There exist certain Words of Power that are able to alter the internal and external realities of those uttering them, and the power may rest in the very sounds of the words as much as their meanings. Many of such words are names, though the meanings may have been lost or forgotten. Very many magical tools require words to be inscribed upon them and/or said over them during their construction and/or use.

Knowing the complete and true name of an object, being, or process gives a sorcerer complete control over it. A name is considered to be the definition, energetic connection, and association with that item. Knowing the complete and true name of something or someone means that you have achieved a complete understanding of its or their true nature. This is why, in most ancient cultures, individuals are given "secret names," as well as "public names." It is also why the sharing of a secret name is such an act of trust (because the secret name is considered to be very close to, if not identical with, the person's true name).

Figure 1.20. The Internally Spoken Name and the Externally Spoken Name

In ancient China, Daoist sorcerers taught that there were two important aspects of any name, word, or phrase which must be considered before using any form of incantation. They are, the Internally Spoken Name and the Externally Spoken Name, described as follows (Figure 1.20):

- **The Internally Spoken Name:** This refers to the silent internal recitation of a name, word, or phrase that occurs within your thoughts or dreams.
- **The Externally Spoken Name:** This refers to the audible expression of a name, word, or phrase when externally vocalized (i.e., whispering or speaking out loud).

Each magical system, whether Daoist, Buddhist, Indian, or Christian, has its own hidden methods of vibrating names, words, and phrases. Because these techniques are jealously guarded secrets of magical power, they are kept hidden from the public and from individuals of lower rank in every religious order. However, the universal features of languages allow us to understand commonalities in the use of the magical vibration of names, words, and phrases.

THREE TYPES OF WORDS

There are three categories of words used to formulate sentence structure and phrases, Denotative Words, Connotative Words, and Words Beyond Verse, described as follows:

- **Denotative Words:** These are words that relate to the acquired analytical mind (Shen Zhi) of the waking state. They indicate something, and are based on the critical comparisons and analytical observations of data gathered and filtered through the five senses. Denotative Words correspond to the “outer-verse,” and relate to the World of Five Elements and action.

The outer-verse (conscious day to day experiences) is eventually absorbed within the

Inner-verse (the unconscious reflection of the day’s experience). Therefore, it is said that a “small outer-verse” exists within the inner-verse (i.e., you think or dream about what happened during the day).

- **Connotative Words:** These are words that relate to the congenital original mind (Yuan Shen) of the dream state. They are suggestive in their meaning and convey or express ideas through metaphors based on the experiences or influences of the unconscious mind. Connotative Words correspond to the “inner-verse,” and relate to the will (Zhi) and imagination (Hun).

Because your imagination energetically creates within your mind, the magical effects of a Mantra, Spell, or Incantation can be immediately experienced and felt in the inner-verse - which then creates action within the outer-verse.

- **Words Beyond Verse:** These are words that relate to the realm of magic and are commonly expressed in Mantras, spells, and incantations. They entail magical words and sounds relating to the creation, tonification, regulation, purgation, or destruction of something.

THE POWER OF WORDS

The magical spells and incantations used in Daoist Magic are initiated in order to influence events, objects, people, and physical phenomena by mystical, paranormal, or supernatural means. The Words of Power that a Daoist sorcerer utters to accomplish such magical spells and incantations are generally rooted in ancient sounds and syllables. These magical sounds and syllables are used in order to bind or release energy.

The best-known type of magical practice is the “spell,” defined as a ritualistic formula intended to bring about a specific effect. When a spell is spoken to create a positive manifestation over a

Figure 1.21. The best-known type of magical practice is the "spell," defined as a ritualistic formula intended to bring about a specific effect.

person, place or thing (i.e., invoke and/or confer praise, honor, and unconditional love), it is known as a "blessing." When a spell is spoken in order to create a negative manifestation over a person, place or thing (i.e., complain, criticize, or condemn) it is known as a "curse" (Figure 1.21).

Spells can be spoken, written, or physically constructed using a multitude of ingredients (i.e., stones, plants, talismans, etc.). The failure of a spell to work in the way that it was designed may be attributed to many causes, such as failure to follow the exact formula, general circumstances being un-conducive, or lack of magical ability.

Words of Power may be classified into five different categories that overlap in their definition and function. These five categories are: Words of Creation, Mantras and Incantations, Magical Passwords, Spells and Invocations, and Healing-Charms. Examples of each of these five intermingled categories are described as follows (Figure 1.22):

- **Words of Creation:** These are magical Words of Power that are used to bring forth creation, manifesting and materializing the sorcerer's thoughts and ideas into the world of matter.
- **Mantras:** These are magical Words of Power that are used for the purpose of affecting matter, energy, and spirit through the repetitive recitation of the secret names of various gods and supernatural beings.

Every Mantra spoken under the right circumstance creates some magical effect (either good or bad). A curse once uttered, for example, must eventually attach itself onto something (i.e., the person, place or thing that it was originally directed towards). If the curse is countered, it can be energetically turned back and directed towards the individual who originated the spell.

To the ancient Daoists, Mantras were believed "to enchain the power of the gods themselves." There was nothing that could resist their magical effect. These Words of Power were believed to be charged with the ability to provide either a blessing or a curse. At their bidding, the demons will enter a man or be cast out of him, and the only test of their efficacy is supplied by the unique powers of the Mantras themselves, since a stronger Mantra can neutralize a weaker Mantra.

The ancient Daoists believed that, in the hands of those who have the key to their true pronunciation, certain Mantras are capable of providing the sorcerer with special supernatural powers. Nothing was impossible for the sorcerers who knew how to use and apply these magical Words of Power.

One popular antidote used by a sorcerer to reverse a spell after it has begun its magical task (for example, the sorcerer suddenly develops a change

Figure 1.22. The Five Categories of Words

of heart), is to speak the Mantra backwards in order to reverse the spell. By pronouncing the same words of a spell backwards - the sorcerer can undo the energetic effects of any hastily spoken inauspicious Words of Power.

- **Magical Passwords:** These are magical "Words of Power" that are used to "open" or "close" energetic portals, and provide the sorcerer with safe passage through other spiritual dimensions (i.e., the Gates of the Underworld). In ancient China, it was believed that Daoist sorcerers could energetically constructed magical gateways, and use these Gateways in order to sojourn to every corner of the known world and beyond. It is said that because the knowledge of these magical portals could be used for both good as well as evil purposes, the Magical Passwords used in "Gatecraft" spells were jealously guarded. In certain Daoist traditions, the secret of constructing and utilizing these magical portals have become completely lost.

- **Spells and Invocations:** These are magical Words of Power that are used for conjuring up the spirits of the dead, exorcising demons, or for removing spells from off of the living.

Throughout China's ancient history, there are numerous examples of magical spells and incantations used for raising the various grades of spirits (i.e., from the ghost of a suicide to the innumerable company of demons). In each case, the effectiveness of the spell or incantation depends on the utterance of magical Words of Power (which are sometimes a combination of strange, manufactured tones).

When a Daoist sorcerer, turning to the four quarters, calls upon the names of the "Gods of the Four Directions" (Mo Li Hung, Mo Li Shou, Mo Li Chung, and Mo Li Hai), the summoned spirit gods will stand before him in human form to do his bidding. The Gods of the Four Directions can bestow onto the sorcerer the gift of invisibility, foreknowledge of the weather, knowledge of the raising and calming of storms, and the ability to understand the language of birds.

- **Healing Charms:** These are magical Words of Power that are used for healing.

NORMAL AND MAGICAL CONVERSATIONS

All conversations are based on the understanding of words, and in modern societies, speech is used to interact with others and exchange thoughts and beliefs. For the sake of simplicity, we can divide conversation into two basic categories: Normal Conversation and Magical Conversation.

In both Normal Conversation and Magical Conversation there is an exchange of information or ideas that has been constructed together based on the understanding of words, phrases, and vocabulary. The terminology, definitions, and expressions of these words specifically express the ideas of the individuals and their particular fields of expertise. These two categories can be described as follows:

- **Normal Conversation:** This category entails conversation used for Greeting and Grooming (surface conversations used in superficial greetings, and in saying good-bye), Finding Resources (conversations used for acquiring information and searching out possibilities), and Action (conversations used for making a recommendation, request, commitment, promise, or declaration).
- **Magical Conversation:** This category entails conversation used for Spells and Incantations, Invocations, Trance Induction, Healing, etc.

There is an ancient magical saying that states, "the sentences that we use are the ones we serve or live out." All sentences vary in power due to the syntax used to construct their verbal actions. In Daoist Magic, the Training the Speech Secret centers around the correct use of the magical power of words and their energetic definitions.

Figure 1.23. The Three Manifestations of Speech

For example, a Spell or “Invocative Phrase” is used in order to paint a “word picture” and invoke powerful feelings as well as gather energetic resources.

THE MANIFESTATIONS OF SPEECH

Speech can be further divided into three levels of energetic manifestation, depending on the integrity and De (Virtue) of the individual. These three levels are, Speech That Inaccurately Describes Reality, Speech That Accurately Describes Reality, and Speech That Creates and Causes Reality, described as follows (Figure 1.23):

- **Speech That Inaccurately Describes Reality:** These are words of deception, that misuse their function of conveying the truth. In this type of speech, the words that are used are inaccurate and incongruent, and are expressed through lying or misleading statements. When used in this manner, speech creates obstacles, and gives birth to deranged fantasies and disillusionions.
- **Speech That Accurately Describes Reality:** These are words of truth, that are accurate, exact, and complete in their description.
- **Speech That Creates and Causes Reality:** These magical words create. They cause the truth to manifest, and don’t depend or rely on the current reality, because they come from the infinite space of the Dao.

RHYME AND RHYTHM

Rhyme and rhythm are two important tools used to empower the magical incantation. In ancient China, rhymes were used as an important

tool for memory, allowing the disciples to retain the secret lineage information that was passed down orally from master to student. Many of the popular rituals still practiced today in China revolve around the recitation of some of these ancient rhymed chants and magical incantations.

Rhymes act as magical correspondences that energetically turn the lines of the spell back in onto itself, increasing its magical potency in an enchanting yet orderly fashion. Rhymes can also be used to unite and bind words of power together in a tightly formed energetic net, designed to capture whatever the sorcerer directs his or her attention onto.

The rhythm of an incantation or spell is its energetic meter. The number of characters (or words) used to construct the magical rhythm and tempo of the incantation will vary, depending on the sorcerer’s specific goal. The importance of an Incantation is manifested within its rhythm and overall vibration created, which is attributed to the specific magical powers contained within the sorcerer’s true self. The continuous recitation of an Incantation helps to induce an altered state of consciousness and can be utilized to commune with the Divine, to achieve a state of ecstasy, to summon psychic powers for esoteric energetic practices, to exorcise spirits or demons, or for healing purposes.

The chanting of an Incantation is sometimes practiced in continual cadence (with musical modulation), which creates a specific pattern of energy and power. When sounding an Incantation, the rhythm of the tone or phrase can be released either through fast or slow repetitions:

- **Fast Release:** When an Incantation is sounded

through fast release, it can generate an incredible amount of energy. The fast release is generally chosen to overcome inertia, disrupting a pathogenic uniform pattern that has become toxic to the individual. For example, shouting "No!" at someone in order to stop their energetic and physical patterns.

- **Slow Release:** When an Incantation is sounded through slow release, it can bring about a calm state of relaxation and peace. The slow release is generally chosen to sedate an active state of energetic agitation. For example, calmly speaking "relax" to someone in order to quiet and sedate their energetic and physical patterns.

Whenever composing an incantation needed to accompany a magical Hand Seal or Star Stepping pattern, the three guidelines below should be strictly followed:

- First, do not rush through the construction of the rhyme. Consider its magical purpose and energetic function and write its "life purpose" down on paper.
- Second, when composing the rhyme, consider any and all magical correspondences and word options that could apply to augment and empower its energetic construction.
- Third, devise the most lyrical rhyme that conveys the incantation's intention and "life purpose."

FOUR LEVELS OF SPEECH

The ancient Daoists believed that only when the Invocations or Incantations were spoken solemnly, through four levels of speech, would the vibrational essence of the magical sounds manifest and reveal their deepest secrets and powers. Each degree of speech transmits a different level of energetic "message," allowing for a deeper type of energetic manifestation. The four levels of speech are described as follows (Figure 1.24):

1. **Jing (Verbal) Speech:** This is considered the physical speech of the conscious mind. It is the expression of the "power of action," and focuses on specific activities such as past, present, or future exploits. It is the external, audible manifestation of phonemes (units of speech) that refers to, or is directed towards, physical, external sense objects through pronunciation, inflection and the melody of words. This type of

Figure 1.24. The Four Levels of Speech

speech is considered Jing (Essence) Speech, and it is released into the world through the mouth via the tongue and vocal cords.

2. **Qi (Mental) Speech:** This is considered the dreaming consciousness speech of the subconscious mind. It is the internal monologue and dialogue verbalized within one's mind. It is the expression of the "power of one's knowledge and wisdom." It is directed towards mental objects (objects of the inner senses) through the experiences and passions of the heart. It is considered the medium between the external verbal speech and the internal convictions of the single-minded speech. This type of speech is considered Qi (Energy) Speech, and it is released into the world through the nose via the breath.
3. **Shen (Single-Minded) Speech:** This is considered the speech of dreamless sleep, that occurs when the unconscious mind takes over. It is a perceptible but not particularized type of speech (not distinguishing between subject and object). It is the vehicle for the "power of desire and projected intentions," released through the concentration of Qi into a single-minded vision or "message." It is considered the medium between the mental speech and the divine speech. This type of speech is considered Shen (Spirit) Speech, and it is released into the world through the eyes via the spirit.
4. **Dao (Divine) Speech:** This is considered the speech of the super-conscious mind, composed of all three speeches (Jing, the speech of the conscious mind; Qi, the speech of the subconscious mind; and Shen, the speech of the unconscious mind). It is considered pure intention, expressed through the will of the Divine, flowing directly from the Wuji. It is beyond all objects,

motionless, external, internal, and peaceful. It is a speech that is telepathic, materializing directly from the individual's intuitive awareness, and it can only be perceived by those who are highly evolved spiritually.

Spoken or written words generate mental or internal dialogues which add patterned Qi to the words in order to energize the information. The Qi activates the words allowing them to become vital and "alive." The ancient Daoists believed that if you lose your ability to access the higher levels of speech, you distance yourself from the Heavenly Truth (Universal knowledge and wisdom) and Earthly Truth (Human understanding). This separation produces confusion, doubt, and cynicism, generating misconceptions and distortions of the "truth."

When treating individuals with the energetic art and skill of "Faith Projection" or "Divine Incantations," full spectrum speech (Jing, Qi, Shen, and Dao) must be utilized in order to transmit and convey all four levels of the Daoist Mystic's intention. When full spectrum speech is projected, it reaches into the four energetic receptive levels of an individual's listening ears (Jing, Qi, Shen, and Dao).

INCANTATIONS

An incantation is defined as the speaking of magical words, during a ritual (either as a hymn or prayer), in order to invoke or praise a deity, or with the intention of casting a spell on a person, place, or thing. The term derives its meaning from the Latin word "incantare," meaning "to chant (a magical spell) "upon," or "into" a person, place, or thing.

Magical Incantations are spoken spells. The ancient Daoists compared them to "a string of magical pearls." Each magical pearl (word) contains its own innate energetic form and meaning. The magical rhythm of the syllables, the repetition of certain consonants and vowels, and the rhymes that bind the ends of each line in a magical incantation reverberate the sorcerer's intention into the Three Worlds.

In all magical disciplines, incantations have certain similar qualities, for example:

- Many incantations have a strong reliance on performative language, including repetition, and formulaic composition.

- Most incantations are metrical in one of several poetic forms of the language in which they are written. Some use an unusual verse form of composition (i.e., incantations that are spoken or written in ordinary spoken language is somewhat rare).
- Almost all incantations invoke the aid of a divine or semi-divine being, or some other form of spirit entity.
- The "information packing" in an incantation is generally extremely tight. Sometimes the magical metaphors in an incantation are difficult to understand. This is because they are either designed to be deliberately meaningless, or because the sorcerer intended the metaphor to carry more semantic weight than usual.
- Many incantations contain nonsense words. These words may be mantras, "barbarous words," or strings of vowels or other non-linguistic sounds.
- Most incantations require some sort of physical action performed by the sorcerer in order for the magical power of the incantation to work. These actions may be described as part of the spell. In some instances, it is difficult to tell if the description of the actions is also to be incanted as part of the spell.

SOUND RESONANCE AND INCANTATIONS

The skill of reciting powerful Jue (Incantations or Mantras) is essential for the Hand Seals or Star Stepping to be functional in Daoist Magic. Incantations or Invocations are words charged with vibrational power. They have long been practiced as a secret esoteric tradition for conjuring and casting spells, and certain words of power were only taught to select disciples within the ancient Daoist sects.

An Incantation is a word, phrase, abstract musical tone or combination whereof that is used to emanate or initiate a spiritual and energetic message within the body's tissues. Each Incantation or Mantra has two important qualities: form and color. Similar to prayer, when an Incantation is continually chanted, it reprograms the individual's spirit, emotion, mind, and body. When spoken aloud for several minutes, an Incantation can vibrate silently in the mind and body of the individual for several

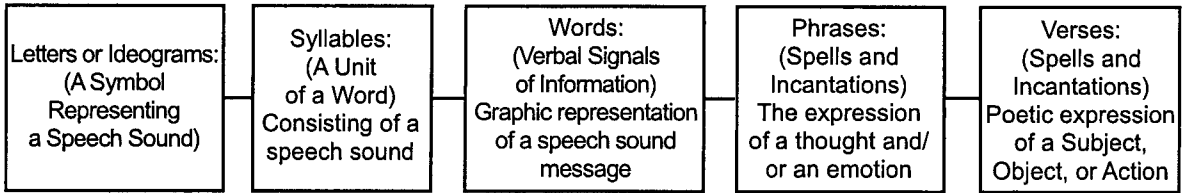

Figure 1.25. The energetic structure of a magical spell or incantation can be divided into five parts.

hours, carrying with it the imprinted message of the Incantation's vibration, image, and meaning.

Certain Incantations, when performed correctly with focused intent, are considered the manifestation of "sacred sounds," and they connect the individual with a particular deity or energy form. Other Incantations are designed to activate certain Dantians or Chakra areas and empower the sorcerer with specific energetic and spiritual powers. These types of Incantations can be sometimes harnessed in order to create or destroy. This skill was particularly used in secret Chinese internal martial arts societies.

Each Incantation contains a specific sound or collection of sounds that can vibrate the infinite space within matter, alter energetic patterns, and affect specific tissues within different parts of the body. The ancient Daoists viewed the mind as an energetic force that was not limited to only psychological interactions. All forms of creation or matter were believed to be nothing more than the manifestations of an individual's thoughts (projected consciousness) and energy. Therefore, every thought was believed to have a corresponding image or energetic form, and every image or energetic form was believed to have a corresponding vibrational tone or sound.

Through the released vibrational tones resonating from within the Incantation, the method of repetition used when sounding an Incantation aligns the sorcerer's consciousness with a particular energetic form. The repeated sound carries a specific type of energy that can be used for healing or protecting the cells, tissues, organs, body, mind, emotion or spirit of the individual.

It is important to note that certain Incantations do not have any specific comprehensive meaning (on the gross material plane). Their power is con-

Figure 1.26. Magical Words are used as powerful verbal signals of information.

tained not within the specific words themselves, but in the sound vibration created when the Mantra is uttered verbally or when it takes form in the mind.

THE STRUCTURE OF A SPELL OR INCANTATION

The energetic structure of a magical spell or incantation can be divided into five parts (Letters or Ideograms, Syllables, Words, Phrases and Verses). Each of the four sections contains a specific function, described as follows (Figure 1.25):

- **Letters and Ideograms:** In magic, letters and ideograms are considered to be the powerful magical symbols of a speech sound and form the basis of all talismans. All humans are affected by these symbols, which are created and further energized by speech.
- **Syllables:** In magic, syllables are considered to be small magical units of a speech sound.
- **Words:** In magic, words are used as powerful verbal signals of information. Words express

Figure 1.27. The Five Element Correspondences of Magical Phrases and Verses

the graphic representation of a speech sound message, and they are used to create, hide, reveal, regenerate and sustain, or destroy something (Figure 1.26).

- **Phrases:** In magic, phrases are used in the form of Mantras, Spells, Incantations, or Poems as the manner of expressing magical power. They consist of two or more grammatically related words that form a sense unit, expressing a thought and/or an emotional action.
- **Verses:** In magic, a verse is constructed of several phrases, and is expressed in the manner of a metrical (sometimes poetic) form of Mantra, Spell, or Incantation. The magical power of a verse is expressed through a subject, object and action.

THE FIVE ELEMENTAL CORRESPONDENCES TO A SPELL OR INCANTATION

All things existing within the physical realm can be attributed to one or several Elemental correspondences. Likewise, magical incantations (i.e., Magical Phrases and Verses) can be attributed to the specific powers and energetic manifestations of Wuji, Air, Fire, Water, and Earth, and can be described as follows (Figure 1.27):

- **Wuji:** Words corresponding to the infinite space of the Wuji magically open, awaken, ini-

tiate, create, or transform a person, place, or things energetic existence.

- **Air:** Words corresponding to the Air Element magically gather, nourish, and create a magnetic attraction towards a person, place, or things energetic existence.
- **Fire:** Words corresponding to the Fire Element magically quell, decrease (contract and shrink), consume, eat, obstruct, bind, stop, or destroy a person, place, or things energetic existence.
- **Water:** Words corresponding to the Water Element magically harmonize, protect, balance and pacify a person, place, or things energetic existence.
- **Earth:** Words corresponding to the Earth Element magically cause something to expand, increase, grow, multiply, and enhance a person, place, or things energetic existence.

THREE MAIN COMPONENTS OF AN INCANTATION

The ancient Daoists believed that everything in life is interconnected in energetic patterns, webbed together in universal order. In order to create the esoteric power of true magic, these ancient sorcerers consciously placed their Intention (Yi) in the central moment of "Now," allowing time and space to diffuse and internal Wisdom and Will to passionately create.

Just as there are three different levels in the universe (i.e., the spiritual, the material, and the energetic consciousness that moves between them), so too are there three components to a magical spell or incantation. These three components are the Prayer, the Means, and the Intention, described as follows:

- **The Prayer:** This magical component directs the sorcerer's consciousness towards a specific deity, God, or spirit entity for assistance. All magic depends on this divine spiritual force in order for it to be effective. Where there is no life, there is no spirit, and where there is no spirit, magic is impossible. Therefore, magical incantations almost always involve a prayer, invocation, offering, or some other form of intentional connection with a deity or other spiritual being. It is important to know that the principles of magic are universal, the main changes from one religion to another are generally the names of the divinities to whom the sorcerer directs his or her prayer.
- **The Means:** This magical component is used to actively manipulate physical symbols (i.e., various objects, words, letters, Elements, Trigram patterns, Hand Seal gestures, Star Stepping patterns, etc.) in order to make the idea manifest within time and space. This energetic pattern is based on the Law of Correspondence.

In Daoist sorcery, the Law of Correspondence relates all energetic patterns and universal connections. These magical laws characterize all things according to their energetic function, and they allow the sorcerer's magical tools, talismans, spells, and incantations to become operational and function within the material realm. They are the Means through which all magical protection and healing are initiated. For example, when practicing Mineral Magic, the sorcerer will use certain vibrant red stones in order to enhance his or her energetic connection with the Fire Element.

The fundamental idea in using the Law of Correspondence to create an incantation is to focus on the central theme of the magical spell, while creating numerous supporting and interlinking items to feed the spell (like the

Figure 1.28. The four magical components of a sorcerer's inner nature

many roots supporting a powerful tree). There is an ancient Daoist saying that states, "*The hub of a wheel is an empty hole, you can know it only by the spokes that surround it.*" Meaning, the specific words and symbols used within an incantation to express its idea are not the archetype itself. They are simply material manifestations, facets, aspects, or forms of a transcendent idea that exists in the spirit realm, beyond space and time. Just as there is a central reason behind every note of a musical composition and every color placed within a painting, so too is there a reason behind every ingredient placed within a magical Incantation and ritual.

- **The Intention:** This magical component unites the prayer with the means. It is the sorcerer's own intention (Yi) that must be impassioned enough to gather together and focus the energetic powers of the four magical components of his or her Prenatal Inner Spirit (Figure 1.28). It is also this inflamed Intention that strongly unites spirit with matter and makes the magical patterns of the Hand Seals and Star Stepping functional. The more emotion and focused intention that is applied to an incantation, the more powerful it becomes.

In order to become successful in using Hand Seals and Star Stepping, the ancient Daoists had to not only master the art of speaking magical words or “Words of Power,” but they also had to use their Intention (Yi) to master their Will (Zhi) in order to transform their thoughts and emotions (Shen) into magical energy (Ling Qi). This magical energy was then channelled outward and directed into the surrounding environment via the incantation and magical Hand Seal, affecting spirit, energy, and matter.

FIVE REQUISITES FOR INCANTATION TRAINING

When practicing Incantations, the sorcerer normally chooses to energetically link its specific magical function with a particular Hand Seal. In ancient Daoism, there were five disciplines needed in order to achieve significant energetic manifestation using Incantations. These five disciplines are Location, Time, Number, Focus, and Control, described as follows (Figure 1.29).

- **Location:** When sounding an Incantation, the sorcerer should stay in one location and not travel about. It is also encouraged that the sorcerer face the same direction, sit in the exact same place and use the exact same posture and Hand Seal each day.
- **Time:** When sounding an Incantation, the sorcerer should determine a specific time for practice. It is encouraged that the sorcerer meditate at the exact time every day (limiting training time to no more than five minutes when first beginning). To be effective, some Incantations need to be repeated for a certain number of days (i.e. 40 days).
- **Number:** When sounding an Incantation, the sorcerer should determine the number of repetitions he or she will be sounding (24, 36, 48, 72, 96 or 108). It is also encouraged that the sorcerer practice the same number each day.
- **Focus:** When sounding an Incantation, the sorcerer should focus his or her mind, imagination, and intention on the resonant vibration of the Incantation. Most Incantations also have complex visualizations or concentration techniques that the sorcerer is required to practice along with the recitation. It is also encouraged that the sorcerer maintain a serious, reverent

Figure 1.29. The Five Disciplines of Incantations needed in order to achieve energetic manifestation

attitude when imprinting the Incantation with the specific Hand Seal and magical application.

- **Control:** When sounding an Incantation, the sorcerer should maintain complete control of his or her sexual organs (a woman should not perform Incantations when she is menstruating). This is to ensure that as the spiritual energy of the Incantation builds up over the course of the training, and his or her Jing (Essence) is stimulated, the sorcerer is able to guide the transformation upward into the desired energetic or spiritual manifestation.

BREATH INCANTATIONS

In Daoist sorcery, it is taught that the reciting of any magical incantation must be spoken and imprinted with the sorcerer’s Vital Breath (originating from the Yellow Court), and in conjunction with the visualization of the related spirits entity summoned to reinforce the spell. This way of reciting magical incantations is known as a Breath Incantation.

Breath Incantations has always been an important part of the ancient Chinese system of Magical Skills used in Daoist Sorcery. In the 24 rank registers of the *Tradition of the Mighty Commonwealth of Zheng Yi*, there is even a book called, “The Ritual of the Breath Incantation.”

Because blood and breath bridge the realms of spirit and matter, they have always been perceived as powerful vehicles of magic by the ancient Dao-

ists. In fact, in ancient China, it was believed that the Vital Breath could be projected from the body, affecting people and objects to the degree that they could be energetically controlled or transformed. This energetic skill was known as "Breath Sorcery." When combined with the creative visualization of a specific deity (imagined and realized within one's mind), the Breath Sorcery would become so powerful that it could be used to restrict, control, or paralyze, and it was sometimes used to kill ghosts, evil spirits or demonic beings.

In ancient China, the famous Daoist sorcerer Zhao Ping used "Breath Sorcery" to charm streams so the degree that the water-level would suddenly drop as much as 20 feet. He was also known to use "Breath Sorcery" in order to light cooking fires on thatched roofs without setting fire to the building, prevent boiling water from scalding, and to prevent dogs from barking.

Since speech is older than writing, the use of spells and incantations is believed to be older than the uses of written charms and talismans. The energetic combination of an Incantation together with "Breath Sorcery," created an even more powerful tool known as a "Breath Incantation," which could be used to captivate and control the energy of an individual's spirit, mind, or body.

In ancient China, Daoist master Ge Hong of the Jin Dynasty (221-206 B.C.) wrote in the *Inner Book of the Master Who Embraces Simplicity* that in certain areas within the Wu and Yue province Breath Incantations were commonly used and have been quite effective. However, according to recent archaeological discoveries, the popularity of Breath Incantations also extended to the Chu and Shu kingdoms as well. According to master Ge Hong's records, Breath Incantations were widely practiced for the use of becoming immune to contagious diseases, curing diseases, dispelling demons, reversing the flow of water, and stopping tigers, leopards, snakes and poisonous bees.

Breath Incantations are able to alter an individual's energetic and spiritual field, intrinsically connecting the one who utters the incantation with the force or concept of its power. These words, sounds or phrases are believed to have accumulated enormous power through the investment of many

individuals having persistently practiced the Incantation over many thousands of years.

INTRODUCTION TO BREATH INCANTATIONS

The *Tai Yi Zheng Yi Book of Incantations for Dispelling Ghosts* states, "I have the vital breath of Heaven and Earth. As I recite the incantations, ghosts will be killed, wood will be broken, and the divine gods will fasten themselves; moreover, gold will melt, water will dry out, fire will extinguish itself, ghosts will kill themselves, ulcers will be cured, and poison will disappear. Supplications will stop, and curses will be worthless."

The ancient Daoists believed that if they recited certain incantations and mantras, celestial deities with strong magical powers would appear to them, and impart the incantation's secret meanings and esoteric powers that have been "hidden in Heaven." It was commonly taught that when a Daoist sorcerer recited certain incantations, thousands of millions of Celestial Warriors and Divine Generals would come to protect and to serve the sorcerer. As a result, throughout the various dynasties more and more incantations were added to the repertoire of Daoist mantra skills, which eventually became widely practiced.

INCANTATIONS IN RELIGIOUS DAOISM

According to the teachings of Religious Daoism, there can be no magical skills without the use of incantations. The most common incantations recited in religious Daoism are:

- Incantations for Setting Up the Altar
- Incantations for Purifying the Altar
- Incantations for Protecting the Altar
- Incantations for Protecting the Soul (when approaching the Altar)
- Incantations for Offering Petitions
- Incantations for Writing Talismans
- Incantations for Pacing the Big Dipper
- Incantations for Opening the Scriptures
- Incantations for Reading Scriptures.
- Incantations for Invoking Celestial Immortals
- Incantations for Invoking the Divine Generals
- Incantations for Invoking the Celestial Officers
- Incantations for Killing Ghosts
- Incantations for Controlling Devils and Arresting Demons

Additionally, the practice of reciting incantations have permeated into the daily life of the religious Daoists, even to the degree of reciting incantations when washing the hands, having meals, taking baths, having the hair cut, etc.

CHARACTERISTICS OF DAOIST INCANTATIONS

Magical incantations have always been an essential part of Chinese sorcery, originating from the ancient understanding of the magic power of words. Religious Daoism inherited and further developed the use of these ancient magical incantations, and also included certain Buddhist incantations into their magical "tool-box" for use in the spirit realm.

In Daoist incantations, there are certain "magical statements" that make the spells unique (i.e., ending the statement using imperial commands) and are different in design from Buddhist incantations (which employ the names of Buddha when recited). For example, in Daoist incantations there are often such terms as "in accordance with the statutes and ordinances," "quickly, quickly, as this is Law," or "the Supreme Sovereign, quickly, quickly, in accordance with the statutes and ordinances" added to the end of the incantation. The reason for this, is because during the Han Dynasty (206 B.C.-220 A.D.), the phrase "in accordance with the statutes and ordinances" was found in all imperial decrees and declarations of war. The phrase "in accordance with the statutes and ordinances" meant "to execute the orders like an imperial decree," which implied that if anyone disobeyed them, he or she will be seriously punished. Such official proclamations, used in state decrees, statutes and ordinances, were eventually adopted by the sorcerers of folk magic. Powerful witches and wizards all began incorporating the use of these imperial mandates into their magical incantations.

In the Eastern Han Dynasty (25 B.C.-220 A.D.), witches and wizards often applied "writs for dispelling evil" when performing magical rituals to "separate humans and ghosts," and to protect themselves from being hurt by ghosts at funerals. Such magical writs usually ended with the fixed expression "in accordance with the statutes and

ordinances." One simple pattern used as a magical write was "Dispel all of the spells in accordance with the statutes and ordinances."

At the end of some of the magical incantations there are such words as "act as regent," "imperial order," or "quickly" to show that the spirit entity must follow the orders of the incantation without delay. For example, when invoking the Divine Generals and Celestial Warriors to destroy evil, the Daoist sorcerer repeated the "Incantation for Opening the Flag," spoken as follows:

**"The Valiant General of the Five Thunders
and The Generals of the Fire Chariots
Soar Up to the Heavens
and Down to the Earth.**

**Drive Thunder and Clouds
Open the Flags to Quickly Invoke
the Thousands of Divine Warriors
and Command Them Without Delay.**

**Quickly, Quickly,
In Accordance With
the Statutes and Ordinances"**

This particular incantation addresses the Divine Generals of the Thunder Agency first, and then describes power of these great conquering generals. It also explains their duty and then opens the "Command Flag" in order to invoke them to come. It orders them to descend without delay, and ends with the fixed expression "Quickly, quickly, in accordance with the statutes and ordinances!"

In order to be effective, the energetic pattern of Daoist incantations focus their content on communicating with and summoning Celestial Deities, Divine Generals, etc. For example, the incantation can be used to address the Supreme Venerable Sovereign, the Jade Emperor of the Divine Heaven, or the Celestial Master. In this way, the titles of the revered spirits are addressed directly, and are spoken in order to invoke the Divine Generals for controlling evil spirits and devils.

The reciting of the religious Daoist incantations is closely related to the Daoist Pantheon, and it is believed that even those spirits of comparatively lower spiritual ranks can be controlled by

Figure 1.30. Incantation Training is Divided into Yang Sounds (Audible Toning) and Yin Sounds (Inaudible Toning)

the ritual masters, who directly address each of them by their names (this is done to show that the ritual masters has the ability to control the spirit). The incantations are orders to work these spirits, and in them the phrase “in accordance with the statutes and ordinances” is used in order to stress that these orders must be executed immediately, otherwise, the spirits will be punished.

FOUR TYPES OF BREATH INCANTATION

When practicing sound emission in the form of a Breath Incantation, the sorcerer can exhale the tone either audibly (Jing), sub-audibly (Qi), inaudibly (Shen), or “Transcended” (Wuji). The decision to use either audible, sub-audible, or inaudible Breath Incantations or to initiate transcended sound incantations will generally depend on the specific sound or phrase and the sorcerer’s intended goal (Figure 1.30).

AUDIBLE (JING) INCANTATIONS

When the Audible Incantation is released through loud chanting, it creates a strong vibration within the body, at the level of Jing and Qi. However, the more subtle the sound, the deeper its effect on the individual and his or her surrounding environment.

The audible released sound (externalized) allows the individual the ability to express, in gross material force, the energetic nature of the Incantation. The audible released sound can be further divided into Yin and Yang pronunciations: Vocalized (Yang) Sound and Nasalized (Yin) Sound:

- **Vocalized Incantation Sound (Yang):** This is a spoken or vocalized Incantation, using sounds or phrases
- **Nasalized Incantation Sound (Yin):** This is an inner cranial Incantation, using individual nasalized syllables

SUB-AUDIBLE (QI) INCANTATIONS

When practicing sub-audible Incantations, the Daoist sorcerer will softly speak the audible released sound (externalized) in a whispered voice, creating a subtle vibration within the body at the Qi and Shen level. This allows the mouth to move (still forming the sound or phrase) and the breath to release the Incantation’s energetic vibration.

INAUDIBLE (SHEN) INCANTATIONS

Incantations can also be internally and soundlessly toned. Silent chanting creates a subtle vibration within the body, at the level of Qi and Shen. When chanting an Incantation, there is a silent sound that proceeds the audible sound. The ancient Daoists believed that these subtle sounds comprise the energetic forces responsible for creating the Elements and allow for their ten thousand manifestations.

The inaudible released sound (internalized) allows the sorcerer the ability to initiate control over the focused item and its essence. The inaudible released sound can be further divided into Yin and Yang pronunciations: Mental (Yang) Sound and Telepathic (Yin) Sound.

- **Mentally Repeated Incantation (Yang):** This is a internal sounding Incantation, wherein the Incantation is repeated inside the sorcerer's Mind (Shen)
- **Telepathic Repeated Incantation (Yin):** This is a form of telepathic speech, in which only the sorcerer's Intention (Yi) and Willpower (Zhi) is conveyed.

The actual meditative writing of an Incantation or mantra (usually practiced through ancient Chinese calligraphy) was considered to be one of the most powerful conscious releases of energetic sound vibration. The skill of meditative Incantation writing required the ancient Daoist sorcerer to combine all three energetic approaches (Jing, Qi, and Shen) of the Incantation in order to impregnate the sound's vibrational resonance into the material substance of paper.

TRANSCENDED (WUJI) INCANTATIONS

This most secret type of Incantation is also internally and soundlessly toned. In this most advanced stage, the silent chanting creates a subtle vibration within the sorcerer's spirit body. This most subtle vibration allows the sorcerer to dissolve into the very essence of the Mantra's energetic matrix, and allows him or her to merge with the original source of sound and light. At this most subtle level, the sorcerer's Shen dissolves into the infinite space of the Wuji and fuses with the Dao.

When chanting this type of Transcended Incantation, the "listening" of the Mantra sound is experienced from the realm of existence, and total surrender is required in order to "realize and awaken" to this type of spiritual fusion. At this stage of transcended awareness, the sorcerer will also be sending and receiving, into his or her presence, the infinite sounds of everyone who has ever spoken that specific Mantra. The ancient Daoists believed that these most subtle transcended sounds comprise the energetic forces responsible for creating the infinite space of the Wuji.

BREATH INCANTATION TECHNIQUE

The human body is "made of dust" only in the sense that our material tissues are constructed from the various elements of the Earth. The shape of our souls, however, was determined by the ex-

Figure 1.31. Performing Breath Incantations

pressed "Word" in the vital breath of the Divine. When expressed through Breath Incantations, "Words" have the power to affect not only the mind of the hearer, but also inanimate objects as well, particularly if they represent archetypal, astrological, or divine forces or beings.

The efficacy of Breath Incantations is greatly magnified when they are uttered by a sorcerer who has been purified by prayer and ritual practices. The ancient Daoists believed that the virtue (De) inherent in the "Word" is augmented by the personal virtue of the individual's voicing it. It is important to note that magical virtue refers to the quality of concentration and purification of the will, and has little to do with virtue in the conventional sense of propriety. In this context, De, could also be understood as having few or no open loops (incomplete tasks, communications, or relationships). This gives the sorcerer a much greater degree of frequency coherence (everything in his or her physical, energetic and spiritual bodies is in agreement); then when he or she focuses, it is

much more concentrated and directly harmonized with the Dao.

The Breath Incantations preformed by Daoist sorcerers in China utilize the ancient Four Levels of Speech techniques. These Four Levels of Speech are spoken solemnly through focused intention and assist the sorcerers in influencing or controlling the thoughts and actions of individuals by means of psychic hypnotic influence. Through the use of positive commands or thoughts, subtle insinuations can be used to reprogram the individual's chronic detrimental beliefs and initiate healing.

In order to perform the Breath Incantation technique, the Daoist sorcerer will proceed as follows:

1. After performing the "One Through Ten Meditation" and the "Three Invocations," imagine that divine healing light is flowing through your Taiji Pole into the Lower Dantian (Figure 1.31).
2. Roll both of your eyes upwards into the Celestial Chamber as you begin to draw a specific talismanic symbol on the center of your upper pallet using your tongue. The upper pallet is the position of the Wood Element and is one of the Hun's access points through the Taiji Pole into the Celestial Chamber. The tongue represents the spiritual nature of the Heart's Shen and the desired projection of the Yuan Shen (Figure 1.32).
3. Inhale the energetic powers of Heaven Qi and Earth Qi through the nose to activate the energetic nature of the talismanic symbol located at the top of the mouth, on the middle of the upper pallet (Figure 1.33).
4. Swallow and bring this combined Qi down into your Yellow Court area and mix it with the combined energetic and spiritual natures of the Wu Jing Shen (Hun from the Liver, Shen from the Heart, Yi from the Spleen, Po from the Lungs, and Zhi from the Kidneys).
5. Bring the divine healing light up from your Lower Dantian through the Taiji Pole into the Yellow Court and combine it with the Qi of the Wu Jing Shen, Talismanic energy, and breath. Once these four energies have com-

Figure 1.32. For the Wood position, which is related to the Liver, the tongue is placed on the middle of the upper palate at the center of the roof of the mouth.

Examples of Various Symbols used for Breath Incantations

Figure 1.33. The energetic nature of the talismanic symbol (drawn with the tongue at the top of the mouth) is activated by the sorcerer's thought intention. Each energetic pattern has a specific meaning and type of power, and it can be accompanied by a Mudra used to activate that power.

bined, exhale them out the mouth with the intention of the projected sound or spoken word.

6. The projected sound or spoken word should include the energetic thought and spirit projection of your Jing (Verbal) Speech, Qi (Mental) Speech, Shen (Single-Minded) Speech, and Dao (Divine) Speech. This projected word should also be combined with the mystic's Hypnotic Influence (audible and thought projection), which is initiated by the voice, attitude, tone, words, mannerism, appearance, and demeanor.

USING BREATH INCANTATIONS FOR PROTECTION

There is an important relationship between sound, Qi, and creation. In the act of creation, (before anything manifests), there must first be the Divine Mind in which time, space, and energy exists as one single point. This dynamic convergence creates form. This is considered by the ancient Daoist sorcerers to be the "seed of creation."

Therefore, through the vehicle of the spoken word (or sound), the fusion of breath (Qi) impregnated with mind (Shen) brings sound.

There are several ways that a Breath Incantation can be used to protect the Daoist sorcerer. Two of the more popular techniques used to energetically and spiritually protect the physically body are Single Sound Breath Incantations and Multiple Sound Breath Incantations, described as follows:

SINGLE SOUND BREATH INCANTATION

One advanced way of spiritual protection is to fill the sorcerer's Wei Qi field with a particular divine incantation (sound or phrase), thereby allowing it to repel any and all incoming destructive negative energetic attacks. This technique especially works well against dark sorcery and psychic attacks coming from Spirit-Spell Incantations (incantations that summon and dispatch evil spirit entities to attack a victim). In ancient China, this technique was known as, "using the divine sound to combat a destructive sound."

- Begin by performing the 1-10 Meditation and Three Invocations (See Chinese Medical Qigong Therapy: Volume 3, Chapter 28). After performing the third invocation, focus the mind's attention on gathering the divine healing light into the Lower Dantian. Imagine and feel the divine light energizing your physical body, energetic body, and spiritual body. Hold this image until you feel all three bodies completely full of the divine healing light.
- Next, reconnect with the Divine and imagine creating an Energy Ball between both hands. Both hands are to be positioned facing each other, with the base of the palms roughly located at the same height as the middle of the chest, fingers pointing upwards (Figure 1.34).
- Create a talisman at the roof of the mouth with the tongue. As the tongue draws the talisman on the soft palate, begin to chant the mantra in your mind that you wish to use for generating divine power and sacred protection. It is important to have a powerful emotional connection to the specific Incantation or phrase used for spiritual protection. By emotionally focusing on the Incantation's specific

Figure 1.34. Direct the Lower Dantian Qi into the palm and imagine creating an energy ball of divine healing white light

energetic and spiritual powers, you ensure a powerful fusion of Qi and Shen.

- As you inhale, imagine divine light flowing in through the nose, stimulating and energizing the talisman (whose image is now drawn on the top of the mouth at the upper soft palate). While continuing to inhale, imagine pulling the energetic and spiritual power of the talisman into the chest, Heart, and Middle Dantian area.
- Begin to connect and fuse the energetic and spiritual powers of the specific Incantation with the energetic and spiritual powers of the Five Yin Organs, specifically the five Prenatal virtuous energies emanating from the Wu Jing Shen (i.e., compassion from the Hun and Liver, peace and order from the Yuan Shen and Heart, integrity from the Po and Lungs, trust and truthfulness from the Yi and Spleen, willpower and wisdom from the Zhi and Kidneys).
- After combining and fusing the spiritual and energetic power of the Incantation with the spiritual and energetic power of the Wu Jing Shen and five internal organs, focus your at-

Figure 1.35. Fill the Wei Qi field with a particular Incantation and allow it to repel any incoming destructive negative energy

tention on bringing the divine light up from the Lower Dantian into the Middle Dantian. Imagine and feel all of these energetic and spiritual powers combining and fusing within the area of your Yellow Court.

- Next, bring the Qi upwards from the Yellow Court into the back of the throat, and exhale this infused spiritual energy combined with the specific Incantation phrase or sacred sound into the energy ball between your hands. Audibly or Inaudibly speak the divine sacred sound as a Breath Incantation, and completely fill and empower the energy ball with the spiritual energy and power of the divine word.
- Focus your mind and intention on feeling the power of the Incantation vibrating between your hands. Imagine and feel the energetic and spiritual vibration becoming extremely bright and powerful. Then, raise the energy ball upwards in front of your Yintang (Third Eye area), releasing its light and power to expand outward, filling your three Wei Qi fields (Figure 1.35).

Figure 1.36. Imagine and feel the Physical, Energetic and Spiritual Bodies dissolving into the light and vibration of the Incantation, until all that inhabits the space of your three Wei Qi fields is the energetic light and sound of the divine vibration.

- Imagine and feel the divine light and power of the energy ball Incantation vibrating throughout your three Wei Qi fields, expanding light and sound vibration to the front, back, right, left, above, and beneath your body (protecting all six directions of space).
- Focus on your body being completely submerged and bathed in the vibrational resonance and power of this divine Incantation, until you feel the physical body slowly dissolve into this powerful energetic field of light and sound.
- Next, feel your energetic body dissolve into this energetic field. Then finally, feel your spiritual body dissolve until all that inhabits the space of your three Wei Qi fields is the energetic light and sound of the divine vibration (Figure 1.36).

MULTIPLE SOUND BREATH INCANTATION

Another variation used to counter Spirit-Spell Incantations is to encircle the divine incantation (sound or phrase) in several energetic spheres and

Figure 1.37. Fill the Wei Qi field with six energetic Breath Incantation orbs, allowing them to repel any incoming destructive negative energy

place them in six directions, surrounding the Daoist sorcerer's body. Each energetic orb resonates outward filling the sorcerer's Wei Qi field. Each of the energetic orbs will also resonate with the other energetic spheres, creating a multilayered reciprocal vibrational field. This multilevel energetic field allows the sorcerer the ability to be protected through the three Wei Qi fields and the six directions of space (Figure 1.37).

IMPRINTING WITH INCANTATIONS

Everything that exists in nature is a part of the energy and the consciousness that formed it. Matter can be regarded as an extension of consciousness, or as a particular form that consciousness has assumed. Therefore in order to learn to materialize (create, mold, form), or dematerialize (dissolve, disperse) Qi and Shen through Hand Seals or Star Stepping, it is important for the sorcerer to be able to create and imprint with magical words by first mastering the four primary properties of Qi. Once these are mastered, the sor-

cerer will then be able to excel in effecting and manipulating the energetic and spiritual levels of vibrational patterns and forms. This will enable the sorcerer to locate and materialize energy in order to strengthen deficient conditions or dematerialize energetic stagnations.

The Daoist sorcerer will use the power of words in order to energetically Create (design, manifest and bring into existence), Imprint (effect and influence), Feel (perceive, examine and ascertain), and Activate (energize, vitalize and animate its energetic function). These four energetic actions are known as the Four Functional Properties of Energy.

FOUR FUNCTIONAL PROPERTIES OF ENERGY

When molding and forming Qi, the ancient Daoist sorcerers would utilize the four energetic actions for mastering the four primary properties of Qi: Create (Chuangzao), Feel (Ganjue), Imprint (Mingli), and Activate (Shi Huodong); described as follows (Figure 1.38):

- **Create (Chuangzao) - Forming the Energetic Blueprint:** The word "Chuangzao" translates as "to create," and it describes the Creative property of Qi. It refers to the production of the energetic form, as well as to the forces and energy associated with it. It makes life itself and the phenomena of materialization and dematerialization possible. Within the body, the Creative property of Qi is responsible for the construction, maintenance, and re-configuration of the body (i.e., electrons, cells, tissues). When materializing Qi, the Creative property of Qi is used to construct the energetic form: its shape, size, and texture (color, sound, solid, liquid, vapor or light).
- **Feel (Ganjue) - The Sensate Property of Qi:** The word "Ganjue" translates as "to feel or sense," and it describes the aspect of "feeling" the energetic quality of the created item. It is considered the manifestation of the "sensory" aspect or property of the Created Qi, and refers to the tangible feeling of the energetic form or substance, as well as the specific forces and energy associated with it (hot, cold, heavy, light, etc.).

Figure 1.38. The Four Primary Properties of Qi

By mastering the Feeling aspect of Qi, the sorcerer can energetically dissolve into the Wuji and experience every cell or particle of material existence; or feel the ebb and flow of the subtle energetic fields that permeate an individual's physical body (by dissolving into the spiritual matrix that exists in-between the individual's energetic particles and cells). Ganjue makes the sorcerer's energetic feelings, sentiments, and sense experiences substantially real.

Within the body, the Feeling property of Qi makes it possible for an individual to enjoy the sensations of physical pleasure or suffer from physical pain. When materializing energy, the Feeling property of Qi allows the sorcerer to fully experience the quality of the subtle vibrations resonating within the energetic form that he or she has created. The energetic form will generally manifest through the Eight Energetic Touches (feeling hot, cold, heavy, light, expanded, contracted, vibrating, and spiralling).

- **Imprint (Mingli) - Tasking the Energetic Form:** The word "Mingli" translates as "to imprint," and it describes the energetic aspect

of imprinting and spiritually "inscribing" the sorcerer's intention into the energetic form. Mingli allows the energetic form to retain specific instructions and perform required tasks. Tasking is considered a type of encoding the energetic form, and it includes all energetic and spiritual forces associated with the thoughts, emotions, and intentions that have impregnated the created object (i.e., Tonify, Purge, Regulate, protect, destroy, bind, heal, etc.).

Imprinting makes the energetic construction of all thought forms and spiritual images possible. It is used after the sorcerer has shaped the energetic form through visualization. When recording images, it is the "Imprinting" quality of energy that helps the sorcerer to observe, memorize, and retain various shapes, sizes, and colors. Within the body, the Imprinting property of Qi makes it possible for every particle and cell of the body's tissues to become energized and strengthened, and to maintain a specific energetic structure.

- **Activate (Shi Huodong) - Awakening the Vibrational Property of Qi:** The term "Shi Huodong" translates as "to activate," and it is used as a term to describe the activity of formally "starting" the energetic and spiritual function of the Created object. The Activation of Qi makes the energetic movement and vibration possible. It is sometimes considered the awakening of the vibrational motion contained within the energetic form, as well as the specific powers (or forces of energy) associated with that awakening.

The Activation of Qi is used as the means for transporting the sorcerer's projected energetic field. Within the body, the Activating property of Qi is responsible for all activities, both conscious (walking, physical coordinations, and eye movements) and unconscious (the energetic function of the circulatory system, respiratory system, vascular system, nervous system digestive system, etc.).

CREATING, FEELING, IMPRINTING, AND ACTIVATING QI MEDITATION

The sorcerer should master the Four Primary properties of Qi by practicing Shengong exercises that use powerful visual images. When creating an "Energy Ball," for example, the sorcerer will utilize all Four primary properties of Qi, described as follows (Figure 1.39):

- **Create (Chuangzao):** The Creative property of Qi is used to construct the shape and size of the energy ball.
- **Feel (Ganjue):** The Feeling property of Qi allows the sorcerer to feel and acknowledge the energetic quality contained within the energy ball, (Hot, Cold, heavy, light, vibrating, spiralling, etc.).
- **Imprint (Mingli):** The Imprinting property of Qi allows the sorcerer the ability to impregnate the energy ball with a specific task or function (Tonify, Purge, Regulate, protect, destroy, bind, heal, etc.).
- **Activate (Shi Huodong):** The Activating property of Qi awakens the energy ball's vibrational movement, giving it life.

To assist the disciple in acquiring the skills needed for materializing Qi, the ancient Daoist masters would instruct the apprentice in "Imprinting and Feeling" Shengong meditations. The following is an example of an "Imprinting and Feeling" Shengong meditation:

1. **Create:** Begin from a seated posture, close your eyes and perform the "One Through Ten" meditation (see Chinese Medical Qigong Therapy: Volume 3, Chapter 28). Connect with the Divine and imagine pulling an energetic cord into your right palm from the Heavens. Feel the divine energetic cord mold into a powerful luminous ball. Imagine a luminous ball of white light energy molding into the size of a tennis ball. This type of imagery exercises the Creative property of Qi.
2. **Feel:** Feel the weight of luminous ball of white light energy in your hand. Feel it alive, electrical, hot, and vibrating; feel it rolling around in your palm like liquid mercury. This will train you in mastering the Feeling property of Qi.
3. **Imprint:** Now that you have created an ener-

Figure 1.39. The Four Primary Properties of Qi Used to Create an Energy Ball

getic form of thought, it can be imprinted with additional messages (tasked to perform specific functions like gathering Toxic Qi or rebuilding a diseased internal organ). The energy ball can be inserted into a specific internal organ inside a patient's body for Tonification or Purgation, or it can be used for long distance healing. You can also focus your mind on a patient who is suffering from a particular illness and send this ball of white light energy to cover the patient's entire body. The greater your ability to concentrate on the formation of this thought form, the stronger its therapeutic value. This type of creative imagery exercises the Imprinting property of Qi.

When utilizing this energetic modality for healing, it is important to realize that when divine light used to construct the energy ball, it will automatically fill the orb with healing light; this is considered the "Imprinting of the Divine's Creative property of Qi." This dynamic transformation initiated by the Divine Imprinting is necessary to alter the preexisting energetic pattern of the disease and change the patient's energetic fields.

4. **Activate:** Once the energy ball has been Created, its energetic power has been realized and felt, and its energetic form Imprinted with a specific "message," all that is left is to Activate its energetic function and give it life by giving it the mental command to begin.

THOUGHTS, FEELINGS & ENERGETIC IMPRINTING

Thoughts and feelings have power; they are created through "Mind" and have shape, form, and energy. Thoughts can be felt; they have weight and color, can be expressed through different variations of light and vibration, and can be perceived or "seen" by those who possess psychic sight.

Our thoughts and feelings are energies that we project into the environment. These thought forms (projected from the conscious or subconscious) can assume a variety of shapes and colors, and differ from one another in form, energy, and power. Desires and emotions in their energetic thought forms can either be positive (as in sending a healing prayer) or negative (as in sending a curse).

The Imprinting of all Daoist Magical Hand Seals, Star Stepping, Magical Tools, etc. is accomplished through the use of the Four Functional Properties of Energy. When utilizing the Four Functional Properties of Energy, the sorcerer must consider the purpose of the formed energetic object. It is important that the sorcerer understand the exact reason for which the energetic object was created and its specific function; keeping these ideas in mind as a basis for maintaining and refining its energetic materialization.

MATERIALIZING ENERGETIC MATTER

The key to mastering energetic materialization is in the sorcerer's ability to concentrate and mold energetic matter. To materialize or dematerialize an object, the sorcerer must first construct and energetically form it within his or her mind through undisturbed, intense concentration using the Creative and Feeling properties of Qi. The object must then be infused and charged with an energetic task (i.e., to tonify or disperse) with divine light, using the Imprinting property of Qi.

When an energy ball is Activated, it is then released or projected into an individual's tissues using the Activating property of Qi. For example, when an energy ball is created for the purpose of dissolving a tumor, the reaction within the tissues (once the energy ball is inserted), is considered the manifestation of the Activating property of Qi.

Every material form has its own vibratory pat-

Figure 1.40. The Five Energetic Fields

tern which regulates its existence. In order to manifest or alter a specific energetic form, it is necessary for the sorcerer to adjust his or her vibrational rate to correspond with the frequency of the energetic matter. This requires the sorcerer to sometimes raise or lower his or her vibrational rate in order to resonate with the energetic form, thereby maintaining its existence after it has been materialized (or erasing its existence after it has been dematerialized).

- Raising the Vibrational Rate:** Raising the vibrational rate allows the energetic field to become more subtle, faster, stronger, and brighter. To begin with, the sorcerer must first relax his or her body and mind, and place his or her Yuan Shen into the infinite space of the Wuji. This allows the sorcerer to access the center of space and time. Next the sorcerer will focus his or her intention on leading the vibrational rate of the focused item's energetic field through an ascending, prenatal progression (Jing - Qi - Shen - Wuji - Dao). This Shen-gong training includes enveloping the item and fusing with the gross material object, while simultaneously guiding and leading it through the various realms of matter towards the upper energetic realms of Qi, ending at the more subtle spiritual realms of Shen (Figure 1.40). Once the energetic shift is experi-

enced, the sorcerer will then begin to work according to his or her initial purpose.

- **Lowering the Vibrational Rate:** Lowering the vibrational rate allows the energetic field to become more slower, pronounced, and to take on form. To begin with, the sorcerer must first relax his or her body and mind, and place his or her Yuan Shen into the infinite space of the Wuji. This allows the sorcerer to access the center of space and time. Next the sorcerer will focus his or her intention on leading the vibrational rate of the focused items energetic field through a descending, postnatal progression (Dao - Wuji - Shen - Qi - Jing). This Shen-gong training includes enveloping the item and fusing it with the upper, more subtle realms of Shen, while simultaneously guiding and leading it through the various energetic fields, to the slower realms of gross matter. Once the energetic shift is experienced, the sorcerer will then begin to work according to his or her initial purpose.

THREE TYPES OF CREATIVE ENERGETIC MATERIALIZATION

There are three types of creative energetic materialization: The Invisible and Tangible Energetic Form, The Visible but Intangible Energetic Form, and The Visible and Tangible Energetic Form (Figure 1.41).

Figure 1.41. Three Types of Creative Energetic Materialization

1. **The Invisible and Tangible Energetic Form:** This type of materialization involves the construction of solid but invisible substances. It has the greatest force and potential when working within the three dimensional world of matter. This type of materialization allows the sorcerer to disperse energetic stagnations and tonify deficient conditions that would normally require several months of conventional Western medical treatment.

In the Medical Qigong clinic, it is quite common for a patient to feel the doctor's hands moving inside his or her body, even though the doctor may be several feet away from the

patient. One example of Invisible and Tangible Energetic Form is the physical sensations felt within the patient's tissues when a Qigong doctor is using the "Invisible Needle" Technique.

Another example of Invisible and Tangible Energetic Form is experienced when a Qigong doctor purges grief from the patient's Lungs; the energetic composition of grief is invisible yet has a thick, slimy, tangible energetic form.

2. **The Visible but Intangible Energetic Form:** This type of materialization has no physical power to directly affect solid objects. One example of Visible but Intangible Energetic Forms are the energetic colors and visions that manifest within an individual's aura field, as well as specific energetic forms or spiritual entities that can surround an individual's body or living space.

Visible but Intangible Energetic Forms can sometimes be spiritual images projected by a sorcerer onto a individual's Subconscious

Mind. These energetic images can be used to assist an individual in spiritual transformations and emotional growth, as well as to provide him or her with support in times of need.

Another example of this type of materialization can be when a sorcerer is Soul Traveling (also known as astral projection). The sorcerer who is Soul Traveling can appear to someone in a ghostly form (like a mist) to give encouragement. Although the image may appear to be as solid as matter, it is possible to pass a hand completely through it.

3. **The Visible and Tangible Energetic Form:** This type of materialization is solid and visible and requires advanced training in order to master its skill.

When Soul Traveling, for example, a sorcerer can construct and materialize the image of a visible and tangible energetic form by simply lowering the vibrational rate of his or her Energy Body to such a degree that he or she can influence and move solid objects).

ENCHANTMENT

An Enchantment (sometimes known as Bewitchment) is the state of being under the hypnotic influence of a magical charm or incantation. An enchantment of a magical spell can be attached (generally on a relatively-permanent basis) to a specific person, place, or thing, so that it alters that thing's physical, energetic, and spiritual qualities. Sorcerers are frequently depicted as being able to seduce or control an individual by means of magical enchantments.

An enchantment with negative characteristics is usually referred to as a curse. Conversely, enchantments can also be spells used to deceive people, either by directly affecting their thoughts or by using some kind of projected illusion. Other forms of negative enchantments include deceiving people into believing that they have suffered a magical transformation (e.g., an energetic/spirit induced diseased state), or that the terrifying supernatural phenomena they are observing and/or experiencing is real.

An enchantment can also be used to manifest positive characteristics. It can shape and alter an individual's self-perceptions to the degree that they view the world in a "new," positive way. When the individual awakens from the trance state, he or she will then experience a new hope in life. This practice is seen in modern hypo-therapy.

TRANCE INDUCTION

A "trance" can be defined as "being lost in a state of mystical absorption." It is the by-product of coming under the hypnotic power of an Enchantment (known as Trance Induction) created from a magical charm, spell, or Incantation.

We are surrounded by an ocean of vibrations that are simultaneously resonating in different dimensions. When an Incantation is directed towards any person, place, or thing (and constantly repeated), the process of withdrawing the mind from the senses begins. As the focus of the mind continues to be directed onto the specific point of intention, both Qi and Shen gather. Once the process of sense withdrawal is complete, the sorcerer's mind can then hold on to and envelop

the item of his or her focused intention. The spiritual, energetic, and physical fields of the item can now be influence through the directed mental power of the sorcerer's cultivated Qi and Shen.

For centuries, ancient Daoists have believed that an individual could be influenced (both positively and negatively) through the utilization of a powerfully controlled Shen. This type of influence could either occur accidentally, or be directly initiated through focused intention. It entails the influencing or controlling of the thoughts and actions of an individual by means of a using an audible command, or through the subtle insinuation of the desired thought. These types of suggestive and psychic influences allows the sorcerer's conscious mind to initiate an effect upon the individual's subconscious mind and can be effectively used to re-patterning beliefs and actions.

In Daoist sorcery, there are generally three forms of psychic influence used to override an individuals defensive mechanisms, reprogram their belief, and initiate new energetic patterns; Audible Suggestive Influence, Thought Suggestive Influence and Hypnotic Suggestive Influence, described as follows:

AUDIBLE SUGGESTIVE INFLUENCE

This is considered the first level of psychic influence, and it is initiated by the sorcerer's voice, attitude, tone, words, mannerism, appearance, and demeanor. The individual's mind receives and accepts as truth the sorcerer's words and affirmations, and he or she then changes specific internal patterns, acting in accordance to the degree of his or her receptivity. The verbal suggestion is often necessary in order to initiate a deep impression on the subconscious mind and cause the individual to accept the new belief pattern. This type of audible suggestive influence becomes even more powerful and gains additional influence by having the individual repeat the audible affirmations or suggestions.

Traditionally, once the individual mastered the way of vibrating names, words, or phrases of power, he or she was then taught how to employ them in the use of the "commanding voice," which allows the "speaking intention" of Audible Suggestive Influence to be effective. The "command-

ing voice" is vibrated from the Lower Dantian in a deep forceful tone (either audible or inaudible) with an open throat. It affects the mind on the subconscious level (below the level of conscious thought) and can cause individuals to immediately react without understanding why. It is for this reason (the ability to implant thoughts and commands directly into another's subconscious mind) that the power of the commanding voice is kept from the general public, and given only to those life is devoted towards the divine and healing the suffering of humanity.

When initiating an Audible Suggestive Influence, it is important that the individual receiving the energetic input maintain a receptive state of mind for the interaction to be considered successful. In order to increase the potential for success, it is important that the sorcerer to constantly monitor the recipient's receptivity. Always focus and direct the mind's attention to initiate the specific repetitions of certain keywords that positively stimulate the recipient's conscious and subconscious mind. When initiating this type of auto-suggestion, there are three primary things that the sorcerer must monitor. These three things are the Recipient's Receptivity, Focused Attention, and Repetition, described as follows:

- **The Recipient's Receptivity:** When performing any type of Audible Suggestive Influence, it is imperative that the recipient maintain a quiet, relaxed, and peacefully receptive attitude. A certain percent of the effectiveness of this type of interaction depends on the degree of receptivity in the recipient's conscious and subconscious mind.
- **Focused Attention:** The recipient should be encouraged to give the sorcerer his or her undivided attention. A certain percent of the effectiveness of this type of interaction also depends on the degree of attention given by the recipient's conscious and subconscious mind.
- **Repetition:** The recipient should be encouraged to constantly repeat the sorcerer's suggestions. The constant repetition of various phrases in the form of suggestive "keywords" fastens the new energetic and spiritual pat-

tern firmly onto the recipient's conscious and subconscious Mind.

When initiating an Audible Suggestive Influence, it is important for the sorcerer to maintain a certain quiescent state of mind for the interaction to be considered successful. In order to increase the potential for success, it is important that the sorcerer to constantly monitor his or her own attitude, voice, and eyes, as well as express images in the form of "word pictures" in order to deepen the energetic and spiritual imprinting on the recipient's conscious and subconscious mind. These four points of attention are described as follows:

- **Attitude:** The sorcerer should pay attention to his or her attitude and have the recipient's best interest at heart ("people don't care what you know, until they know that you care").
- **Voice:** The sorcerer should pay attention to his or her voice and should be able to project feeling and sincerity into the expressed words. The sorcerer's Qi and Shen should permeate his or her tone to the degree that the recipient feels the words vibrating within their body and mind when the suggestion is being planted.

A softly spoken Mantra that maintains a particular rhythm can also be used in order to induce a hypnotic trance.

- **Eyes:** The sorcerer should pay attention to his or her gaze, and should look firmly yet compassionately through the recipient, seeing into his or her center core to communicate with the recipient's Soul. The focus of the sorcerer's eyes will allow for stronger concentration of thought, holding and maintaining the recipient's attention.

A common preliminary to hypnotic induction is the requirement for the recipient to fix his or her attention on a particular spot above eye level (sometimes the recipient was instructed to look upward into the dark celestial pool of a starry sky). This technique quickly has the effect of tiring the eyes and inducing a sensation of relaxation and sleepiness, which can easily be transformed into trance.

Additionally, a "flat" (featureless) environment can aide the sorcerer in quickly bring-

ing an individual into a trance state due to the lack of sensory stimuli.

The fixation of the gaze, the uninteresting environment, and the rhythm of the spoken mantra synchronized with rhythmic breathing all combine to become powerful tools for hypnotic induction.

- **Word Pictures:** The sorcerer should pay attention to his or her verbal descriptions when implanting autosuggestions. It is important that the recipient feel the desired condition with a mental picture of him or her living the outcome of the projected intention (e.g., being restored back to health).

THOUGHT SUGGESTIVE INFLUENCE

This is considered the second level of psychic influence, and it is initiated by the sorcerer's inaudible projected thought and intention. The stronger the sorcerer's Qi and Shen, the greater the result. These conscious and subconscious thought projections stemming from the sorcerer's mind can only be effective if the individual is open and receptive to the thought waves directed towards him or her. This type of thought suggestive influence becomes powerful and gains additional influence by having the sorcerer perform certain Hand Seals and magical rituals.

HYPNOTIC SUGGESTIVE INFLUENCE

This is considered the third level of psychic influence, and it is a combination of the first two suggestive influences. It is initiated through the sorcerer's focused Qi and Shen emission, whereby the individual is enveloped and "bathed" in a constant flow of thought intention. This type of hypnotic influence becomes even more powerful and gains additional influence over the recipient when the sorcerer performs Breath Incantations.

Hypnotic Suggestive Influence can also be used when speaking magical incantations, in order to fuse the sorcerer's mind and intention with that of a recipient. This is an energetic skill in which various repetitions of powerful incantations are initiated in the form of auto suggestions or affirmations, spoken by the sorcerer into the recipient's physical, energetic, and spiritual bodies.

In Hypnotic Suggestive Influence, the pro-

jected mental attitude of the sorcerer is energetically impressed into the individual's tissues via the sorcerer's words, attitude, tone, and demeanor. As the sorcerer begins to audibly and telepathically pour "thought intention" into the mind of the individual, a strong positive current of uplifting, strengthening and healing thought is created. The fusion of both minds (the sorcerer's and the recipient's) is directed towards a common purpose, producing a powerful conscious and subconscious healing pattern.

The "hypnotic suggestion" induced by the trance is the main tool that a sorcerer uses to reprogram the mind of an individual. A hypnotic suggestion is defined as a statement of explicit instruction given in trance to do or experience something (e.g., relax the body, feel the body sink, feel a specific area become numb, etc.).

There are four main trance states induced by "hypnotic suggestion" that an individual can experience. These four trance states are described as follows:

- **Light Trance:** In this state of trance, the eyes are closed, the facial muscles are relaxed, and the individual is breathing deeply.
- **Medium Trance:** In this state of trance, the eyes are closed, the facial muscles are relaxed, the head and body slump, the responses are slower, the breathing is deep, and the individual experiences a reduced awareness of their surround environment.
- **Deep Trance:** In this state of trance, the eyes are closed, the facial muscles are relaxed, the head and body slump, the responses are slower, there is a reduced awareness of the surround environment, and there is deeper abdominal breathing.
- **Somnambulism Trance:** In this state of trance, the individual experiences paralysis, loss of sensation, or catalepsy (i.e., rigidity, lack of response to stimuli, and mutism). During this trance state, the individual may experience sensations as if they are awake (similar to sleep walking). Consequently, when awakened the individual generally will not retain the hypnotic suggestion in either their conscious or unconscious memory.

Figure 1.42. The four stages used to lead an individual into trance

The conscious mind thinks quantitatively using words, numbers, logic, and sequential thinking. The unconscious mind uses images, memories, feelings, intuitions, dreams, and abstract non-sequential thinking. At increasingly deeper levels of trance, the individual becomes more open to his or her unconscious mind and more receptive the hypnotic suggestions planted by the sorcerer's intention or contained within the magical incantation.

When you dissociate from your feelings you enter into a trance state (e.g., day-dreaming is a form of Light Trance state). In Daoist magic, the hypnotic suggestions contained within certain magical incantations are used to cause an individual to dissociate from his or her conscious mind in order to reprogram the unconscious mind. At this state, the unconscious mind can be flooded with various sensory images in order to elicit a creative experience, resulting in either a positive or negative emotional response (e.g., traveling through space, standing in the center of a beautiful field of flowers; or suddenly being surrounded by aggressive snakes, insects, fire, ghosts, etc.).

Once the individual is in a state of hypnotic trance, the sorcerer will proceed to deepen the trance state. The deeper the trance state, the more successful the "imprinting" process of the hypnotic suggestion will be on the individual's unconscious mind. These imprinted suggestions are then transformed by the individual's unconscious mind and integrated as part of their own ideas or conscious will.

FOUR STAGES USED TO INDUCE TRANCE

Psychic influence is a term used to indicate when one individual's mind is directed towards purposely influencing another. Every individual's mental state is accompanied by certain vibrations that resonate on the energetic and spiritual planes. The plane of physical vibrations arising from the human brain and nervous system has energetic counterparts that manifest through the vibrational resonance of the energetic and spiritual planes.

The effect of an individual's psychic influence is initiated through the energetic principle of "induction," which manifests on all three planes (physical, energetic and spiritual). The principle of induction is described as "that inherent quality or attribute of energy by which the manifestation of energy tends to reproduce itself in a second object by setting up a corresponding vibration, even though there is no direct contact between the two objects." For example, the vibrational manifestation of heat generated in one object tends to induce the vibrational response of heat in other objects that are within its range of induction. Likewise, the vibrational resonance of light striking another object can render it capable of additionally radiating light; and through induction, a magnet can induce magnetism into a piece of steel suspended nearby, even though the two objects do not actually touch each other. In the same way, an object which carries an electromagnetic charge can induce electricity in another object situated some distance away.

In every form or manifestation of energy, including thoughts and emotions, we can see the principle of induction operating. It is commonly held that no individual is able to influence another person through induction unless the individual being influenced already possesses within him or herself a similar thought or emotion.

A sorcerer will use four stages of induction to lead an individual into trance, Eliciting a Response, Leading, Suggesting, and Trance. Each of these four stages are described as follows (Figure 1.42):

- **Eliciting a Response:** In magic, this refers to finding an energetic connection to the individual that emotionally links their mind and spirit with the sorcerer's will. This energetic connection can either be spoken (e.g., through Mantras, Spells, or Incantations) or written (e.g., through Talismans, Icons, Symbols, etc.).

Through eliciting a response, the sorcerer draws out something hidden from within the individual's unconscious mind. The extraction of this information can be subtle, yet it contains an important subconscious key that can be used to unlock the individual's unconscious mind.

- **Leading:** After eliciting an energetic response, the sorcerer builds on the energetic connec-

tion by leading the individual into a deeper trance state. In order to help the individual disassociate from the "normal" world of superficial relationships, the sorcerer issues a series of predictable response patterns. These energetic patterns are used to build trust in the sorcerer, and to develop control over the individual's will. For example, if the individual is sitting, the sorcerer will respond, "Now that you are sitting, you can relax yourself, and if you want - begin to feel your tissues getting heavy."

- **Suggestion:** After successfully leading the individual's Shen (thoughts and emotions), the idea is to take the individual into deeper trance states. This is accomplished through insisting or indicating a suggestion. The suggestion is introduced to the individual as the undertone of something (i.e., a feeling or recollection) associated in the individual's mind with a particular person, place, or thing. For example, "Feel the outside world slowly begin to fade away as you continue to listen to my voice."
- **Trance:** Once the individual enters into a deep trance, the sorcerer is now able to create an energetic link directly to and within the individual's unconscious mind.

TRAINING THE BODY SECRET

Training the Body refers to cultivating and releasing the magical power that can be harnessed through the proper application of the Body Posture Training (i.e., Lying, Sitting, and Standing Postures), Magical Hand Seal Training (i.e., Single and Double Hand Seal applications), and Star Stepping Training (Walking Posture applications).

In traditional Daoist magic, all Hand Seals are activated through the act of speaking incantations while secretly drawing a magical talisman with the tongue on the roof of the sorcerer's upper palate, and then exhaling the breath to "activate."

THE THREE TYPES OF POSTURE

In ancient China, training the posture was divided into three stages, training the physical posture, training the energetic posture, and training the spiritual posture, described as follows (Figure 1.43):

- **Training the Physical Posture:** This type of posture is based on training the structural integrity and alignment of the body's physical tissues. Focus is placed on the proper placement of the Bones, muscles, tendons, nervous system, internal organs and energetic systems.
- **Training the Energetic Posture:** This type of posture is based on training the energetic matrix which supports and moves the physical tissues of the body. Focus is placed on

Figure 1.43. Training The Three Types of Posture

strengthening the energetic fields, cavities and energetic casings (orbs) that create and support the body's physical structure.

- **Training the Spiritual Posture:** This type of posture is based on training the normally unconscious spiritual patterns that create the blueprint for the body's energetic matrix.

DAOIST MAGICAL HAND SEAL TRAINING

INTRODUCTION TO HAND SEALS

In Daoist magic, all Hand Seals are traditionally activated through the act of speaking incantations, while secretly drawing a magical talisman with the tongue on the roof of the sorcerer's upper palate. The Hand Seal represents the physical activation of "Earth" magic, energy internally moving from Essence (Jing) to Energy (Qi); the drawing of a magical talisman on the roof of the upper palate represents the spiritual activation of "Heaven" magic, energy moving from the Spirit (Shen) to the infinite space of the Dao (Wuji); and the exhaled Breath Incantation represents the energetic activation of "Man" magic, wherein the combined energies of Heaven and Earth move from internal thoughts, feelings, and intentions to external manifestation.

Because the Heart houses the Eternal Soul (located within the Taiji Pole), it contains the major energy field of the body. The secondary energy fields responsible for moving the body's energy are located within the hands and head. Therefore the heart (Man), hands (Earth) and head (Heaven) are all incorporated when constructing and implementing magical Hand Seals.

The energetic skill of the Hand Seal was one of the most secret of the Daoist esoteric practices of ancient China. They were respected as the key to the true magic which existed between the energetic and spiritual realms of Earth and Heaven. There are twelve types of alchemical transformations created from the proper magical application of Daoist Hand Seals:

1. **Purification:** These Hand Seals were used to remove toxic Qi and Shen
2. **Regulation:** These Hand Seals were used to balance and stabilize Yin and Yang
3. **Tonification:** These Hand Seals were used to Energize and strengthen Qi and Shen
4. **Rooting:** These Hand Seals were used to ground the body's Qi and Shen
5. **Meditation:** These Hand Seals were used to quiet the body's Qi and Shen, allowing the mystic to enter into the infinite space of the Wuji.

6. **Worship:** These Hand Seals were used to help the mystic energetically and spiritually connect with the Dao.
7. **Summon:** These Hand Seals were used to demanding or requesting the presence or service of a spirit entity
8. **Protection:** These Hand Seals were used to defend and ward-off harmful Qi and Shen, as well as evil spirits
9. **Binding:** These Hand Seals were used to stop, envelop, bind and restrain evil spirits
10. **Attacking:** These Hand Seals were used to striking, defeating and destroying evil spirits
11. **Imprisoning:** These Hand Seals were used to detain and confine evil spirits
12. **Sealing:** These Hand Seals were used to initiate energetic "closure" to a magical ritual

When applying any form of magical Hand Seal, in order for the energetic application to become effective, the Hand Seal must be activated through Breath Incantation. The magical incantation (directed by the Three Minds) must be applied with the proper Hand Seal (activated through the Three Bodies), and both powers of Mind and Body must fuse with the Ling Shen (Magical Spirit) of the Three Breaths in order to work (refer back to Figure 1.4).

TYPES OF HAND SEALS

Ancient Chinese sorcerers often used the finger gestures of specific Hand Seals in order to represent the energetic and spiritual functions of the universe, the mysteries of nature, the positions of space and the changes of time. According to the ancient *Book of Secret Correspondence*, "while making the various finger gestures of esoteric Hand Seals, the Daoist disciple feels the energetic form of the universe and knows that the transformations of all things are under his control. The contracted scene of the universe is visible on his hand."

The Daoist Hand Seals (called "Shou Jue") and Buddhist Mudras (called "Shou Yin") have been used in personal and communal rituals since the Southern Dynasty Period (420-588 A.D.) for the pur-

poses of exorcism, controlling spiritual entities, and healing diseases.

A Hand Seal or "Mudra" (Mudra is the Sanskrit word for "Seal" or "Gesture") is a specific hand posture used to form a specific symbol which serves to empower and enhance energetic and spiritual interactions and transformations. The primary meaning of a "Seal" implies stamping, marking, impressing or imprinting the engraving of a sign, image or text. Hand Seals were commonly used by both the ancient Daoist and Buddhist Qigong masters (Figure 1.44).

There are three types of magical hand seals used in Zheng Yi Daoist ceremonies: Fa Jue (Law Seals), Dou Jue (Star Seals), and Shen Jue (Spirit Seals). The skill of the Hand Seal also involves the use of both Single-Handed Finger Gestures (Dan Jue) and Double-Handed Finger Gestures (Shuang Jue).

The Zheng Yi Daoist systems have collected and used at least 70 different types of magical Hand Seals. Some of these magical seals include the famous Left and Right Thunder Block Hand Seal, the Big Golden Light Double Hand Seal, the Binding Collar Double Hand Seal, the Immortal Sword Single Hand Seal, etc.

Beginning students were generally taught simple Single and Double-Handed Seals first. This allowed the student to focus his or her mind's intention on manifesting and controlling specific forms of energetic and spiritual states.

Once the Daoist student had mastered gathering, embodying and projecting the elemental realms of the Bagua powers, he or she was then allowed to progress further into the more advanced Single and Double-Handed Hand Seals.

SPECIFIC FUNCTIONS OF THE HAND SEALS

The Single Hand Seal was commonly used in developing certain energetic powers, and for spiritual exorcisms. When performing spiritual exorcisms and other forms of Daoist rituals, the Single Hand Seals were generally created with the Daoist's left hand, while his or her right hand was used in order to conjure and control specific spirit deities (Figure 1.45).

The energetic finger formations of specific Hand Seals were used in combination with fo-

Figure 1.44. Ancient Daoist Single Hand Seal (One Handed Earth Mudras) used for Rooting the body's energetic field into the Ninth Chakra: the Earth's Transpersonal Point located under the ground.

Figure 1.45. In the "Three Fans Technique," the "Second Fan" moves towards the right in order to create the "Auspicious Qi."

cused intention and were sometimes combined with incantations in order to receive and transmit ancient shamanistic energetic skills.

Hand Seals were also associated with protection from disasters. The Daoist classic *Tianhuang Zhidao Taiqing Yuce* (the Jade Volume of Great Clarity on the Utmost Way of the Heavenly Sovereign), compiled in the early Ming Dynasty (in 1444 A.D.) with a preface by the royal Ming prince Zhu Quan, states, "Hand Seals (Twist Signs) are used to communicate with the perfected Dao; summon protective celestial generals; control, exorcise, or destroy demons and malicious spirits; and affect the healing of disease."

The use of pseudo-Sanskrit seed words or phrases, and the complicated two-handed Hand Seals became very popular among the Daoists during the Tang (618-907 A.D.) and early Song Dynasties (960-1279 A.D.). Many of the energetic practices of Tantric Buddhism were integrated in the rapidly developing "Thunder Magic" techniques popularized by the Mao Shan Daoists during the mid-Song period in China.

The skill needed for the "divination of thunder" was already well established in ancient China by the Han Dynasty (206 B.C.-220 A.D.). During this time period, the ancient Daoist magicians were famous for their ability to summon thunder, rain and lightning. It is believed that the "Thunder Magic" techniques were developed by the ancient Mao Shan Daoists in order to harness both the benevolent and destructive power of thunder, thereby acquiring the ability to access and utilize the power of Heavenly Fire (lightning) needed to counter the effects of black magic, expel demons and destroy demons; the power of Heavenly Water (rain) was used to bring relief in times of drought.

When performing the various Single and Double Hand Seals, it is important for the Daoist disciple to pay strict attention to the flexibility of his or her wrist and fingers. All of the joints of the bones of the wrists and fingers should rotate smoothly, and the finger transitional movements of the various Hand Seals should be evenly connected. The mind should be focused on imagin-

ing and feeling the body's internal Qi creating or embodying the specific power and force of the energetic form that the Hand Seal represents. It is also important that, within this divine state of mind, the disciple take advantage of the infinite power placed at his or her disposal and therefore use the various Hand Seals with complete confidence and belief in the outcome.

Traditionally, a Daoists priest will make the appropriate finger gestures of specific Hand Seals, when he or she is performing the following rituals:

- Reading Daoist scriptures
- Reciting Incantations
- Pacing the Big Dipper
- Setting up the Altars
- Invoking the Celestial Martial Generals
- Practicing Vital Breath Incantations
- Arresting evil spirits
- Curing Illnesses
- Praying for Happiness
- Offering Sacrifices to Avoid Disasters
- Offering Sacrifices to Dispel Evil Spirits

The ancient Daoist text, *The Supreme Essential Secret of General Perfection to Help the Empire and Save the People* says that the disciples must make the finger gestures of specific Hand Seals when they "walk, inquire about illnesses, harness devils, enter temples, cross rivers, go into mountains and write talismans."

Since ancient times, the secret finger gestures used in making esoteric Daoist Hand Seals has been passed down together with the art of Breath Incantations. In the course of development and refinement, the ancient Daoists often changed and corrected the original finger gestures of certain Hand Seals, so that the finger gestures expanded into a comprehensive magical system.

COMBINING HAND SEALS AND INCANTATIONS

From a Daoist perspective, the ancient Chinese skill of spell-recitation is complex and multidimensional. However, when treating disease, there is nothing better than using an "Energetic Seal." Energetic Seals were used in ancient China to imprint the specific energy of a deity's spiritual power onto the Breath Incantation.

The main focus on utilizing the energetic power of a seal lies in combining visualizations with breath incantations, spirit projection and proper timing. The ancient Daoist ritual of exorcistic Energetic Seal imprinting was generally practiced as an oral tradition, passed from master to disciple. It is said that the ancient Daoist master Fan Li practised this method "causing mountains to crumble, rivers and seas to flow backwards, Spirit-demons to tremble with fear and thunderclaps to resound."

Both Quiescent and Dynamic Postural training utilizes various hand postures designed to stimulate and increase the body's physical, energetic and spiritual potential. In ancient times, both Daoist and Buddhist mystics would sometimes combine the various Hand Seals with incantations (Mantras) in order to empower their intention, focus, and direction of Qi. Every specific Hand Seal had its own sound formula that required the master to combine physical practices relating to posture, breath and mind (i.e., pulling up on the anal sphincter while inhaling, clapping the teeth, swallowing saliva, spitting, etc.) with the energetic and spiritual practices of prayer and incantation (i.e., chanting a specific tone, reciting a prayer, using a specific incantation while exhaling, inhaling specific types of Heavenly and Earthly Qi powers, etc.).

Daoist Hand Seals are based on a theoretical construction of Yin and Yang, wherein the left hand is considered Yang and pure, and dominates the hand postures. Buddhist Mudras, however, originate from the Indian culture, which is predominantly right handed, therefore in the Buddhist system the right hand is seen as pure and dominates the hand Mudra postures.

ESOTERIC STUDY AND TRAINING

If the Hand Seals or incantations are not performed correctly, then the disciple will not receive the response that he or she is seeking (e.g., the ability to command the Thunder Martial Generals and their officers to apprehend demons or evil spirits). Therefore, when a disciple performs the Fa Jue Hand Seals (the Hand Seals that invoke the

power of the Law), he or she should understand all of the symbolic meanings that each seal represents in the spiritual realm as well as within the Celestial Immortal World. If the disciple does not understand the secret meanings of each Fa Jue Hand Seal, he or she will not be able to access the hidden power that lays concealed within the body's own energetic and spiritual realms, and will also be unable to summon the Thunder Martial Generals to defeat, capture, control or destroy demons and evil spirits.

When starting to perform the various Hand Seals, the disciple must take advantage of his or her cultivated Jing, Qi and Shen, and fuse both the internal and external energetic fields in order to access the spirit realm of the Immortal World and make it respond to his or her own personal will (internal thoughts and desires). All of the "disciples of immortality" in the Zheng Yi Heavenly Masters Mansion are taught to pay strict attention to this advice and to not take the study of the three various schools of Hand Seals for granted. Traditionally, each disciple is not allowed to perform any of the Hand Seals and incantations without first completely understanding and mastering the external and internal influences of each Hand Seal and its particular energetic and spiritual potential.

The combination of Hand Seals and Breath Incantations is the key to connecting the mind and spirit with the movements of the hands; this allows the Shen (mind and heart) to converge with the movements of the human form in order to gather the ancestral spirits (Prenatal Wujingshen) into the body.

According to ancient Daoist records, the magical power of certain hand seal incantations was maximized during the time when the Pole Star (located in the center of the Heavens) was directly aligned with the Moon when it was positioned in the West. However, some of these most powerful secret Hand Seals used to create miraculous acts of transformation were not passed along from master to disciple, and therefore certain esoteric "secrets of Heavens" were lost.

DOUBLE HANDED SEALS

The purpose for using Double-Handed Hand Seals is to allow the Daoist mystic's body (Jing), energy (Qi), and mind (Shen) to combine and be directed towards one purposeful goal. In ancient China, Daoist mystics would commonly use the Double-Handed Bagua (Eight Trigram) Hand Seals in order to summon the powers of specific elements.

FORMING THE BA GUA HAND SEALS

The ancient Daoists understood that from the Wuji, the Dao creates Yin and Yang, which in turn give birth to four phases of universal energy (Greater Yang, Lesser Yang, Greater Yin and Lesser Yin). The four phases of universal energy give birth to the eight natural forces of the Bagua (Heaven, Thunder, Water, Mountain, Earth, Wind, Fire and Lake). These four phases also form the energetic basis of the prenatal and postnatal transformations, manifested in the form of eight energetic actions (known as the Bagua Trigrams). These eight energetic patterns are therefore symbolized by combinations of Yin and Yang lines (Yao). Traditionally, a Yin line is represented as a broken line (---), and a Yang line is represented as a solid line (—). A Yao Trigram is composed of three lines, constructed with either Yin Yaos, Yang Yaos, or a combination of both Yin and Yang Yaos (Figure 1.46). These eight prenatal and postnatal energetic actions act as a template for all creation and can be further combined in order to form the ever-changing energetic patterns of the 64 Hexagrams of the Yi-Jing (Figure 1.47).

In ancient China, Daoist Mystics would summon the powers of specific Elements through connecting their fingers in various patterns in order to form Hand Seals in accordance with the energetic principles of the Eight Trigrams. Accessing the Eight Trigram power was initiated through connecting the fingers of both hands in various patterns in order to form Hand Seals in accordance with the energetic principles of the Bagua. The Double-Handed Bagua (Eight Trigram) Hand Seals are formed through the corresponding Yin and Yang configurations of the fingers.

The ancient Daoists believed that each energetic pattern would "open a gateway" to the

Figure 1.46. Yin and Yang Yao Trigram

Trigram Element's energetic nature and allow an individual to absorb, manipulate, or control the Element's energetic and spiritual nature. The Bagua Trigrams can be organized and arranged according to either the Prenatal System of Fu Xi or the Postnatal System of King Wen Wang.

The Ancient Daoist Hand Seals used to access and control the energetic natures of the Ancient Five Elements is an extremely well guarded secret. The purpose for secrecy is due to the ability of controlling both the creative and destructive forces of these Elements. When combined with the colorful images and vibrational resonances of ancient Daoist Invocations (Mantras), these ancient Daoist Hand Seals can be used to initiate a powerful influence on the environmental energetic fields.

EIGHT TRIGRAM DOUBLE-HAND SEALS USED FOR YI-JING DIVINATION

The ancient Daoist Mystics also used the Prenatal and Postnatal Bagua Trigrams for Yi-Jing divination. This skill required the Daoist Mystic to dissolve his or her energetic and spiritual matrix into the infinite space of the Wuji while deep in a meditative state. Specific Hand Seals were used for assisting the Daoist Mystic in entering into the state of "No-Mind." This state of being an impartial, passive observer (non-judgemental) was needed for the divination to be effective.

1. To begin, start from a sitting posture, with both hands resting on the lap directly in front of your Lower Dantian. After performing the "One Through Ten" meditation and "Three Invocations" (in order to create a sacred training space), the divination practice begins. First relax, then concentrate and imagine dissolving into the infinite space of the Wuji, established within the "center of space" and "center of time."

Figure 1.47. The Ancient Daoist Concept of Yin and Yang Expressing the Four Phases of Universal Energy and Manifesting Through the Prenatal and Postnatal Bagua Trigrams (Pre-Five Element Theory).

Figure 1.48. The Ancient Chinese Yi-Jing Hologram Structure of the Eight Trigrams in relationship to the Sixty-Four Hexagrams

While experiencing the energetic field and infinite space of the Wuji, completely surround your physical, energetic and spiritual body with the Prenatal and Postnatal Bagua Trigram formations (which will eventually combine to form the sixty-four hexagrams of the Yi-Jing). First surrounds your body with the energetic fields of the Prenatal Bagua Trigrams. Once the power of this energetic field is acknowledged, honored, and experienced, then surround the Prenatal Bagua Trigrams with an outside energetic field of the Postnatal Bagua Trigrams. (Figure 1.48).

2. Then begin to spin both Bagua Trigrams according to the following patterns:

- The Prenatal Trigrams, located in the inside of the circle, spin in a clockwise direction. This represents the Prenatal creative cycle of Heaven's Yang energetic field.

- The Postnatal Trigrams, located on the outside of the circle, spin in a counterclockwise direction. This represents the Postnatal cycle of Earth's Yin energetic field (Figure 1.49).

3. As both circles continue to spin, join only the tips of the thumbs and the tips of the little fingers (the middle six fingers are not allowed to touch, but simply face each other) and imagine forming a bright energetic circle. This energetic circle represents the infinite space of the Wuji. Once an "Energy Ball" has formed between the palms, then allow the energy to build, creating a brilliant white light orb. The connected thumbs on top of the circle represent the Qi of Heaven, the connected little fingers on the bottom of the circle represent the Qi of Earth (Figure 1.50).
4. Next begin to focus and concentrate on the specific question or purpose for the divina-

tion. While spinning, the outside and inside circles of the Prenatal and Postnatal Bagua Trigrams will slowly begin to stop their movements and begin to form a Hexagram (containing six Yaos). The Hexagram is constructed of three Yaos from the inner Prenatal Bagua Trigram circle combined with three Yaos from the outer Postnatal Bagua Trigram circle.

5. After observing the Hexagram, end the meditation and consult the Yi-Jing's book of commentaries for the proper interpretation of his or her reading.

EIGHT TRIGRAM DOUBLE-HAND SEALS FOR GATHERING POWER

To control the powers of the Eight Elements, the ancient Daoist Mystics used the Eight Trigram Hand Seals in order to create energetic portals or spiritual doorways into the infinite void of the Wuji. Before using the Double-Hand Seals to gather and control these specific powers, the Daoist Mystic must first change his or her relationship to each Element's fundamental characteristic. This understanding must be experienced on all three levels (physical, energetic and spiritual). Then, when practicing the exact meditation used for entering into the energetic and spiritual fields of each Element, the Daoist Mystic uses the proper Hand Seal for creating and controlling the Element's specific nature.

The following ancient Daoist Hand Seals are used to effectively conjure and control the ancient elements active within the Eight Trigrams. However, due to the innate dangers involved, the specific Incantations that are used to accompany the Hand Seals in conjuring and controlling the ancient elements must only be obtained through the careful guidance of a qualified master.

1. To begin the meditation used for summoning and controlling the power of the ancient Daoist Bagua Trigrams, start from a sitting posture, with both hands resting on the lap directly in front of your Lower Dantian. Then perform the "One Through Ten" meditation and "Three Invocations" in order to create a sacred training space in which to practice.

Both the Prenatal Trigrams and Postnatal Trigrams surround the Daoist Mystic to form the Sixty-Four Hexagrams of the Yi-Jing

The Postnatal Trigrams, located in the outside of the circle, spin in a counterclockwise direction.

The Prenatal Trigrams, located in the inside of the circle, spin in a clockwise direction.

Figure 1.49. The Cycles of Heavenly and Earthly Energetic Forces Expressed Through the Bagua Trigrams Represent the External Energetic Manifestations of Divine Thought

Figure 1.50. Bagua "Energy Ball" Hand Position

Relax, concentrate and imagine existing within the "center of space" and the "center of time."

While experiencing the energetic field and infinite space of the Wuji, completely surround your physical, energetic and spiritual body with an energetic field of divine light.

2. Next, join the tips of the thumbs and the tips of the little fingers and imagine forming an energetic circle. The middle six fingers are not

Figure 151. Ancient Daoist Hand Seal for Qian (Complete Yang, Heaven, Sky, Creativity, Strength and Power, Activity, Immaterial, Universal, Formless, Energy, Infinite Space). This Hand Seal is used by the Daoist Sorcerer to increase personal power by fusing energetic powers of all three Treasures (Heaven, Earth and Man) into his or her body. This Trigram is also used to dissolve into the infinite space of the Sun, Moon and Star constellations

Figure 1.52. Ancient Daoist Hand Seal for Kun (Complete Yin, Earth, Yielding, Receptive, Passivity, Material, Universal, Form, Dense Matter). This Hand Seal is used by the Daoist Sorcerer to create density and solid mass. Because it is constructed with three Yin Yaos, this Trigram is also used to assist the sorcerer in obtaining a deeper state of receptivity. The Kun Trigram is considered to be the primary Hand Seal used for connecting with the energetic realm of the Earth Element

allowed to touch, but simply face each other. Once an "Energy Ball" has formed between the palms, allow energy to build, creating a brilliant white light orb. The connected thumbs on top of the circle represent the Qi of Heaven, the connected little fingers on the bottom of the circle represent the Qi of Earth (refer back to Figure 1.50).

3. Each of the eight configurations can be developed and formed through the combined effort of the middle six fingers, depending on the specific needs of the individual. After a significant amount of energy has accumulated between the palms, then arrange the middle six fingers to form the intended Bagua Trigram. By touching and connecting the middle six fingers, it is possible to create any of the various Bagua Trigram formations and initiate the energetic fields of these various powers. Each specific configuration acts as a template for conjuring, creating, absorbing or generating energy, described as follows:
 - **Ancient Daoist Hand Seal for Qian (Heaven, Sky, Creativity, Strength and Power):** This Hand Seal is used by the Daoist Sorcerer to increase personal power by fusing energetic

powers of all three Treasures (Heaven, Earth and Man) into his or her body. This Trigram is also used to dissolve into the infinite space of the Sun, Moon and Star constellations (Figure 1.51).

- **Ancient Daoist Hand Seal for Kun (Earth, Yielding, Receptive and Dense):** This Hand Seal is used by the Daoist Sorcerer to create density and solid mass. Because it is constructed with three Yin Yaos, this Trigram is also used to assist the sorcerer in obtaining a deeper state of receptivity. The Kun Trigram is considered to be the primary Hand Seal used for connecting with the energetic realm of the Earth Element (Figure 1.52).
- **Ancient Daoist Hand Seal for Zhen (Thunder, Movement and Growth):** This Hand Seal is used by the Daoist Sorcerer to gather and control thunder and lightning, as well as to create earthquakes. This Trigram is also used to facilitate spiritual growth (Figure 1.53).
- **Ancient Daoist Hand Seal for Sun (Wind and Air, Penetrating and Sensitivity):** This Hand Seal is used by the Daoist Sorcerer to gather or create Wind in order to bring or remove clouds, rain, snow, hail and tornados. The Sun

Figure 1.53. Ancient Daoist Hand Seal for Zhen (Strong Yang, Thunder, Exciting, Impetus, Vitality, Organic, Movement, Fertilization, Growth and Power). This Hand Seal is used by the Daoist Sorcerer to gather and control thunder and lightning, as well as to create earthquakes. This Trigram is also used to facilitate spiritual growth

Figure 1.54. Ancient Daoist Hand Seal for Sun (Strong Yin, Wind and Air, Penetrating, Sensitivity, Assimilation, Pervasiveness, Organic, Gaseous, Perceptive Intuition). This Hand Seal is used by the Daoist Sorcerer to gather or create Wind in order to bring or remove clouds, rain, snow, hail and tornados. The Kan Trigram is considered to be the primary Hand Seal used for connecting with the energetic realm of the Wind/Air Element

Figure 1.55. Ancient Daoist Hand Seal for Kan (Middle Yang, Water, Dark, Formless, Lunar Forces, Elementary, Cold, Fluid, Space and Movement). This Hand Seal is used by the Daoist Sorcerer to create coldness and darkness (in order to enter into the "shadow world"). This Trigram is also used to assist the sorcerer in obtaining an evasive state of formlessness. The Kan Trigram is considered to be the primary Hand Seal used for connecting with the energetic realm of the Water Element

Figure 1.56. Ancient Daoist Hand Seal for Li (Middle Yin, Fire, Bright, Formed, Solar Forces, Elementary, Heat, Incandescence, Penetrating Light). This Hand Seal is used by the Daoist Sorcerer to create fire, heat and light. The Li Trigram is considered to be the primary Hand Seal used for connecting with the energetic realm of the Fire Element

Trigram is considered to be the primary Hand Seal used for connecting with the energetic realm of the Wind / Air Element (Figure 1.54).

- **Ancient Daoist Hand Seal for Kan (Water, Formless Fluid and Coldness):** This Hand Seal is used by the Daoist Sorcerer to create coldness and darkness (in order to enter into the "shadow world"). This Trigram is also used to assist the sorcerer in obtaining an evasive state of formlessness. The Kan Trigram

is considered to be the primary Hand Seal used for connecting with the energetic realm of the Water Element (Figure 1.55).

- **Ancient Daoist Hand Seal for Li (Fire, Heat and Light):** This Hand Seal is used by the Daoist Sorcerer to create fire, heat and light. The Li Trigram is considered to be the primary Hand Seal used for connecting with the energetic realm of the Fire Element (Figure 1.56).

Figure 1.57. Ancient Daoist Hand Seal for Gen (Lesser Yang, Mountain, Tranquil and Quiescent, Steady, Heaviness, Inertia, Inorganic, Resistance, Solid Stability). This Hand Seal is used by the Daoist Sorcerer to create stillness and peace of mind. This Trigram is also used to facilitate deeper states of spiritual quiescence

Figure 1.58. Ancient Daoist Hand Seal for Dui (Lesser Yin, Lake, Mist, or Rain, Reflective, Weightless, Evaporation, Inorganic, Changeability, Clairvoyant Observation). This Hand Seal is used by the Daoist Sorcerer to create or gather mist, fog or rain. This Trigram is also used to dissolve into the infinite space of the mist or fog in order to observe people and places

- **Ancient Daoist Hand Seal for Gen (Mountain, Solid, Tranquil and Quiescent):** This Hand Seal is used by the Daoist Sorcerer to create stillness and peace of mind. This Trigram is also used to facilitate deeper states of spiritual quiescence (Figure 1.57).
- **Ancient Daoist Hand Seal for Dui (Mist or Rain, Reflection and Observation):** This Hand Seal is used by the Daoist Sorcerer to create or gather mist, fog or rain. This Trigram is also used to dissolve into the infinite space of the mist or fog in order to observe people and places (Figure 1.58).

THREE DANTIAN DOUBLE HAND SEALS

These Double Hand Seals require the Daoist sorcerer to use the energetic finger combinations of both hands in order to stimulate the Three Dantians. In these particular Mudras, both hands are united to form a powerful energetically focused union, similar to two streams combining to form a mighty river. The following are examples of popular Double-Handed Mudras used to energize, stimulate and focus energy into each of the Three Dantians.

STIMULATING THE LOWER DANTIAN:

This Double-Handed Mudra is traditionally practiced in either a sitting or standing posture. This specific hand posture is used to stimulate the individual's Lower Dantian and is normally practiced for the transformational stage of changing the Kidney Jing into Kidney Qi, and filling the Sea of Marrow. This energetic stimulation and transformation is also known to increase the individual's intellect, willpower, bravery, determination and courage (Figure 1.59).

STIMULATING THE MIDDLE DANTIAN:

This Double-Handed Mudra is traditionally practiced in either a sitting or standing posture. This specific hand posture is used to stimulate the individual's Middle Dantian, and is traditionally practiced in order to stimulate the transformation of Qi to Shen occurring within the inner chambers of the Yellow Court and Middle Dantian. This energetic stimulation and transformation is also known to increase the energy to the individual's Lungs, Heart and thymus gland, and is sometimes known as the "Lotus Flower" Hand Seal (Figure 1.60).

STIMULATING THE UPPER DANTIAN:

This Double-Handed Mudra is traditionally practiced in either a sitting or standing posture. This specific hand posture is used to stimulate the individual's Upper Dantian, and is traditionally practiced in order to stimulate the transformation of Shen to Wuji. This energetic stimulation and transformation is also used to develop the student's Yintang (Third Eye), and to increase his or her psychic abilities (Figure 1.61).

Figure 1.59. Lower Dantian Hand Position

Figure 1.60. Middle Dantian Hand Position

Figure 1.61. Upper Dantian Hand Position

Figure 1.62. "Three Pure Ones"

HAND SEALS AND RITUALS

There are certain Hand Seals that are used in the Zheng Yi Daoist rituals for communing with the three major types of Celestial Immortals: The Perfected Immortals of Anterior Heaven, The Patriarchs (sometimes called Missionaries) and The Celestial Generals. There are also specific Animal Hand Seals and Magical Instrument Hand Seals that are used for invocation of the various Perfected Immortals of Anterior Heaven.

HAND SEALS RELATED TO THE PERFECTED IMMORTALS OF ANTERIOR HEAVEN

The finger gestures used in these Hand Seals are sometimes related to the worship of or communion with the three Daoist immortal gods, known as the "Three Pure Ones" (Figure 1.62). According to ancient Daoism, the Three Pure Ones (Highest Purity, also known as the Highest Em-

peror or the Celestial Worthy of Numinous Treasure; Jade Purity, also known as the Jade Emperor or the Celestial Worthy of Primordial Beginning; and Supreme Purity, also known as the Supreme Emperor or the Celestial Worthy of the Dao and Its Virtue) are emanations of the Dao, and they rule over the highest three celestial realms. Connection to these upper celestial realms is initiated via the utilization of either the Jade Emperor Hand Seal, Highest Emperor Hand Seal, or Supreme Emperor Hand Seals. These magical Hand Seals are formed when the Daoist priest offers ritual "Report" petitions, commands the Celestial Martial Generals and their horses, and when commanding the "God of Plague" (the Emperor of the North). These Three Immortal Gods also represent the three different Zheng Yi Daoist branches and their powers. The corresponding Hand Seals are described as follows (Figure 1.63):

Figure 1.63. The "Three Pure Ones" Hand Seals.

- **Yu Qing (Jade Purity) Hand Seal:** This finger gesture is applied at the last (third) joint of the middle finger in order to invoke Jade Clarity Celestial Soldiers (spirit warriors) and their horses. The pinching of the nail on the middle finger is also used when inquiring of illnesses.
- **Shang Qing (Highest Purity) Hand Seal:** This finger gesture is generally applied at the second joint of the middle finger in order to invoke Highest Clarity Celestial Soldiers (spirit warriors) and their horses.
- **Tai Qing (Supreme Purity) Hand Seal:** This finger gesture is applied at the first joint of the middle finger in order to invoke Supreme Clarity Celestial Soldiers (spirit warriors) and their horses.

ANIMAL HAND SEALS

Sometimes the Hand Seals related to the Perfected Immortals of Anterior Heaven are not directly called by the celestial names of the deities, but are instead represented by the images of their celestial animals (e.g., horses, cranes, tigers, dragons, lions, pigs, frogs, etc.) or magical instruments (e.g., immortal swords, golden bridges, golden lights, jade rings, etc.). For example, during the "Refinement and Salvation" ritual, when the Supreme Oneness

Figure 1.64. The Immortal Mother of the Big Dipper

Figure 1.65. The divine animal that draws the carriage of the Immortal Mother of the Big Dipper is named the "Horned Pig"

Lord of Heaven is invited to descend to the altar, the ritual master forms the finger gestures of the Lion Double Hand Seal. As the two palms are crossed, the thumb of the left hand folds while the other nine fingers remain straight. These extended fingers represent nine horses for the Supreme Oneness Lord of Heaven to ride to the altar.

There are also various finger gestures used for symbolizing the spiritual power of the Big Dipper descending to the Earth and energetically covering (or filling) the body of the disciple. For example, the Immortal Mother of the Big Dipper often sits on a lotus (Figure 1.64), and the divine animal that draws her carriage is named the "Horned Pig" (Figure 1.65). Therefore, Hand Seals

that form the images of either a lotus or of a pig are used to welcome the Immortal Mother of the Big Dipper and invite her to descend to the altar (Figure 1.66). These specific Hand Seals can be used in rituals of worship, protection or healing by forming the Lotus Flower Double Hand Seal, the Lotus Treasury Seat Double Hand Seal, or the Big Pigs Head Double Hand Seal.

MAGICAL INSTRUMENT HAND SEALS

Sometimes the Hand Seals relate to magical instruments (e.g., immortal swords, golden bridges, golden lights, jade rings, etc.). For example, certain finger gestures, such as the Tiger Hand Seal and the Ghost Hand Seal are both named after evil spirits. Other types of finger gestures such as the Hand Seals used for Dispelling Ghosts, Controlling Ghosts, and for Controlling Thunder are named after their specific function and the purpose of the ritual. And the finger gesture of the Fork (Trident) Hand Seal, the Immortal Sword Hand Seal, and the Golden Bridge Hand Seal, are named after the divine instruments that are held by the ritual master or the specific energetic methods that he uses when conducting the rituals.

There are also other finger gestures which symbolize the various Hand Seals of the Sun Sovereign, the Moon Sovereign and the Dippers of the Five Directions. The number of Hand Seals used for controlling various objects and summoning immortals is difficult to calculate, as there are so many types of magical skills used in Daoist mysticism for refinement, cultivation, salvation, spreading the divine Vital Breath, curing illness, dispelling evil, inviting or invoking spirits, controlling ghosts, and praying to avoid disasters.

HAND SEALS AND THE MARTIAL GENERALS

There are so many Celestial Generals in Daoism that the Hand Seals representing the Martial Generals are the most numerous of all the various types of finger gestures. Also complicating things, is the fact that different Daoist sects prefer to use different Celestial Generals when practicing their magical skills.

The most important of the Patriarch finger gestures are the Celestial Master Hand Seals, which represent the descending of the Celestial

Figure 1.66. The Lotus Flower Double Hand Seal

Master or the founder of a specific sect. When using these Hand Seals, the ritual master visualizes himself as the Celestial Master commanding the Celestial Soldiers to dispel the evil spirits.

The most important Hand Seals used to summon the Celestial Martial Generals are as follows:

- **The Supreme Commander Hand Seal:** This Hand Seal is used for summoning the Commanders of the Thunder Agency.
- **The Heavenly Warrior Hand Seal:** This Hand Seal is used for summoning the powerful Celestial Soldiers of Heaven.
- **The Inspector Hand Seal:** This Hand Seal is used for summoning the Inspectors of the Warriors and their Horses, and is used in order to control the Celestial Soldiers.
- **The Celestial Officer Hand Seal:** This Hand Seal is used for summoning the celestial officers who invoke the divine ones responsible for managing the files.

DAOIST ESOTERIC DOUBLE-HAND SEALS

The following is a description of the most common Double Hand Seals used in the various Zheng Yi sects of Daoist mysticism. The Zheng Yi sect is composed of three main branches of ancient Daoist magic, which are energetically united in what is known as the "Three Mountains Drop of Blood Alliance." Each drop of blood represents one of the following Zheng Yi branches, each located in the South-Eastern part of China:

- Celestial Master Daoism (Tian Shi sect) from Long Hu Shan, located in the Jiangxi Province.
- Highest Purity Daoism (Shang Qing sect) from Mao Shan, located in the Jiangsu Province.
- Magical Treasure Daoism (Ling Bo sect) from Ge Zao Shan, located in the Jiangxi Province.

These particular Double Hand Seals can be divided into three main categories according to their magical uses: Hand Seals used for Worship, Hand Seals used for Summoning, and Hand Seals used for Attacking and Defending.

HAND SEALS USED FOR WORSHIP

The following Double Hand Seals are used in Zheng Yi Daoist rituals for the alchemy of Worship. The primary goal is one of energetic and spiritual transformation brought about through prayer and meditation.

- **The Golden Dragon Double Hand Seal:** This Double Hand Seal is used for Worship (Figure 1.67). It energetically represents the fusion of the combined energies of Yin (the two fingers of the right hand) and Yang (the three fingers of the left hand).
- **The Big Golden Light Double Hand Seal:** This Double Hand Seal is used for Worship. It energetically represents the shining golden light of the spirit body, and is used to connect the human body to the spirit (immortal) body in large ceremonies (Figure 1.68).
- **The Golden Bridge Double Hand Seal:** This Double Hand Seal is used for Worship. It energetically represents two Yin and Yang Golden Hooks that are combined together in order to fuse the celestial energies of the Pre-

Figure 1.67. The Golden Dragon Double Hand Seal

Figure 1.68. The Big Golden Light Double Hand Seal

Figure 1.69. The Golden Bridge Double Hand Seal

Figure 1.70. The Small Golden Light Double Hand Seal

natal Qi (represented by the left Yang palm) and Postnatal Qi (represented by the right Yin palm). This energetic fusion magically creates a Golden Bridge that the Daoist mystic uses to cross over from the material realm into the celestial realm (Figure 1.69).

- **The Small Golden Light Double Hand Seal:** This Double Hand Seal is used for Worship. It energetically represents the shining golden light of the spirit body, and is used in small ceremonies in order to connect the physical body to the spirit (immortal) body (Figure 1.70).
- **The Small Pig Pass Double Hand Seal:** This Double Hand Seal is used for Worship. It symbolizes the pathway that the immortals use to travel to Heaven, and it is energetically used to open the esoteric spiritual pathway into the Wuji (Figure 1.71).

Figure 1.71. The Small Pig Pass Double Hand Seal

Figure 1.72. The Double Jade Ring Double Hand Seal

Figure 1.73. The White Crane Double Hand Seal

- **The Double Jade Ring Double Hand Seal:** This Double Hand Seal is used for Worship. It represents the Qi of the Ancestral Master's Palace, and it is energetically used to change an individual's fate to become an immortal (Figure 1.72).
- **The White Crane Double Hand Seal:** This Double Hand Seal is used for Worship. It represents the immortal crane and is energetically used to cross the spiritual waters of the afterlife. The Daoist sorcerer travels to the celestial realm while riding on the back of the crane (Figure 1.73).

HAND SEALS USED FOR SUMMONING

The following Double Hand Seals are used in Zheng Yi Daoist rituals for the energetic and spiritual purpose of Summoning. The primary goal of Summoning is that of demanding or requesting the presence or service of one of the five types of Immortals (Ghost Immortals, Human Immortals, Earth Immortals, Spiritual Immortals or Celestial Immortals).

- **The Double Star Double Hand Seal:** This Double Hand Seal is used for Summoning. It energetically represents the prebirth Palace of Dou Mu (Figure 1.74), and is used when human beings of the mundane world need the help from Mother Dou Mu. Dou Mu is the Mother of the seven stars of the Big Dipper (refer back to Figure 1.64). She is generally depicted with three eyes in each of her four faces (one in each major direction). She has four arms on each side of her body. Two of her hands are held together, palm to palm, while the other six hold a sun, moon, bell, golden seal, bow, and halberd. Dou Mu is regarded as holding a very senior position in the Daoist hierarchy, and she is credited with the ability to save people from many types of evil and trouble. Her birthday is celebrated on the 9th day of the 9th lunar month.
- **The Lotus Flower Double Hand Seal:** This Double Hand Seal is used for Summoning. It represents the magical Lotus Flower, and is energetically used to send signals and contact Mother Dou Mu (Figure 1.75).
- **The Heavenly Mother's Palace Double Hand Seal:** This Double Hand Seal is used for Summoning. It symbolizes the seal of Dou Mu Palace, and is energetically used for seeking approval of the Celestial Court (Figure 1.76).
- **The Treasury Seat Double Hand Seal:** This Double Hand Seal is used for Summoning. It is energetically used to invite Mother Dou Mu to sit on the throne of the altar (Figure 1.77).
- **The Big Pig's Head Double Hand Seal:** This Double Hand Seal is used for Summoning. It symbolizes the immortal beast ("Horned Pig;" refer back to Figure 1.65) of Mother Dou Mu,

Figure 1.74. The Double Star Double Hand Seal

Figure 1.76. The Heavenly Mother's Palace Double Hand Seal

Figure 1.77. The Treasury Seat Double Hand Seal

Figure 1.78. The Big Pigs Head Double Hand Seal

Figure 1.79. The Lions Incantation Double Hand Seal

and is energetically used to Summon the animal down into the human world (Figure 1.78).

- **The Lion's Incantation Double Hand Seal:** This Double Hand Seal is used for Summoning. It energetically symbolizes one of Mother Dou Mu's celestial animals (Figure 1.79).
- **The Elephant's Trunk Double Hand Seal:** This Double Hand Seal is used for Summoning. It energetically symbolizes the trunk of the elephant, and represents one of Mother Dou Mu's celestial animals (Figure 1.80).
- **The Welcoming The Immortals Double Hand Seal:** This Double Hand Seal is used for Summoning. It is energetically used to welcome the celestial immortals to the altar (Figure 1.81).
- **The Lotus Treasury Seat Double Hand Seal:** This Double Hand Seal is used for Summoning. It symbolizes the Treasury Seat of the immortals, and is energetically used to welcome celestial immortals to the altar (Figure 1.82).
- **The Summoning the Immortals Double Hand Seal:** This Double Hand Seal is used for Summoning. It is a energetically used as a signal for Summoning and gathering the celestial immortals to the altar (Figure 1.83).

Figure 1.87. The Summoning Clouds Double Hand Seal

Figure 1.88. The "An Da" Double Hand Seal

- **The He He (Gathering and Harmonizing) Double Hand Seal:** This Double Hand Seal is used for Summoning. It is energetically used for gathering celestial powers by Summoning and gathering the Immortal Martial Generals to the altar (Figure 1.84).
- **The Big Golden Command Block Double Hand Seal:** This Double Hand Seal is used for Summoning. It is energetically used to Summon the Immortal Martial Generals to the altar (Figure 1.85).
- **The Immortal Whirlwind Double Hand Seal (Front):** This Double Hand Seal is used for Summoning. It symbolizes the rolling of a magical whirlwind, spiraling in energetic circles like a wheel. It is energetically used for quickly sending messages to the celestial mansion (Figure 1.86).
- **The Summoning Clouds Double Hand Seal:** This Mao Shan Double Hand Seal is used for Summoning clouds in order to bring rain. It

represents the image of a wild mountain and a field (Figure 1.87).

- **The "An Da" Double Hand Seal:** This Double Hand Seal is used for ending the Summoning Ritual. The left fist represents the celestial energy of the Sun, the right Immortal Sword represents the celestial energy of the Moon (Figure 1.88). The An Da Double Hand Seal is generally used before or after speaking magical incantations (i.e., the magical incantation is energetically shouted quickly followed immediately with the "An Da" Double Hand Seal to offer a form of energetic completion).

Figure 1.89. The Left and Right Eight Immortal Guards Double Hand Seal

HAND SEALS USED FOR ATTACKING AND DEFENDING

The following Double Hand Seals are used in Zheng Yi Daoist rituals for the energetic and spiritual purpose of Attacking and Defending. These skills are commonly incorporated in esoteric Daoist rituals used for exorcism (removing evil spirits from a person, place or thing).

The training involved in the energetic and spiritual art of Attacking and Defending is divided into six primary stages: Protection, Obstruction, Attacking, Binding, Imprisoning, and Sealing. These six stages are described as follows:

PROTECTION

The energetic goal of Protection Double Hand Seals is to create an energetic field strong enough to provide for the safety for the disciple's person (self, family, loved ones, etc.), place (house, worship area, etc.) or things (items of significance and importance).

- **The Left and Right Eight Immortal Guards Double Hand Seals:** This Double Hand Seal is used for Attacking and Defending. It sym-

Figure 1.90. The Double Tiny Light Double Hand Seal

bolizes the eight Heavenly Martial Generals, and is energetically used for the protection of people, places and things (Figure 1.89).

- **The Double Tiny Light Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It is used to represent the electrical light that illuminates within the energetic particles contained within the field of Yin and Yang (which envelops the infinite space of the Wuji). It is used for protection by creating a shining golden light that purifies, illuminates, and shines divine light over a person, place or thing (Figure 1.90).

Figure 1.91. The Copper Tent Double Hand Seal

Figure 1.93. The Sword Trees Double Hand Seal

Figure 1.92. The Knife Mountain Double Hand Seal

OBSTRUCTION

The energetic goal of Obstruction Double Hand Seals is to create an energetic field strong enough to stop or inhibit a evil spirit or demonic entity from further antagonistic actions.

- **The Copper Tent Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It symbolizes a tent, and is energetically used to create a protective covering over a person, place or thing (Figure 1.91).
- **The Knife Mountain Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It represent a mountain covered with sharp knives and spears. It is used as an energetic barrier to block and stop (or cut off) the pathway of people, animals or evil spirits (Figure 1.92).
- **The Sword Trees Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. This double-handed Hand Seal represents 10,000 magical immortal swords.

Figure 1.94. The Mount Tai Double Hand Seal

It is used as an energetic barrier to block and stop (or cut off) the pathway of people, animals or evil spirits (Figure 1.93).

- **The Mount Tai Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. This double Hand Seal represents the energetic power of a huge and imposing mountain. It is used as an energetic barrier to block, cover, squash and stop (or cut off) the pathway or movement of people, animals or evil spirits (Figure 1.94).

Figure 1.95. The Big Golden Light Double Hand Seal

Figure 1.96. The Magical Gun Double Hand Seal

ATTACKING

The energetic goal of Attacking Double Hand Seals is to create an energetic field strong enough to initiate a direct attack onto the spirit entity, whereby its energetic form will be captured, defeated, or destroyed.

- **The Big Golden Light Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. Although this Double Hand Seal can also be used for Worship (see Figure 1.68), it can also be used for attacking and paralyzing (or freezing) spirit entities when combined with a specific Incantation (Figure 1.95).
- **The Magical Gun Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It represents the blasting power of an ancient Chinese fire weapon (similar to that of a gun). It is energetically used as a fierce attack, and is similar to an energetic punch. It is usually energetically released by stomping the back foot, punching towards the intended en-

Figure 1.97. The Magical Cannon Double Hand Seal

Figure 1.98. Two Dragons Pierce the Mountain Double Hand Seal

emy and shouting a specific incantation or mantra (Figure 1.96).

- **The Magical Cannon Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It represents the explosive power of an ancient Chinese fire weapon. It is energetically used for a fierce attack, and is similar to an energetic bomb. It is usually energetically released by stomping the back foot, punching towards the intended enemy, and shouting a specific incantation or mantra (Figure 1.97).
- **Two Dragons Pierce the Mountain Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It is used to energetically penetrate through mountains or into the depths of the Earth. It is used to energetically cut through, chase-after and catch evil spirits (Figure 1.98).

Figure 1.99. The Twisting and Binding Double Hand Seal

BINDING

The energetic goal of Binding Double Hand Seals is to create an energetic field strong enough to envelop, enclose, and restrain an evil spirit. "Binding" can also be used to keep someone from doing something - almost like putting an energetic wall between them and the chosen thing. This is a very restrictive form of magic, and is never to be taken lightly. A "Binding" spell can be very powerful and long lasting.

- **The Twisting and Binding Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It causes the surrounding energetic fields to envelop and twist around the spirit entity like bamboo reeds, and is energetically used for binding people, places and things, especially spirit entities and ghosts (Figure 1.99).
- **The Binding Collar Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It energetically represents the shackling of a secure steel collar around a prisoners neck, and is used for binding and restraining people, places, and things, especially evil spirits and ghosts (Figure 1.100).
- **The Heaven and Earth Net Double Hand Seal (Front):** This Double Hand Seal is used for Attacking and Defending. It energetically represents a huge net that is extended between the Yang of Heaven and the Yin of Earth, used to ensnare people, animals, or evil spirits (Figure 1.101).
- **The Stone Weighted Scale Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It represents the stone

Figure 1.100. The Binding Collar Double Hand Seal

Figure 1.101. Heaven and Earth Net Double Hand Seal

Figure 1.102. The Stone Weighted Scale Double Hand Seal

that is attached to the end of an ancient Chinese scale. It is energetically used to envelope, bind and block people, animals or evil spirits (Figure 1.102).

Figure 1.103. The Copper Fence Double Hand Seal

IMPRISONING

The energetic goal of Imprisoning Double Hand Seals is to create an energetic field strong enough to energetically detain and confine an evil spirit.

- **The Copper Fence Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It symbolizes a prisoner's cage, and it is energetically used to detain and confine people, places, things, and evil spirits (Figure 1.103). The only difference between the Copper Tent and the Copper Fence Double Hand Seal is the extension of the thumb and angle of the fingers (see Figure 1.91).
- **The Pit Incantation Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It symbolizes a pit used to capture defeated demons, and it is energetically used to incarcerate people, demons and evil spirits (Figure 1.104).

SEALING

The energetic goal of Sealing Double Hand Seals is to create an energetic field strong enough to provide the final energetic sealing needed after the incantation has imprisoned the evil spirit into a confined area.

- **The Magical Lock Double Hand Seal:** This Double Hand Seal is used for Attacking and Defending. It energetically represents the sealing and confining some person, place or thing with a magical lock (Figure 1.105). It is sometimes energetically used after binding an evil spirit in order to contain and imprison its energetic form (e.g., sealing after the incantation has imprisoned the evil spirit into a confined area).
- **The Magical Seal Double Hand Seal:** This Double Hand Seal is used for Attacking and

Figure 1.104. The Pit Incantation Double Hand Seal

Figure 1.105. The Magical Lock Double Hand Seal

Figure 1.106. The Magical Seal Double Hand Seal

Defending (Figure 1.106). It represents the combined energies of Yin and Yang converging onto one specific item (e.g., a person, place, or thing). It is sometimes energetically used after binding an evil spirit in order to contain and imprison its energetic form (e.g., sealing after the incantation has imprisoned the evil spirit into a confined area).

When creating a powerful spiritual talisman or an energetic "tool," this Double Hand Seal can also be used for the construction of both the energetic "Opening" (before the initial imprinting) and the energetic "Closing" (e.g., sealing after the incantation is imprinted its function and purpose).

SINGLE HAND SEALS

Every specific Hand Seal has its own particular sound formula (incantation) that combines the use of ingesting specific types of Heaven Qi and Earth Qi powers. The Daoist mystic chants a specific incantation, employs a specific Hand Seal and then exhales to activate the supernatural powers.

Generally, Double Hand Seals were taught first in order to help the Daoist Mystic focus his or her concentration onto a specific object, deity, thought form or Eight Trigram power. After the individual became proficient in gathering and controlling the thought form or Trigram power with both hands, then Single Hand Seals were introduced. The purpose of Single Hand Seals being to use the left hand in order to summon spirits and gain control of specific powers, while the right hand was used to embody, command, task and dispatch the supernatural power.

The Daoist master's energetic hand seal can be used to force any member of the numerous demonic population to appear in visible form. With a seal in the left hand and a sword in the right the Daoist master is fully equipped to summon, question, and interrogate whatever demon he wishes.

DAOIST SINGLE-HAND SEALS

In Daoist magic, certain points on the left palm or specific areas on the joints of the fingers of the left hand are used in order to cultivate, gather and control specific energies and spiritual powers. Each of the finger joints symbolizes and corresponds to one of the specific energetic powers of The Five Elements, Five Planets, Five Directions, Five Yin Organ Spiritual Energies, Eight Trigrams, Seven Stars of the Big Dipper, Twelve Earthly Branches and Twelve Organ Channels. Therefore, when a Daoist mystic pinches a certain finger position, it symbolizes that he or she is accessing and controlling the energetic and spiritual powers through the utilization of one of the following Hand Seals:

- **The Five Element Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within either the energetic realms of the infinite space of the Wuji, Air/Wind, Fire, Water, and Earth; or through

the energetic power and manifestations contained within the Elements of Wood, Fire, Earth, Metal and Water.

- **The Five Planet Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within energetic celestial powers of Jupiter, Mars, Saturn, Venus and Mercury.
- **The Five Directions Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within celestial and terrestrial energetic powers of the five directions (Front, Back, Left, Right and Center).
- **The Wu Jing Shen Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within the Five Virtues of Compassion, Order, Integrity, Trust and Wisdom.
- **The Eight Trigram Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within the eight powers of Heaven, Mist/Rain, Thunder, Mountain, Earth, Water, Fire and Wind/Air.
- **The Seven Stars of the Big Dipper Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within the Big Dipper, manifesting through the seven star celestial powers of influence (Lusty Wolf, Giant Gate, Store of Wealth, Civil Chief, Pure and Chaste, Military Chief and Troop Destroyer).
- **The Twelve Earthly Branches Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within the specific powers of the Twelve Earthly Branches (Yin, Wu, Xu, Hai, Mao, Wei, Shen, Zi, Chun, Si, You and Chou).
- **The Twelve Organ/Channel Hand Seals:** These Hand Seals allow the mystic to gather, cultivate and utilize the Qi contained within body's twelve primary internal organ channels (the Jing, Qi and Shen of the Liver - Gall Bladder, Heart - Small Intestine, Spleen - Stomach, Lungs - Large Intestine, Kidneys - Urinary Bladder, and Pericardium - Triple Burner Channels).

Figure 1.107. The Five Element Organ Energy Pattern was used to access the energy of the Wu Jing Shen (Five Essence Spirits) contained within the Five Yin Organs). The ancient Daoist would use his or her left hand in order to absorb the organ Qi and Shen into the Lower Dantian or body's energetic field. This arrangement was also used to control the Ancient Five Elements.

FIVE ELEMENT ORGAN PATTERN

In ancient China, the following hand chart of the Five Element Organ Pattern was used to access the energy of the Prenatal Wu Jing Shen (Original Five Essence Spirits) contained within the Five Yin Organs. This particular Daoist Hand Seal system was originally taught only to advanced disciples. When applying its energetic function to internal cultivation, the disciple would use his or her thumb to touch each individual finger in order to connect with the specific Element power. Likewise, the neutral position, located at the base of the fingers allowed the disciple to connect with the Earth Element (Figure 1.107).

The ancient Daoist would use the left hand in order to absorb the intended organ's Qi and Shen into the Lower Dantian or into the body's surrounding energetic field. The energy could then be released out the Daoist's body via the right palm. This energetic transformation was also used to control the Five Elements.

The left palm could also be used for gathering and absorbing the twelve channel energies of the Five Yin Organs. As the disciple's left thumb

Figure 1.108. The Five Element - Twelve Channel Two Hour Time Period. The left palm is used for gathering and absorbing the 12 Channel energies of the Five Yin Organs. As the individual's thumb touches the specific areas on the fingers, the energy is gathered into the Lower Dantian and released out from the right palm.

touched the specific areas on the fingers or palm, the energy was gathered into the Lower Dantian and then released out of the body via the disciple's right palm (Figure 1.108).

DAOIST THREE DANTIAN'S SINGLE HAND SEALS

In ancient Daoism, the single Hand Seals were commonly used to access and command the body's internal Seas of Energy, or Dantian energies. The following descriptions are of Single Hand Seals used in two separate branches of Daoist Mysticism:

Mao Shan Hand Seals (Zheng Yi Branch)

In the Highest Purity sect of Daoism, from the Zheng Yi tradition, the thumb represents the celestial powers of the Heaven, while the little finger represents the terrestrial powers of the Earth (as explained in the Eight Trigram Double-Hand Seals for Gathering Power, Figure 1.109). When combined (the thumb touches the little finger), the body's energy is regulated within the center Taiji Pole and the Three Dantians are balanced.

Traditionally, the ancient Mao Shan Daoist used a left handed Hand Seal that portrayed the

Figure 1.109. Bagua "Energy Ball" Hand Position

ideogram "Shan" (Figure 1.110). The magical image of the mountain was used in order to access and stimulate the internal Seas of Qi contained within the Three Dantians.

When cultivating internal power, the ancient Mao Shan sorcerers would train to access the magical powers of Heaven and Earth by blending these energies within their Three Dantians. This form of magical cultivation was initiated by energetically blending the Yang of Heaven (i.e., the descending celestial energy of the Green Dragon, represented by the sorcerer's "Imagination") and the Yin of Earth (i.e., the ascending terrestrial energy of the White Tiger, represented by the physical feelings of the energetic "Sensations"). The magical Hand Seals and their secret access points used by the ancient Mao Shan sorcerers to activate each Dantian is described as follows:

- **The Lower Dantian:** When training to transform Jing to Qi in the Lower Dantian, the Daoist sorcerer would press the second crease (down from the top) of the ring finger on his or her left hand. While pressing the Lower Dantian point, the sorcerer would also pull up on his or her lower perineum and the centers of both feet in order to draw Earth Qi (the energy of the Earthly White Tiger) up the legs and into the Lower Dantian. The sorcerer would place his or her tongue on the Fire position (this requires that the tongue be placed on the hard palate at the front of the upper palate behind the teeth and gum line - Figure 1.111) and inhale the energy of the Heavenly Green Dragon down the front of the body into

Figure 1.110. In ancient Daoism, the Single-handed Hand Seals were commonly used to access and command the body's internal Seas of Dantian Energy (an example of Mao-Shan Daoist training from the Zheng Yi tradition)

Figure 1.111. The Fire tongue position used for activating the Lower Dantian

the Lower Dantian. As the Green Dragon (imagination) and White Tiger (sensation) began to "play," the energetic sensation of heat and vibration would be created within the Lower Dantian.

- **The Middle Dantian:** When transforming Qi to Shen in the Middle Dantian, the Daoist sorcerer would press the first crease (down from the top) of the middle finger on his or her left hand. While pressing the Middle Dantian point, the sorcerer would also pull up on his or her lower perineum and the centers of both feet in order to draw Earth Qi (the energy of the Earthly White Tiger) up the legs and spine into the back of the heart at the Middle Dantian area. The sorcerer would place his or

Figure 1.112. The Wood tongue position used for activating the Middle Dantian

Figure 1.113. The Water tongue position used for activating the Upper Dantian

her tongue on the Wood position (this requires that the tongue be placed on the hard palate, at the middle of the upper palate at the center of the roof of the mouth - Figure 1.112) and inhale the energy of the Heavenly Green Dragon down the front of the body into the Middle Dantian. As the Green Dragon (imagination) and White Tiger (sensation) began to "play," the energetic sensation of heat and vibration would be created within the Middle Dantian.

- **The Upper Dantian:** When transforming Shen to the infinite space of the Wuji via the Upper Dantian, the Daoist sorcerer would press the second crease (down from the top) of the first (index) finger on his or her left hand. While pressing the Upper Dantian point, the sorcerer would also pull up on his or her lower perineum and the centers of both feet in order to draw Earth Qi (the energy of the Earthly White Tiger) up the legs and spine into the back of the head at the base of the Upper Dantian. The sorcerer would place his or her tongue on the Water position (this requires that the tongue be placed on the soft palate at the back of the upper palate - Figure 1.113) and inhale the energy of the Heavenly Green Dragon down the top of the head into the Upper Dantian. As the Green Dragon (imagination) and White Tiger (sensation) began to "play," the energetic sensation of heat and vibration would be created within the Upper Dantian.

Figure 1.114. In ancient Daoism, the Single-handed Hand Seals were commonly used to access and command the body's internal Seas of Dantian Energy (an example of Wu Dang Shan Daoist training from the Quen Zhen tradition)

When performing these meditations, all the Daoist sorcerer needed to do was simply connect his or her thumb with each of the Dantian's access points, place the tongue in the secret Dantian position, and simultaneously draw the Qi of Heaven and Earth into the respected Dantian area in order begin energetic cultivation.

Wu Dang Shan Hand Seals (Quen Zhen Branch)

In the Pole Star sect of Daoism, from the Quen Zhen tradition, the thumb and little finger positions used to represent the power of the Heavens and Earth are reversed. In this particular Daoist system, the thumb represents the terrestrial powers of the Earth, while the little finger represents the celestial powers of the Heaven. When combined (the thumb touches the little finger), the body's energy is regulated within the center Taiji Pole and the Three Dantians are balanced.

When cultivating internal power, the ancient Wudang masters used the first (index) finger to represent the access point of the Lower Dantian; the middle finger to represent the access point of the Middle Dantian; and the ring finger to represent the access point of the Upper Dantian. When meditating, all the Daoist master needed to do was simply connect his or her thumb with each Dantian's access point in order to tap into its cultivated power (Figure 1.114).

BAGUA SINGLE HAND SEALS

In ancient China, after a Daoist Mystic learned how to control the energy of the Bagua through Double Handed Hand Seals, he or she would transfer the eight energetic powers of the Bagua to their left palm. The progression from using double hands to a single hand allowed the Daoist Mystics the ability to summon and gather the energetic and spiritual powers of the specific Bagua into their body with their left hand, while extending and emitting the Qi with the right hand.

Hidden within the construction of the Bagua Trigram formation are the energetic patterns of the Nine Palaces (also known as the Magic Square). The ancient Daoist would use his or her left palm as a medium for conjuring the energetic structure of the Magic Square formation and "opening the gate to the supernatural world." After the Spirit Gate was opened, the Daoist mystic would initiate a specific incantation for conjuring the supernatural powers released from the Celestial Elements or Eight Trigrams. This was initiated by placing either the thumb or fingers of the left hand onto the specific Trigram location. Combined with a specific incantation, the supernatural powers of the Trigram could then be activated and summoned.

As the ancient Daoist performed the specific ritual for spiritual incantation, pacing through positions of the Nine Palaces of Heaven, he or she could use the same numeral sequence on the left palm as the Magic Square patterns by tracing the "magic steps of Yu" with the left thumb (Figure 1.115).

The Nine Palaces are arranged in an eight direction box formation with an additional number in the center. Each palace position is assigned a number, a specific color and a star (one of the seven stars of the Big Dipper, the extra star and the North Star). Each star is associated with a specific Prenatal energy flow related to one of the original Extraordinary Vessels and one of the Nine Chambers located in each one of the Three Dantians. The numbers and their correspondences are described as follows:

1. **The Trigram Kan:** This point is located at the base of the middle finger. Kan is assigned to the number 1 and its color is white.

Figure 1.115. In ancient China, the Postnatal Heavenly Bagua pattern of the "Magic Square" was superimposed on the left palm allowing Daoist mystics the ability to summon and gather the energetic and spiritual powers of the Bagua into the body, while extending and emitting the gathered Qi with his or her right palm.

2. **The Trigram Kun:** This point is located on the first superior digit of the ring finger. Kun is assigned to the number 2 and its color is black.
3. **The Trigram Zhen:** This point is located on the second digit of the index finger. Zhen is assigned to the number 3 and its color green/blue.
4. **The Trigram Sun:** This point is located on the first superior digit of the index finger. Sun is assigned to the number 4 and its color is blue.
5. **The Bright Hall (Ming Tang):** This point is located on the center digit of the middle finger. The Ming Tang (Bright Hall) is associated

Figure 1.116. In Ancient China, the numbers of the Magic Square also related to the Three Realms of Heaven, Man, and Earth, and were used for Divination.

- with the Taiji Pole and the middle space of the Magic Square; the Ming Tang is assigned to the number 5 and its color is yellow.
- The Trigram Qian:** This point is located at the base of the middle finger. Qian is assigned to the number 6 and its color is white.
 - The Trigram Dui:** This point is located on the second digit of the ring finger. Dui is assigned to the number 7 and its color is red.
 - The Trigram Gen:** This point is located at the base of the index finger. Gen is assigned to the number 8 and its color is white.
 - The Trigram Li:** This point is located on the first superior digit of the middle finger. Li is assigned to the number 9 and its color purple. It should be noted that the middle number "5" does not correspond to a Trigram because it is the unifying number placed in the center to represent balanced internal energy.

MAGIC SQUARE AND DIVINATION

In ancient China, the specific numbers of the Magic Square could also relate to the energetic manifestations that occur within the three realms of

Imagine a cord of divine light descending from the Heavens and penetrating the center of the left palm

Figure 1.117. Heaven and Earth Posture

Heaven, Earth and Man. Because of this, the ancient Daoists sometimes used the Magic Square for Divination described as follows (Figure 1.116):

- While meditating, form a "Heaven and Earth" standing posture (Figure 1.117).
- Imagine a cord of divine light descending from the Heavens and penetrating the center

of the lower left palm creating the energetic pattern of the Magic Square previously described (refer back to Figure 1.116). The left palm (Magic Squares) should be placed horizontally in front of your Yellow Court (fingers pointing towards the right). This energetic position relates to the power of Earth.

- Next, with your right hand, form the Thunder Bolt Hand Seal (Figure 1.118) above the Magic Square, at the Heart and Middle Dantian area. This energetic position relates to the power of Heaven. The right hand's index finger should point towards the left direction, while the little finger should point downward into the numbers of the Magic Square positioned inside the left palm.
- Focus your mind's intention on a specific individual and perform magical Invocations over the Magic Square according to the specific intention of the divination. Begin to ask specific questions related to that individual's past, present or future while spiralling the Qi downward in a descending clockwise direction (moving from Heaven to Earth) using the tip of the Thunder Bolt Hand Seal (i.e. the little finger of the right hand).

EARTHLY BRANCHES AND DAOIST ALCHEMY

The ancient Daoists viewed the body as a small and complete universe unto itself and understood that the internal organs are influenced by the celestial movements of the sun, moon, planets and stars. The Governing and Conception Vessels in particular are influenced by these Heavenly cycles (Figure 1.119).

Figure 1.118. In this Thunder Fist Hand Seal, the thumb touches the base of the ring finger and roots the Lung Qi and the Po.

In ancient China, the day was divided into twelve separate time divisions. Each time division encompassed two hours of the day and was named after one of the Twelve Earthly Branches. The ancient Daoists discovered that the body's Qi and Blood mirror the Earth's seasonal ebb and flow, rising and falling like the lunar tides.

Each time period in the Twelve Earthly Branches system is regarded as having a specific influence on each of the twelve gates of the body's chakra system. The rhythmic variations of the waxing and waning of Qi and Blood are associated with the waxing and waning of Yin and Yang energy, and with the circulation of Qi along the Microcosmic Orbit (Fire) cycle.

Each of the Twelve Chakra Gates relates to one of the Twelve Earthly Branches following the Fire Cycle of the Microcosmic Orbit. These twelve chakra gates extend their energy outward.

80

MAO SHAN HAND SEALS USED FOR HEALING OR PROTECTION

In the ancient Mao Shan Daoist monasteries, Hand Seals were used for bringing Qi from a specific internal organ or celestial direction into a vessel of water for healing (Figure 1.120). This Hand Seal technique is then followed with a specific Breath Incantation. If a Daoist mystic wishes to gather Heavenly Qi from which to strengthen the Liver, he or she will repeat the following Breath Incantation

**“Dong fang wuji fei tian shen
wang su jiang Gan Qi yu wu sui zhong.”**

Which translates as “Eastern Palace infinite flying heavenly god, quickly bring down the Liver Qi into my water - do this as it is law.”

The Incantation is then sealed by shouting “An Da” while simultaneously forming the An Da Double Hand Seal (Figure 1.121).

- **The “An Da” Double Hand Seal:** This Double Hand Seal is used for ending the Summoning Ritual. The left fist represents the celestial energy of the Sun, the right Immortal Sword represents the celestial energy of the Moon (Figure 1.105). The An Da Double hand Seal is generally used before or after speaking magical incantations (i.e., the magical incantation is energetically shouted quickly followed immediately with the “An Da” Double Hand Seal to offer a form of energetic completion).

The Breath Incantation is changed according to the Daoist Mystic’s needs, substituting the specific Palace and the specific internal organ Qi. Each of the palaces also has corresponding times, Ele-

Figure 1.120. Hand Seal pattern used for bringing Qi from a specific Organ and direction into a glass of water for healing.

Figure 1.121. The “An Da” Double Hand Seal

Palace	Time	Element	Organ	Alter Gift	Immortal

Figure 1.122. Chart of Daoist Five Palaces Correspondence

ments of control, organ energies, altar gifts, and governing immortals (Figure 1.122).

SEVEN STARS OF THE BIG DIPPER #1 SINGLE HAND SEALS

In ancient Daoism Mysticism, the advanced Single Hand Seals (Mudras) were sometimes used to access the power of one of the seven specific stars of the Big Dipper. The following is one esoteric version of accessing the hidden power of the Seven Big Dipper Stars (Figure 1.123):

1. **The Gui Star:** The access point for gathering and cultivating the magical energy of this star is located at the second segment of the index finger.
2. **The Gou Star:** The access point for gathering and cultivating the magical energy of this star is located on the first segment of the index finger.
3. **The Fan Star:** The access point for gathering and cultivating the magical energy of this star is located on the first segment of the middle finger.
4. **The Shou Star:** The access point for gathering and cultivating the magical energy of this star is located on the third digit of the middle finger.
5. **The Bi Star:** The access point for gathering and cultivating the magical energy of this star is located on the second digit of the ring finger.
6. **The Pu Star:** The access point for gathering and cultivating the magical energy of this star is located on the second digit of the little finger.
7. **The Piao Star:** The access point for gathering

and cultivating the magical energy of this star is located on the third digit of the middle finger.

SEVEN STARS PATTERN OF THE NORTHERN DIPPER SINGLE HAND SEALS

Certain advanced Single Hand Seals were sometimes used to access the combined power of the seven stars of the Northern Dipper by performing specific stepping rituals. In the advanced training, these esoteric stepping rituals could be performed on the Daoist mystic's left hand. The above is one version of a Northern Big Dipper

Figure 1.124. The Seven Stars of the Northern Dipper can be accessed through the mystic's left hand.

Seven Star Stepping Pattern initiated on the Daoist mystic's left hand (Figure 1.124).

SEVEN STARS PATTERN OF THE SOUTHERN DIPPER SINGLE HAND SEALS

Certain advanced Single Hand Seals (Mudras) were sometimes used to access the combined power of the seven stars of the Southern Dipper by performing stepping rituals. In advanced training, these esoteric stepping rituals could be performed on the left hand of the Daoist mystic. The above is one version of a Southern Dipper Seven Star Stepping Pattern initiated on the Daoist mystic's left hand (Figure 1.125).

THE "FIVE THUNDERS EXPLODE" HAND SEAL

When performing Thunder Magic, the Daoist sorcerer will draw the Five Thunder Mountains on the center of his or her left palm, while reciting a magical incantation used to gather the power of the guardians of the Five Sacred Mountains. The sorcerer will draw five circles around the center of a "Thunder" character and speak the following incantation to call and dispatch the Five Thunder Generals from the Five Thunder Mountains (Figure 1.126):

"Dong Qi Tai Shan Lei
(The Eastern Energy of the Tai Shan Thunder);
Nan Qi Heng Shan Lei
(The Southern Energy of the Heng Shan Thunder);

Figure 1.125. The Seven Stars of the Southern Dipper can be accessed through the mystic's left hand

Xi Qi Hua Shan Lei
(The Western Energy of the Hua Shan Thunder);
Bei Qi Heng Shan Lei
(The Northern Energy of the Heng Shan Thunder);
Zhong Qi Song Shan Lei
(The Center Energy of the Song Shan Thunder)"

DAOIST ESOTERIC SINGLE HAND SEALS

The following is a description of the most common Single Hand Seals used in the various Zheng Yi sects of Daoist mysticism. The Zheng Yi sect is composed of three main branches of ancient Daoist magic, which are energetically united in what is known as the "Three Mountains Drop of Blood Alliance." Each drop of blood represents one of the following Zheng Yi branches, each located in the South-Eastern part of China:

- Celestial Master Daoism (Tian Shi sect) from Long Hu Shan, located in the Jiangxi Province.
- Highest Purity Daoism (Shang Qing sect) from Mao Shan, located in the Jiangsu Province.
- Magical Treasure Daoism (Ling Bo sect) from Ge Zao Shan, located in the Jiangxi Province.

These particular Single Hand Seals can be divided into three main categories according to their magical uses: Hand Seals used for Worship, Hand Seals used for Summoning, and Hand Seals used for Attacking and Defending.

SINGLE HAND SEALS USED FOR WORSHIP

The following is a list of popular Single Hand Seals used in Zheng Yi Daoist rituals for the alchemy of Worship. The primary goal is one of energetic and spiritual transformation, brought about through prayer and meditation.

- **The White Crane Single Hand Seal:** This Single Hand Seal is used for Worship. It is energetically used to show respect to the celestial immortals. The last three fingers symbolize an offering of three incense to the celestial immortals (Figure 1.127). The first finger and thumb represent the eternal circle and the infinite space of the Wuji through which to access the Di (Divine or God).
- **The Willow Branch Single Hand Seal:** This Single Hand Seal is used for Worship. It symbolizes the Willow Branch and is energetically used in rituals to purify the water at the altar, or to dip into the altar cup to flick holy water onto specific items for purification (Figure 1.128).
- **The Tiny Light Single Hand Seal:** This Single Hand Seal is used for Worship. It is used to represent the electrical light that illuminates within the energetic particles contained within the field of Yin and Yang (which envelops the infinite space of the Wuji). It is energetically used for protection by purifying, illuminating and shining divine light over a person, place or thing (Figure 1.129).
- **The Trident Single Hand Seal:** This Single Hand Seal is used for Worship. It symbolizes three prongs and is energetically used to support the purified water cup on the altar during purification rituals, and is sometimes used

Figure 1.132. The Jade Ring Single Hand Seal

Figure 1.133. The Magical Root Single Hand Seal

Figure 1.134. The Two Lotus Joining Single Hand Seal

- for holding or support other altar tools (Figure 1.130).
- **The Magical Toad Single Hand Seal:** This Single Hand Seal is used for Worship. It represents an image of the immortal three legged toad from the Moon Palace, and is energetically used to bring about the fragrant smell of the celestial world into the realm of the human world (Figure 1.131).
 - **The Jade Ring Single Hand Seal:** This Single Hand Seal is used for Worship. It is used to energetically represent a magical bracelet of the Celestial Mother Dou Mu, and used to show respect to the Palace of Dou Mu (the Mother of the seven stars of the Big Dipper). She is generally depicted as having three eyes in each of her four faces (one facing each of the four major direction). She has eight arms (four arms on each side of her body). Two of her hands are held together, palm to palm, while the other six hold a Sun, Moon, bell, golden seal, bow and halberd. Dou Mu is regarded as a senior Daoist immortal and is credited with the ability to save people from many types of evil and trouble (Figure 1.132).

- **The Magical Root Single Hand Seal:** This Single Hand Seal is used for Worship. It represents the fusion of Qi and Shen, and is the energetic and spiritual foundation used to send reports to Mother Dou Mu in order to request for auspicious times (Figure 1.133).
- **The Two Lotus Joining Single Hand Seal:** This Single Hand Seal is used for Worship. It is energetically used to invite Wang Mu Niang Niang (Mother of the Heavenly Emperor), welcome her to the altar and offer her respect as she appears (Figure 1.134).

SINGLE HAND SEALS USED FOR SUMMONING

The following is a description of popular Single Hand Seals used in Zheng Yi Daoist rituals for the energetic and spiritual purpose of Summoning. The primary goal of Summoning is that of demanding or requesting the presence or service of one of the five types of Immortals (Ghost Immortals, Human Immortals, Earth Immortals, Spiritual Immortals and Celestial Immortals).

- **The Gathering The Hun Single Hand Seal:** This Single Hand Seal is used for Summoning. It is used in rituals to energetically gather the soul of the dead (Hun) to the altar (Figure 1.135).
- **The Flying Hun Crosses the Sea Single Hand Seal:** This Single Hand Seal is used for Summoning. It symbolizes flying over the ocean, and is energetically used for gathering the soul of the dead and bringing it back to the altar area (Figure 1.136).
- **The Golden Lotus Single Hand Seal:** This Single Hand Seal is used for Summoning. It energetically represents the Golden Lotus Flower where the Great Ancestral Master will show his appearance (Figure 1.137).
- **The Small Gold Metal Single Hand Seal:** This Single Hand Seal is used for Summoning. It is energetically used as a "Grand Order" (or command) for the Great Ancestral Master to come and protect you by terrifying and defeating evil spirits (Figure 1.138).
- **The Single Star Single Hand Seal:** This Single Hand Seal for Summoning. It energetically represents the Dan Dou (Single Star) and is used to request that Mother Dou Mu command or Summon the Heavenly Court to dispatch the Celestial Generals (Figure 1.139).
- **The Small Pig's Head Single Hand Seal:** This Single Hand Seal is used for Summoning. It resembles a small pig's head and is energetically used in small ceremonies to summon the "Horned Pig" of Mother Dou Mu down into the human world (Figure 1.140).
- **The Jade Left Single Hand Seal:** This Single Hand Seal is used for Summoning. It symbol-

Figure 1.144. The Blue Green Spirit Single Hand Seal

izes the celestial Jade Palace and is energetically used to gather the celestial immortals to the altar (Figure 1.141).

- **The Four Heavenly Immortal Generals Single Hand Seal:** This Single Hand Seal is used for Summoning. It symbolizes the bringing the four Thunder Martial Generals to your side and is energetically used for protection (Figure 1.142).
- **The Magic Tiger Single Hand Seal:** This Single

Hand Seal is used for Summoning. It represents the Martial Generals' Magical Tiger and is energetically used to summon the General's Magical Tiger to the altar (Figure 1.143).

- **The Blue-Green Spirit Single Hand Seal:** This Single Hand Seal is used for Summoning. It is energetically used to represent the celestial post from which Martial General Wen Qiong will rein in his Celestial Horse (Figure 1.144).

SINGLE HAND SEALS USED FOR ATTACKING AND DEFENDING

The following is a list of popular Single Hand Seals used in Zheng Yi Daoist rituals for the energetic and spiritual purpose of Attacking and Defending. These skills are commonly incorporated in esoteric Daoist rituals used for exorcism (removing evil spirits from a person, place, or thing).

The training involved in the energetic and spiritual art of Attacking and Defending is divided into six primary stages: Protection, Obstruction, Attacking, Catching, Imprisoning and Sealing. These six stages are described as follows:

- **Protection:** The energetic goal of Protection Single Hand Seals is to create an energetic field strong enough to provide for the safety of the disciple's person (self, family, loved ones, etc.), place (house, worship area, etc.) or things (items of significance and importance).
- **Obstruction:** The energetic goal of Obstruction Single Hand Seals is to create an energetic field strong enough to stop or inhibit a evil spirit or demonic entity from further antagonistic actions.
- **Attacking:** The energetic goal of Attacking Single Hand Seals is to create an energetic field strong enough to initiate a direct attack onto the spirit entity, whereby its energetic form will be captured, defeated, or destroyed.
- **Binding:** The energetic goal of Binding Single Hand Seals is to create an energetic field strong enough to envelop, bind, and restrain an evil spirit.
- **Imprisoning:** The energetic goal of Imprisoning Single Hand Seals is to create an energetic field strong enough to energetically detain and confine an evil spirit.
- **Sealing:** The energetic goal of Sealing Single Hand Seals is to create an energetic field strong enough to provide the final energetic sealing needed after the incantation has imprisoned the evil spirit into a confined area.

PROTECTION

- **The Magic Scissors Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It represents the celestial scissors

Figure 1.145. The Magic Scissors Single Hand Seal

Figure 1.146. The "Sai Nian" Single Hand Seal

of the eternal law of the Dao and is energetically used to cut and separate the good from the energetic "cords" attached to the body via evil (dark) people, places or things (Figure 1.145).

OBSTRUCTION

- **The "Sai Nian" Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It symbolizes a cork or stopper and is energetically used to block or stop the energetic leakages that occur from holes in an individual's Wei Qi (Aura) field. These energetic holes cause the individual life-force to become vulnerable to being stolen via people, places or things (energetic parasites). The Sai Nian Hand Seal is also used for obstructing psychic attacks and chasing away evil spirits (Figure 1.146).

Figure 1.147. The Immortal Sword Single Hand Seal

Figure 1.148. The Left Thunder Block Single Hand Seal

ATTACKING

- **The Immortal Sword Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It is used to energetically represent the magical power of the Immortal Sword. The magical power released from this Single Hand Seal is energetically used to draw talismans and esoteric characters for protection, defence or attack. It is also commonly used for cutting and defeating evil spirits and demons (Figure 1.147).
- **The Left Thunder Block Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It represents the power of Heavenly Thunder and is energetically used to terrify, attack and kill evil spirits (Figure 1.148).

When forming the Left Thunder Block fist, the left thumb touches the base of the second (ring) finger before the last two fingers lock and seal the energy of the palm. The thumb is placed on the Gall Bladder Channel (Wood Element) access point (see Figure 1.108), and the Qian (Heaven) Trigram (see Figure 1.115) which allows the Daoist priest's Hun the ability to access the celestial energetic power of the lightning bolts that have been stored within the priest's Gall Bladder during the Thunder Magic rituals (used for gathering the celestial energy of thunder during the first storms of Spring).

When using both the Left and Right Thunder Blocks (Lei Jue) to "attack and bind the evil

Figure 1.149. The Right Thunder Block Single Hand Seal

with the sound of Thunder" the ancient Daoist teachings state that the disciples "eyes become like lightning and the voice becomes like thunder" when he or she stomps, shouts and releases the power of the celestial thunder.

- **The Right Thunder Block Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It represents the power of Heavenly Thunder and is energetically used to terrify, attack and kill evil spirits (Figure 1.149).

When forming the Right Thunder Block fist, certain Daoist schools will place the right thumb onto the base of the first (little) finger before the last two fingers lock and seal the energy of the palm. The thumb is placed on the Triple Burner Channel (Fire Element) access point (see Figure 1.114), which allows the Daoist priest the ability to access the energetic

Figure 1.150. The Mount Tai
Single Hand Seal

power of the fire and light that have been stored within the priest's Taiji Pole during the Thunder Magic rituals (used for gathering the celestial energy of thunder during the first storms of Spring).

- **The Mount Tai Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It is used to energetically represent picking up Mount Tai, lifting it 10,000 Zhuang (miles) in the air and then slamming it down hard on top of evil spirits and ghosts in order to energetically crush them (Figure 1.150).
- **The Purple Star Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It energetically represents the Shi Wei (Purple Star) of the Heavens. Energetically, its power is so immense that is used to place on top of fierce ghosts and evil spirits in order to dissolve them like acid (Figure 1.151).
- **The Demanding Knife Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It represents the magical knife (Dao Tao) and is energetically used for chopping demons, cutting evil and destroying ghosts (Figure 1.152).
- **The Ghost Beating Stick Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It represents the immortal stick used for beating demons and is energetically used to beat the evil spirits into submission (Figure 1.153).

Figure 1.151. The Purple Star
Single Hand Seal

Single Hand Seal

Figure 1.153. The Ghost Beating Stick
Single Hand Seal

Figure 1.154. The Medical Fork Single Hand Seal

Figure 1.155. The Magic Needle Single Hand Seal

CATCHING

- **The Medical Fork Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It energetically symbolizes a fatal poisonous weapon that is used to stop and kill evil things. This hand seal is commonly used in order to entice and bring spirit entities out of hiding into the "light," to then be paralyzed (or frozen) before beginning an exorcistic inquisition (Figure 1.154).
- **The Magic Needle Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It represents an immortal's needle, which has magical powers, and it is energetically used to chase, search and penetrate evil spirits and ghosts (Figure 1.155).
- **The Single Dragon that Pierces the Mountain Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It is used to energetically penetrate through mountains and into the depths of the Earth. It is used to energetically cut through, chase-after and catch evil spirits (Figure 1.156).

Figure 1.156. The Single Dragon that Pierces the Mountain Single Hand Seal

Figure 1.157. The Five Blacks Single Hand Seal

SEALING

- **The Five Blacks Single Hand Seal:** This Single Hand Seal is used for Attacking and Defending. It is used to energetically represent the final seal (black cover), meaning to place a powerful energetic cover over a pit once it is closed (Figure 1.157). It is energetically used as the final or finishing technique for binding of an evil spirit inside a pit or cave (as in the final imprisoning of a demonic entity).

DAOIST MAGICAL STAR STEPPING PATTERNS

CYCLES OF THE STARS

To the ancient Daoists, the days of greatest importance (according to their calendar of magical events) was not assigned to a traditional month and day, but the specific day and hour on which a certain astronomical event took place. This knowledge of the Heavens required the sorcerer to be completely aware of the most subtle energetic movements that transpire within his or her environment, completely in tuned with the energetic movements of the Sun, Moon, Planets, and Stars.

The ancient Chinese divided Heavenly energy into different classes of Yin and Yang: the Sun was seen as being the essence of Yang, the Moon as being the essence of Yin, and the Stars as being a combination of both Yin and Yang. The Stars were believed to have a great influence upon the energetic matrices of Earth and Man. The term "Stars" in ancient China, referred to the visible stars in the Northern Hemisphere; namely the Big Dipper, Polaris, the five planets, and the twenty-eight star constellations.

The Chinese ideograph for star, "Xing," is composed of two characters (Figure 1.158). On the top is the character "Ri" meaning "Sun," on the bottom is the character "Sheng" meaning "to give birth to." It depicts the purest embodiment of refined matter which ascended into the Heavens and crystallized into Stars.

The ancient Chinese believed that stars and planets were energetically Yang, born from the Original (Yuan) Qi of Heaven and were considered to be the condensation of Fire, while the Milky Way was considered to be the condensation of Water. The ancient Chinese name for Milky Way is "Tianchong," meaning "Highway of Heaven."

The pure aspects of these stars were believed to form the universal patterns that are responsible for the manifestation of form and matter. Thus, the ancient Chinese also believed that everyone was born under the guardianship of the stars. Certain stars would have a great influence over an individual's life, determining whether he or she

Figure 1.158. In Ancient Chinese Ideograph for the word "Star"

would be born as a human or animal, live long or die young, be rich or poor, etc.

The ancient Daoists believed that the energetic matrix of the Spirit Body was composed of certain energetic substances that were common with, and peculiar to, the stars. These energetic substances constantly created and activated stellar manifestations within the body's energetic fields. These stellar manifestations expressed themselves within the spiritual sheath that enveloped an individual's spiritual, energetic, and physical bodies. Once an individual had awakened to the esoteric stellar power that was contained within their energetic field, they could successfully accelerate the formation of their Spirit Body, and free themselves from the realm of matter.

In an individual's everyday life, it was believed that all actions under Heaven would unavoidably incur consequences. How an individual thinks and acts was reported by the man's or woman's Yuan Shen to the stars that govern longevity and destiny, and years of life were subtracted for bad deeds performed. If the celestial vapor was eventually taken from the individual (i.e., due to misuse of life-force energy), then the terrestrial vapor contained within the individual's Spirit Body would slowly suffocate his or her life-force energy and death would follow.

HISTORY OF DAOIST STAR STEPPING

The ancient Daoist discovered that performing a ritual or speaking an incantation in a natural power spot (i.e., a place in the Earth where energy naturally accumulates) would tremendously enhance the magical power of the ritual and dramatically increase its energetic potency. This was one of the primary reasons why the skill of Feng Shui was so important to the ancient Daoists.

These energetic centers of the Earth were considered to be areas where matter intersects with spirit. They represented "cracks" in visible matter, that allowed the hidden spiritual energy to shine through. Once the power spot was discovered, the sorcerer could then use the energetic field of his or her own body to additionally increase the magical power of that area. This was initiated during a magical ritual by performing esoteric dance, chanting, or Star Stepping.

Daoist Star Stepping began in ancient China, when the shaman sorcerers would dance certain ritualistic steps in order to open the Celestial Gate and contact the various immortals living within the spirit world. These stepping patterns allowed the ancient Daoists to summon a spiritual entity from another plane of existence, causing it to manifest as a visible entity in either the energetic plane or the physical plane. These shuffling trance-like movements are variously known as "the Dance of the Wu," "the Steps of Yu," "Steps of the Big Dipper," or "Daoist Star Stepping."

In modern times, the ritual master (Fa Shi), wearing cloud shoes, imagines the diagram of the Big Dipper on ground, in front of the central altar, covering about ten square feet. The magical diagram of the Big Dipper symbolizes the nine levels of Heaven (sometimes called the "Nine Heavens").

Generally accompanied by Daoist music, the ritual master continues to visualize the Nine Heavens while performing the "Steps of the Big Dipper." This star stepping pattern is performed to correspond with the positions of the Dipper Stars and the 28 Constellations, and is utilized in conjunction with the magical diagrams of the Nine Palaces and the Eight Trigrams. The ancient Daoists believed that through the various stepping rituals, the spirit soul (Hun) of the priest could accomplish the following:

- **Spirit Travel:** To the ancient Daoists, the Northern Dipper was a celestial bridge that existed between Heaven and Earth. It was the path of celestial travel, the gateway to the Underworld, and the field of creative transformation. The sorcerer could therefore ascend into the Nine Heavens and deliver petitions ("reports") to the Celestial Immortals.

- **Controlling:** The Big Dipper was also used as a form of protective power, keeping the sorcerer safe from all manner of demonic influence that were sure to become attracted to the sorcerer's occult studies and rituals. The sorcerer could therefore receive various powers to control the energetic realms of nature, as well as to control the various actions of evil spirits and demons.
- **Destroying:** The sorcerer could invoke the magical power of Thunder in order to destroy the energetic and physical realms of people, places and things (specifically an evil spirit or demon).

THE GATE OF HEAVEN

In ancient China, it was traditionally believed that the Celestial Gate (or Gate of Heaven) was the energetic portal that an individual's soul entered into at the time of death, thus leading the deceased into another dimension. This magical gate could also be accessed and opened by an experienced Daoist sorcerer.

The Gate of Heaven is believed to be an actual spiritual "place," that exists as a physical location, and as a magical event. It can be accessed through the tail of the Big Dipper which serves as a "pointer," informing the sorcerer of the exact location from which to orient his or her magical rituals.

For example, during the evenings of the winter months (i.e. November), the Big Dipper seems to hanging "upside down" from its tail. It is during this time period, when the magical powers Heaven naturally descend upon the Earth, that the "Lu" Ordination is performed for the Zheng Yi Daoist priesthood, held in the Celestial Master's Mansion of Lung Hu Shan.

The ancient Daoist sorcerers would perform the magical Steps of Yu (also known as the "Steps of the Big Dipper") in order to open the Gate of Heaven. This magical ritual is based on the esoteric concept that "in order to create an invisible phenomenon, a sorcerer must first create its visible counterpart (i.e., constructing a magical circle and altar); and in order to create a visible phenomenon, a sorcerer must first create its invisible counterpart (i.e., casting the spell and reciting the incantations needed to open the energetic gate)."

THE THREE GODS OF THE GATE OF HEAVEN

When performing the Steps of Yu, and attempting to enter into the Gates of Heaven, there are three Celestial Gods that preside over the Gate of the Northern Dipper in Mao Shan Daoism. These three gods are collectively known as the "Three-in-One," and are sometimes describes as the Male (the White Tiger), the Female, and the Great One (the Primordial King Ying Er, Ruler of the Gate of Life). The Great One is also sometimes known as "the King of the Yellow Court."

In certain Daoist sects, the Three-in-One gods are sometimes represented as the manifestations of Jing (Essence), Qi (Energy), and Shen (Spirit). Other Daoist sects equate them to the psychic energies of the subconscious, conscious, and superconscious mind. Still other Daoists express the Three-in-One as the gods of the Three Dantians ("Three Cinnabar Fields").

These three separate, yet related powers are susceptible to the prayers and invocations of the Daoist sorcerers. They are viewed as the primordial gods of creation, representing the subtle forces and influences that modern society has all but forgotten.

INCANTATION USED FOR CAUSING THE SPIRIT TO LEAVE THE PHYSICAL BODY

Before beginning the Steps of Yu, the Daoist sorcerer would normally say the "Chu Shen Zhou" ("Bring the Spirit Out of the Body") magical incantation. This magical incantation was recited when offering prayers and supplications to the Jade Emperor. This incantation was not only used to receive permission to enter the celestial realm, but it also prepared the sorcerer's Spirit for the long journey into the stars. The "Chu Shen Zhou" magical incantation is described as follows:

**"Yuan Wo Shen Shen Chu Wo Shen Xing.
Ling Wo Long Shen Shang Da Di Ting.
Ji Ji Ru Lu Ling"**

**"Allow my Spirit to come out of my body.
Command my True Spirit to reach
the Jade Court.
Quickly - As this is Law"**

Figure 1.159. The "Steps of Wu," is used for invocation. This pattern, originally used to demonstrate the energetic and spiritual union of Heaven and Earth, shows the combined circular "Tread" pattern of "Terrestrial Regulation" and the Big Dipper "Flight" pattern of "Celestial Rules."

INCANTATION USED FOR RETURNING THE SPIRIT BACK INTO THE PHYSICAL BODY

After completing the Steps of Yu, the Daoist sorcerer would normally say the "Ru Shen Zhou" ("Bring the Spirit Back into the Body") magical incantation. This magical incantation was recited after completing the ritual, and before dispersing the celestial deities. The "Ru Shen Zhou" magical incantation is described as follows:

**"Yuan Wo Shen Shen Ru Wo Shen Xing.
Ling Wo Zhu Shi Bao Wo Chang Sheng.
Yi Ru Sheng Qi Jun Lu Ling."**

**"Allow my Spirit to return to my body."
"Command my spirit to live in this world
and protect my long life.
As this is the command
of General Sheng Qi Jun."**

Figure 1.160. The Pathway of the Earth Through the Twenty-Eight Constellations. The positioning of the stars is considered to be the spiritual and energetic matrix (celestial diagram) of certain areas of the Heavens

THE STEPS OF YU

To the ancient Chinese, the Steps of Yu (also known as the "Paces of Yu") represented access to a magical "star gate." In ancient China, each of the seven stars of the Big Dipper related to one of seven magical gates, and also corresponded to one of the seven planets (Sun, Moon, Mercury, Venus, Mars, Jupiter, and Saturn).

It is generally believed that the "Steps of the Big Dipper" stepping pattern was originally developed from the "Steps of Yu" (Figure 1.159). According to the *Magical Utterances* written by Yang Xiong of the Han Dynasty (206 B.C.-220 A.D.), "Because he often scaled high mountains and forded deep streams, when Emperor Yu had finished harnessing the water and the land, he suffered from a foot disease and would therefore walk with a limp." According to this source, the "Steps of the Big Dipper" are a result of the imitation of Emperor Yu's way of walking.

However, the actual "Steps of Yu" appeared quite early in China's ancient history and also incorporated the ancient art of Breath Incantation. According to the *Inner Book of the Master Who Embraces Simplicity* and the *Book of Original Changes of the Pervasive Divine Eight Emperors*, "After Emperor Yu had harnessed the water and the land, he observed a huge bird along the ocean that had mastered Breath Incantations. The bird walked in

	Jupiter	Mercury	Saturn	Sun	Moon	Mars	Mercury

	Thursday	Friday	Saturday	Sunday	Monday	Tuesday	Wednesday

Figure 1.161. The Twenty-Eight Star Constellations

a strange manner, and its steps could turn huge stones upside down. Emperor Yu studied the bird's stepping pattern and transformed the bird's strange way of walking into an effective method of acquiring magical skill." Therefore, the stepping pattern was called the "Steps of Yu," after its founder.

It is also said that Yu spent three years learning Breath Incantations and later used the magical power of Breath Incantations to match the star stepping patterns. The positioning of the stars is considered to be the spiritual and energetic matrix (celestial diagram) of certain areas of the Heavens (Figure 1.160 and Figure 1.161). Therefore, as his feet stepped within the celestial patterns of the Nine Dipper stars, Emperor Yu used Hand Seals and Breath Incantations to absorb the energetic and spiritual powers of the various stars.

ANCIENT STAR STEPPING RITUALS

When practicing the Steps of Yu or any star stepping pattern, the sorcerer will follow certain magical protocols used for preparation and application. Each Daoist school will vary in its unique approach to performing the magical star stepping patterns.

Because some Daoist priests have reportedly been “instantly struck dead” by inadvertently “miss-stepping” during magical star stepping rituals, it is advised to adhere to the following list of precautions and advice used by many Daoist sorcerers when performing the ancient star stepping rituals. These esoteric practices were designed to assist the sorcerer in developing a powerful Spirit Body, capable of safely making the celestial voyage into the stars:

- Before beginning, the sorcerer must first prepare him or herself by performing “cleansing and purifying” rituals (bathing and fasting). These preparation rituals generally last three days, and sometimes require sexual abstinence, fasting, and the consumption of magical elixirs or Holy Waters (depending on the specific needs and functions of the magical ceremony).
- It is advised to first double-lock the ritual or meditation room before performing the magical rite. This helps insure complete privacy and avoids distractions.
- Certain rituals must take place at midnight, the hour when the Yang Qi begins to rise (11:00 pm - 1:00 am). Therefore, be aware of the specific time of year, month, day, and hour that the magical rite must take place (e.g., magical

Wood
Element
Tongue
Position

Figure 1.162. The Wood Element Tongue position is related to the spiritual energy of sorcerer's Hun.

rituals are regularly performed during the solstices and equinoxes).

- The sorcerer will make sure that statues of a male and female celestial immortal has been placed in plain view on the altar. Any pair of deities representing the dual energies of Yang and Yin is suitable, however, they should represent a combination of Power and Spirituality (i.e., your greatest spiritual strength, combined with your most noblest aspirations). Care must be taken to invoke the celestial powers of both of these deities when performing this specific magical Star Stepping magical.
- Begin by creating a three ring Magical Circle for protection.
- Then, after the red altar candles and incense has been lit, the sorcerer should immediately grind and knock his or her teeth 36 times. This particular teeth knocking practice is used in order to stimulate the Kidneys, awaken the Yang Qi, and protect the sorcerer's body from ingesting Hou Qi (turbid or toxic energy).
- After knocking the teeth, the sorcerer will place his or her tongue in the Wood Element position. The Wood Element Tongue position is related to the spiritual energy of sorcerer's Hun. Connecting the tongue in this manner is a popular technique used by the ancient Daoist sorcerers for connecting with the Taiji Pole and releasing the spirit. It requires that the tongue be placed on the middle of the upper hard palate, at the center of the roof of the mouth (Figure 1.162).

Figure 1.163. The Proper Hand Position

- After gathering Earth Qi into the Lower Dantian, the sorcerer will form the Yin and Yang Hand Seal. This particular Hand Seal is used to develop a strong electromagnetic charge in the sorcerer's Lower and Middle Dantians, and is naturally utilized by the mystic's body to balance the Yin and Yang currents (Figure 1.163).
- Next, the sorcerer will inhale, and with a slow concentrated breath, lead the Qi from the Lower Dantian to the Middle Dantian and heart area. It is important to keep the energy gathered and focused in the heart area, while the hands continue to rise upward towards the Yin Tang (Third Eye) area.
- The sorcerer will now imagine the Celestial God Tai Shang Lao Jun (Figure 1.164) hovering above his or her head, as a Divine ball of illuminating light, radiating powerful celestial light into his or her body (from the crown). Once the sorcerer experiences the illuminating light sensation, he or she will say the following "Mantra of Intention" three to seven times. Once the Mantra is completed, the sorcerer's mind should be completely empty:

"Tai Shang Si Bei
Wu Liang Du Ren."

"Divine Presence, fill me with compassion, so that I may help others without restraint."

- After the "Mantra of Intention" is spoken, the sorcerer will slowly lower his or her hands. While the hands are descending from the Yin Tang (Third Eye) area, the sorcerer will con-

Figure 1.164. The Celestial God Tai Shang Lao Jun (also known as Lord Lao or Laozi)

tinue to imagine the energy from the Celestial Deity Tai Shang Lao Jun descending into his or her body, fusing with the energy of the heart. The fused energy of Heaven (i.e., the Divine light) and Earth (i.e., the Heart's Shen) will continue descending the body, along with the hands, until it reaches the Lower Dantian. When the combined energies reach the Lower Dantian, imagine and feel the energy immediately transform into steam, and fill the extremities with energy and power.

- After completing the Mantra of Intention, the sorcerer will then summon the magical powers of the Celestial Yin and Yang, as well as the Four Celestial Animals of the Four Directions and offer burnt incense to these deities.
- Then, while facing East (i.e., the Green Dragon), the sorcerer will close his or her eyes and visualize the seven stars of the Big Dipper descending on top of his or her body (with the celestial handle of the Big Dipper pointing towards the Eastern direction). Daoist star stepping rituals require the sorcerer to protect his or her body by arranging the magical power of the seven stars in specific configurations in or around the body (see The Stars of the Big Dipper).
- The sorcerer will now turn his or her eyes "inward," and begin to visualize and experience surrounding and transforming the entire cen-

ter core (i.e., energetic area surrounding the Taiji Pole) into the reflective image of a magic mirror.

- Next, the eight magical powers of the Bagua are then invoked and visualized surrounding each of the sorcerer's Three Dantians. Each of the three realms (spirit, energy, and matter) of the eight magical powers represent the Twenty-Four Perfected Immortals. The celestial powers of the Twenty-Four Perfected Immortals will energetically combine and begin to illuminate the sorcerer's three bodies (physical, energetic, and spiritual).
- The powerful illumination created from the eight magical powers of the Bagua is then reflected outward via the image of the Magic Mirror surrounding the sorcerer's center core. At this point, the locked meditation room will now become completely filled with the radiating celestial light emanating from the sorcerer's body.
- The Five Pure Lights that surround the sorcerer's Eternal Soul will now emerge from his or her Taiji Pole and heart area as five "Illuminating Pearls." These five magical orbs will additionally shine their powerful lights and further illuminate the four corners of the meditation room and the central space of the Magic Circle.
- At this moment, the radiating spiritual light pouring from the sorcerer's center core begins to lift the sorcerer's spirit body out of his or her physical body, towards the Heavens.
- In the incense smoke above the altar, the sorcerer will eventually see the First Gate open. After the password is presented, the sorcerer's spirit body can begin to enter into the celestial realm and begin its journey among the stars.
- Now is the time when the sorcerer will perform the magical Star Stepping patterns required in the ritual. This experience should feel like rising on a ladder of light, and strolling among the seven stars of the Northern Dipper.

ANCIENT STEPPING PATTERNS

The following are examples of the primary magical stepping patterns used in the various Zheng Yi sects of Daoist mysticism. The Zheng Yi sect is composed of three main branches of ancient Daoist magic, which are energetically united in what is known as the "Three Mountains Drop of Blood Alliance." Each drop of blood represents one of the following Zheng Yi branches, each located in the South-Eastern part of China:

- **Celestial Master Daoism (Tian Shi Sect):** This Zheng Yi system is located in Long Hu Shan (Dragon Tiger Mountain), in the Jiangxi Province.
- **Highest Purity Daoism (Shang Qing Sect):** This Zheng Yi system is located in Mao Shan (Mao Mountain), in the Jiangsu Province.
- **Magical Treasure Daoism (Ling Bo Sect):** This Zheng Yi system is located in Ge Zao Shan, in the Jiangxi Province.

Daoist Stepping patterns can be divided into several categories according to their magical uses. The most popular are: Big Dipper Stepping, Seven Star Stepping, Nine Palace Stepping, Twenty-Eight Star Constellation Stepping, Bagua (Eight Trigram) Stepping, Five Element Stepping, Three Stepping Patterns, and the Magical Esoteric Star Stepping Patterns, are described as follows.

INTRODUCTION TO THE BIG DIPPER

Much of what has been written in ancient China about the magical powers of the Big Dipper was preserved in the classic Daoist works on alchemy originating from the Mao Shan (Shang Qing) Daoist school during the Jin Dynasty period (265 - 420 A.D.). Shang Qing translates as "Highest Clarity," and refers to the "Nine Heavens" of ancient Daoist cosmology. The term "Nine Heavens" refers to the seven stars of the Big Dipper plus the two invisible stars, Fu and Bi. The Nine Heavens was sometimes called the "Abode of the Great One," who was believed to be the "Father of the Dao," and was older than the Heavens and Earth.

The Big Dipper (also known as The Emperor's Chariot or The Celestial Gate) was considered to be the "place of origin and of return." It was accepted as a magical gate by the ancient Daoists and was

Figure 1.165. Facing the direction of the North Star and Big Dipper at night allowed the ancient Daoists the ability to accurately tell time.

used as the passageway into Heaven. According to the ancient Daoists, the Northern Ladle (Big Dipper) was the Chariot of the Celestial Emperor, who was believed to ride around the Celestial Pole Star continually overseeing his earthly kingdom. According to Mao Shan Daoist tradition, the Celestial Pole Star can only be approached through Seven Gates of the Big Dipper, which represents the highest attainment possible for earthly beings, hence the name Shang Qing, "Highest Clarity."

Since they associated it with Death, Enlightenment, Soul Travel, and the worship of the Celestial Immortals, the ancient Mao Shan Daoists continually worshipped and invoked the magical powers of the Big Dipper. While the Sun, Moon, and Five Planets were used as a kind of "cosmic timetable," effective as a means of foretelling the Macrocosmic changes within the Heavens and Earth or for predicting future events, the Big Dipper served another purpose entirely. It was used as a means through which the Daoist sorcerer could enter into the supernatural realm.

In ancient times, it was believed that the Heavens revolved around the Earth. This is one reason why the ancient Daoists believed the Big Dipper to be circumpolar (i.e., constantly circulating the North Star and never appearing below the horizon). Because it appears to rotate once around the North Star every twenty-four hours, the ancient

Figure 1.166. Dou Mu, The Immortal Mother of the Big Dipper

Chinese were able to tell time from the position of the Dipper at night, give or take a few (four) minutes (Figure 1.165).

In Daoist cosmology, the Sun corresponds to the Middle Dantian, the Heart and the Element of Fire, the Moon corresponds to the Lower Dantian, the Kidneys and the Element of Water, and the Big Dipper corresponds to the Yellow Court, the Spleen, and the Element of Earth.

In some ancient Daoist sects, the Big Dipper is viewed as a female deity Dou Mu (the Immortal Mother of the Stars of The Dipper), and she is considered to be the "Governor of the Pavilion of Heavenly Treasure." She is said to have the most "brilliant eyes of all the Heavens." She, along with the Stars of the Dipper as her terrestrial spirit, and water celestial spirit, is in charge of life (Figure 1.166).

In the ancient Chinese Daoist book of the *Fundamental Destiny, Life-Prolonging Heart Scripture of the Great Sagely Primordial Sovereign of the Supreme Mysterious and Numinous Big Dipper*, it is written that, "with her great merit of medicine and healing, the Big Dipper manages and harmonizes the Five Elements, regulates the Yin and Yang Vital Breaths, dissolves stagnations and eliminates dark and Evil Qi. Under her mercy, those individuals who miss their time of salvation may redeem themselves. She is also in charge of the safety of

Figure 1.167. In Ancient China, the Handle of the Big Dipper was used to Determine the Season (The North Star was always positioned in the center of the diagram).

pregnancy and birth, as well as the healing of diseases. Seated on her throne, the Immortal Mother of the Big Dipper peacefully cultivates divine perfection, refines celestial and terrestrial spirits, concentrates the Vital Breath with an empty mind and enters the Mystery of Mysteries. Breathing the numinous Wind, gathering the purple Wuji energy, she has attained the mysterious and numinous Sublime Dao, and releases infinite subtle rays, penetrating the Pool of Essence."

ANGLE OF THE BIG DIPPER

In ancient Chinese mysticism, the Big Dipper represents the foundational base for the "Gate of Access," which is considered the spiritual passageway between life and death. Through this gate the individual may obtain knowledge and insight concerning past, present, and future events. The ancient Daoists believed that the Heavenly Gate of Destiny or Life (Mingmen of Heaven) is located in the direction that the handle of the Big Dipper is pointing. In ancient China, the tip of the Big Dipper handle was sometimes called the "horse," because it leads the novice (the rider) to the Heavenly Gate of Destiny. The location of the Heavenly Gate of Destiny indicates the directions from which prayers and blessings are to be initiated,

and exorcisms performed. It is also considered the place from which the soul of a deceased person can escape from the underworld.

As the Earth orbits the Sun, the angle at which the Big Dipper can be viewed changes on a daily, monthly, and yearly basis (Figure 1.167). These changing angles correspond to the different cycles of the Moon as they are arranged in the Twelve Earthly Branches, and repeat themselves after completing an orbit (360° rotation of twelve Moon cycles). These twelve lunar cycles determine the twelve seasonal periods (Figure 1.168). The beginning part of each month marks the beginning of the seasonal periods of the Twelve Earthly Branches and the beginning of the energy cycle of that month.

When the Big Dipper points to a specific direction in accordance to the "lunar month," a practitioner can face the direction that the handle is pointing to invigorate internal energy. The Big Dipper is related to the energetic transformations of germinating, beginning, and growing.

SPIRITUAL POWER OF THE BIG DIPPER

The ancient Daoists believed that the Gate of Life/Destiny indicates the directions from which prayer is to be initiated and is also the place through

Figure 1.168. The beginning of the seasonal periods of the Twelve Earthly Branches and the twelve Moon cycles is determined by the angle of the Big Dipper.

which the soul of a deceased individual could escape the underworld. The Gate of Life/Destiny is found in different locations during the various times of the year (Figure 1.169 through Figure 1.172).

Because the Gate of Life/Destiny is located at the exact point of the tip of the handle of the Pole Star constellation, it also indicates the precise directions from which the Daoist Mystic would gather his or her celestial energy in the form of Thunder Magic cultivation.

Furthermore, the ancient Daoists also believed that the Stars of the Big Dipper move in the center of the Heavens and look down to control the four directions, four seasons and Five Elements. In ancient times, there were three specific kinds of spiritual practice centered around the Stars of the Big Dipper, described as follows:

1. The first consists of invoking its power for protection by having the celestial stars surround and cover the body with divine light.

2. The second consists of ascending into it in order to access the infinite knowledge contained within the realm of Big Dipper.

3. The third involves gathering the star's essence or star cream into the body to energize the Nine Chambers of the Three Dantians.

In ancient China, the Big Dipper was considered the bridge between the energies of the Sun, the Moon, and the source of "10,000 things." According to the *Seven Slips of a Cloudy Satchel*, "the Nine Stars are the luminous root of the Nine Heavens, the bright bridge of the Sun and Moon, and the ancestral abyss of all things." The Sun and Moon are together considered to create a bipolar energy field, whereas the Big Dipper is considered unipolar. The Sun corresponds to the Heart and Fire energy, which is related to the front area of the body. The Moon corresponds to the Kidneys and Water energy, which is related to the back area of the body. The Big Dipper corresponds to

Figure 1.169. In the Shen, Zi, and Chen months (known in Daoist Mysticism as the months of the Middle Original) the tip of the Big Dipper handle points to Yin and the Spirit passes through the Gate of Life/Destiny through Mao. The Three Evil Breaths located at the open top of the Dipper are at Si, Wu, and Wei.

Figure 1.170. In the Yin, Wu, and Xu months (known in Daoist Mysticism as the months of the Supreme Original) the tip of the Big Dipper handle points to Shen and the Spirit passes through the Gate of Life/Destiny through Yu. The Three Evil Breaths located at the open top of the Dipper are at Hai, Zi, and Chou.

Figure 1.171. In the Si, You, and Chou months (known in Daoist Mysticism as the months of the Lower Original) the tip of the Big Dipper handle points to Hai and the Spirit passes through the Gate of Life/Destiny through Zi. The Three Evil Breaths located at the open top of the Dipper are at Yin, Mao, and Chen.

Figure 1.172. In the Hai, Mao, and Wei months (known in Daoist Mysticism as the months of the Upper Original) the tip of the Big Dipper handle points to Si and the Spirit passes through the Gate of Life/Destiny through Wu. The Three Evil Breaths located at the open top of the Dipper are at Shen, You, and Xu.

Figure 1.173. The Big Dipper is considered a reservoir of heavenly energy, collecting Qi from all of the other stars and constellations as it moves through the sky.

the Spleen and the center Earth Element, which is related to the Taiji Pole.

The energy from the Stars of the Big Dipper can also be used to balance the body's Five Agents (stored within the body's Five Yin Organs) and can be arranged internally to enhance perception of space and time. The Seven Po are also said to relate to the seven Stars of the Big Dipper.

THE STARS OF THE BIG DIPPER

The "Steps of Yu" enacted a Daoist sorcerer's magical journey from star to star through the various realms of the Northern Dipper. This sacred journey began with the "First Star" (located on the outer lip of the bowl of the Dipper), and continued to the last star, ending at the Celestial Gate (located on the very end of the handle).

The ancient Chinese believed that each person was born under the protection of one of the spirits who reside in each star of the Big Dipper. When pacing the "Steps of Yu," the sorcerer would therefore stop at each star and invoke the spirit's magical name, using the appropriate Words of Power in order to open each magical Seal. The ancient Daoists believed that there was a energetic memory encoded and contained within this magical ritual, allowing the Words of Power to automatically trigger and open the energetic portal of each star's celestial Gate.

As this encoded memory begins to awaken the deepest layers of the sorcerer's unconscious mind, it eventually works its way upward into his or her consciousness. Once the conscious mind experiences this spiritual awakening, the sorcerer's Spirit Body begins to conform itself around this encoded memory. At that moment of recognition, the sorcerer's Yang Body begins to absorb and envelop itself in the energetic material of the stars. Then, the sorcerer's Yang Body along with his or her consciousness begins to separate itself from its attachment to the dense energetic form of the Yin Body, and Soul Travel is manifested.

The names of the Big Dipper stars and their planetary correspondences are described as follows (Figure 1.173):

- **The First Star in known as the "Clarity of Yang:"** It is the star located at the lip of the Dipper's bowl, and it is sometimes called "The Pivot of the Sky." In the ritual of "Walking the Dipper," the sorcerer begins at the midnight hour, starting at the "Clarity of Yang," when the Yang energy begins to rise.

This star is also known as "The Gate of the Moon," and it represents entry into the spirit realm. When working specifically with just the "Clarity of Yang" star as a magical portal, the altar should face the North. It is also important

that the magical Seal used to open the celestial gate be engraved onto a silver talisman, during one of the three days of the Full Moon, and that no sunlight ever be permitted to shine onto this Seal. The incense used to access the spirit realm of the First Star is Camphor.

- **The Second Star** is known as the “Essence of Yin.” It is the star located at the outer bottom edge of the Dipper’s bowl, and it is sometimes called “The Revolver of the Sky.” This star is also known as the “Gate of Mercury.”
- **The Third Star** is known as the “True One.” It is the star located directly on the “floor” of the Dipper’s bowl, just before the star known as the Underworld, and it is sometimes called “The Rotator of the Sky.” This star is also known as the “Gate of Venus.”
- **The Fourth Star** is known as the “Underworld.” It is the star located at the outer edge of the Dipper’s bowl, and it is sometimes called “The Lever of the Sky.” This star is also known as the “Gate of the Sun.” It is considered to be the energetic portal to the “land of the Midnight Sun,” and was sometimes known by the name “Mysterious Darkness” and “Black Obscurity.”
- **The Fifth Star** is known as the “Red One.” It is the star located on the Dipper’s panhandle, and it is sometimes called “The Balance of the Sky.” This star is also known as the “Gate of Mars.”
- **The Sixth Star** is known as the “Northern Bridge.” It is the star located on the Dipper’s panhandle, and it is sometimes called “The Generator of the Sky.” This star is also known as the “Gate of Jupiter.” The Northern Bridge leads directly to the Celestial Gate. It also contains an “invisible” star that orbits the Northern Bridge.
- **The Seventh Star** is known as the “Celestial Gate.” It is the star located on the tip of the Dipper’s panhandle, and it is sometimes called “The Harmonizing Light of the Sky.” The Celestial Gate provides the Daoist sorcerer with the final entrance to the celestial realms. This star is also known as the “Gate of Saturn.”

Figure 1.174. The ancient Daoists would sometimes use the energy of the Big Dipper for invoking its powerful protection.

USING THE DIPPER STARS FOR PROTECTION

One method used in ancient China for invoking the powerful protection of the Big Dipper energy is for the individual to cover him or herself with the Stars of the Big Dipper. This was accomplished by first surrounding the body’s outer energetic field with the four primary directions of the Earth Qi, then surrounding the central internal organs and energetic fields with the energy of the Postnatal Eight Trigrams.

Next, visualize the Big Dipper Stars descending from the Heavens and arranging themselves in a specific order around the center Taiji Pole of the body’s core (Figure 1.174). After the inner core has been filled with the celestial power emanating from the Big Dipper Stars, the individual can be further protected by arranging the Stars in four specific ways:

- Shining above the individual’s head, saturating through his or her entire body
- In front of or behind the doctor’s body and radiating through his or her tissues

- Vibrating the nine chambers within the individual's Three Dantians
- As a celestial receptacle, with the bowl of the Dipper in the Lower Dantian in order to receive celestial light and the handle along the spine to strengthen one's destiny and virtue

The doctor imagines placing the stars of the Big Dipper into the center of his or her body. The Stars' energetic function is to govern the front, back, right, and left of the body, thus regulating the individual's Yin and Yang energy. The Stars' energetic function can also be used for absorbing energy from the four seasons into the individual's body.

Usually, meditations dealing with gathering energy from the Sun and Moon are followed by meditations involving the Big Dipper to further stimulate and energize the body's energetic fields. The Stars of the Big Dipper are also considered to be responsible for opening the seven orifices of the embryo's body, and for giving the embryo life. These stars also correspond to the Nine Chambers in the Three Dantians and the seven primary chakras.

The ancient Zheng Yi Daoists also believed that the Nine Emperors of the Dao Body (Heavenly Emperor, Purple Subtlety, Lusty Wolf, Giant Gate, Store of Wealth, Civil Chief, Pure and Chaste, Military Chief, and Troop Destroyer) were connected to the Nine Stellar Sovereigns of the Big Dipper.

THE NINE DARK STARS OF THE BIG DIPPER

The ancient Daoists also believed in the existence of certain "anti-stars," stars that could not be seen with the eyes but existed as counterparts to the visible stars. They therefore positioned the existence of these invisible Dipper stars around the location of the visible stars.

Just as there were invisible stars forming and invisible Dipper, so are there invisible planets forming an invisible solar system. The magical rituals employed by the ancient Daoists to summon the forces of these stars also work to summon the invisible forces into the sorcerer's own body.

According to ancient Daoist texts, the nine stars of the Big Dipper constellations are doubled in number by virtue of their association with a

Figure 1.175. The Big Dipper, surrounded by the Dark Stars and Preceded by the Three Terraces

group of nine dark stars, which cast a "black light," or "light that does not shine." This is a type of sacred darkness floating around the North Pole. The black light is also associated with the "floating darkness" where nothing external or internal can be seen.

These nine dark stars are actually the stars of the celestial Hun and Po, or Ling Ming (Magical Light) wherein female deities known as the "Nine Empresses of the Great Yin" dwell (Figure 1.175). The Nine Empresses of the Great Yin are associated with the condition of *Wu Wei*, in which the forces of nature are gathered and hidden. They were also believed to assist the Daoist adept in the art of advanced physical, energetic, and spiritual transformation.

In ancient times, the Daoist adepts would direct the focus of their prayers and meditations toward these nine female deities in order to acquire the power of invisibility. Some of their names include, "She Who Hides by Transformation and Escapes into the Origin," "She Who Hides Her Traces and Disperses Her True Form," and "She Who Changes Her Body and Transforms Her Brilliance."

Within the physical body, these nine dark stars correspond and dwell within the Ming Tang of the Upper Dantian, while the nine visible stars of the Big Dipper correspond and dwell within the Heart and Middle Dantian.

Figure 1.176. The ancient Daoist believed that the Pole Star was the absolute center of the Heavens. Pictured here (through time-lapse photography) the stars seem to trace concentric circles around the Pole Star.

THE POLE STAR AND THE BIG DIPPER

In 3000 B.C., the Celestial North Pole pointed to the star Thuban, in the constellation known as “Draco,” or the Dragon. Draconis was considered to be the most important constellation at that time, and it seemed to pivot around the Heavens via one of its own stars, Thuban (also known as Alpha Draconis). Over time, the gradual change from Draconis to the Great Bear (Big Dipper) signified a energetic shift that occurred on the planet many centuries ago.

Currently, the Celestial North Pole corresponds to an area in space very close to the star known as Polaris (the North Star). According to ancient Daoist texts, the Pole Star (North Star) is the absolute center of the Heavens (Figure 1.176). It was further believed that the Pole Star axis, stemming from the North Star, traveled downward from the center of Heaven to connect with the Earth’s center core through the North and South poles. The North pole was regarded as the peak (or Baihui) of the Earth, and was believed to be comprised of seven Stars, composing a fifth realm (differentiated from the Four Directions of Heaven).

The energies of each of the four directional animals and their seven constellations moved around the Earth’s central Pole to create the Five Element changes in weather. If the weather changes progressed in their expected order, they

were considered normal; however, if the weather transition occurred either earlier, later, stronger, or weaker than expected, it was considered to be an environmental Evil Qi.

Therefore, the ancient Chinese believed that one could predict the changes of weather by studying the interrelationships between the Five Elements and the cycles of the Sun, Moon, the Pole Star, the Five Planets, and the Twenty-Eight Constellations.

BIG DIPPER STEPPING PATTERNS

The Big Dipper is also called the “Celestial Matrix” and the “Earthly Pattern.” Therefore, the basic function of Pacing the Dippers is to symbolize leaving the Earth and crossing over the “Nine Quarters” of the Nine Heavens, patrolling the universe, and flying over the realm of the Immortals. Once the priest has entered into the celestial realm, he or she can receive assistance in prohibiting evil things, and controlling evil spirits. The Steps of Yu and the Pacing of the Big Dippers also had the additional function of creating supernatural powers, and enhancing the ability to prohibit and control spirit entities.

Within the course of their development, the specific functions of the stepping patterns became specialized. Some of the stepping patterns were mainly practiced in order to allow the mystic the ability to fly over the Nine Heavens, others were specifically used to control the spirits. For example:

- The pacing of the Dipper for “Destroying Hell and Invoking Thunder,” was used as a skill in Thunder Magic. The stepping pattern was believed to be able to remove the Yin Vital Breath from the body and allow the disciple to be able to discharge Yang spiritual power (causing the frightening sound of thunder to be heard).
- Pacing the “Dipper of Spirit Possession” as a exorcistic skill for “Summoning and Interrogating Spirits” caused the spirit to attach itself to a specified children medium or other designated individual.
- The “Pacing The Numinous Dipper of the Divine Tiger of the Life-invoking Roar” was

Figure 1.177. The Seven Stars of the Northern Dipper can be accessed through the mystic's left hand.

used in order to invoke the Divine Tiger General, who pursued and controlled souls lost in the darkness. This stepping pattern was commonly used when performing the ritual of "Refinement and Salvation for Destroying the Darkness."

- Dipper pacing can also be performed in order to access the Nine Quarters (Nine Continents) of the Earth. In ancient times, the Nine Quarters referred to the nine distinct regions of Earth: Yong, Liang, Yan, Yang, Qing, Xu, Yu, and Ji, which surrounded the "center" kingdom of ancient China. By symbolizing the entire country while pacing the Nine Quarters, the ancient Daoist mystic was able to spiritually travel and energetically patrol all the land on the Earth.

The foundation of Daoist magic lies in the ability to transform and use supernatural powers while controlling the resulting energetic changes with the aid of supernatural forces (via the Celestial Immortals who live within the Heavens or within the Immortal Mountains). A Daoist mystic must also develop powerful supernatural abilities if he or she desires to enter the supernatural world. Pacing the Dipper was thought to be an effective "tool" in helping the Daoist priest enter into the realm of the Immortals.

Figure 1.178. The Pacing of the "Big Dipper of the Mysterious Pivot"

PACING THE BIG DIPPER AND HAND SEALS

The Pacing the Big Dipper is usually practiced together with specific Hand Seals (refer to Figure 1.177). It is said that during the Tang Dynasty (618-907 A.D.) and the Song Dynasty (960-1279 A.D.), there were over 700 kinds of Steps of the Big Dipper and Hand Seal patterns.

In spite of the huge variety of stepping patterns, there are only a few types of magical skills conjured from the Pacing the Big Dipper that are commonly used in Daoist mysticism. The most common stepping pattern used when Pacing the Big Dippers is called the "Big Dipper of the Mysterious Pivot" (Figure 1.178). In this particular stepping pattern, there are only seven Dipper stars used. The names of these stars are used as the names of each steps while pacing forward, and the names of the stars' Rulers (the controller over the stars' specific power) are used as the names of each steps while pacing back.

In the Eastern Han Dynasty (25-220 A.D.), the *Tradition of the Mighty Commonwealth of Orthodox Oneness* taught the "Three-Five Big Dipper Register," which describes the skills of the Pacing of the Dippers of the East, South, West, North and Center. Later the "Skills of Pacing the Dippers of the Twenty-Eight Constellations" (Figure 1.179) and the "Five Big Dippers of the Sun and the Moon" were commonly used in the Zheng Yi traditions.

Figure 1.179. The Three-Five Big Dipper Stepping Patterns of the Twenty-Eight Star Constellations

SEVEN STAR STEPPING PATTERNS

The ancient Chinese divided the Heavenly energy of the cosmos into different classes of Yin and Yang: the Sun was seen as being the essence of Yang, the Moon as being the essence of Yin, and the Stars as being a combination of both Yin and Yang. The Stars were believed to have a great influence upon the energetic matrices of Earth and Man. The term "Stars" in ancient China referred to the visible stars in the Northern Hemisphere; namely the Big Dipper, Polaris, the five planets and the twenty-eight star constellations.

The pure aspects of these Stars were believed to form the universal patterns that are responsible for the manifestation of form and matter. Thus, the ancient Chinese also believed that everyone was born under the guardianship of the Stars. Certain Stars would have a great influence over an individual's life, determining whether he or she would be born as a human or animal, live long or die young, be rich or poor, etc.

The following stepping patterns are based on the placement of the various star constellations.

Figure 1.180. The "Big Star Stepping"

These various stepping patterns are attributed to the "star powers" of the twenty-eight celestial mansions and their movements within the Heavens.

"BIG STAR STEPPING"

This Stepping Pattern uses the stars to summon the magical help of Celestial Immortal Ne Zha (The Fire Wheel Child). According to legend, the Celestial Immortal Ne Zha, riding on his fire wheels can travel everywhere (over rivers and seas, Heaven and hell, etc.) making his task of fighting evil much easier (Figure 1.180).

The Jade Emperor honored him and conferred upon him the title "First Leader of the 36 Immortal Warriors, the Heavenly Marshal who guards the Gates of Heaven."

Figure 1.181. Seven Star Stepping #1:
"Summoning the Immortal Ne Zha" Stepping

SEVEN STAR STEPPING #1:

"SUMMONING THE IMMORTAL NE ZHA" STEPPING

This Stepping Pattern uses the stars to summon the magical help of Celestial Immortal Ne Zha (The Fire Wheel Child). According to legend, the Celestial Immortal Ne Zha, riding on his fire wheels can travel everywhere (over rivers and seas, Heaven and hell, etc.) making his task of fighting evil much easier (Figure 1.181).

This stepping pattern is performed while reciting the following incantation:

**"My body raises up
to offer respect to
the Big Master Teacher
Who Leads the Ghosts"**

SEVEN STAR STEPPING #2:

"REMOVING THE EVILS" STEPPING PATTERN

This Stepping Pattern is used to capture and remove demons and evil spirits (Figure 1.182).

This stepping pattern is performed while reciting the following incantation:

**"I summon
the White Yi
of the Great Heaven
to capture and remove
the demon hoards"**

Figure 1.182. Seven Star Stepping #2:
"Removing The Evils" Stepping

Figure 1.183. Seven Star Stepping #3:
"Summoning the Magical Officers" (First Version)

SEVEN STAR STEPPING #3:

"SUMMONING THE MAGICAL OFFICERS" (#1)

This Stepping Pattern is used for the purpose of summoning the magical help of the Celestial Marshal Generals and their Celestial Soldiers (Figure 1.183).

This stepping pattern is performed while reciting the following incantation:

**"Dispatch the order
and summon the Heavenly Fire
that Demands Respect
and Commands Victory"**

SEVEN STAR STEPPING #4:

"SUMMONING THE MAGICAL OFFICERS" (#2)

This Stepping Pattern is used for the purpose of summoning the magical help of the Celestial Marshal Generals and their Celestial Soldiers (Figure 1.184).

This stepping pattern is performed while reciting the following incantation:

**"With the Fire of Thunder
and My Penetrating Shout
I cause the Heavens and Earth to Move"**

SEVEN STAR STEPPING #5:

"SUMMONING MARSHAL YIN" STEPPING

One example of a general ritual used for summoning Celestial Marshal General Yin to Bind Evil Spirits and Demons is described as follows:

- First, the Daoist disciple transforms his body into that of a Hua Shen ("Immortal Deity"). Next the disciple gathers the energy of his Prenatal Wu Jing Shen (i.e., the spiritual energy of his Five Yin Organs) to merge with his original soul energy (Ling Shen). Both energies are combined in order to form the "true spirit body" (also known as the "Golden Luminosity" body).
- The disciple begins to circulate the spiritual energy by transforming his tissues through the alchemy of mind and respiration. As this circular process continues, the disciple will imagine the exteriorizing of the deities within (by breathing out) and the interiorizing of the Golden Luminosity (by breathing in). The disciple will continue in this manner until he transforms the his body and mind into the spiritual state of an immortal, known as the "Mysterious Lord" (Xuan Di). As the Mysterious Lord, the disciple now has the spiritual status and power to communicate with and summon Celestial Marshal General Yin (or any other celestial deity).
- Next, the disciple purifies the brush used for writing talismans and focuses his attention onto the celestial name of the deity he wishes to summon (Marshal General Yin). The disciple then performs the Seven Star Stepping Pattern for "Summoning Marshal Yin" (Figure 1.185), while saying the following incantation:

Figure 1.184. Seven Star Stepping #4: "Summoning the Magical Officers" (Second Version)

Figure 1.185. Seven Star Stepping #5: "Summoning Martial Yin" Stepping

**"With deep respect I reach
and completely receive
the Magical Power of the Black Ink"**

- On a three and one-half meter blue banner (whose bottom end has been cut into five pennant-shaped ribbons and weighted with small stones), the disciple will draw a large talisman associated with Celestial Marshal Gen-

Figure 1.186. General Yin's Talisman:
Used for Binding Evil Spirits and Demons

eral Yin (Figure 1.186). Marshal General Yin is considered to be the "Star God of the Center Sky," and is summoned from the "Earthly Palace of Supreme Age."

- On the bottom of the large talisman, the disciple then writes in smaller characters the specific talismans associated with several dozen deities and tens of dozens of celestial names in an effort to summon all these celestial deities to attend the ritual.
- The disciple will write each name, one after the other, on top of one another (so as to form a dense circle of black ink at the bottom of the large talisman).
- After writing these names, the disciple then writes a talisman on the ends of each of the five pennants on the bottom of the banner.
- The ceremonial master and his acolytes will then hoist the banner on the end of a 10-meter bamboo pole.
- Charged with talismans and celestial names that have been written by a disciple with spiritual power, the banner waves in the wind, and

INCANTATIONS, HAND SEALS AND STAR STEPPING

Figure 1.187. Seven Star Stepping #6:
"Southern Star" Stepping

summons Celestial Marshal General Yin and the rest of the celestial deities to the altar space.

- When Celestial Marshal General Yin arrives, he ties into knots the pennants at the end of the banner. This energetically symbolizes that he has responded to the summons.
- After all five pennants are securely knotted, the banner is taken down and placed in the center of the main altar.
- Through the use of the Talismanic Brush, Breath, Hand Seal, Star Stepping, Incantation and Banner, the disciple (having become a deity) is now able to summon the celestial Marshal Generals and other deities.

SEVEN STAR STEPPING #6: "SOUTHERN STAR" STEPPING

This Stepping Pattern is used to capture evil spirits or demons (Figure 1.187). The ancient Chinese believed that the energy of the Southern Dipper was in charge of life, while the energy of the Northern (Big) Dipper was in charge of death. While the Northern Dipper represents the realm of the Underworld, the Southern Dipper leads the skillful practitioner to eternal life. Therefore, the celestial deities of the Northern Dipper are invoked in order to help the disciple pass for registration in the Southern Dipper, where the true registers of immortality are kept.

This stepping pattern is performed while reciting the following incantation:

**"I Summon the White Yi
of the Wood Element
to secretly persuade the masses"**

SEVEN STAR STEPPING #7:**“NORTH STAR” STEPPING**

The Northern Dipper (also known as the Northern Bushel, Big Dipper, and Ursa Major) was and is the central object of important visualization techniques in Daoist mysticism (as well as being one of the main celestial divinities). It is the center and source of all things, establishing the inherent order of the universe and foundation of the world. The Dipper is seen as the pivot of all creative transformations. It is the vertical axis of the universe that is aligned with the Spleen and Yellow Court in the human body. It establishes the rhythms of the seasons, distinguishes good and evil and controls good fortune and disaster.

Most importantly, the Northern Dipper is seen as the “Gate of Access” to the Heavens. Believers must invoke its divinities to pass from death into life. The ancient Daoists believed that in order to live longer, an individual needed to pray to the Immortal of the Big Dipper to take one's name off the Death Registration.

The Dipper is the symbol and home of the Great Unity, the Daoist god “Taiyi,” and is part of a triad formed between the Sun, Moon and Stars. The Northern Dipper is made up of 9 stars (2 of which are visible only to skillful practitioners), each star inhabited by a particular male divinity. In addition, each star in the Dipper has a corresponding location in the human body. For example, the first star is located in the Heart.

Moreover, the Northern Dipper has beside it a corresponding counterpart/mirror image made up of “Black stars.” The spouses of the male divinities of the Northern Dipper live in these stars. This “black” constellation forms the material and spiritual soul of the Northern Dipper (Figure 1.188). In the *Bu Tiangan Jing* (Scripture on Pacing the Heavenly Guideline), stars of the Dipper are known by the following names: Yangming (Yang Brilliance), Yinjing (Yin Quintessence), Xuanming (Mysterious and Dark), Danyuan (Cinnabar Origin), Beiji (Northern Culmen), Tianguan (Heavenly Gate), and are joined by two “dark” stars that serve as the Hun and Po souls of Dipper (Fuxing and Bixing) which help form an esoteric “outer” Bushel.

Figure 1.188. The Big Dipper, surrounded by the “Black Stars” and preceded by the “Stars of the Three Terraces”

Figure 1.189. Seven Star Stepping #7: “Northern Star” Stepping

This Stepping Pattern is used to remove, evict, and capture evil spirits and demons (Figure 1.189). This stepping pattern is performed while reciting the following incantation:

**“The White Yi of Heaven
Secretly Persuades the Masses
to Purify their Spirit”**

Figure 1.190. Seven Star Stepping #8: "Escorting and Sending" Stepping

**SEVEN STAR STEPPING #8:
"ESCORTING AND ASCENDING" STEPPING**

This Stepping Pattern is used for escorting and sending the official reports to the Heavens (Figure 1.190).

This stepping pattern is performed while reciting the following incantation:

**"The Receptacle of the Heavenly Ding
Falls Auspiciously onto those
in the Divine State of Mysticism"**

**SEVEN STAR STEPPING #9:
SUMMONING THE MAGIC TIGER STEPPING**

This Stepping Pattern is used to summon the Celestial General's Magic Tiger (Figure 1.191).

The ancient Chinese considered the Tiger to be the prince of the wild mountain beasts (the four stripes on his forehead form the character "Wang," or Prince), believing that "its powerful roar stirs up the wind in the valley." It is the magical animal which signifies the Yin that calls forth the actions of the Yang, therefore tiger talismans are used to keep away disease and evil, and its images are painted on the walls of homes and temples to keep away evil spirits.

The tiger is also associated with autumn, when it comes down from the mountains into villages, and is personified by the constellation Orion, which is prominent in autumn. Immortal deities who ride on the back of tigers include:

Figure 1.191. Seven Star Stepping #9: "Summoning the Magic Tiger Stepping"

Figure 1.192. Zhang Daoling, the First Celestial Master of the Zheng Yi Daoist Sect

- **Zhang Daoling:** Zhang Daoling (the First Celestial Master of the Zheng Yi Daoist sect), is depicted as riding a tiger and carrying a demon-dispelling sword as he escorts the dead to their final destination (Figure 1.192).
- **The God of Wealth:** The God of Wealth, Marshal Chao Gongming, is depicted as riding a black tiger while holding a silver ingot.
- **The Goddess of the Wind:** The Goddess of the Wind, Feng Po-po, symbolizes the elements of air and water, storms, precipitation and moisture. She is depicted as an old, wrinkled woman, sitting on the back of a tiger, riding on a path made of clouds.

The tiger represents the greatest earthly power as well as protection over human life. It chases away the "Three Disasters" (fire, thieves and ghosts). As the enemies of evil spirits, especially those who torment the dead, tigers are carved on tombs and monuments.

This stepping pattern is performed while reciting the following incantation:

**"Transform the Original Flying Li
of the Heavenly White Star
and fly to the finish"**

NINE TRACES OF THE BIG DIPPER

The Daoist Book of the *Flowing Drops of the Golden Lock* states that the Big Dipper was the Middle Dipper (which was a star). As the Middle Dipper descended, it became the Nine Souls (which inhabit the Nine Palaces). In order to fuse the spiritual powers of these Nine Souls, the nine traces are performed when Pacing the Dipper (these are demonstrated by following the nine patterns of the Big Dipper stars). It is important to note that the nine traces are represented by the seven stars of the Big Dipper, plus the two extra Dipper stars "Fu" and "Bi."

It is also believed that the original Steps of Yu and the pacing of the Big Dipper corresponded to the energetic and spiritual powers contained within the Nine Palaces and Eight Trigrams. In ancient China, this was called "the three steps and the nine traces which construct the Kan (Water) Trigram and the Li (Fire) Trigram."

Figure 1.193. In ancient China, the Post-Heaven Bagua pattern of the "Magic Square" was superimposed on the left palm allowing the Daoist mystic the ability to summon and gather the energetic and spiritual powers of the Bagua into his or her body.

A common diagram used as a template for stepping in the Nine Palaces and Eight Trigrams, is the "Great River Chart Dipper of the Open Valley" diagram, which was originally used as the stepping pattern diagram of the Big Dipper. The seven stars of the Dippers and the two stars Fu and Bi compose this Big Dipper Diagram, and are regulated by the Post-Heaven positions of the Bagua (Eight Trigrams) listed on the "River Chart" (Figure 1.193). There are two specific types of stepping patterns displayed:

- **Kan (Water) Trigram Stepping Pattern:** This pattern is used after the Winter Solstice. At the time of the Winter Solstice, Yang energy is born, and subsequently increases its power each day. During this time period, the ritual master starts from the Kan (Water) Trigram and moves to the Li (Fire) Trigram.
- **Li (Fire) Trigram Stepping Pattern:** This pattern is used after the Summer Solstice. At the time of the Summer Solstice, Yin energy is born, and subsequently increases its power each day. During this time period, the ritual master moves from the Li (Fire) Trigram to the Kan (Water) Trigram.

Because the original three steps and nine traces of the Steps of Yu were thought to have the shape of the Big Dipper, they were associated with Pacing the Big Dipper. Later, the original "Steps of Yu" was diversified into different types of stepping patterns (i.e., the "Twelve Traces" and the "Three-Five Traces"). Since there are so many kinds of Big Dipper diagrams and patterns, new Dipper steps were constantly created and compiled based on specific ritual contents, needs and functions. In modern times, there are now many names given to these star stepping patterns

THE NINE PALACES OF HEAVEN

Each of the nine numbers listed on the "River Chart" represent one of the nine areas of the Heavens or the Nine Palace Constellations (Figure 1.194). The following is an explanation of the energetic natures of the Nine Stars, as well as their specific Elements and divinational forecasts:

1. **Tian Peng (Water Element):** This star corresponds to Kan Trigram. It energetically has a

Figure 1.194. The "River Chart"

- close connection to the occurrence of theft, and it is therefore considered to be an inauspicious star. When the Tian Peng star falls in one palace, people should construct dams, defence facilities, or strengthen the stronghold in order to prevent calamity from happening. It is also not a good time to travel far or conduct business (due to the potential of theft).
2. **Tian Rui (Earth Element):** This star is Yin, and it has a close connection with epidemic. It is sometimes called the disease star. When the Tian Rui star stays in one palace, people should receive teachings or admonishment, make friends, stay in the original place, abstain from the deployment of armed forces, not marry, and avoid quarreling, traveling, new construction, etc.
3. **Tian Cong (Wood Element):** This star is Yang, and it has a close connection with kind donations, doing kind deeds, and agricultural activities. It is considered to be an auspicious star. When Tian Cong dwells in one palace, it is considered to be a good time for military action, battle or fighting.
4. **Tian Fu (Wood Element):** This star is Yang, and it has a close connection with cultural education. It is considered to be a very auspicious star. When Tian Fu dwells in one palace, it is auspicious for traveling, business, marriage, construction, studying, and elevating one's social status, as well as for cultural and educational development.

5. **Tian Qin (Earth Element):** This star is Yang, and it is considered to be auspicious for all things because it dwells in the "Central Earth Palace" which can give rise to all.
6. **Tian Xin (Metal Element):** This star is Yin, and it has a close connection with leadership capability, scheming, treatment of disease, and military deployment. It is considered to be an auspicious star.
7. **Tian Zhu (Metal Element):** This star is Yin, and it has close connection with killings, strange things, mysterious matters, damage and destruction. It is considered to be an inauspicious star. When Tian Zhu falls in one palace, people should strengthen their garrison, train their forces, and prepare for the bad times. It is not a good time for traveling far or doing business, otherwise loss, injury and unfortunate things will happen.
8. **Tian Ren (Earth Element):** This star is Yang, and it is considered to be an auspicious star. When Tian Ren dwells in one palace, it is a good time for offering teaching to the general public, pacifying individuals, and cracking down on rebellious individuals or gangsters. It is also an auspicious time for business, marriage and social status.
9. **Tian Ying (Fire Element):** This star is Yin, and it has a close connection with outrageous behavior, heated situations, fire, and blood. It is considered to be a neutral star. When Tian Ying dwells in one palace it is good for planning and visiting high officials. However, it is not an auspicious time for making fortunes, social status possession, marriage or travel.

INCANTATIONS FOR THE NINE PALACES OF HEAVEN

In ancient China, the ritual master would recite specific incantations while pacing any one of the nine magical stars, pointing out the direction in which he is moving, reciting the symbolic meaning of the specific Dipper and manifesting the power of his magic skill. For example, the incantation used when pacing the Dipper after the Winter Solstice says:

**"The Dipper is sublime
at the 12 two-hour periods,
Therefore I take the Big Dipper
flying over to exhibit mighty power
with Vital Breath like the clouds.**

**The seven stars move
to interact with the Heavens,
so that we know the changes
of good or ill luck.**

**Pacing the Dipper by its rhythms,
I move into the Dipper,
and through the 28 Constellations,
through the Heavenly Pass
with the changing of time.**

**Moving from Tianying up to Tianren,
I feel cold as if the land
has sunk down into a deep valley.**

**Leaning by Tianzhu and bracing Tianxin,
I ascend to Tianqin from Tianxin.
I pass by Tianfu and look at Tianchong,
going into Tianrui and out of Tianfeng.**

**The passage of the Dippers is open,
and the strong and weak
mutually assist each other.
Happiness and good fortune are increased
and are passed on to the descendants.**

**I have stayed in the darkness
for hundreds of years.
I follow your steps after the Yang.**

**The Dipper of the Open Valley is divine,
so that it can dispel the devils.
As a result, one can avoid the evils
at the mouth of the Dipper.**

**Quickly, quickly,
In accordance with
the statues and ordinances!
Act as this is my command!"**

Through understanding this ancient Daoist incantation, we may see that Pacing the Big Dipper mainly symbolizes flying in the Heavens, with the supernatural function of dispelling disasters and avoiding evils. The Dipper of the Twenty-

Eight Constellations and the Five Big Dippers of the Sun and the Moon represent certain mystical areas of Heavens. The ritual master visualizes these celestial scenes while pacing the Dipper steps.

OFFERING INCENSE WITH "THE DIPPER OF BRIGHT STARS AND PEARLS" INCANTATION

Each time the Daoist priest offers incense at the Central Altar, he or she will perform the "Dipper of Bright Stars and Pearls" stepping patterns. These stepping patterns can be paced in either of two ways; through the "Eight Stepping Patterns" or through the "Three Stepping Patterns."

As the Daoist paces through these steps, and offers the incense, he or she will recite the following incantation:

**"The imperial order of Jade Clarity is simple,
with the separate images
of the Great Divine.**

**The original Dippers
are flowing and changing with the stars
and pearls over and around them.**

**Quickly, Quickly,
In accordance with the statues and
ordinances as the imperial order"**

While reciting the incantation, the ritual master visualizes the three magical realms of the Jade Clarity, Supreme Clarity, and Highest Clarity, where the Immortal Gods of the Three Pure Ones reside.

The incantation of "Pacing the Big Dipper" mentions that by burning the incense, the Daoist priest transforms the energy of normal starlight into spiritual power within the realm of the mortal world (the World of the Dead). The ancient Daoists believed that the priest could succeed in accomplishing such a supernatural task with the aid of speaking such an incantation.

NINE PALACE STEPPING PATTERNS

When the Eight Trigrams were arranged into a nine-chambered square pattern, with the center representing the magical "Bright Palace," it was commonly known as the "Magic Square." The

ancient Chinese attached great significance to this magical pattern, as it involved manifesting endless variations of mathematical calculations that could be used to explain the energetic flows of Heaven and Earth. So influential was this magical pattern that the Imperial Palace in China was divided into a Magic Square containing nine chambers. In each appropriate chamber, sacrifices were performed in accordance with the times and seasons of nature.

The "Nine Chambers of the Emperor's Palace," (or Nine Palaces) was first introduced publicly in ancient China in the *Book of Rites*. This ancient book described each celestial palace, with its unique color and time of season. The ancient system of "Nine House Divination" (based on the celestial patterns of the Nine Palaces) and the unique patterns of energetic interactions stemming from the "Magic Square" were also introduced to the public during this time period.

Nine Palace Stepping Pattern, also known as the "Walk of Taiyi Through the Nine Palaces," is represented by eight trigrams positioned around the center of the Luo Diagram. The esoteric rituals pertaining to this "Magic Square" configuration may be seen in the Celestial Masters *Shangqing Huangshu Guodu Yi* (Initiation Rite of the Yellow Writings), which consists of twenty ritual units to be performed by a male-female pair, literally pacing the Earthly Branches, the Five Elements, and the Nine Palaces on the cosmicized body of each of the partners.

During the Spring and Autumn Period (770-476 B.C.), the famous Daoist poet Lu Buwei wrote, "Heaven has nine fields, Earth has nine regions, the country has nine mountains, the mountains have nine passes." The ancient Daoist Star Stepping patterns follow these nine passes, allowing the sorcerer the ability to access the most subtle realms of Heaven and Earth.

According to the ancient writings on the *Xu Zhen Tu* (the Chart of True Cultivation), Heaven, Earth and Man are energetically joined in a continuous interaction of correspondences. These subtle correspondences relate to the esoteric patterns hidden within matter, energy, and spirit. For example, the "Nine Palaces" correspond to the

Figure 1.195. Nine Palace Stepping #1:
"Magic Square Stepping"

nine energetic influences of Heaven, the "Nine Continents" correspond to the nine energetic influence of the Earth, and the "Nine Orifices" correspond to the nine energetic influences of Man.

The following Nine Palace Stepping Patterns are arranged according to specific energetic patterns unique to the Magic Square and are practiced in order to allow the Daoist disciple access into the energetic realms of the Jade Emperor's "Nine Celestial Palaces."

NINE PALACE STEPPING PATTERN #1: "MAGIC SQUARE STEPPING"

This stepping pattern is traditionally used in Daoist rituals for the purpose of conjuring and summoning the specific powers of celestial Immortals, Planetary Immortals, Spirit Soldiers, etc. By following the Nine Palace stepping patterns, the disciple can progress into the most subtle realm of the celestial world (Figure 1.195).

As with all of the other stepping patterns, when using the Magic Square for attacking, defending, summoning, or dispatching, the disciple will eventually transfer the energetic pattern onto his or her left hand, in order to use the right hand to hold Daoist magical "tools."

Figure 1.196. Nine Palace Stepping #2:
"Hero Stepping (Nine Purple Stepping)"

Figure 1.197. "Nine Palace Stepping"

NINE PALACE STEPPING PATTERN #2: "HERO STEPPING (NINE PURPLE STEPPING)"

This stepping pattern is traditionally used in Daoist rituals for the specific purpose of sending a "Report" back to the Heaven. By following the Nine Palace stepping patterns, the disciple can progress into the most subtle realm of the celestial world (Figure 1.196).

This stepping pattern is performed while reciting the following incantation:

**"My hidden energy
flows like silk
It rushes to assist me
It leaves my stable heart and mind
allowing me to complete
a hero's task"**

NINE PALACE STEPPING PATTERN #3: "SENDING THE REPORT"

This stepping pattern is used in rituals in order to send reports back to Heaven (Figure 1.197).

TWENTY-EIGHT STAR CONSTELLATIONS

In China, manuscripts uncovered from the cave monasteries of Tun Huang have included some of the oldest star maps in existence. Since the year 2000 B.C., the ancient Chinese Qigong Masters have observed and used the energetic movements of the Twenty-eight Star Constellations, flowing in 24 hour cycles and yearly cycles. The ancient Chinese also placed careful attention on the Sun and Moon, and the Five Planets with the Chinese zodiac to forecast auspicious times for matters of state and war, and to predict weather and natural disasters. Each of these energetic systems has its own cyclic pattern, as well as a direct and indirect influence on human life.

The Chinese practiced gathering energy from the Heavenly Stars, believing that the study of astrology, like alchemy, united the body's inner world with that of the outer. According to ancient divination practices, the celestial bodies exert forces and exhibit personalities that influence people and events on Earth. A person's character and destiny throughout life is based upon the positions of the planets and constellations at the exact time and place of conception and birth. These influences can be determined by mapping the positions of the twenty-eight constellations in the sky at various times.

In ancient China, the Emperor was considered to be the high priest of the Heavens, and he frequently made sacrifices to the Stars to maintain harmony with the universe. The four corners of the Emperor's palace represented the cardinal points in space (the equinoxes and solstices). To be in harmony, the Emperor and his family would move from one corner to another as the seasons changed.

In ancient China, the Heavens were divided into 28 areas matched with 28 corresponding signs, which are called the constellations as the symbols of Heaven (7 constellations in each direction). The pacing of the Twenty-Eight Star Constellations therefore represents stepping within the 28 constellations, throughout the four directions of the Heavens.

STARS OF THE TWENTY-EIGHT CONSTELLATIONS

In ancient China, the Twenty-Eight Star Constellations (Xiu) were commonly observed as "Star Patterns" (Xingxiang), and were considered to be the eter-

	Jupiter	Mercury	Saturn	Sun	Moon	Mars	Mercury
East

North							
	Dou	Niu	Nu	Zu	Wei	Shi	Bi
West							
	Kui	Lou	Wei	Mao	Bi	Zu	Shen
South							
	Jing	Gui	Liu	Xing	Zhang	Yi	Zhen
	Thursday	Friday	Saturday	Sunday	Monday	Tuesday	Wednesday

Figure 1.198. The Seven Divisions of the Twenty-Eight Star Constellations Arranged According to Celestial Energies of the Five Elements and the Sun and Moon

nal abode of immortals and gods. Specifically, the gods of Prior Heaven were believed to live within the Twenty-Eight Star Constellations, at one with the eternal Dao. These gods were divided into three groups corresponding to Heaven, Earth and Man.

The ancient Chinese Daoists would thus use the Twenty-eight star constellations for summoning specific gods, immortals, and spirits. Generally, the Twenty-Eight Star Constellations were categorized by Heavenly divisions, each division containing several constellations associated with one of the Five Element phases, a ruling color, and one of the Four Palaces with its associated celestial animal spirit.

Each of the Twenty-Eight Star Constellation spirits has his or her own post, unit, and garrison name. The ancient Daoists would construct a Bagua circle consisting of twenty-eight "standards" from which to conjure the spirits from the Twenty-Eight Star Constellations. A "standard" is a list drawn on silk of each of the twenty-eight star constellations' energetic Elements, colors, and animals. A description of the "Seven Celestial Divisions" of the Twenty-Eight Star Constellations

arranged according to Celestial Energies of the Five Elements and the Sun and Moon is described as follows (Figure 1.198):

1. **These star constellation spirits are subservient to the Wood Element;** they are drawn on standards constructed of green/blue silk:
 - **The Jiao Constellation:** with the spiritual animal form of a Rain Dragon
 - **The Dou Constellation:** with the spiritual animal form of a Unicorn
 - **The Kui Constellation:** with the spiritual animal form of a Wolf
 - **The Jing Constellation:** with the spiritual animal form of a Wild Dog
2. **These star constellation spirits are subservient to the Metal Element;** they are drawn on standards constructed of white silk:
 - **The Gang Constellation:** with the spiritual animal form of a Dragon
 - **The Nui Constellation:** with the spiritual animal form of an Ox
 - **The Lou Constellation:** with the spiritual animal form of a Domestic Dog
 - **The Gui Constellation:** with the spiritual animal form of a Sheep (Goat)
3. **These star constellation spirits are subservient to the Earth Element;** they are drawn on standards constructed of golden-yellow silk:
 - **The Di Constellation:** with the spiritual animal form of a Badger
 - **The Nu Constellation:** with the spiritual animal form of a Bat
 - **The Wei Constellation:** with the spiritual animal form of a Ring-Neck Pheasant
 - **The Liu Constellation:** with the spiritual animal form of a Roebuck
4. **These star constellation spirits are subservient to the Sun;** they are drawn on standards constructed of dark, ruby-red silk:
 - **The Feng Constellation:** with the spiritual animal form of a Rabbit
 - **The Zu Constellation:** with the spiritual animal form of a Rat
 - **The Mao Constellation:** with the spiritual animal form of a Rooster
 - **The Xing Constellation:** with the spiritual animal form of a Horse
5. **These star constellation spirits are subservient to the Moon;** they are drawn on standards constructed of deep-blue silk:
 - **The Xin Constellation:** with the spiritual animal form of a Fox
 - **The Wei Constellation:** with the spiritual animal form of a Swallow
 - **The Bi Constellation:** with the spiritual animal form of a Crow
 - **The Zhang Constellation:** with the spiritual animal form of a Stag
6. **These star constellation spirits are subservient to the Fire Element;** they are drawn on standards constructed of purplish-red silk:
 - **The Wei Constellation:** with the spiritual animal form of a Tiger
 - **The Shi Constellation:** with the spiritual animal form of a Pig
 - **The Zu Constellation:** with the spiritual animal form of a Monkey
 - **The Yi Constellation:** with the spiritual animal form of a Snake
7. **These star constellation spirits are subservient to the Water Element;** they are drawn on standards constructed of black silk:
 - **The Qi Constellation:** with the spiritual animal form of a Leopard
 - **The Bi Constellation:** with the spiritual animal form of a Snail
 - **The Shen Constellation:** with the spiritual animal form of an Ape
 - **The Zhen Constellation:** with the spiritual animal form of an Earthworm

After constructing the Bagua circle and arranging the constellations in their proper places, the Daoist would then position him or herself in the center of the circle, acting as the coordinating general for all of the spirits summoned. It was important for the ancient Daoist to place the "great standard" (a talismanic charm needed to control the twenty-eight constellation spirits) in the center of the circle in order to command the spirit soldiers. To command and dispatch the spirit soldiers, the Daoist would use specific Hand Seals formed on his or her left hand, combined with the recitation of specific incantations and the drawing of talismanic charms.

Figure 1.199. Face the direction of the North Star and Big Dipper, and try to feel the energetic nature of each of the four quadrants of Stars.

GATHERING ENERGY FROM THE TWENTY-EIGHT STAR CONSTELLATIONS

At nighttime, when the Moon is not suitable for absorbing Qi (i.e., during the new Moon), the Daoist mystic can focus on absorbing the energy of the twenty-eight star constellations into his or her body (Figure 1.199). The absorption of the star energy is used in order to strengthen the Yuan Qi of mystic's internal organs and tissues.

In ancient China, the energy of all Five Planets and Twenty-eight star constellations was traditionally drawn into a Daoist master's body via the Tian Wu Zang meditation. The Tian Wu Zang meditation allowed the master to absorb celestial

energy through the five Thrusting Channels. These Channels flow through the center of the body, connecting the top of the head to the perineum, enveloping and supporting the center Taiji Pole.

The twenty-eight day star constellation cycle was also arranged externally on the Daoist master's body along the Governing and Conception Vessels. The "ecliptical" path of the Sun follows the Fire Cycle of the Microcosmic Orbit, which influences an individual's emotional, mental, and physical health.

Figure 1.200. The Pacing of the "Twenty-Eight Star Constellations"

"PACING THE 28 CONSTELLATIONS" STEPPING PATTERN

The pacing of the Twenty-Eight Star Constellations also symbolizes the rotation of the Dipper turning around and crossing the Ji Constellation, as it moves around the Heavens (Figure 1.200).

"DIPPERS OF THE 28 CONSTELLATIONS" STEPPING PATTERN

On the outside of this star stepping pattern are the Twenty-Eight Constellation Stars, on the inside right is the Southern Star, and on the inside left the North Dipper Star. This stepping pattern is used in ancient rituals to show respect to the Celestial Immortals and the Celestial Palace (Figure 1.201).

Figure 1.201. The Pacing of the "Dippers of the Twenty-Eight Star Constellations"

BAGUA: EIGHT TRIGRAMS

In ancient times, the Bagua (Eight Trigrams) was the symbol originally used for observing the movements of the sun and moon. In the ancient Chinese characters for Bagua (the eight ancient Daoist energetic structures of life), the character "Ba" translates as "eight," and the character "Gua" translates as "trigram" (Figure 1.202). The character "Gua" is composed of two ideographs, on the right is the radical meaning "to observe," on the left is the radical "Gui" meaning "earth heap." The Gui (earth heap) was used in ancient times to measure the shadows in order to record ancient calendars (the ancient Chinese form of a sundial). Together, the term "Bagua" can be translated as

Figure 1.202. The Chinese Characters for "Bagua,"

Figure 1.203. The Prenatal Bagua Trigram Powers According to the Universal Forces of Yin and Yang (System of Fu Xi)

"Eight Trigrams," and is considered a template for the basic laws of all energetic movements and transformations (Figure 1.203).

Each trigram is composed of three "yao" lines: a solid yao line (—) is considered Yang, a broken yao line (- -) is considered Yin. Each "yao" represents a basic unit of the Eight Trigrams, and has three meanings: sunlight, moonlight and the mutual projection of the sun and moon. The Yao Trigram itself is the symbol of the movement of the sun and moon.

PRENATAL AND POSTNATAL TRIGRAMS

The unique powers of the Bagua can be divided into two separate schools or systems of thought: The Prenatal Bagua of Fu Xi, and the Postnatal Bagua of King Wen.

The Prenatal Bagua of Fu Xi

Fu Xi is believed to have lived a thousand years before King Wen, during the Age of the Five Rulers (2852 B.C.). The Bagua system of Fu Xi focuses on the fundamental principles of light and darkness, which revealed to him the polar nature of the universe (Figure 1.204). The Heavenly prin-

Figure 1.204. The Prenatal Bagua Trigrams (Eight Dimensions or Phases of Energy Polar Opposites): Yin (1-4) across from Yang (5-8). This Cycle of Harmony Relates to the World of Thoughts and Ideas. The Opposition of Energetic Forces is Responsible for the Creation of All Phenomena.

Figure 1.205. The Postnatal Bagua Trigrams: The Energetic Cycles of Forces are the External Manifestations of Divine Thought (The World of Phenomena or Senses)

ciples expressed within the system of Fu Xi reflect the multidimensional symbols which govern our life. Therefore Heaven is placed at the top of the trigram and Earth is placed at the bottom of the trigram. The specific focus of Prenatal Fu Xi Bagua is the expression of two mutually dependent powers, compensating each other, for example:

- Heaven-Earth
- Fire-Water
- Mountain-Lake
- Thunder-Wind

As energetic principles, the multidimensional powers are inseparable, although one power may temporarily predominate. In Fu Xi's Bagua system, the eight fundamental forces constantly seek to balance each other.

Postnatal Bagua of King Wen

King Wen is believed to have lived in the Zhou Dynasty (1028-221 B.C.). The Bagua system of King Wen focuses on the fundamental principles of the Earthly transformations (Figure 1.205). They

are arranged according to the expression of increasing or decreasing qualities of physical life (beginning at Zhen and following a clockwise progression). The Earthly principles expressed within the system of King Wen are not only separated in time, but they are also thought of as being energetically "in sequence" around the periphery of the Bagua instead of matching powers through opposite polarity alignment. Because Fire (light and heat) and Water (dark and cold) appear as the most prominent and visible of all Earthly forces, in King Wen's Bagua configuration Fire is placed at the top of the trigram and Water is placed at the bottom.

BA GUA STEPPING PATTERNS

The following Stepping Patterns allow the Daoist disciple access into the energetic realm of the various Eight Trigram Powers.

BAGUA STEPPING #1:

"THE ANCIENT RIVER CHART"

This circular stepping pattern is used both in Daoist alchemic cultivation, and in summoning rituals. It represents the unification of the Yin and Yang energies described within the ancient River Chart (Lo Diagram), and it contains the esoteric energetic patterns of the "Magic Square" (Figure 1.206). When walking the circular stepping pattern, the Daoist mystic would envision the Prenatal celestial energies and the Postnatal terrestrial energies combining within the energetic space of the center of the circle.

According to the historic records, in ancient China the world was believed to be made up of Nine Continents. Eight of these continents (Yong, Liang, Yan, Yang, Qing, Xu, Yu, and Ji,) surrounded the "center" kingdom of ancient China. As the Daoist mystic stood in the middle of the "Central Continent" (represented by the image of the River Chart) and fused with the interacting energies of Heaven and Earth within these eight continents (represented by the eight mountains which circle the River Chart), he or she could access an energetic portal and spirit travel to any place in the physical world.

Offering The Report

When using the circle walking method for "Offering the Report," the disciple is taught to step through each of the Eight Trigrams and focus on their various celestial powers. As the disciple steps, he or she imagines approaching the Celestial Courts. After walking the circle counter-clockwise through nine complete rotations, the disciple eventually comes to a halt by forming a "T-Stance" at the "Stars of Three Terraces," located by the Qian Trigram (North-West). The three stars of the Three Terraces were believed to be a staircase connecting Heaven to the Earth. The disciple proceeds from star to star, after having first circled around the Dipper three times (totaling nine rotations), the ultimate goal being to mount up to the Shangqing Heavens.

When walking, it is important that the disciple imagines him or herself being covered in a sealed bubble of purple mist. Once the disciple reaches the "Stars of Three Terraces," he or she "transforms their energetic form," and mounts the back of an enormous white crane (while forming the White Crane Double Hand Seal) to fly towards the Gate of Heaven and meet with the Jade Emperor. After the encounter, the disciple is to return from the Gate of Heaven by walking the circle nine times (three rotations per each Terrace) in a clockwise direction, ending at the Earth Door (located at the South-West corner of the altar).

BAGUA STEPPING #2:

"THE YI-JING - WU XING STEPPING"

This circular stepping pattern is used both in Daoist alchemic cultivation, and in summoning rituals. It represents the "Blending of the Three and Five" manifesting through 64 changes of the Yi Jing Divination (Figure 1.207).

When pacing the circular steps of the Yi-Jing - Wu Xing Stepping pattern, the energetic and spiritual natures of the Earthly body's Jing, Qi, Shen fuse with the celestial energies of the individual's cultivated Heavenly virtues. These combined energies then fuse with the subtle energies of the Five Elements, allowing the awareness of the physical body to dissolve into the infinite space of the spiritual realms.

Figure 1.206. Bagua Stepping #1:
"The Ancient River Chart"

Figure 1.207. Bagua Stepping #2:
"Yi Jing-Wu Xing Stepping"

Figure 1.208. Bagua Stepping #3:
"Ba Gua - Yi Jing Stepping"

Figure 1.209. Bagua Stepping #4:
"Prenatal Bagua Stepping"

BAGUA STEPPING #3: "BA GUA - YI JING STEPPING"

This circular stepping pattern is used both in Daoist alchemic cultivation, and in summoning rituals. It represents the blending of the "Eight Original Trigram Powers" with the powers of the "Sixty-four Hexagram Changes."

These combined energies then fuse with the subtle energies of the Five Elements, allowing the awareness of the physical body to dissolve into the more powerful spiritual realms (Figure 1.208).

When pacing the circular steps of the Ba Gua - Yi Jing Stepping pattern, the energetic and spiritual natures of the eight original trigram powers become manifested within the disciple's body, giving birth to the energetic veil through which to observe one's destiny and life purpose.

BAGUA STEPPING #4: "PRENATAL BA GUA STEPPING"

This circular stepping pattern is used both in Daoist alchemic cultivation, and in summoning rituals. The Prenatal Bagua Trigrams represent Eight Dimensions or phases of energy (Figure 1.209). The specific powers of the trigrams are polar opposites (Yin across from Yang). This "cycle of harmony" relates to the world of thoughts and ideas. In the Prenatal Bagua Trigrams, the opposite energetic forces are responsible for the creation of all phenomena.

The Prenatal stepping pattern is traditionally begun with circular clockwise stepping. It is practiced in the early morning, during the time of the "Ascent of Yang" (from 12:00 midnight to 12:00 noon), with the focus placed on the cultivation of the eight specific powers of the Bagua.

Figure 1.210. Bagua Stepping #5: "Prenatal Bagua Stepping"

BAGUA STEPPING #5:
"PRENATAL BAGUA STEPPING"

This stepping pattern is traditionally used in Daoist rituals for the specific purpose of sending a "Report" back to the Heaven. By following the Prenatal Bagua stepping patterns, the disciple can progress into the most subtle realm of the celestial world (Figure 1.210).

BAGUA STEPPING #6:
"POSTNATAL BAGUA STEPPING"

This stepping pattern is traditionally used in Daoist rituals for the specific purpose of sending a "Report" back to the Heaven. By following the Postnatal Bagua stepping patterns, the disciple can progress into the most subtle realm of the celestial world (Figure 1.211).

The Postnatal Bagua Trigrams represent the energetic cycles of the eight original powers. Their powers are expressed as the external manifestations of Divine Thought. The Postnatal Bagua Trigrams represent the spark of life, responsible for the creation of the world of phenomena (or senses).

BAGUA STEPPING #7:
"POSTNATAL BAGUA STEPPING"

This stepping pattern is traditionally used in Daoist rituals for the specific purpose of sending

Figure 1.211. Bagua Stepping #6: "Postnatal Bagua Stepping"

Figure 1.212. Bagua Stepping #7: "Postnatal Bagua Stepping"

a "Report" back to the Heaven. By following the Postnatal Bagua stepping patterns, the disciple can progress into the most subtle realm of the celestial world (Figure 1.212).

THE WU XING: FIVE ELEMENTS

In the ancient Chinese characters for Wuxing (the five energetic phenomena of life), the character "Wu" translates as "five," and the character "Xing" translates as "movement, process, manifestation, or phase" (Figure 1.213). Together, the term "Wuxing" can be translated as "Five Elements," and is considered an energetic template based on the study of five manifestations, phases or processes of Qi transformations. The Five Elements are represented by the physical, energetic and spiritual natures of the Wood, Fire, Earth, Metal, and Water Elements (Figure 1.214).

The Five Elements classify all tangible and intangible substances into five specific categories (five senses, five viscera, five postnatal emotions, five prenatal virtues, five flavors, five seasons, five directions, five phases of energetic transition, etc.).

The Five Elements can additionally be classified according to three levels of energetic manifestation and influence. These three levels pertain to the crude, subtle and ethereal states of Jing, Qi and Shen, and are described as follows:

- **The Material Components of Five Elements:**

These relate to the gross material realm, and correspond to the waking state of consciousness. The material aspect of the Five Elements refers to the most dense and material forms of the Five Element natures; they affect the individual's physical body.

- **The Energetic Components of Five Elements of Energy:**

These relate to the energetic realm, and correspond to the dream state of consciousness. The energetic aspect of the Five Elements refers to the subtle Five Element natures; they affect the individual's energetic body.

Figure 1.213. The Chinese Characters for "Wuxing," The Five Elements

Figure 1.214. The Five Elements

- **The Spiritual Components of the Five Elements:**

These relate to the spiritual realm, and correspond to the sleeping state of consciousness. The spiritual aspect of the Five Elements refers to the most subtle of the Five Element natures; they affect the individual's spirit body.

Figure 1.215. Five Element Stepping #1:
"Five Element Power Stepping #1"

**FIVE ELEMENT STEPPING #1:
"FIVE ELEMENT POWER STEPPING"**

This Stepping Pattern is used to gather the Powers of the Five Elements that are stored within the Elements of Wood, Fire, Earth, Water, and Metal (Figure 1.215).

This stepping pattern is performed while reciting the following incantation:

**"The Mystical Smoke
of ____ arises
at the Gate of the Dead"**

**THE FIVE ELEMENT STEPPING #2:
"FIVE ELEMENT POWER STEPPING"**

This Stepping Pattern is also used to gather the Powers of the Five Elements that are stored within the Elements of Wood, Fire, Earth, Water, and Metal (Figure 1.216).

This stepping pattern is performed while reciting the Five Element Creative Cycle:

**"Wood Creates Fire
Fire Creates Earth
Earth Creates Metal
Metal Creates Water"**

Figure 1.216. Five Element Stepping #2:
"Five Element Power Stepping #2"

Figure 1.217. Five Element Stepping #3:
"Five Element Virtues Stepping"

**THE FIVE ELEMENT STEPPING #3:
"FIVE ELEMENT VIRTUES STEPPING"**

This Stepping Pattern is used to respect, purify, and gather the energy of the Five Virtues stored within the Five Yin Organs: Heart (Peace), Liver (Compassion), Spleen (Truth), Lungs (Integrity), and Kidneys (Wisdom) (Figure 1.217).

This stepping pattern is performed while reciting the following incantation:

**"The Essence of Evil
is Taken Away
and ____ Dies"**

**THE FIVE ELEMENT STEPPING #4:
"FIVE STAR STEPPING"**

This Stepping Pattern is used to respect and gather the energy of the Five Prenatal Stars (the Supreme Yang, Supreme Yin, Heavenly Stars, Southern Stars, and Northern Stars) (Figure 1.218).

This stepping pattern is performed while reciting the following incantation:

**"The Pure and Serious
Follow the Cloudy Road
to Divine Illumination"**

**THE FIVE ELEMENT STEPPING #2:
"FIVE SOUNDS STEPPING"**

This Stepping Pattern is used to respect and gather the Qi of the Five Postnatal energy sound vibrations ("Xu" of the Liver, "He" of the Heart, "Hu" of the Spleen, "Si" of the Lungs, and "Chui" of the Kidneys) (Figure 1.219).

This stepping pattern is performed while reciting the following incantation:

**"I Draw Towards and Acquire
Shang Qing"**

THREE PACE STEPPING PATTERNS

The following Three Pace stepping patterns (known as San Bu Gan) are commonly used in Zheng Yi rituals for summoning the Celestial Martial Generals.

**THREE PACE STEPPING PATTERN #1:
"FA YI STEPPING (WIND AND FIRE STEPPING)"**

This Stepping Pattern is known as Wind and Fire Stepping. It used to show respect to the stars, and to summon Celestial General Fa Yi (Figure 1.220).

This stepping pattern is performed while reciting the following incantation:

**"I Move the Wind
and Gather Thunder
to Release Heavenly Fire"**

This is a fast magical step. After three quick steps, take the "Thunder Block" in the right hand and write the following Chinese character for "Bind" (Figure 1.221). At the same time form a left hand "Jade Incantation" Hand Seal by placing the thumb of the left hand on to the "Yi" posi-

Figure 1.222. The "Jade Incantation" Hand Seal.

tion (located on the second crease) of the left middle finger (Figure 1.222).

THREE PACE STEPPING PATTERN #2: "THREE ALTAR STEPPING"

This Stepping Pattern is used for sending the report back to the Celestial Palace. When performing rituals, it is sometimes used as a "connecting" step, in order to link the Nine Purple Stepping with the Five Stepping patterns (Figure 1.223).

This stepping pattern is performed while reciting the following incantation:

**"On the Lower Altar
Three Blues
Cut the Demons and
Remove the Ghosts."
On the Upper Altar
One Yellow Removes the Evil.
On the Middle Altar
Two Whites Protect the Body
and the Property."**

SUMMONING THE SPIRITS OF THE DEAD

The following stepping patterns are commonly used in Zheng Yi rituals for summoning or retrieving the Ethereal Soul (Hun) of the dead.

The Hun represent the body's spiritual consciousness, provide the energetic movement of the mind, and are associated with the Qi of Heaven and the Prenatal Five Element Virtues (also known as the Five Agents). Although they reside in the

Figure 1.223. Three Stepping Pattern #2
"Three Altar Stepping"

Liver Orb, the Hun also resonate from the Three Dantians (like a vaporous mist extending from the Liver and filling the body's three Dantians).

The Hun (Ethereal Soul) and Po (Corporeal Soul) influence the body's "Original Soul" (Yuan Shen). The ancient Chinese believe that, in the presence of a disorder (whether physical, mental, emotional or spiritual) the Hun sometimes fly away (like startled birds in a yard). This vacancy of the Hun causes the body's Corporeal Soul (Po) to either stir about thoughtlessly in the absence of effective control (clinically known as "disassociation" or commonly called "spacing out"), or to become animalistic in nature and attack or flee for the sake of survival.

Traditionally, the ancient Daoists believed that the three Hun originated from Heaven, and were considered to be a part of the spiritual aspect of an individual that can project and travel. Dreams are an example of the information gathered during the Hun's out of body travels.

The Hun store the sum total of past experiences. The expressions of the Hun are manifested through images, symbols and ideas stemming from the Divine, or through the energetic state of the Wuji. These images, symbols, and ideas are stored in the individual's mind, affecting his or her spiritual life. Without this interaction, a person's inner mental and spiritual life would become deficient in ideas, images and dreams.

The Hun spiritually and energetically respond to the energetic grids of Heaven (universal energetic fields). The stars and planets within these Heavenly grids exert an influence on the Hun, causing each individual's body to react to certain astrological configurations (full moon, new moon, equinox, solstice, etc.). An individual's positive or negative emotional reactions are sometimes based on the affinity of the vibrational rate of the Hun with the energies of a particular astrological alignment.

The Hun are classified as Yang spirits; they can be cultivated and refined. Imagination, visualization and positive affirmation in the form of prayer and incantations, meditation, and Hand Seals are traditionally used to awaken and establish an active relationship with the Three Ethereal Souls.

Upon the death of the body, the energetic spiritual essence of the Hun ascends back to Heaven. According to ancient Daoist tradition, upon death, the Hun exit the body through the Baihui at the top of the head and ascend to the Big Dipper. While at the Big Dipper, the Hun report the individual's actions, thoughts and deeds from his or her lifetime to the celestial spirits that preside over the individual's destiny. The celestial spirits will then determine the degree to which the individual had cultivated virtue during that incarnation.

In China, when an individual dies, there is a traditional ceremony performed called, "Zhao Hun" or "the calling of the Hun." This ceremony entails someone (a relative or loved one) going to the roof of the deceased individual's house and calling to the deceased person's Hun, begging it to return to its body. If the Hun do not return, then the Po will then begin their descent into the Earth and the body's tissues will start to decay.

In order to ensure that the Po stay in the body after it has been buried (and that they will not come out to annoy the living) the relatives seal all of the orifices (exits) of the body, in order to trap the Po inside. Generally, the orifices of the body are plugged with either jade or rice (depending on the deceased individual's financial status).

Figure 1.224. Summoning the Spirits of the Dead #1
"Gathering the Hun Stepping"

When performing a magical ritual used to hunt for a deceased individual's Hun, bring the soul out of hell, and lead it upward into Heaven, the Daoist sorcerer will traditionally repeat the following incantation:

**"An Fa,
Zha Fa Feng
Pu She
Zhong You Hun"**

The sorcerer will then end the incantation with:

"JI JI Ru Lu Ling"
("Quickly, Quickly - As this is Law")

"GATHERING THE HUN STEPPING"

This Stepping Pattern is used to call and gather the Hun (The Soul of the Dead) (Figure 1.224).

This stepping pattern is performed while reciting the following incantation:

Figure 1.225. Summoning the Spirits of the Dead #2
"Gathering and Hiding the Hun Stepping"

**“God of the Heavens,
Gather to Yourself
the Flying Hun
So that it may Safely Pass
Over Your Infinite Sea
Seize Any Demon
That Seeks to Hinder its Flight”**

"GATHERING AND HIDING THE HUN STEPPING"

This Stepping Pattern is used to gather, hide and keep the Hun (Figure 1.225).

This stepping pattern is performed while reciting the following incantation:

**“Seven Demon Generals,
Are Enveloped
By the Seven
Awesome Celestial Officers
Of the Complete ”**

Figure 1.226.
"Summoning the Celestial Immortals
Stepping Pattern #1"

MAGICAL ESOTERIC STAR STEPPING PATTERNS

The following stepping patterns are commonly used in Zheng Yi rituals for summoning various Celestial Immortals.

SUMMONING THE CELESTIAL IMMORTALS

STEPPING PATTERN #1

This Stepping Pattern is used to evict, remove, and control evil spirits (Figure 1.226).

This stepping pattern is performed while reciting the following incantation:

**"My hidden energy
flows like silk.
It rushes to assist me,
It leaves and stops
at the stable task of a hero
who has overcome his ghost"**

Figure 1.227.
"Summoning the Celestial Immortals
Stepping Pattern #2"

SUMMONING THE CELESTIAL IMMORTALS STEPPING PATTERN #2

This Stepping Pattern is used to evict, remove, and control evil spirits (Figure 1.227).

SUMMONING THE CELESTIAL IMMORTALS STEPPING PATTERN #3

The following stepping patterns are commonly used in Zheng Yi rituals for summoning various Celestial Immortals in order to control the various Elemental powers of nature.

Figure 1.228. Controlling Nature
"Nine Wind Stepping"

"NINE WIND STEPPING"

This Stepping Pattern is used to control the power of water (Figure 1.228).

This stepping pattern is performed while reciting the following incantation:

**"The Nine Essence Thunder,
of the Heavenly Cart Star
Brings the Immortal Sword
of the Upper Thunder Wind"**

Figure 1.229.
"Celestial Master Zhang Stepping"

“SUMMONING MISSIONARY ZHANG STEPPING”

This Stepping Pattern is used for summoning Celestial Master Zhang (Figure 1.229).

The first Celestial Master was the famous Daoist Master Zhang Daoling (refer back to Figure 1.188). The basic doctrines of Celestial Master Zhang concentrated on the use of the twenty-four Auspicious Alliance registers, or list of spirits, which allowed the Zheng Yi Daoists to summon, command, dispatch, or destroy demons and spirit entities. These twenty-four registers categorized spirit entities by name and description. The twenty-four registers are categorized according to 24 Daoist Monasteries located in the Cheng Du province, and were originally created and organized by Celestial Master Zhang Daoling.

This stepping pattern is performed while reciting the following incantation:

**“From the Heavens,
Over the Lake
and through the Mountain,
The Force of Fire
From the Northern Man
Arouses the Power
of Wind and Thunder”**

Figure 1.230. “He He
(Harmonize and Gather Stepping)”

Figure 1.231. “The Intertwining Fence Stepping”

"HE HE (HARMONIZE AND GATHER) STEPPING"

This stepping pattern is used in rituals in order to send reports back to Heaven (Figure 1.230).

“THE INTERTWINING FENCE STEPPING”

This Stepping Pattern is used to remove the filthy things and purify the altar court area. This stepping patterns is sometime known as “Pacify the Dragon and Respect the Earth” (Figure 1.231).

"THE SECOND STAR OF THE DIPPER PROTECTS THE BODY STEPPING"

This star stepping pattern is commonly used in Daoist Thunder Magic rituals and is described in the *Absorb the Riches of the Profound Text*. It includes both the Ghost Names and the Destiny Names of the Seven Stars of the Big Dipper (Figure 1.232). After performing "The Second Star of the Dipper Protects the Body" Stepping Pattern, the Daoist priest will then say the following Five Animal Protection incantation (Figure 1.233):

**"The Green Dragon protects me on the left with his bold and powerful laws.
The White Tiger commands the celestial soldiers and protects me on the right.
The magical light of the Red Sparrow
is in front of me,
The mysterious Dark General (Turtle/Snake)
holds the bright light behind me."**

**The Heavenly Generals ride about
on golden wheels of fire
They dispatch their celestial soldiers
who play their Heavenly drums,
creating a powerful Heavenly sound.
Everyone knows of life and death,
they all understand the profound
chances and opportunities"**

**"Let the Three and Five Marshal
Generals and their celestial soldiers
come together with the public.
Let their sunshine and the brightness
come upon us
"Quickly, quickly, do this
as it is my command."**

Figure 1.232. "The Second Star of the Dipper Protects the Body Stepping"

ABOUT THE AUTHOR

- **Priest of Tian Yun Gong Zheng Yi Daoist Temple:**
Temple of the Celestial Cloud, Pacific Grove, Ca.

- **Ordained Priest in Zheng Yi Daoism:**
Received formal "Lu" Ordination as a Daoist Priest at the 900th Year Anniversary of the Founding of the Celestial Master's Mansion in Jiangxi Province - October 2005.

- **Disciple of 65th Celestial Master Daoism:**
Received formal indoctrination ceremony in Celestial Master Daoism (Tian Shi sect), from Long Hu Shan Daoists priests in Jiangxi Province.

- **80th Generation Disciple of Mao Shan Daoism:**
Received formal indoctrination ceremony in Highest Purity Daoism (Shang Qing sect), from Mao Shan Daoists priests in Jiangsu Province.

Background

Professor Jerry Alan Johnson is internationally renowned as a Shifu (master instructor) of Chinese Wu Dang Martial Arts, Chinese Medicine and Daoist Magic, having studied for over 36 years.

Professor Jerry Alan Johnson, Ph.D., D.T.C.M., D.M.Q.

Paleo-Muslim Angels and Other Preternatural Beings

Aziz Al-Azmeh (Vienna/Budapest)

In addressing the topic of Paleo-Muslim preternatural beings, it will be useful to consider a number of prefatory points relating to sources and to Paleo-Islam before turning to the highly complex related questions of Paleo-Muslim divinity and angelology. Paleo-Islam is a historiographical category, elaborated further below, that is concerned with the configuration and dynamics of those events, social and political trends, and doctrinal and ritual developments and options that relate to the history of Muhammadan and immediately post-Muhammadan Arabia. This category is intended to describe, in relation to rough chronological termini, a dynamic that was later to crystallise into forms that we now recognise as Islamic. Framing the subject in terms of this category will allay the impression that beginnings can be described in light of outcomes, or that outcomes were an inevitable flowering of these Paleo-Muslim seeds, conceived in a linear manner.¹ My preliminary observations also relate to Paleo-Muslim preternatural beings prior to the crystallisation of what ultimately became the monotheistic Muslim divinity and His related regime of the preternatural. I use the term ‘preternatural’ rather than ‘supernatural’ because, since the nineteenth century, the latter term has come to imply a sharp-edged division between two completely distinct realms that would have been inconceivable in Paleo-Muslim times. During this period, the natural world and the preternatural realm constituted a continuum and were distinguished only in the sense that the one was visible and the other largely invisible, although even the latter could become visible in rare flashes of appearance.

Sources

Sources for the Paleo-Muslim period, covering Muḥammad’s lifetime, the decades preceding it during the Ḥijāz period, and the years immediately following his death, are often portrayed as impossible to use, entirely misleading, or as being so forbiddingly impenetrable that they have little evidentiary value. However, if we pay closer attention to this material we can see that these prevailing views are a matter of attitude rather than of fact. Indeed, such views can only be sustained by appealing to a methodological postulate that is no longer credible

¹ See Aziz Al-Azmeh, *The Emergence of Islam in Late Antiquity*, Cambridge: Cambridge University Press 2014, 41-42, 358-368 and at Index; in shorter compass, Aziz Al-Azmeh, “Paleo-Islam: Transfigurations of Late Antique Religion,” in: *A Companion to Religion in Late Antiquity*, Josef Lössl and Nicholas J. Baker, eds., Oxford: Wiley Blackwell 2018, 348-354.

and which stipulates criteria of documentation and verification that are generally unattainable. These criteria have their origins in an unworkable, idealistic historiographic model of the perfect and neutral document that is able to speak for itself. This model arose out of the epistemological innocence of the more simplistic versions of nineteenth-century positivism and has been deployed polemically, and often naively, in relation to studies of the Paleo-Muslim period, rather than in a constructive manner. One research trend that has its roots in this despairing attitude is the cognitive nihilism associated with hyper-sceptical historiography, which has become commonplace and fairly orthodox in certain academic milieux. Another trend, captive to an even older misconception concerning historical methodology perpetuates, protestations to the contrary notwithstanding, *faute de mieux* the basic conceptual and technical apparatus of a medieval practice of historical verification, indulging in seemingly endless parsing of *isnāds* despite an awareness that a mirage might be chased thereby, and also despite the paucity of results expected and announced so far.

Rather than celebrating, regretting, or seeking to measure and calibrate *a priori* this alleged inaccessibility to history, and the near-impossibility of convincing historical reconstruction, this essay will proceed in an affirmative mode and on the assumption that much of the history of our period is, in fact, accessible. The underlying contention is that historians are by vocation trained to handle and interpret different types of sources, including those that are difficult. There is much that we can learn from our surviving fragments about the ancient Hījāzī Arabs and their religion. Much can be reconstructed of the way in which, in the first third of the seventh century, the taxonomy of the preternatural, including angels, was reconfigured. This period can be accessed by forensically reconstructing it from Arabic literary sources such as the Qurʾān, from sources in other languages, and from material evidence available in the epigraphic and archaeological records, and in ancient Qurʾānic manuscripts.

The use of an alert eye, primed by both curiosity and methodological and conceptual reflexivity, and attuned to comparativism, seems the appropriate way to read through the narrative motifs of epic, legend, patterning, myth, partiality, and other encrustations upon the individual *akhbār* that serve as the ‘elementary particles’ of historical transmission. Such an approach gives rise to a highly complex picture of the emergence of a new religion and of the social arrangements and dynamics associated with it. Making it possible to rethink this historical period with an accent on its complexity will serve to reset the ground-rules of the discussion by suggesting new areas for research, by reinterpreting well-known facts in the light of new perspectives, and, crucially, by the forensic reconstruction of a history from its traces.²

² For the foregoing paragraphs, see Aziz Al-Azmeh, *Islam and the Arabs in Late Antiquity. A Critique of Approaches to Arabic Sources*, Berlin: Gerlach Press 2014; Robert Hoyland, “The

Perspectives

Since the goal of this chapter is to ask fresh questions, explore new thematic areas, and reset the research agenda, a second preliminary point is especially pertinent. This is that the standard and habitual narrative which takes Paleo-Islam and its Qurʾān as almost natural outgrowths of previous monotheisms, a view that has been made to appear self-evident to the monotheistic self-representation of the history of monotheism, is far too simplistic. This narrative allows for little more than token gestures towards the crucial immediate context of Arab polytheism and its perspective on the divine and the preternatural. It tends to place undue emphasis on breaks with this perspective, despite the recognition of a series of ritual continuities and the identification of certain modes of expression with the earliest Qurʾānic verses. Further, this monotheistic genealogy is generally expressed in terms of the Qurʾānic text, a way of conceiving the history of religions which sees them primarily as texts that beget other texts.

I maintain, by contrast, that although these textual genealogies did come to be constructed exegetically as the new religion was elaborated under the Umayyads and the Abbasids, it would be anachronistic to ascribe to them a foundational and causative effect in the earlier, Paleo-Muslim and Muḥammadan period. At this time, they were yet to become co-constitutive of the new religion, although they were fragmentarily evident in its articulation. Nevertheless, it is true that a monotheistic construction of a typological pre-history of Muḥammad's religion can be found in the Qurʾān fragmentarily. The crucial point being made here is the emphasising of the distinction between the symbolic and genealogical, on the one hand, and the efficiently causal, on the other.³

The perspectival resetting I advocate views the emergence of the new religion as taking place not so much through doxography as through religious practice. This practice includes mythical elaboration and cultic practice at concrete points

Content and Context of Early Arabic Inscriptions," in: *Jerusalem Studies in Arabic and Islam* 21 (1997), 77-102; Robert Hoyland, "New Documentary Texts and the Early Islamic State," in: *Bulletin of the School of Oriental and African Studies* 69 (2006), 395-416. With the emphasis on the pertinence of non-Arab sources and witnesses, it is interesting to note that the one work that has used these systematically alongside epigraphic and other material remains Robert Hoyland, *In God's Path. The Arab Conquests and the Creation of an Islamic Empire*, Oxford: Oxford University Press 2015, passim. He offers a narrative that introduces interesting and pertinent detailed material which tends to be in agreement with the general outline (as well as crucial detail) of what occurs in the much derided Arabic narrative sources. For elaborations on forensic analysis in history and law and medical diagnostics, see Carlo Ginzburg, *Clues, Myths and Historical Method*, Baltimore: Johns Hopkins University Press 1992, 96-104.

³ Al-Azmeh, *The Emergence of Islam*, 76-77, 89-90, 279-280, 306-307, and passim for monotheism, and 271-272, 316-317, 489-497 for the Qurʾān. The present essay is primarily derived from points developed in this book, sustained by the references there cited and discussed. Some additional reference will be made to additional material or material that broadens the span of analysis in a meaningful way.

of application, with an emphasis on primary, devotional, forms of practice over secondary, theological or mythographic, elaborations, and with a view to noting dynamics of change and variability. The Qurʾān, the major ‘fossil’ of Paleo-Islam, does encompass theologemes and mythologemes, but it does so in a form and with an intension that was still evolving when the texts were set down. These theologemes and mythologemes would have been received in different ways by different audiences and constituencies, a point that is often missed in the assumption of unitary meanings of and audiences for the various Qurʾānic enunciations. The ascription to the Qurʾān of the kind of *Leittheologie* that Protestant and Protestant-influenced scholarship finds in scripture is anachronistic and unjustifiable.

This model of interpretation, stressing process over fixity in the Paleo-Muslim period, can be taken as a leitmotif for the approach to Paleo-Muslim material proposed here. The assumption that Allāh’s rapid emergence to a position of primacy and exclusivity in the Paleo-Muslim context was an almost natural and self-explanatory occurrence, and that so too was the corresponding incidence of the standard monotheistic conception of angels, has been very resilient and arises from ancient monotheistic traditions about the naturalness and primeval character of monotheism.⁴ The invocation, *tout court*, of Judaism or Christianity or, in the absence of sufficiently convincing support for either, of the exotic and alluring, but equally evasive, Judaeo-Christianity, is a not uncommon complement to this assumption.⁵

The assumption of self-evidence needs to be relaxed if we are to unfetter the historical gaze and enable it to seek out a verisimilar account of the emergence of Allāh and the host of preternatural beings that arrived alongside Him, including beings called angels. What is discernible in the Paleo-Muslim period, as we shall see, is a great degree of fluidity in the classification of preternatural beings, with Paleo-Islam developing in a direction that ultimately differentiated angels generically. This development gave angels greater definition and subordinated them to the new deity just as He was being reconfigured as transcendent and began to absorb the class of divinity entirely into Himself. By relaxing the traditional assumptions of self-evidence, we are able to explore what might follow from the proposal that the Arab transition to monotheism was neither natural, self-explanatory, nor inevitable, but, rather, a non-linear process with a specific dynamic that can be reconstituted and described.

⁴ See, for instance, Jeremy Schott’s illuminating discussion in “Heresiology as Universal History in Epiphanius’ *Panarion*,” in: *Zeitschrift für antikes Christentum* 10 (2007), 546-563; Al-Azmeh, *The Emergence of Islam*, 53, 279-280.

⁵ Al-Azmeh, *The Emergence of Islam*, 248-275, 279-315.

Paleo-Islam

The condition of dynamic mutability that lies behind the Ḥijāzī Arab transition to monotheism finds expression in the historiographic category of Paleo-Islam, which designates both a period and a perspective, and which provides the chronological and thematic parameters of this essay. This term is used in preference to 'Islam' without qualification, to 'early Islam', and to 'primitive Islam'. The use of the term expresses a preference for precision and discrimination over categorical reductionism, for names as category nominatives are neither neutral nor insignificant but tend rather to function in an associative manner. Names, when used with little discrimination, can convey broad conceptual networks by association, implying specific semantic fields and shades that generally have the commonplace purchase of clichés and carry a high ideological load.

The historiographical category of 'Paleo-Islam' is able to assist us in a number of ways as we attempt to reset the terms in which the 'unfurling' of the Ḥijāz occurred during the first half of the seventh century, alongside the emergence of a new religion, the eventual triumph of the Umayyads, and their stepping into the shoes of their imperial predecessors. The category guards against the automatic ascription of causality to priority in time, such as the proposal that the Qur'ān gave rise, ineluctably and in a linear manner, to what we call classical Islamic beliefs, practices, politics. On the contrary, our new approach contends that Muḥammad's horizons were limited by the circumstances of his time and place, and that the elementary religion of Muḥammad would most likely either have waned or become an obscure western Arabian sect had it not been for the fact of empire. The notion of Paleo-Islam serves to facilitate a perspective which regards conceptions of the divine, and of the preternatural more generally, as well as associated cultic practices, as undergoing a process of change the end of which was not inherent in its beginning. It is intended to avert ascriptions of inevitability or of the inherence of consequences in precedents, thus restoring to history its proper dynamics.

Paleo-Islam is a socio-religious and political phenomenon, the name of a historical period, and a perspective from which to approach historical interpretation. In scriptural and doctrinal terms, it refers to an emergent condition, prior to theological and exegetical elaboration in cumulative durable forms and including the pre-exegetical Qur'ān, and prior to durable imperial crystallisation. This condition necessitates reading the Qur'ān and ritual practices against the immediate background of their inception and in terms of how they would have been performed at the concrete points of occurrence. Paleo-Islam was an evolving constellation of elements and a scattering of credal, mythical, and devotional elements motivated by social and political processes, with each element being received differently by different constituencies of address, influence, enmity, alliance, and so forth.

Gods, cults, and religions

In order to understand Arab polytheism and the way in which it was reconstituted into the new monotheistic religion of Muḥammad, it is important to recognise that religion as an historical fact is sustained by social constituencies and by forms of authority and control. It is especially important to study religious practice at the concrete points of its application. With regard to Arab polytheism, it is crucial to understand the way in which worship was organised by **cultic associations** which also typically doubled as socio-political alliances and provided the framework for arrangements concerning territorial access and control over trade and natural resources.⁶ Thus, each of the Ḥums (Quraysh, Thaḳīf, Kalb, Māzin, sections of Hawāzin, and in general sections thereof dwelling along the routes between Mecca and Yemen, routes north-east of Mecca to al-Ḥira, and on the road to Syria), the Ṭuls (Yemenites and sections from Iyād, ʿAkk), and the Ḥilla (comprising distant groups: Tamīm [except for the Yurbūʿ section, who were Ḥums], sections of Māzin, Rabīʿa, Asad, Ṭayy, and Qays ʿAylān except for Thaḳīf) performed pilgrimages at the federated sanctuary of Mecca. Each group and subgroup indicated the specific constituency of a treaty-based alliance that formed cultic associations with discernible social geographies. Such associations might be compared in some respects to what the Swiss were later to call *Eidgenossenschaften*.

This association of cult and alliance was to be the tried and tested model for the erection of the Paleo-Muslim movement. Federal sanctuaries with which Arabs were associated abounded in Hellenistic and late antique times, as, for instance, at Manbij (Hierapolis) in northern Syria, Rāmat al-Khalil (Mamre) near Hebron in Palestine, and Jabal Ithlib at al-ʿUlā to the north of Ḥijāz. Recent excavations have yielded further interesting results.⁷ It is not sufficiently appreciated that the religions carried by social constituencies were distinguished from one another not so much by differences in doctrine as by the significance placed on distinct cultic times, such as the schedule of pilgrimages and associated markets of the *ḥajj* (of the Ḥilla and the Ṭuls), which took place in autumn (either Dhū l-Ḥijja, Muḥarram or Ṣafar al-awwal: the timing was uncertain, and the names of months were not always constant, intercalation having an effect on both), and the *ʿumra* (of the Ḥums), which took place in the spring month of Rajab. Pilgrimage itineraries within the larger Meccan area overlapped in part but were distinct in other ways, with Muḥammad eventually carrying out an amalgamation that initially lacked universal assent, and removing the mandatory sacrifices that had previously been essential offerings to the various deities wor-

⁶ For the following: Al-Azmeh, *The Emergence of Islam*, 183-203. For local west Arabian calendars and intercalation: Al-Azmeh, *The Emergence of Islam*, 138-139, 191-196, 332-333.

⁷ François Villeneuve and Zeidoun Al-Muhaisen, "Dharīh and Tannur, Sanctuaries of Central Nabatea," in: *Petra Rediscovered: The Lost City of the Nabatean Kingdom*, Glenn Markow, ed., New York: Abrams 2003, 82-100.

shipped by the Arabs. The associated calendars that codified the rhythms of worship, trade, and transhumance were political institutions of social time. Intercalations were more than just technical adjustments for coordinating solar and lunar temporal reckonings. Rather, they represented the outcomes of negotiation and alliance, or were dictated by a party that had gained the upper hand in a conflict.⁸ When intercalation was abrogated by Muḥammad once and for all, the move bore all the marks of a stroke of political genius. In one move, he successfully severed the connection between the cultic calendar and the rhythms of social and economic life that depended upon the seasons. The mastery of time now belonged to Muḥammad's new political and cultic association, the *umma* that acted under his own command.⁹

Within this system of religion, it mattered little what god was the object of worship, since many deities were worshipped by multiple constituencies and none had a stable or constant personality that was distinct from a specific ritual occasion. The deities that were worshipped were connected to particular places and ritual occasions but were, for all intents and purposes, interchangeable. Rudolf Otto's statement, presumably building on Wellhausen, that these Arabian gods were no more than local noumena and variable demonstrative pronouns is certainly overstated, and is far more applicable to the nameless *jinn* than to named gods.¹⁰ However, the overstatement is simply representative of one end of the spectrum of possibilities that describes practical conceptions of preternatural beings at the points of their concrete application. For the gods of the polytheistic Arabs in late antiquity were defined by the coincidence of cult – that is, worship and sacrifice or other votive offering, given at a particular place and at specific or otherwise extraordinary times – and name, epithet, or epiclesis.¹¹ The situation here is not unlike that which obtained for other polytheistic religions that have been studied in greater detail. And, like these other religions, Arab polytheism contained no imperative divine unicity rather than multiplicity, and tended towards devotional atomisation without recourse to mythical or theological repertoires at the points of

practical cultic application.¹² It was *savoir-faire* rather than *savoir-penser*,¹³ and its divinities might just as well be namelessly identified with the locations of their worship as given any other nominative identity,¹⁴ as we can see in the example of Dhū l-Khalāṣa south-east of al-Ṭāʾif, worshipped by Khathʿam, Daws, Bajila, and Azd al-Sarāt. Theologies and mythologies including pantheons of twelve or nine or seven divinities are secondary elaborations arising from social and cultural processes distinct from those of worship.¹⁵ Ultimately, a religion was a specific form of sacrifice performed at specific places and times by a specific constituency; such was, indeed, the meaning of the word *dīn*.¹⁶ If Hubal and the god at Dhū l-Khalāṣa (who received no blood sacrifices) were distinguished by their specific function of cleromancy, this did not mean that they were not all-purpose gods as well. Polytheism is aggregative and syncretising, and we have indications for a turnover in the roster of the divine. These changes often involved the importation of new divinities or their representations, according to the vagaries of political control and opportunities of communication,¹⁷ with the importation of Hubal and of his idol standing out as a famous example in Arab tradition. The turnover of the divine was correlated with the emergence, or attempted emergence, of centres of territorial control, such as the failed attempt by B. Baghidʿ to set up a competitor to the Meccan *ḥaram*.¹⁸

The only shared item of **belief** among Arab polytheists was in the efficacy of deities, an item held not as a confession but, rather, rendered in ritual action. It is this that explains the centrality of rites rather than any considerations of faith in this tradition. Rites are a combination of bodily gestures and words pronounced in set sequences of two verbal packages: invocation, thanksgiving, and praise, on the one hand; supplication, promise, and propitiation, on the other. The performance of rites was usually followed by sacrifice, and all these elements

were generally performed at set ritual times, in locations that were specially consecrated, and by specific constituencies: cultic associations or what Wellhausen called *Schlachtgemeinschaft*.¹⁹ Priestly functions, including sacrifice and the leadership of pilgrimage processions, were social and political functions carried out by designated individuals at set times and places.

Gods and other preternatural beings

It has been suggested that Paleo-Muslim divinity emerged within a polytheistic setting, a development which also involved a recasting of the taxonomy of the preternatural. This development saw the angels particularised and constituted as a specific category of the preternatural that was disentangled from the *jinn* and from polytheistic deities. In the fullness of time, this development led to the creation of an elaborate angelology cast along familiar monotheistic lines, although this later construction was only fragmentarily present in Paleo-Muslim times.²⁰

But this disentanglement was not complete or constant. As in the period prior to Paleo-Islam, and still to some extent continuing during the Paleo-Muslim period as expressed in the Qurʾān, the boundaries between various named types of preternatural actors were unstable. Deities, *jinn*, and angels tended to shade into each other in terms of their functions. When the Qurʾān asserts that unbelievers conceived the *jinn* as partners to Allāh (Q 6:100), the implication is that *jinn* may have been worshipped, a polemical overstatement of the fact that they had been propitiated in ways that were not dissimilar to the way in which deities were propitiated.²¹ A further implication of this is that the taxonomic classes under which deities and the *jinn* were classified were not entirely distinct from one another. Further, when the Qurʾān states that unbelievers did not really worship angels but worshipped the *jinn* instead (Q 34:41), this amounts to a Qurʾānic *jinnification* of deities that might have been designated as angels, or that the Paleo-Muslims came to designate as angels rather than as gods. Similarly, when the Qurʾān castigates those who elevated angels to the status of deities (Q 3:80, 34:40), this appears to be a taxonomic manipulation of a classificatory indeterminacy that was operative in Arab polytheism. This indeterminacy was also related to the disparagement of belief in female angels (Q 17:40, 43:19, 53:27) and to the removal of the angelic – in fact, the generally preternatural – nature of the three famous female deities, Allāt, al-ʿUzzā, and Manāt. The context for this last

²¹ Al-Azmeh, *The Emergence of Islam*, 210-211.

move might well reflect Muḥammad's divine diplomacy at the point in time when these figures were designated as Allāh's daughters.²²

Clearly, whether a preternatural being was *ilāh*, *jinnī*, or *malak/mal'ak* was a matter of unstable naming conventions or, perhaps, of sociolects, and not the result of the kind of theology with its related ontology that was to come in the course of time,²³ reflected in the cumulative moves of Paleo-Islam from henotheism and monolatry to monotheism, a move reflected in the chronological flow of the Qur'ān.²⁴ This is unsurprising, given the polyvalent and polyonymous nature of polytheistic deities, and the rapid turnover of the divine in the Ḥijāz. In many ways, this development of Paleo-Islam paralleled the disengagement in the early history of Christianity of *daimones* from the realm of indeterminate divinity that they had long shared with *theoi*, and their consequent relegation to a status of preternatural malignancy that was substantively distinct from the status of God.

This phenomenon is also unsurprising when we consider the continuum between visible and invisible nature, or nature and the preternatural, and the porosity of the boundaries between them. Polytheistic divinities inhabited and animated special locations and objects, including cult objects.²⁵ Famously, the *jinn* were capable of materialisation and could take on a variety of visible forms, including acting as doubles to humans. Transmogrification was not infrequently noted by Paleo-Muslims and polytheistic Arabs, be it that of the *jinn* or of Gabriel. Similarly, both polytheists and Paleo-Muslims mention the appearance of mysterious persons in confusing guises, including the possible confusion over the appearances of Muḥammad and Dihya al-Kalbi and Abū Fukayha. This can be compared to the ways in which Aphthartodocetism and the Qur'ān conceived of the likeness, the formal double or *eidolon*, of Christ on the cross as a transfer of forms – the person crucified was not Christ, but something like him. Again, we can also note, this time with reference to a transfer of substances, the aetiological and euhemeristic interpretations of certain deities, such as Isāf and Nā'ila, ancestral deities of Quraysh from regions near the Red Sea who were said to have been petrified for having profaned the sacred Meccan enclave.²⁶ Anthropologically, epiphany, like transfiguration, is itself an instance of transmogrification, and the receipt of divine inspiration also involves an act of transmogrification, regardless of the precise route through which this inspiration was transmitted.

²³ Al-Azmeh, *The Emergence of Islam*, 293-295, 326-327.

²⁴ Al-Azmeh, *The Emergence of Islam*, 283, 306-326.

²⁵ Al-Azmeh, *The Emergence of Islam*, 164-183, 204-248. Compare the discussion of animation by Cyril Mango, "Antique Statuary and the Byzantine Beholder," in: *Dumbarton Oaks Papers* 17 (1963), 56, 59-61.

²⁶ For some of this Arabian lore: al-Jāhiz, *Kitāb al-Ḥayawān*, ed. 'Abd al-Salām Muḥammad Hārūn, Cairo: Muṣṭafā al-Bābi al-Ḥalabi 1965-68, vol. 1, 297-299, 308-309; vol. 6, 196.

The being that presented itself to Muḥammad *‘alā qābi qawṣayni aw adnā* in order to deliver inspiration, described in a famous vision of Sūrat al-najm (Q 53:5-10), is likely to have been Muḥammad’s deity – the deity who ‘descends’, according to the Qur’ān, but who dwells above the seven heavens, and who is yet present in the black stone at Mecca, is of this type.²⁷

The relationship between Allāh and His preternatural subordinates needs to be seen in the light of the metastasis, partibility, and polymorphy of the divine, and the continuum between the visible and the invisible. This applies all the more once He has eliminated other competing deities and has assumed the exclusive right to the generic title of divinity, predicating divinity of Himself alone and absorbing all the functions that had previously been attributed to a range of divine figures. Allāh allocates to Himself both common and uncommon divine epithets and, crucially, the epicleris of invocation *Allāhumma*, used previously for the invocation of all deities. He declares Himself the sole recipient of the attribute and epithet of unicity. These epithets had previously been generic and were applicable to a variety of divinities in cultic moments, as was the case with polytheistic invocations that used the epithet ‘one’.²⁸ The Qur’ān, intriguingly, sometimes associates, and thus perhaps conflates, both sympathetically and by synecdoche, the Lord, Rabb, and the angels. This is done almost indiscriminately during the Meccan period, with the Qur’ān speaking of God and the angel (in the singular) coming forth in formation, *ṣaffan ṣaffan* (Q 89:22) – perhaps, but not necessarily, implying multiplicity in a manner that Arabic grammar would recognise as *mufrad bi-ṣiḡhat al-jam‘*. Indeed, one needs to bear in mind the possibilities of thinking of the linguistic usage in Arabic of the singular to designate a plurality, and the plural to designate a singularity.

The precise way in which this conjunction of multiplicity occurred is not entirely clear. What matters is the connection between the divinity and His various instantiations and the strong implication of convertibility that is reminiscent of transmogrification. The Qur’ān speaks of the arrival of ‘the angels ... or your Lord, or Signs from your Lord’ (Q 6:158). It speaks of a visitation during sleep (*tāfa ‘alayhum tā’ifun*) from or of your Lord (*min rabbika* – Q 68:19), although in what form is left unclear.

It is important to note the frequent conjunction in the Qur’ān between angels and the Spirit. However, there is no suggestion anywhere in the Qur’ān that they were not distinct, or that the Spirit denoted Gabriel, as was later to become the prevalent exegetical gloss upon the very late Qur’ān’s gloss (at Q 2:97-8) on its

own earlier statements, which has remained with us down to the present day.²⁹ What we have here is a situation in which it is often difficult to disengage God from His messenger in a categorical manner, in a way that is reminiscent of, but not necessarily directly inspired by, the Biblical *mal'ak Yahweh* that is, at times, indistinguishable from Yahweh Himself.³⁰ All are active in situations in which God emits tangible energy by epiphanic display. This phenomenon belongs to a world in which the categories of the natural and preternatural are not ontologically distinct – God and Spirit, single and multiple, share this, that they are instances of God's kratophanic energy, by which the Qur'ān swears *al-ṣāffāt* and *al-zājirāt* (Q 37:1-2), as it swears by the stars and by a variety of other beings, both natural and preternatural.³¹

God instantiates His being as Spirit and as angel by a *glissando* of energy in different manifestations, a *glissando*, it needs to be noted, played across *our* categories of ontological classification, not those of seventh-century Arabia. The instantiations discussed here are corporeal, incorporeal, and subtle. The latter, commonly characteristic of the *jinn*, is both corporeal and incorporeal, straddling the visible and the invisible and inhabiting both, the distinction between the two being virtually meaningless to Arabians of the seventh century. This setting was well noted by St Augustine (354-430), who asserted in his exposition of Psalm 103 that the word 'angel' is the name of an office rather than a nature.³² Angelicalness designates a function and betokens a presence beyond the specific instance of any particular angel. It manifests those operations of God that can be, and have been, personified and individualised, all the while designating God himself by virtue of His command. This manifestation can appear, as it does in the Old Testament, as a pillar of cloud or a pillar of fire.³³

A systematic tally of the ways in which the notion of Spirit is used in the Qur'ān reveals a variety of senses, each of which is associated with a different stage of Muḥammad's ministry.³⁴ God blows His Spirit into the clay from which Adam

²⁹ Much later, by a reinvention or by the silent persistence of a motif and of a distinction, the Spirit, *al-Rūḥ*, is depicted in al-Qazwini's thirteenth-century cosmography as a separate angel, and indeed one of very exalted and particular status, some of his powers related by etymological association with his name, every breath of his becoming a soul; see: al-Qazwini: *ʿAjā'ib al-Makhlūqāt wa gharā'ib al-mawjūdāt*, ed. Fārūq Sa'd, Beirut: Dār al-Āfāq al-Jadida 1977, 90.

³² This view is a standard component of Catholic dogma: *Catechism of the Catholic Church*, London: Burns and Oates 1994, § 329.

³³ See the especially fine analysis of Thomas Hobbes, whose extraordinary exegetical gifts are not noted often enough: *Leviathan*, ed. Richard Tuck, Cambridge: Cambridge University Press 1996, 274-276. For an analogous situation, cf. R. L. Gordon, "The Real and the Imaginary: Production and Religion in the Graeco-Roman World", in: *Art History* 2 (1979), 8-9, 12, 20.

³⁴ Al-Azmeh, *The Emergence of Islam*, 343-346.

was created. He blows His Spirit into Mary's parthenogenetic body. The Spirit is a mysterious matter of (*min amr*) God (Q 16:2, 17:87, 40:15) and is 'of' Him, *minhu* (Q 58:22). It creates by animation and the magical precipitation of effect, by contiguity or at a distance; it brings succour to His worshippers, and, crucially, brings forth inspiration and revelation. Other senses of the Spirit in the Qur'ān notwithstanding, we clearly have here a concept which conveys the transmission of divine substance by means of sublime energy, indeed the transmogrification of the former into the latter. This spirit straddles materiality and spirituality, the one serving as the double of the other, a conductive capacity which incorporates and transcends the less ample preternatural energies of the *jinn* and of the betylic Lords.

The Spirit, *rūḥ*, is a term the connotations of which evolved along with the history of the Qur'ān. It may also be regarded from the perspective of categorical uncertainty and ontological mutability discussed above. The Spirit's identification with Gabriel was only a late Qur'ānic personification of divine agency, simplifying categorisation and clearing out indeterminacy as it emphasises the divine transcendence that was connected with the older mythemetic repertoire of monotheistic religions. There are many passages from various periods that mention angels and the Spirit together (Q 70:4, 78:38, 97:4). The angels 'bring down' the Spirit (Q 16:1). Both might, like *maḥ'ak Yabruḥ*, be transient manifestations of God's energy, with a character that is fundamentally *jinnic*. The spirit may indeed become an angel in jinnic, transmogrifying aspect, as was the case with the Spirit sent to Mary, which appeared to her in human form (Q 19:7). The Holy Spirit brings forth Signs (Q 16:102), helps Jesus (Q 2:87, 253, 5:110), and God sends forth a Spirit from or of His Command (Q 16:2). The differentiation between Spirit and Command is not always clear, their categorical separation being introduced furtively, as the latter acquired the sense of a more literal, direct command by a distinct and intransitive deity in chronologically later parts of the Qur'ān.

Categorical distinctions in later passages are clearer; when the angels and the Spirit appear as a serried host, they speak only with the permission of al-Raḥmān (Q 78:38). But the two beings are distinct. The Spirit is clearly *of* God, sometimes figured angelically, and is often His metonymical personification. The Spirit, as both term and being, could productively be interpreted in the context of a magical conceptual infrastructure upon which the philosophical notion of hypostasis was based, a conceptual infrastructure that might underlie it mytho-poetically; it might be sublimated philosophically as hypostasis if conceived as a functional differentiation within divine activity. This tallies with the notion of 'procession' in the Nicene Creed, which has the Holy Spirit proceed from both Father and Son. The relationship is epiphanic. The Spirit is often a substantive projection of God, a numinous energy, and, as often in cases of epiphany, is subtended by an assumption of the indeterminate consistency of substance, allowing for associations with transmogrification and transfiguration. Like the Word in John 1:1, for instance, which 'was with God' and 'was God', the prepositions relating God and Spirit in

the Qurʾān betoken a metonymical and allegorical slippage of the referent in a play of identity and separation, in all cases indicating unity and continuity of action, readily prone to personification.

The continuity between God and “the Spirit of Him”, God and His Word, is conceived almost materially, just as transfiguration is understood materially, in terms of a plasticity of both substance and form, as a change of form and a diminution of plenitude. Between *al-rūḥ al-amīn* and *al-rasūl al-amīn*, the latter applying equally to God’s angel and to Muḥammad as well, is an agreement of attributes. Without implying that there might have been an identification between Muḥammad and Gabriel, it can be noted again that we are dealing here with an *imaginaire* in which boundaries between nature and the preternatural were not firm, and in which transfiguration was familiar to Paleo-Muslims.

Like the spirit blown into the clay out of which Adam was fashioned, and the spirit blown into Mary’s body whence Jesus came, the Spirit – and, by displacement, angels and other transfigurations of the divine as well – represents a translocation of divine presence, a dramatisation of contiguous magic acting across the scale of being.

Paleo-Muslim angels

Already in Paleo-Muslim circles there was a germ of the later categorical differentiation between angels and the Spirit, with the suggestion that individuation and personification might be possible. Angels are potentially at a distance from God, while the Spirit is continuous with Him, despite the possibility of the one shading into the other. This shading was later neutralised, with the reinterpretation of the Spirit as angelic and of angels as messengers, guards, servitors, worshippers, and, broadly, as agents of divine action. Angels came to be seen as intermediaries who carried out the commands of a divine being that both transcended them and created them. This relationship between higher and lower beings was part of the package of changes that transposed Allāh into the register of monotheism and the sort of cosmocratic and cosmogenic transcendence which had, by then, become the standard model in monotheistic territories ambient with Arabia. The ontological demotion and reconfiguration of angelicalness was, at the same time, correlated with the demotion of polytheistic deities to the status of phantasms.³⁵

It is difficult to interpret the status and the substance of angels in a definitive way, given the categorical indeterminacy sketched above, and doubtless Muḥammad’s various constituencies understood them differently. A full investigation of this very interesting issue would need to form part of a wider project to provide a historical-anthropological description of the complex, and at times obscure, Paleo-Muslim mythical landscape. We cannot assume that this landscape was uni-

³⁵ Al-Azmeh, *The Emergence of Islam*, 315-327.

form or see it as predetermined by its eventual evolution into the fully developed scheme of Muslim angelology. Nevertheless, it is possible to sketch briefly the image of angels as depicted in the Qurʾān, which was to become an important component in the later islamising elaboration of monotheistic angels.³⁶

Much of the time, angels appear as generic creatures, lacking individuality and indistinct from each other, although functional and individualising elements are sometimes added to this generic appearance. Thunder, after whom Q 13 is named, praises God (Q 13:13), who commands natural forces. Gabriel is mentioned three times in very late Qurʾānic texts. On one of these occasions, he is depicted as bringing inspiration to Muḥammad's heart (Q 2:97), taking over the communicative functions of the spirit in an emergent regime of categorical separation between God and God's manifestations, now ontologically separated from him and acting as His messengers or satraps. Gabriel appears again together with Michael without qualification, along with messengers (*rusul*) and unnamed angels (Q 2:98). On another occasion, Gabriel appears in connection with Muḥammad's domestic affairs (Q 66:4). Mālik – if the reading is correct – is called upon in vain by people in Hell who ask for his help (Q 43:77). Hārūt and Mārūt (Q 2:102), both obscure beings who were involved in magic, are sent with disorder and discord (*fitna*). That these two preternatural creatures were called angels rather than daemons or *jinn* probably came about by default as a result of the lack of elaborate categorical boundaries and likely reflects the looser Arab usage of 'angel' discussed above.

Angels take people away when the hour of their death arrives (Q 4:97) and are also appointed as the guardians of hell (Q 74:31). In addition to such commissions, angels minister to Him in two primary capacities. First, they act as scribes who register the deeds of men. Second, they serve as His host, carrying and surrounding His Throne in serried ranks (Q 39:75, 40:7), and guarding the gates of the heavens (Q 37:1-10, 54:11). They dwell in celestial heights, called *al-malāʾ al-ʿālā* by some or *ʿIlīyūn* by others, where they minister to God's wishes, on a royalist model of command. Angels, presciently predicting the lot of humankind, are also depicted as counselling God against designating Adam as His vicar on earth (Q 2:30).

Groups of angels are sent to assist Muḥammad and his companions in battle (Q 3:123f., 8:9, 9:26), in hosts of 300,000 and 500,000 (Q 3:123-125), sometimes visible to the humans involved and sometimes invisible (Q 9:26). At Q 33:9 God chastises unbelievers by dispatching furious winds – a ubiquitous motif in the Qurʾān – along with invisible soldiers. These soldiers serve to personify the force of the winds, often associated by the Arabs of the time with *jinn* – it is interesting to note here the comparable view that the Valkyries personified the Aurora Borealis. It is possible that the winds and the soldiers might stand metonymically

³⁶ Al-Azmeh, *The Emergence of Islam*, 338-339, 342-345.

for each other and that both might, with some mythological plausibility, be interpreted as angelic extensions of the divine. God also obliterated the people of Lot by bombarding them with deadly pellets that rained down from the sky. This account is given without further explication but one possible interpretation is to see this as an example of angelic action (Q 15:72). The Battle of the Elephant was also won by the raining down of deadly pellets from the sky. These were dropped by avian creatures (Q 15:74, 105:4) and angels have often been associated with birds.³⁷

One would expect that, as the categorical differentiation of angels from gods and other preternatural beings found its complement in their creaturely status, this differentiation would have been consolidated by mythematic elements acting to confirm the generic specificity of their nature. While angels are described as winged creatures (Q 35:1) and, on occasion, are defined in functional terms and individuated from one another, we have little further indication of their nature and substance.

The natures of the other categories of preternatural beings, by contrast, were much more clearly defined as they were differentiated in line with the evolving taxonomy of the preternatural. The *jinn* were beings of fire (Q 55:15), and indeed of a very Arabian fire, the scourging wind of *samūm* (Q 15:27). Satan declares himself to have been created of fire, superior to the clay that was Adam's substance (Q 7:13, 38:76). His appearance in the Qur'ān is far more individuated than that of the angels and his character is better rounded and drawn more clearly, although he does sometimes occur generically as well, in the plural or sub-categorised as *'ifrit* and *mārid* (Q 27:39, 37:7).³⁸ Both types of Satanic manifestation, the individual and the generic, were to be elaborated later into a profuse Muslim demonology that paralleled angelology and grew in tandem with the older *jinnology*.

Yet Satan's nature is itself an indication of the uncertain boundaries and categories of the Paleo-Muslim preternatural. Devils may well be the functionally opposed mirrors of angels. But as an obnoxious, fallen, and accursed angel, Satan must surely once have been forged from the same conceptual substance.

Introduction

This selection of Taoist magic diagrams, talismans and charms represents an aspect of Chinese art virtually unknown in the West. Art historians – even Eastern art historians – have largely ignored them, concerning themselves primarily with problems of artistic technique rather than meaning, the question of ‘how’ rather than ‘why’. Yet Taoist calligraphy, as I shall be showing, has been of first importance in China since earliest times, both as an artistic carrier of spiritual truths, and as the one means of communication with the spirits.

Taoist graphic art was first and foremost a practical magic, enabling man to communicate with the spirit world and influence the workings of the invisible forces of nature for his own benefit. It was geared to his everyday needs, concerned with the changes of season and weather essential for planting, harvesting, and building. On another level of daily life, the diagrams and talismans were intended to cure sickness, bless marriage, ease childbirth, protect the household from fire, get rid of pestilence and misfortune, guard against calamities. In short, they were to make the daily life of the people easier. Later in the text we shall be looking at the different ways in which these magic diagrams have been made and used, throughout the centuries.

On a deeper philosophical level, the diagrams may be understood as embodying the concepts of Taoist philosophy. They are to help us harmonize the sexual polarities, the *yin* and *yang*, within ourselves, and to place us in harmony with the turbulent energies that act upon our lives and the universe. At the most profound level of all, they point the way to the core of Chinese mysticism. We can intuit the truth that reality is not a succession of separate moments, or an infinite number of separate ‘things’, but a seamless web of eternal change, like the currents of a river, or clouds blown by the wind; that ‘being’ and ‘non-being’ are complementary, just as the fretted stones which we see depicted in the diagrams are given their shape by erosion, and the surrounding silence gives music its form. In the visual arts of China, empty space is as important as line. The final goal of the Taoist mystic is to penetrate beyond ordinary ‘reality’ to reach to an awareness of

Geomancy patterns known as 'The Flying Male Phoenix' (above) and 'Drawing the Bow' (below). (From Chiang P'ing-chien, *Shui-lung ching* 3:10a. 1744 ed.)

the ultimate tranquillity, that which is beyond time and change, the Great Ultimate, the Whole, the 'mystery beyond all mysteries', called by the Chinese the Tao.

Artistically, the diagrams represent some of the most fascinating examples of Chinese abstract art to develop outside the imperial mainstream, which is what we know as 'Chinese art' today. They are as much a part of the legacy of Chinese art as the celebrated Shang and Chou ritual bronzes and jades, Han and T'ang pottery tomb figurines, Sung academic paintings and calligraphic scrolls, or Ming and Ch'ing dynasty ceramics.

We can see their influence in the symbolic abstraction of these other visual arts. We can also clearly observe their traces in the techniques of various Taoist schools and secret societies which operated all over China from the Han period onwards. These include astrology, palmistry, physiognomy, geomancy, alchemy, herbal medicine, acupuncture, and the arts of movement (t'ai-chi chüan and kung-fu).

The secrecy that has surrounded Taoist teaching arises partly from the taboo on the sacred – the mystic communication has to be protected from the eyes of the uninitiated or irreverent – and partly from the historical need to protect the various cults from official hostility. Even today, talismans have been refused to non-Taoist, non-Chinese enquirers.

The Secret Sources

The present selection of Taoist magic diagrams, talismans and charms has been taken from the most esoteric of the 1,464 works preserved in the *Tao-tsang*, the 1436 (early Ming dynasty) edition of the Taoist canon, and other Ming and Ch'ing dynasty manuals. The *Tao-tsang*, first published about AD 1190, was originally an even larger collection before its burning was ordered by Kublai Khan of the Mongol (Yüan) dynasty in 1281.

In its present (early Ming) form the collection consists of seven different sections ('caves') with various supplements, containing more than fifty million characters of text and several thousand diagrams. Supplementary diagrams were added in the Ming period, but the vast majority of those printed are ancient canonical forms, belonging to a tradition of occult art over two thousand years old, the roots of which go back to shamanistic practices in the second and first millennia B.C.

The shaman is a person who has acquired techniques which enable him to contact the spirit world, and, specifically, to summon spirits. His power and prestige largely depend on the number of spirits he can

voluntarily incarnate in himself and thereby control. He may be aided by songs, dances, drums and, frequently, narcotics.

There was a limited tradition of these practices in Taoism, particularly in South China, but more frequently Taoist magic used talismans and charms which became impersonal repositories of power. They were impersonal in the sense that, once the talismanic calligraphy had been completed by the Taoist priest, who would usually reproduce a canonical prototype, all his spiritual power was immediately *transferred* to the talisman. It was then used by the individual as a kind of ritual object to retain his direct contact with the spirit.

A profound belief in the spiritual powers of calligraphy was very probably already present even in the formative period of Chinese civilization (i.e. during the first millennium BC), and was largely responsible for the survival of the Chinese ideographic script. For it is significant that, despite several attempts at reform, the Chinese civilization has always shown reluctance to adopt an alphabetic script.

In order to protect the talismanic 'mystery' a number of beautiful secret scripts were evolved by Taoism; how they arose and in what way they differ from ordinary calligraphy, we shall see later in the introduction, when we look at the magic power of calligraphy.

The diagrams as they appear today were the work of a wide range of artists, including illiterate villagers, recluses and hermit-scholars, as well as Taoist exorcist-priests, faith-healers, and sorcerers. Most of them are anonymous, for the powerful talismanic forms are rarely attributed to particular individuals, and the legendary attributions of the Taoist canon must be treated with reservation.

In their original form, these diagrams were the most perishable visual art products of China. Some of these mystic diagrams were originally drawn in the dust with a wooden stick or a finger, others (after Han times) on paper to be burnt as 'paper-money' offerings to the forces of the supernatural. These notes of 'paper-money' were reproduced many thousands of times in the course of a single generation, only to be used for a single day in a given hour of the magic rite. The highly perishable material of which they were made was itself a constant reminder of the cardinal Taoist teaching: the principle of Eternal Change which governs the whole universe. Indeed, most of them have disappeared along with the voices of the famous ancient singers and the movements of celebrated Sui and T'ang dynasty dancers. Yet, they have not been completely lost. Outstanding examples have survived in Taoist canonical sources, and even today are being copied closely. A number are to be found among the illustrations of this book.

Talisman of the Messenger of the Nine Heavens, who can cure epidemics. It depicts a shaman performing a ritual fire-dance. (Tao-tsang 1203-224: 16b)

of time since before 1000 B.C. A measurement of both days and years, it is formed by revolving a cycle of ten characters, representing the Ten Heavenly Stems, with one of twelve, representing the Twelve Earthly Branches. The ten Heavenly characters are: *chia, i, ping, ting, wu, chi, keng, hsin, jen* and *kuei*. The twelve Earthly characters are: *tsu, ch'ou, yin, mao, ch'en, ssu, wu, wei, shen, yu, hsü* and *hai*. The duodenary system has also been used on its own to designate the twelve months and the twelve double hours of the day, starting at 11 p.m. In addition, there is a number for each person determined by the characters drawn from the cycles marking the year, month, day, and hour of his birth. Taoist occult theory correlates these two sets of characters with the workings of the Five Elements, colours, seasons, etc.

The following passage from the *Pao-p'u tzu*, a Taoist work of about A.D. 300, explains this concept:

When the *Ling-pao ching* speaks of *protective days*, it means a continuation of the Twelve Earthly Branches and the Ten Heavenly Stems in which the first element begets the second. Days *chia-wu* (no. 31 of the 60-cycle) and *i-ssu* (no. 42) are examples of this. *Chia* is Wood, and *wu* is Fire; *i* too is Wood, and *ssu* Fire, Fire being born of Wood. When it speaks of *proper days*, it means combinations where the second element begets the first. *Jen-shen* (no. 9) and *kuei-yu* (no. 10) are examples of this. *Jen* is Water, and *shen* is Metal; *kuei* is Water, and *yu* is Metal, Water being born of Metal. By *constraining days* it means combinations where the first element conquers the second. *Wu-tzu* (no. 25) and *chi-hai* (no. 36) are examples of this. *Wu* is Earth, and *tsu* is Water; *chi* too is Earth, and *hai* Water, and according to the theory of the Five Elements, Earth conquers Water. By *attacking days* it means combinations where the second element conquers the first; *chia-shen* (no. 21) and *i-yu* (no. 22) are examples of this. *Chia* is Wood, and *shen* is Metal, *i* too is Wood and *yu* Metal, Metal conquers Wood. From these examples one can deduce the rest.

The notes to the talismans which follow contain frequent references to this cyclic system, which is by no means as complicated in its practical application as it appears in the passage quoted above. For example, if a given year, month, day or hour is linked with the element Water, this signifies that a good deal of rain may be expected during the period, while a dominant element of Fire would indicate a hot spell and also an increased risk of fire breaking out. The choice of lucky and unlucky days, which features so prominently in Chinese divination and farmers' almanacs, is only one of the practical extensions of this *yin-yang* and Five Elements theory.

Yin-yang numerical system, as shown in the table above, also played a prominent part in Taoist magic. As we shall see, a large number of talismans were used in sets of threes, fives, nines, etc.

3-5

6-10

Among these, the sets of fives were considered particularly powerful

31-4 Magic talisman to bring happiness and good fortune, depicting two constellations (yin and yang) interlocked in acrobatic sexual union. (Early 12th century, Tao-tsang 217-25:2b)

because they acted on the Five-Element space-time factor of the cosmos with associated symbolism of colour, smell, taste, sound, etc. Inspired by the philosophical doctrine of the Five Elements, popular Taoist spiritualism showed itself remarkably practical again: the multiperceptual contact with the spirit world opened up additional channels of communication with the spirits, making use of all the senses of the human body.

Of the heavenly bodies, the radiant Sun represents *yang* and the silver Moon, *yin*. To reinforce *yang*, Taoist magic prescribed sun-bathing in the nude for men, who were instructed to hold a talisman (a secret character for sun written in the *yang* colour, red, on green paper). Moon-bathing in the nude was prescribed for women to reinforce their *yin*, and they too were to hold a talisman (a secret character for the moon written in the *yin* colour, black, on yellow paper). Constellations too, according to the principle of the harmonious (*yin-yang*) unity of heaven and earth, guided and influenced changes on earth. Hence their frequent appearance in talismanic graphic compositions and secret diagrams. They are often represented symbolically as convoluted stones and rock-formations.

Vital Breath

Ch'i, the Vital Spirit, fills the world of the Taoist. It is the Cosmic Spirit which vitalizes and infuses all things, giving energy to man, life to nature, movement to water, growth to plants. It is exhaled by the mountains, where the spirits live, as clouds and mist and, therefore, the undulating movement of clouds, mist, or air filled with smoke rising from burning incense, is a characteristic mystic representation of *ch'i* in Taoist art. As the Universal Force or Eternal Energy, it is at the centre of Taoist breathing exercises, which also involve the art of smelling and the use of incense. In occult diagrams it is the reason for the preference for asymmetrical design. The *Pao-p'u tzu* states: 'Man exists in *ch'i*, and *ch'i* is within man himself. From Heaven and Earth to all kinds of creation, there is nothing which would not require *ch'i* to stay alive. The man who knows how to circulate his *ch'i* maintains his own person and also banishes evils that might harm him.' The same source mentions a method of casting spells by simply rendering breath (*ch'i*) more abundant. The Taoist Chao Ping used to charm streams by breath so that the water-level dropped as much as twenty feet. Using the same technique, he would light a cooking-fire on thatched roofs without setting light to the dwelling, render boiling water harmless for scalding and prevent dogs from barking.

Taoist mystics also conceived of *ch'i* as the invisible underground currents of the earth. Geomancy (*feng-shui* in Chinese, meaning 'wind and water') was born out of this concept. It was concerned with the art of fixing the sites of houses for the living and tombs for the dead in mystic harmony with the local currents of *ch'i*, the Cosmic Energy. Traditionally, if houses and tombs were not correctly sited, evil effects were likely to befall the inhabitants of the houses and the descendants of the dead, whereas a good siting would bring them happiness, prosperity and longevity. The forces and nature of the invisible *ch'i* currents, known also as 'dragon's veins', were determined not only by mountains and hills (*yang*), and valleys and watercourses (*yin*), but also by the movements of the heavenly bodies from hour to hour and day to day all round the year. The *yin* and *yang* aspects of geomancy currents were also identified with the Tiger and the Dragon, which in turn represented the western and eastern quarters of Heaven. As a rule, a three-fifths *yang* and two-fifths *yin* balance was thought to be the most favourable. A magnetic compass marked with trigrams and hexagrams of the *I-ching*, as well as with the sexagenary cycle of stems and branches, aided the complex reckoning for the selection of the suitable site. Compass references have been indicated in the notes on some of the talismans illustrated later in the book.

But *ch'i* also meant sexual energy. The *yin-yang* theory held that the sex organs were a major vehicle of the primary forces of the universe, and looked upon sexual intercourse as an act charged with Cosmic Energy. The schematic symbol of *yin* and *yang* is a circle divided into two equal parts by a curving line, with the lower, or female half dark, and the upper, or male half light. The Earth, woman, and the vulva are all *yin*. Heaven, man, and the penis are all *yang*. The union of these opposites leads symbolically to the harmony of the universe. This also means that it is possible to believe that Heaven and Earth consummate their relation each time a man and a woman perform the sexual act. The prolongation of this act, therefore, becomes a magic ritual. Hence the frequent references, both symbolic and explicit, to the union of the opposite sexes in Taoist magic rites, according to which there were lucky and unlucky days for intercourse, favourable and unfavourable directions and positions in which to lie, etc. There was also an early Taoist ritual known as the 'deliverance from guilt' ceremony which took place on the nights of the new moon and the full moon. It consisted of a ritual dance, the 'coiling of the dragon and playing of the tiger', which ended in successive sexual unions in the assembly. It was censured in a pre-T'ang Buddhist document on the grounds that 'men and women have sexual intercourse in an improper way as they make

Talisman of the Great Yin.
(Early 12th century, *Tao-tsang*
463-271:28b)

no distinction between nobility and commoners' – a piece of contemporary social criticism which testifies to the egalitarian nature of Chinese Taoist magic.

Bodily yin-yang and Alchemy

Man's own body is also governed by the principle of the Great Ultimate (*t'ai-chi*), *yin-yang* and the Five Elements. Traditionally, when *yin* and *yang* were formed out of the primordial chaos, *yang*, being light, went up to form Heaven, while *yin*, being heavy, descended to form the Earth. This idea is repeated in the composition of the human body, with the head as Heaven and the feet as Earth. There is a spirit in each part of the body corresponding to the structure of the universe. The five organs have their ruling spirits, the upper parts of the body contain the *yang* spirits of Heaven, and the lower parts accommodate the *yin* spirits of Earth. At birth we are filled with the primordial *yang* and, as we grow, this *yang* waxes until, on maturity, it reaches its peak. But *yin* is also present and, as life goes on, *yin* increases and *yang* gradually flows away. When the balance of *yin* and *yang* is no longer effective, we die. Our breath, spirit, and seminal essence are all dissipated. But for the Taoist death is not a separation of the body and spirit as we conceive of it in the West. It is rather a separation of the *yin* and the *yang* elements of man.

Concepts of Taoist internal alchemy also appear in talismanic magic. As we have just seen, the human body was considered to be endowed by Heaven and Earth with the two life-constituents, *yin* and *yang*. They are symbolized by the trigrams *k'an* and *li* respectively. *K'an* and *li* are also the active manifestations of *ch'ien* (representing Heaven) and *k'un* (representing Earth), thus symbolizing their influences. In alchemical terms, *ch'ien* and *k'un* also represent the furnace (the 'subtle fire' of the body) and the crucible (the centres in the body where energy is transformed), while *k'an* and *li* are the ingredients combining in the crucible to form the elixir of life. Trigrams *k'an* and *li* also stand for the sacred union of *ch'ien* and *k'un*, and that of *yin* and *yang*. This union is said to be the magic union of the solar and lunar influences, for in the *I-ching*, *k'an* and *li* represent the moon and sun.

These were the chief principles governing Taoist thinking, and the main purpose of the magic rites and ritual activities of popular Taoism, with its use of talismans and charms, was to win the blessing associated with *yang* and suppress the dark forces of *yin*.

Finally, in accordance with the ancient principle of Taoist inner alchemy, certain post-Han Taoist cults stressed the idea of giving

Talisman of the Great Yang.
(Early 12th century, *Tao-tsang*
463-271:28a)

no distinction between nobility and commoners' – a piece of contemporary social criticism which testifies to the egalitarian nature of Chinese Taoist magic.

Bodily yin-yang and Alchemy

Man's own body is also governed by the principle of the Great Ultimate (*t'ai-chi*), *yin-yang* and the Five Elements. Traditionally, when *yin* and *yang* were formed out of the primordial chaos, *yang*, being light, went up to form Heaven, while *yin*, being heavy, descended to form the Earth. This idea is repeated in the composition of the human body, with the head as Heaven and the feet as Earth. There is a spirit in each part of the body corresponding to the structure of the universe. The five organs have their ruling spirits, the upper parts of the body contain the *yang* spirits of Heaven, and the lower parts accommodate the *yin* spirits of Earth. At birth we are filled with the primordial *yang* and, as we grow, this *yang* waxes until, on maturity, it reaches its peak. But *yin* is also present and, as life goes on, *yin* increases and *yang* gradually flows away. When the balance of *yin* and *yang* is no longer effective, we die. Our breath, spirit, and seminal essence are all dissipated. But for the Taoist death is not a separation of the body and spirit as we conceive of it in the West. It is rather a separation of the *yin* and the *yang* elements of man.

Concepts of Taoist internal alchemy also appear in talismanic magic. As we have just seen, the human body was considered to be endowed by Heaven and Earth with the two life-constituents, *yin* and *yang*. They are symbolized by the trigrams *k'an* and *li* respectively. *K'an* and *li* are also the active manifestations of *ch'ien* (representing Heaven) and *k'un* (representing Earth), thus symbolizing their influences. In alchemical terms, *ch'ien* and *k'un* also represent the furnace (the 'subtle fire' of the body) and the crucible (the centres in the body where energy is transformed), while *k'an* and *li* are the ingredients combining in the crucible to form the elixir of life. Trigrams *k'an* and *li* also stand for the sacred union of *ch'ien* and *k'un*, and that of *yin* and *yang*. This union is said to be the magic union of the solar and lunar influences, for in the *I-ching*, *k'an* and *li* represent the moon and sun.

These were the chief principles governing Taoist thinking, and the main purpose of the magic rites and ritual activities of popular Taoism, with its use of talismans and charms, was to win the blessing associated with *yang* and suppress the dark forces of *yin*.

Finally, in accordance with the ancient principle of Taoist inner alchemy, certain post-Han Taoist cults stressed the idea of giving

Talisman of the Great Yang.
(Early 12th century, *Tao-tsang*
463-271:28a)

Talisman of the Ruler of the South, to assist in refining spiritual energy, and by Taoist Inner Alchemy, to achieve immortality. The design incorporates a gourd-shaped crucible with *liên* – 'to smelt' or 'to refine' – beneath.
(*Tao-tsang* 1152-29:6b)

birth to a new man within oneself, instead of producing offspring externally. This 'infant' represented the immortal soul which was finally externalized when the soul left the mortal body and joined the spirit world. This inward concentration of life-forces, aided by talismanic magic, is symbolized by the image of the flaming 'pearl,' a frequent talismanic graphic component, representing the offspring of the union of *k'an* and *li*, the human and cosmic Energies enveloped in the fire of transformation.

The Spirit World

During the centuries of the Han and post-Han periods (i.e. from the second century BC onwards), popular Taoism began to develop a large pantheon of the spirit world which numbered tens of thousands by the end of the Ch'ing period. Both zoomorphic and anthropomorphic images, representing gods, spirits and demons, appear in this pantheon. They are drawn from ancient Chinese nature-worship, local hero-cults and ancestor-worship, and are so numerous that it would be impossible to list them all. The gods are divided into two categories: those of the Prior Heavens, and those of the Posterior Heavens. At the top of the hierarchy are the gods of the constellations, i.e. the Prior Heavens, the abode of the transcendent and eternal Tao. The Prior Heavens are exempt from changes and represent the mystic sources of life, primordial breath, and blessing in the world of the Posterior Heavens. The gods commonly worshipped by Taoists as patron spirits are those of the Posterior Heavens, where change does take place. They are divided into three groups: those of the Heaven, those of the world of nature and man, and those of the underworld hidden beneath the oceans. These three sections of the visible world are governed by the change of seasons and the continuously revolving complementary interaction of *yin* and *yang*.

The highest of the Taoist divinities are the Three Pure Ones of the Prior Heavens. These are the so-called Primordial Heavenly Worthy, Elder Lord of the Heaven, controlling the past; the Precious Spiritual Heavenly Worthy, Ling-pao, Lord of the Earth, also known as the Jade Emperor, controlling the present; and the Precious Divine Heavenly Worthy, Tao-te, Lord of Man, also known as Lord Lao, controlling the future. They reside in the three highest of the heavenly realms. The Three Pure Ones, lords of Heaven, Earth and Man are also lords of the head, the chest and the belly in man, corresponding also to primordial breath, spirit, and seminal essence.

Of even greater antiquity than the Three Pure Ones are the Five

Primordial Spirits, who also dwell in the Prior Heavens, but are summoned to Earth during rituals. These are the five spirit-emperors: Fu Hsi for the East, Shen Nung for the South, Huang-ti for the Centre, Shao-hao for the West, and Chüan-hsü for the North. They are accompanied by their assistants or spirit-ministers, and are closely connected with the workings of *yin-yang* and the Five Elements, as well as with the animals and star-spirits symbolizing the Five Directions. The five great mountain peaks of China are considered to be the special repositories of these spirits of the Five Directions, and are thus symbolically treated as sources of the Five Elements. For example, Hua-shan is the dwelling place of the spirits in the west, and the source of Metal.

All other spirits who rule the visible world (like the Three Star-gods of Happiness, Prosperity and Longevity, or the Kitchen God) watch over men's good and evil deeds and report them to the heavenly rulers for reward or punishment. In popular Taoism, the highest spirits commanding *yang* influences are resident in Heaven and provide life and blessing. The demons of the underworld are the spirits of men who have died violent deaths or committed suicide, or orphan souls lacking ancestor's tablet or offspring. These bring misfortune, sickness and calamity to mankind. Good spirits, on the other hand, are invariably those of virtuous men and women who worked on behalf of mankind (e.g. as healers) during their lives, and who have become local cult figures after death so that their power and good influence should continue to operate. But in this Taoist spirit world 'bribery' exists as well as the power of accumulated 'merit': demons and spirits were symbolically given talismanic 'paper money', just as the mandarins of imperial China were offered bribes in return for their favour or influence. Clearly this is an indication of the effect of China's mandarin society on the Taoist system – the use of burnt offerings to spirits predates the use of actual paper money by over two thousand years. As a rule, gods worshipped at seasonal festivals and rites were only summoned at other times in the case of great disasters or calamities.

In folk religion and in magic rites contact was primarily with the lower level of the spirit world: the *shen* spirits and the *kuei* demons. According to *yin-yang* theory, before death the *yang* part of a man's soul is *hun*, and after death, it is *shen*. The *yin* part of the soul before death is *p'o*, and after death, it is *kuei*. Thus the *yin* part of the soul after death is usually associated with demons and evil. The *kuei* may also be the harmful spirit of a man who has not been properly returned to earth in burial; a person, for instance, who has died by drowning. In

many cases, people who have died violent deaths have *kuei* and not *shen* spirits. In Chinese mythology, they appear to seek vengeance on mankind for their unfortunate position. In some parts of China, however, they are regarded as patrons of gamblers and prostitutes.

According to Taoist beliefs, the *yin* soul is divided into seven and is connected with the emotions, while the *yang* soul is divided into three and is responsible for human virtues. These emotions and virtues also correspond to the Five Elements, Seasons, Directions, etc., as shown in the chart above (p. 11). Thus man's relation to this many-layered spirit world of the popular Taoist pantheon, which already numbered several hundred in Han times, was further complicated by the contribution of later Taoist teachings, mostly of sectarian nature, in the fields of geomancy, alchemy, medicine, etc. As a result, the Taoist vocabulary of the period acquired fresh connotations, and the visual arts developed new dimensions of occult symbolism. These included the esoteric significance of the unity of the round Heaven and the square Earth; nature worship, from sacred mountains to indoor dwarf plants; the intentionally vague concept of *ch'i*, Cosmic Energy, and its careful preservation in the body through Taoist self-cultivation, breathing exercises and prolonged sexual intercourse. Thus the vocabulary of Taoist occult art was founded on the concept of multi-perceptual communication with the spirit forces of the universe, from which grew the notion that the arts should appeal simultaneously to sight, hearing, taste and feel, and should include movement, a principle alien to Western art traditions, in which any particular art is expected to appeal to two of the senses simultaneously at most.

fig. 4

The Magic Power of Calligraphy

The magic power of talismans derived, as we have seen, from the fact that, according to Taoist belief, they were *permanently* inhabited by spirits. Thus men were able to communicate directly with spirits by means of these talismans without the participation of a medium. The talismans themselves acted as mediums, and were to be treated with the greatest respect, veneration, and secrecy. The interdependence of the Taoist spirit world with the material world made the use of talismans much more significant than it would be to Western spiritualists, since spirits were believed to play a commanding role throughout the whole universe, and not merely in a realm of ghosts and supernatural beings. Moreover, talismans constituted the basic essentials for individual Taoist religious practice and worship, as well as for communal rites.

Talismans for Summoning Spirits by Ornamental Beauty, to be written on blue paper in red, and burnt as offerings. The set of three in rounded (*yin*) style of calligraphy (on the right) are to be used 'on *yang* day(s) to have intercourse with the *Yang* Spirits'. The set of three in the squarish (*yang*) style of calligraphy (on the left) are to be used 'on *yin* day(s) to have intercourse with the *Yin* Spirits'. (Tao-tsang 221-1: 26a)

Spoken charms and spells predated written and painted talismans in China as in other parts of the world. The composition of the Chinese character *shou*, meaning 'invocation of spirits', shows two 'mouth' graphs at the top and a magic wand underneath, strongly suggesting the participation of two people, one presumably a medium, engaged in the task of invoking the spirits. Under shamanistic influence, mediums seem to have played a very significant part in the mystic experiences of Chinese Taoists during the Han period and before. And talismans of particular power were believed to have been composed by those Taoist mystics who were able to communicate directly with the spirits.

Contemporary Han and post-Han sources invariably emphasize the unusual graphology of protective charms and spells received by the mystics from the spirits. They refer to various 'cloud scripts', archaic script forms, and commonly unrecognizable forms of script and graphic compositions charged with magic power which were secretly handed down by the early Taoist mystics. Some of these were written on peach-wood plaques, such as the Weapon-Averter seal talismans of the Chou period, measuring 6 by 3 inches, written in five colours, and placed on gates and doors during the month of midsummer. Others, like the post-Han Five-Colour Talisman, which guarded against pestilence and all kinds of illness, were inscribed on paper or silk of various colours. Yet others were written on gold or jade tablets. In addition to black ink, red cinnabar was used for the calligraphy. The Red Spirit Talisman, for instance, which was worn on the body primarily to guard against death or wounding in battle, consisted of drawing in red cinnabar on vertical strips of yellow paper.

The size of the written character or characters varied considerably: some, like the Enter-Mountain Amulets attributed to Lao-chün to protect travellers in mountainous regions, were inscribed in specially large characters to fill the whole oblong plaque or paper strip. Others only had one or two characters written on them: the 'Emperor of the North', for instance, which afforded protection against crocodiles and insects, as well as winds and waves. Some combined a word of command or request with semi-abstract representations of spirit mountains, constellations, or elements of thunder and lightning (to frighten demons). Others consisted of amulets about two inches square, carved from the pith of jujube and inscribed only with archaic seal-script characters: the Lao Tan Amulet, for example, which protected against tigers, i.e. symbolically against the influence of the *yin* (female) element. More commonly, however, the talismans were oblong strips

with written characters descending in a single or combined vertical form, rather than spreading horizontally. The strong esoteric influence of this strip-format is indicated by the fact that it has survived intact in the format of both Chinese and Japanese hanging paintings, particularly landscapes, in later centuries.

Originating from, and inhabited by spirits, these compositions were treated with the utmost reverence. To receive their favour, one had to perform a brief personal introduction to them by name, bow to them at least twice and, if necessary, pronounce the prescribed incantation. When this ceremony had been performed, the talismans would be placed in garments, on doors or gates, or burned to provide protection. In the latter case, the ashes might or might not be consumed, according to the prescribed ritual. Although the talisman was traditionally produced for the layman by an initiated Taoist priest, the priest was not required, except in the case of specially prescribed cures or exorcism, to communicate with the spirit world. On the other hand, certain highly powerful talismanic formulae were transmitted by Taoist mystics from generation to generation in utmost secrecy. Many of the examples illustrated in this book belong to this class.

In a description of the contemporary use of talismans, the *Pao-p'u tzu* (c. AD 300) lists several forms much used at the time. Among these were some to be written in red cinnabar and worn by travellers in mountains and forests; others to be fastened on doors, corners, pillars and beams, and set up at important road-junctions and public spots; others 'to reduce to subjection'; and finally, the Charm of Universal Peace attributed to the founding figure of philosophical Taoism, Lao-tzu (sixth century BC).

The uninitiated were of course unable to read these talismans and charms. The *Pao-p'u tzu* complains that no layman could detect the errors in them although some were suspect, and various Taoist sources of later centuries ascribed the inefficacy of talismans to the use of mutilated versions or faulty copies. The increasing use of calligraphic magic talismans by the fifth century could not prevent the decline of old talismanic graphic traditions: indeed, it opened avenues for fresh visual interpretations, culminating in the flowering of Taoist art of the Sung period.

Magic diagrams, talismans and charms required a secret language for their expression, a symbolism outside the scope of the ordinary graphic vocabulary of Chinese writing and painting. For this purpose, popular Taoism was able to draw upon the unlimited resources of the Chinese inventive genius. But in order to find unorthodox calligraphic expression, or to modify existing forms for occult use, the artist had to

Talisman to bring assistance from the Supreme Jade Sovereign. In red on white paper, to be burned with an incantation of 36 characters. (Tao-tsang 1152-34:2b)

solve an almost insuperable problem. The rules governing the use of the sensitive Chinese writing brush, one of the most ingenious inventions of Chinese civilization, were rather inflexible. Strictly speaking, there was only one way of writing a Chinese character correctly. The rules of the brush were admittedly more flexible for painting and for the so-called 'free' calligraphic exercises, in which the character was sometimes modified out of recognition. To fulfil his function, the occult artist had to stay either partly or completely outside the traditional conventions of Chinese calligraphy which, for example, did not accommodate waves and curving lines, or circular forms in script. Hence the emphasis on these in 'free' calligraphic exercises. Sometimes, of course, the writer was an illiterate folk-artist, and therefore already outside the tradition, so that his contribution to the vocabulary of unorthodox expression was fortuitously non-conformist.

The Mystic Graphic Arts

69 Taoist philosophy has been called at the same time scientific and
 22 mystical. And this applies equally to the magic art of Taoist talismanic composition. But the graphic styles of the diagrams clearly reveal two categories of inspiration: some display an acquaintance with brushed calligraphy, or incorporate elements of it; others simply do not show any relation to, or influence from, the conventional technique. In the second category we find imitations of wood-carving and needle-work techniques at one end of the spectrum, and, at the other, the blood-stained impressions left upon the paper by the cut tongue of the medium. These bloody marks represent the words of the spirit, and the utterances of spells by the medium. It is also an example of the creation of new talismans by means of the mediumistic practices of the Spirit Cloud (*shen-hsiao*) Sect of Taoism, which dates back to the Hsüan-ho reign period (AD 1119-26) of the Northern Sung dynasty. These practices have survived until the present day in Hong Kong and Taiwan. M. Saso, in his *Taoism and the Rite of Cosmic Renewal*, has an illustration of a half-naked medium cutting himself with a sword while in trance, and carrying on his back a talisman dipped in blood.

The variety of occult graphic compositions is enormous, ranging from the spontaneity of trance-drawings to the meticulous draughtsmanship of pseudo-scientific diagrams and magic charts. However, the technique of execution remains uniformly unsophisticated, lacking the subtle texture strokes of academic painters. But the Northern Sung School and the School of Literati (*wen-jen*) of the Yüan period accepted some of the principles inherent in Taoist

graphic art, together with its mystic values, and thus from the Sung period onwards, inspired calligraphers and painters were generally regarded as people able to communicate with the spirits. As a result, the spiritual cult of calligraphy (and painting) long venerated by Taoists, became firmly established beyond the boundaries of talismanic graphics.

Furthermore, talismanic calligraphy included other means of symbolie contacts with the powers of the supernatural: first and foremost, the elements of magic dance. As an art of movement, dance symbolized the principle of change. The magic dance of the legendary limping Emperor Yü is often referred to in talismanic compositions. These movements which were taught to Yü by heavenly spirits to give him command over the spirits of nature, originally represented a kind of hopping dance that Taoist shaman sorcerers often performed while in trance. But the Taoists were primarily concerned with the magic power of calligraphy, and considered its effectiveness to lie above all in the line traced by the sorcerer's feet in dance, a line which reproduces a vortex, a spiral of magic, frequently reinforced by constellations.

fig. 18

What are the chief merits of this Taoist graphic art?

First of all, we find that it provided the foundation for a high level of abstraction in Chinese art as a whole, creating forms of a primarily graphic nature for the basic concepts of Taoist teachings, which were metaphysical, rather than ethical, embodying such concepts as Change, Movement, and Energy. Ancient China's lack of epic traditions ensured a fertile soil for this abstract symbolism. It penetrated artistic life beyond the visual, influencing the arts of movement, for instance, and music. As Taoist graphic art recognized no lines of demarcation between the real and the imaginary, it could appeal equally to all, from the philosophically minded to the least sophisticated, although at very different levels. The active use of the imagination in interpreting abstraction was the cardinal point in this type of Taoist art, and still survives in many areas of Chinese art and literature. In traditional Chinese opera, for instance, the almost bare stage is traditionally filled in by the imagination of the spectator.

In addition, Taoist occult artists developed the basic grammar of a superbly rich artistic language designed to symbolize and embody continuity of form (i.e. material reality) in space (i.e. imagination). Through observation of rolling clouds and mist, undulating waves, rising vapour and smoke – the most intangible of all phenomena – they established linear representations for Change, Movement, and Energy. The basic grammar of this artistic language constituted a unique form

Talisman for purifying the body, to be burned with an incantation of 37 characters which can be rendered as follows: 'The Spirit of Uncleaness is already dissipated, exhausted in the three places to be guarded [i.e. ears, eyes and mouth]. The turbid torrent has been cleansed by the Golden Tower and the Illuminated Royal Apartments. Go high above to contact the Primordial Lord, the Twenty-four True Ones, all in the form of Divine Spirits, to ascend mysteriously from the darkness. Without delay, as the True Order commands.' (*Tao-tsang* 217-30: 22a)

39,40

of rhythmic linearity, uniting the perceptible – the pulse beat of the human body – with the invisible ether of breath and spirits. This Taoist-inspired abstract linearity is already to be seen in the decorative arts of the late Chou period: in bronzes during the sixth and third centuries BC; in the lacquer of the Chang-sha type of the third century BC; and in silk and painted pottery designs of the Han period.

Curving lines which at first allowed man to contact the spirit world, later took on the opposite function in popular occult art: namely they were the one way to outwit evil spirits who can move only in a straight line!

This graphic art of the occult also helped, in a typically Taoist fashion, to establish the significance of 'no statement' which enables one to make a statement. It created the mystic as well as the artistic framework to blend 'statement' with calligraphic 'emptiness' in the true complementary manner of the magic interaction of *yin* and *yang*. Thus 'emptiness', or 'no statement', becomes a statement in this art; a mystic statement, skillfully representing the elements of uncertainty in real life, the vagueness of destiny, or the obscurity of the future. The musical pause, the momentary stillness in dance, or the enclosed emptiness in calligraphic composition or painting, all become an inseparable part of the whole, just as the negative *yin* or the positive *yang* alone cannot form a complete interlocking symbol of the two, representing the Great Ultimate.

Taoist graphic art also produced a system of symbolic multiplicity which went well beyond the ordinary limits of the visual arts. This repertoire of symbolism had a metaphysical significance which was applied alike to Heaven, Earth, and mankind. It sought to unite men and spirits into a single state in emulation of the perfect harmony of *yin* and *yang*, or of Heaven and Earth. Thus we find that the cavities of rock-formations also symbolize stars, which in turn represent lanterns. Similarly, the footpath marked out on the Taoist pilgrim's guide-map to the sacred mountains becomes a magic line on the chart to find the spirits. On another level, the 'sound' of blue jade lends its 'colour' to the sky, and phallic diagrams become 'Heavenly Cures'. To make matters still more complicated, the world of imperial China was also incorporated into the Taoist system when, for example, the term for summoning spirits, 'induce to come', took on the additional mandarin meaning: 'by imperial order'.

The Taoist practice of using intimidatingly vivid colours, however, was never taken up by the academicians of Chinese fine art. Such colours, which were also used in the related art of paper-cuts, directly reflected the colour consciousness of the *yin-yang* world of symbolism,

besides expressing the inherent desire of the Taoist occult to create a different art, suitable for communication with the spirits. Talismanic colours and colour-combinations – characteristically Chinese reds, yellows, greens, and blues – contributed to the splendour of popular Taoist festivals in the decoration of streamers, banners, kites, lanterns, brooms, baskets, parasols and fans, all of which were employed in Taoist magic rites. Of these, brooms were traditionally regarded by the shamans as magic implements to sweep away evil spirits. The long shapes of the streamers and strip-banners indicated talismans with their inscriptions and symbolic designs. And their movements in the wind, which would cause them to show or hide their inscriptions or designs with each gust, symbolized the uncertainty and suddenness of man's contact with the spirits. Similarly, the flash of the ancient bronze mirrors, which was supposed to signify lightning and thunder, also represented this moment of spiritual contact, although these magic phenomena were later reinterpreted according to popular occult tradition as no more than functions of exorcism. Some Taoist sects, however, remained very much aware of the concept of the momentary spiritual experience, vision, insight or inspiration, and brought it into the foreground to meet the challenge of Ch'an (Zen) Buddhism in Sung times. Occult Taoism nevertheless did not prove sufficiently flexible to make much of the Buddhist concept of Enlightenment: its followers turned instead to the world of metamorphosis familiar to the West in the form of Chinese ghost stories, and placed increasing emphasis on the concept of immortality.

To return to the ritual objects used in Taoist popular festivals and communal rites, the flickering lights (*yang* element) of lanterns were to guide the spirits to the altars during seasonal rites at night (the *yin* period). The colourful parasols provided shade (*yin* element) against the burning sun, thus regulating its *yang* influence. The movement of fans brought currents of *ch'i*, Vital Energy; while baskets of flowers provided the various scents – another *yin-yang* 'regulator' in man's communication with the spirit world. Spoken charms, spells, and chants combined with talismans to give multiperceptual contacts with the spirits over and above the visual art of calligraphy.

Making Talismans

In order to assess the early popular Taoist concept of talismans, one should note that the Chinese word for talisman, *fu*, originally designated written tallies or contracts. In Han times, talismanic charms attributed to the inventor of magic charms, Chang Tao-ling (first

Consultation of a magic diagram. (Early 17th-century illustration from the *Shui-hu ch'üan t'u*)

Consultation of the magic formations of yarrow sticks. (Early 17th-century illustration from the *Shui-hu ch'üan t'u*)

century AD), also known as Chang T'ien-shih or Heavenly Master Chang, the legendary founder of the Heavenly Master Sect, represented a kind of contract made with the spirits. As such, they were looked upon as important documents of contract to be carried on the body to provide permanent protection. They guaranteed command over the spirits whenever it might be required. This popular Taoist belief, indeed, prevailed alongside the more profound mysticism of philosophical Taoism for centuries. The use of 'protective contract' talismans appears to have been universal, but popular Taoism favoured the use of specific talismans as well. In fact, the ever-increasing variety of printed talismans from the Sung period onwards proves their immense popularity. Even up to the present day, an estimated two million talismanic New Year prints are marketed in China annually.

There are over three thousand basic talismans preserved in the monumental compendium of the Taoist canon, with several hundred other magic diagrams and charts. These examples provide ample material to enable us to analyse the art of making talismans as well as their underlying graphic principles.

As we have seen, the use of talismans was governed by the *yin-yang* Five Elements theory, the complex doctrine which taught that men were able to influence the processes of the universe by their *participation* through magic (as opposed to the teaching of religious acceptance of Confucianism and, to a large extent, Buddhism). In the course of the centuries following the Han period, this system acquired lavish accretions from folk art and festivals, to such an extent that, by the seventeenth and eighteenth centuries, it became practically impossible for the uninitiated to observe the outward signs of it correctly. In fact, outsiders were hardly aware of the complex esoteric preparations which preceded the performance of Taoist occult rites. Only recently have reliable accounts been published for the first time. These provide fascinating information on the precise timing of Taoist occult rites, including the making of talismans. For example, after the day and hour of the ceremony had been determined by an astrologer in accordance with the temple's geomancy and the nature of the festival, a list was drawn up of those people whose presence would be inauspicious to the occasion. This was because their eight characters (i.e. the cyclic double characters for year, month, day, and hour of birth) would clash with the elements governing the auspiciousness of the chosen day. In fact, their presence would not only be an expression of disrespect, it might also incur the actual hostility of the spirits.

In talisman-making, the timing was equally important. Talismans of Chung Kuei, for example, the popular devil-catcher whose cult

goes back to T'ang times, had to be composed not only on the day of his festival – the Fifth Day of the Fifth Moon – but preferably during the *wu* hour of that day, i.e. between 11 a.m. and 1 p.m.

Among a host of similar examples we may single out the practice of making medicinal talismans by Taoist doctors (known as *chu-yu-ko*). The treatment of an illness included chanting the name of a particular healing spirit while tracing the charm or talisman on paper. The ashes of this paper, mixed with the appropriate 'carrier' drug, was believed to be efficacious whether swallowed or used externally. The doctor had to be familiar with the spirits of all the thirteen branches of Taoist medicine (namely, the greater veins, winds, arrestives, external infections, swellings, mouth and teeth, eyes, ears and nose, obstetrics, external injuries, external wounds caused by metal weapons, acupuncture, and pediatrics), as well as their related diseases, principal curative areas, and appropriate charms. In addition, he was required to observe specific geomantic codes for establishing his surgery. This had to be spacious and far away from the kitchen and living quarters of the house. In the centre stood the altar for the spirit of the Yellow Emperor with his image hanging above it. To the left was a second altar for healing spirits, whose names were written in ink on red paper, and to the right was the altar of Lao-tzu. Before all three were containers with offerings of ripe fruit and flowers. The most important feature, however, was a low square table specially installed to hold the implements necessary for writing charms. On it would be laid out secret Taoist talismanic writings, papers of various colours, brushes, cinnabar, ink, and clean water.

The procedure in the treatment of the sick was as follows: after the patient had told the Taoist doctor his symptoms, he was led to the image of the Yellow Emperor where he (or his representatives) burnt incense and bowed formally four times. The doctor then recited the water incantation, the cinnabar incantation, the ink incantation, the brush incantation, the paper incantation, the incantation for writing the selected charm and, finally, the incantation to summon the spirits of the appropriate branches of Taoist medicine involved in the case. After this, the doctor painted the charm, at the same time silently repeating the Yellow Emperor's chant for healing. When he had finished, he wrote the two characters *chih ling*, meaning 'induced to come' or 'by imperial order', on the top of the paper and placed it on the altar. Then having sprinkled three drops of water on the 'Summon the Spirits' charm, he took a mouthful of water and sprayed it over the talisman he had just painted. After making the healing spirit incantation, he rose, clicked his teeth three times to mark a pause, bowed

Talisman to vitalize the Five Viscera. (13th century, *Tao-tsang* 1204-42:31a)

Talisman to prolong life. (Early 12th century, *Tao-tsang* 463-271:27b)

formally, picked up the talisman and retired. Finally, he wrapped the talisman in white paper and gave it to the patient with instructions on how to burn it (i.e. how to send it to the spirits) and what additional drugs to take. The patient would then take the talisman home in his left (*yang*) hand.

Equally elaborate was the procedure for making the magic peach-wood wands used in trance-drawings. In this type of talismanic composition (more often found in South China), the drawing was traced on a thin layer of sand or rice spread on a table. The medium sometimes took the wand in both hands or, alternatively, allowed one hand to be held by a person wanting to establish contact with the spirits and record the talismanic message. The drawing might later be transferred to paper, particularly if the diagram was proved to be sufficiently powerful. The peach-wood was usually cut from a twig growing on the east side of the tree, since the peach was associated with the immortal paradise of the Queen Mother of the West, and this arrangement therefore symbolized the union of East and West. On the side opposite the twig, characters meaning 'Spirit of the Clouds' (*yin*) would be cut in the bark of the tree. As implements of automatic writing, these wands were regarded as especially powerful and were frequently used in exorcism, as were peach-wood calligraphic swords. According to popular Taoist belief, the instruments used for writing talismans and charms were themselves so powerful that they were capable of defeating not only ghosts and evil spirits, but also hostile animals and men.

Talismanic Language

Five basic colours were traditionally used in paper charms and talismans for, since spirits moved in all five directions, a suitable colour or combination of colours was needed to control them. Yellow represented the Centre, blue the East, red the South, white the West, and black the North. Of these, red was especially important in that it also symbolized blood, the life-force, and was considered to have supreme magic power. Red talismanic paper protected the whole family from pestilence and ills. The belief that red brought good fortune and long life is indicated by the extensive use of red cinnabar in Taoist alchemy in perpetual search for the elixir of life. The prevalence of cinnabar-red carved lacquers in popular Taoist magic art can also be linked to the magic powers of red, since they are frequently adorned with benevolent talismanic inscriptions. In view of the auspicious meaning of red, it is easy to understand the popular appeal of this colour when it

Exorcist charm to be used against the noxious influences of the Black Tiger of the Mountains and the Black Fog. (Tao-tsang 1152-37:2b)

Talisman to protect the body, composed of the character *sheng* - 'life'. (Tao-tsang 1203-226:3a)

became the symbol of a political movement in China, as was the case with the Chinese Communist Party. Again, one can better understand Red Guard demands in recent years that red should be the 'Go' colour at traffic lights, instead of green.

The widespread Chinese superstition about destroying any kind of paper is certainly connected with the talismanic use of paper in Taoist occult practices. For paper has always been a relatively cheap and easily available material in all parts of China.

Talismanic language required, first and foremost, a visual statement of the unity of Heaven above and Earth below, and this was expressed in the verticality of the composition, whatever the differences of detail. In early Taoist symbolism, thin lines represented Heaven and thick lines Earth. In later centuries, a rounded style of calligraphy was used to indicate *yin*, no doubt deriving from the clouds which represented that aspect. On the other hand, a squarish style of calligraphy indicated *yang*, referring presumably to hard, angular rock-formations. Therefore, the ancient Chinese symbolism of the round Heaven and square Earth did not apply to talismanic graphics. On the contrary, the rounded, soft style was *yin*, the hard, squarish style, *yang*.

Dots, either connected by straight lines or not, represented stars and constellations. In combined compositions, these appear in the upper, celestial half of the talisman. Such visual references to the stars are frequently to be found in charms against demons, for celestial deities were powerful destroyers of spectres as well as dispensers of felicity. Hence, too, the visual reference to constellations in terms of cavities of rock-formations, re-emphasizing the unity of Heaven and Earth. In other instances, constellation dots outline human figures and convey a bizarre, almost futuristic mood of expression, as we can see in the Armour of Man talisman of Sung or Yüan date, where the image is strangely reminiscent of a twentieth-century spaceman.

Ascending and descending lines found in various types of talismanic calligraphy are another reference to the invisible lines of contact between celestial spirits above and terrestrial beings below. This concept of linear contact is very close to the shamanistic symbol of the Tree (*axis mundi*) which was said to be the home of the spirits permitting ascent to the various heavens or descent to our world. The lines occur with surprising regularity in all kinds of talismans. When broken, they resemble the shape of the Chinese character for 'bow', and this has resulted in another false interpretation by the uninitiated of later centuries, who taught that the character had been incorporated into the talismans because the bow was a weapon especially feared by evil spirits.

The vortex, or spiral of the ancient Taoist Cosmic Energy, which is the dominant sign of the celestial upper half of the talismanic compositions in some of the most ancient charms preserved in the *Pao-p'u tzu*, was later believed to symbolize thunder and lightning – a result of the growing influence of a great variety of thunder-and-lightning gods invented by popular Taoism in post-Han times.

70, 72-3 Since talismans and charms were believed to produce whatever condition they expressed, Taoists invented a great variety of them, in particular, characters which express the blessings of *shou* (longevity),
74 and *fu* (happiness). Archaic and fanciful talismanic representations were produced for them in a hundred different forms, and used by way of decoration on all sorts of objects from lacquer to silk embroidery. Written characters denoting felicity, and therefore producing it, likewise appeared regularly in charms on the grounds that they frustrated evil. Talismans also contained threats and commands directed at evil spirits. Among these, we find the character *sha* (to murder) with great regularity. Another powerful character for charm-writing is *cheng*, which denotes the Order of the Universe, before which all evil influences must disappear. It is frequently accompanied by *chih*, also meaning 'order', so that the charm enjoins good behaviour on evil spirits in accordance with the Order. By no means less powerful and frequent are the characters for Sun and Moon, which are often combined to form the character *ming*, meaning light – a devil-destroying power with *huo*, fire.

A very prominent position in talismanic graphics was held by *ting*, the fourth of the ten Heavenly characters, which represents South and, therefore, the devil-destroying element of Fire. In the sexagenary cycle *ting* recurs six times to perform its exorcising function, hence *ting* is written six times in some talismans. A similar part is played by *chia*, the first of the ten Heavenly characters, which represent East where the devil-destroying Sun rises.

81 Talismans were of course inscribed with the names of benefactor and protector spirits. But even more extensive was the use of the rough drawings supposed to be portraits of gods. Frequently in fragmentary form, with only an arm or leg indicated, their magic effect was regarded as even stronger. When such talismans and charms were burned, the demons were believed to be most satisfactorily roasted, tortured, and killed. For such important talismans, the gods were
64, 65 specially chosen from among Generals of the Celestial Armies.

Sentences in ordinary Chinese writing dedicated to gods and spirits to station themselves on certain spots to protect people feature in a good number of talismans. Among these, one finds commands like,

'Planet Jupiter take station here', 'Li Kuang shoot your arrows this way', or 'This is to order the Dark Lady of the Nine Heavens to stop murderous influences'.

The Taoist Vision

Taoist magic offered man an inner vision to help him communicate with the various spirits that inhabit the body. But since the body is a microcosm, all these interior spirits are also spirits of the exterior world. By the use of talismanic calligraphy, the Taoist is able to extract the cosmic emblems from within, and project them around himself as if forming a meditative mandala – his personal image of the universe, with himself at the centre. This image is sometimes reduced in talismanic magic to a mere circle representing the Whole, the Great Ultimate, the ultimate substance of Tao: emptiness. It is in perfect equilibrium, and nothing can harm it. It takes no initiative, to produce either happiness or disaster.

The spirit of philosophical Taoism remains the most important mystic ingredient in the occult use of talismans. This idea is best summed up in the words of an eighth-century Taoist source, the *Kuan-yin tzu*:

Being is Non-Being and Non-Being is Being; if you know this, you can control the spirits and demons. The Real is Empty and the Empty is Real; if you know this, you can see the stars even at dawn. . . . If you unite yourself with all things, you can go unharmed through water and fire. . . . Only those who have the Tao can perform these acts. Better still not to perform them, though able to perform them.

Indeed, talismanic magic was all this in essence. In practice, it provided the link between popular Taoism and Taoist philosophical mysticism. In the application of occult ideas, it harmonized sectarian views and teachings without necessarily discrediting any of them, or creating rivalries. Talismanic magic art encompassed the symbolism of the noise of the fire-crackers in popular spirit festivals as it did the silence of the Taoist hermit's meditation, recognizing both as ways of spiritual communication. Thus meditational inactivity existed happily alongside the vigorous dance movements within this frameless and endless system of multiperceptual symbolism, in which even time and space could be dissolved. For the true mastery of this magic art the understanding of Tao is needed: the understanding of the process of change, the harmonization of experiences, spiritual and human alike, which in the final analysis cannot be encompassed by a single act of will.

As testimony to human anxiety, Taoist magic is much concerned with immortality, or at any rate with the desire for a long and sexually active life. The life-giving talismans of Ling-pao, 'Spiritual Heavenly Worthy', Lord of Earth, represent some of the most powerful charms in this group, all of which are executed in a characteristically bold and heavy graphic style. These life-giving talismans seem to have been used in many different ways, including even in burial ceremonies (plate 19), but they all relate to a spiritual power which was closely connected with the ancient cult of the Earth Spirit. Birds (later more specifically cranes) represent longevity in occult tradition, hence their frequent appearance in talismans, often in shorthand form, for instance as bird-heads. These are the forerunners of the mystic Bird Script of talismans of later periods.

18 Talisman of the Armour of Earth. Eight *t'ien* (Heaven) characters surround a *kuei* character. *Kuei* spirits are the *yin* part of the soul after death, associated with demons or evil, or the souls of men who have not been properly returned to the earth in burial. (*Tao-tsang* 853:16b)

19 Bold Taoist talismanic calligraphy symbolizing Earth combined with 'constellation holes', i.e. Heaven. It was reputedly engraved on stone on the outer coffin of Duke T'eng of the Han period, c. 200 B.C. (The earliest reference to this inscription is by a writer in the 6th century. Reproduced from the *Hui-t'ang che-chi*, 7b, late 14th century)

20, 21 Four magic formulae to ward off evil (*yin*) influences are combined in the design of this wooden stand, and also in the brushed composition which can be read from any of the four directions. It incorporates the characters for Heaven, Earth, Fire and Metal. (Stand, Ch'ing dynasty, 18th century; diagram, Sung date, *Tao-tsang* 543-38:18a)

22 Talisman to vitalize the tongue. Such diagrams in heavy calligraphy are an 'improved' version of the blood-stained impressions formerly made on the paper by the cut tongue of the medium. Attributed to Ling-pao. (In an early 12th-century work by Lin Ling-su, *Tao-tsang* 463-268:1b)

23 Talisman to vitalize the tongue. It is to be used under the sign of the third branch of the Twelve Earthly Branches, with

corresponding symbolic animal Tiger, zodiacal sign Gemini, hours 3-5 a.m., and point of compass East-North-East. It represents the Vital Energy (*ch'i*) of the purple clouds of the Centre of Heaven. It is painted in cinnabar-red on a yellow ground. Attributed to Ling-pao. (In an early 12th-century work by Lin Ling-su, *Tao-tsang* 463; reproduced here from *Tao-tsang* 543-41:20a-b)

24 Talisman of the Bird Mountain of the Supreme Taoist, where Vital Energy gives life to the spirits. It is reputed to have the power to grant immortality. (Probably from the period of the Six Dynasties, *Tao-tsang* 431:5a)

25 Jade Talisman symbolizing ascending *yang*, with the Dragon of the East and the Fire Bird of the South. A talisman to prolong active life and increase sexual energy. (Period of the Sixth Dynasties)

26 Talisman in brushed technique, used to establish contact with spirits and/or to bring about Unity. Like the talisman in pl. 23, to be used under the sign of the third branch of the Twelve Earthly Branches. It represents the Vital Energy (*ch'i*) of the precious radiance of the Centre of Heaven. Painted in cinnabar-red on a yellow ground. Attributed to Ling-pao. (In an early 12th-century work by Lin Ling-su, *Tao-tsang* 463; reproduced here from *Tao-tsang* 543-41:17a-b)

27 Talisman to vitalize the kidneys (kidneys symbolizing the female sex organs). The two shapes suggest a pair of female

dancers with *yin* receptacles (i.e. the female sex organs) emphasized. To be used under the sign of the first branch of the Twelve Earthly Branches, with corresponding symbolic animal Rat, zodiacal sign Aries, hours 11 p.m. to 1 a.m., and point of compass North. It represents the Vital Energy of the dark clouds of the North. Black on a white ground. Attributed to Ling-pao. (In an early 12th-century work by Lin Ling-su, *Tao-tsang* 463; reproduced here from *Tao-tsang* 543-41:18b)

28 Talisman to vitalize the eyes. To be used under the sign of the fourth branch (with corresponding symbolic animal Hare, zodiacal sign Cancer, hours 5-7 a.m., point of compass East), and tenth branch (i.e. Cock, Capricorn, 5-7 p.m., West) of the Twelve Earthly Branches, representing the Vital Energy of the radiance of the Sun and Moon. Blue on a white ground. Attributed to Ling-pao. (In an early 12th-century work by Lin Ling-su, *Tao-tsang* 463; reproduced here from *Tao-tsang* 543-41:19a)

29 Talisman to vitalize the brain. To be used under the sign of the Centre, i.e. Earth, representing the Vital Energy of the precious radiance of the Upper Heaven. Red on a white ground. Attributed to Ling-pao. (In an early 12th-century work by Lin Ling-su, *Tao-tsang* 463; reproduced here from *Tao-tsang* 543-41:22b)

30 Talisman to vitalize the blood. The design appears to represent a coiled snake. Attributed to Ling-pao. (In an early 12th-century work by Lin Ling-su, *Tao-tsang* 463-268:2b)

Plates 31–41

The movement of air, and the rising smoke of incense and burnt paper talismans, represent ceaseless change and cosmic energy (*ch'i*) – the all-pervading force in Taoist magic. These highly abstract compositions have a characteristically thin and refined linearity. Their lines can be broken (*yin*) or continuous (*yang*), rounded (*yin*) or angular (*yang*), or a combination of both (plate 36). Although they are of widely different esoteric functions, ranging from charms for summoning spirits (plate 31) to medicinal talismans (plate 40), they are all related to Heaven, the yang partner of the yin Earth. This linear talismanic graphic style had a marked influence on the free calligraphic exercises of conventional Chinese art. The majority of them, however, were not originally painted with the brush. Most of them are derived from magic drawings by mediums on sand- or rice-tables.

31 Spirit-invoking esoteric diagrams formed by lines of blue and red. The diagram on the right invokes: 'the Immortals of the Great Paradise, the Supreme Heaven, the Five Sacred Mountains, the Four Great Rivers [Yangtze, Yellow River, Huai and Chi], the Twelve Sources of Rivers, and the Five Internal Organs [kidneys, heart, lungs, liver, spleen].' The diagram on the left invokes: 'the Super-Immortals of the Great Paradise and Supreme Heaven, the Feathered and Flying Divine Immortals and Fragrance-spreading Strong Men, each to represent the strength of 3,000 men.' (*Tao-tsang* 1367:15b)

32, 33 The eighth and twelfth of the Twelve Field-Marshal Talismans, by means of which Vital Energy (*ch'i*) stimulates the gall and heart respectively. The pattern suggests the rising smoke of incense. White on a blue ground, and white on red, respectively. (*Tao-tsang* 216–62:9b; 216–62:10b)

34 Talisman of the Charcoal-stove, based on the patterns of rising smoke. One of a set of eight diagrams to free souls from the Eight Tortures of the Earthly Prison (i.e. the charcoal-stove, the iron couch, the pile of knife-blades, the hollow bronze pillar with furnace inside, the boiling cauldron, the iron wheel, saw and ice). The text reads: 'By the will of this Ling-pao Talisman, liberate the dead on behalf of [so-and-so], get them out of the Earthly Prison of the Charcoal-stove, so they can ride on this

light and live according to the principles of human kind...' (*Tao-tsang* 216–51:15b)

35 Talisman to purify the mind, to be burned using an incantation of 37 characters which may be translated as follows: 'Spirit of the Divine Ruler of the Red Palace, Energy of burnt offerings, follow the light and fly to purify. Come to the cottage-wall of the Taoist so that weariness has no place in his mind. Under the peaceful morning sky the sweet dew sets quickly to form red jasper. Follow without delay the commands of the True Order.' (*Tao-tsang* 217–30:22b)

36 Old Master's Talisman to rid dwellings of evil spirits and cure epidemics, in combined round and square calligraphy. One of a set of seven, this charm is to be used only in the eastern quarters of the house. The others in the set are specified for the southern, western and northern quarters, and those to be placed on the bed, the stove and behind the house. (*Tao-tsang* 217–24:16a)

37 Talisman to vitalize the lungs, in rounded (*yin*) calligraphy. To be used under the sign of the tenth branch of the Twelve Earthly Branches (corresponding to Cock, Capricorn, 5–7 p.m., West). It represents the Vital Energy (*ch'i*) of the yellow clouds of the Centre of Heaven. Painted in white on a black ground. Attributed to Ling-pao. (In an early 12th-cen-

tury work by Lin Ling-su, *Tao-tsang* 543–41:21b; also reproduced *Tao-tsang* 463)

38 Jade Talisman of Supreme Ruler One of the Great Cave, in rounded (*yin*) calligraphy. It embodies 'the turbid torrent of the whirlpool of the female essence', and 'offers a magic formula to ward off evil influences'. (*Tao-tsang* 7–2:21b)

39 Talisman of the Heavenly Cure, made in 1974 at the Chinese New Year. This type of mystic 'paper money' is known as 'white gold' in Singapore today. (Red ink and eight-trigram seal-impression on yellow. From a Chinese Taoist temple in Bukit Timah, Singapore)

40 Talisman of the Heavenly (*yang*) Cure for women (*yin*), with erect penis (*yang*) under a constellation. The penis carries a brushed character meaning 'induced to come'. The character also means 'by imperial order'. The curative diagram is based on the concept of illness (excess of *yin* influence) being cured by re-establishing the right balance between *yin* and *yang* through sexual intercourse. (*Tao-tsang* 217–16:6b)

41 Natural rock-formation in Hong Kong, a place of pilgrimage for Taoist women. All-night lantern festivals take place here, connected with the talismanic cult of the Heavenly Cure.

Plates 42–55

Cloud formations were associated with the movement of spirits, which were believed to dwell in mist, emerging suddenly to manifest themselves before human beings. A purple flash, or clouds of five colours, frequently marked such supernatural events. But these spiritual contacts too could be controlled by the magic power of calligraphy, and the various cloud-motifs employed in Taoist graphics serve this very purpose. Thus a variety of superbly linear and vapoury 'Cloud Script' forms derive their shapes and therefore their magic power from cloud formations. They are believed to have special powers to enable man to communicate with the spirit world, hence their extensive use in talismanic graphic art. Cloud formations, with or without constellations, also provide the model for the magic art of movement (plate 42), and even geomancy (plate 46). Sound was believed to penetrate this mysterious cloudy spirit world, so that talismans were often used in combination with spoken charms, incantations, and chants. The musical scores accompanying diagrams (plate 49) are written in a style resembling magic Cloud Script calligraphy.

42 Cloud Dance performed in mirror-image formation. The three pairs of female dancers represent the living, with the leg-movements of the *t'ai-chi ch'üan* exercises ('riding of the Heavenly Horse'), while their arm-movements symbolically reach out to invoke the spirits, in harmony with the Inner Alchemy. The Cloud Dance links microcosm and macrocosm, man with the spirit world. (Rubbing from a stone-engraving on an early T'ang tomb, excavated 1973–4)

43 'Flight of the Phoenix' around an imaginary ball of fire, i.e. the sun, an act of magic symbolically inviting the union of *yin* and *yang*, performed by acrobatic dancers of the Peking Opera. This movement expresses the same theme as the magic diagram shown on the facing page

44 Magic diagram of the interaction of the *yang* element of the fiery sun and flying *yin* rain-clouds. (Cinnabar-red and black ink. From a 19th-century Taoist weather-manual)

45 Diagram to prevent great rainfall and wind. The cinnabar-red sun collects black clouds in a fashion reminiscent of the geomancy pattern shown on the facing page. (From a 19th-century Taoist weather-manual)

46 Geomancy pattern known as 'The Flowing Spirits collect Water', indicating increased *yang* influence of the spirits which

absorbs *yin* water and thus prevents rain. (From the geomancy manual of Chiang P'ing-chien, *Shui-ling ching* 1: 35b, 1744 ed.)

47 Diagram for making rain, based on the seven-star constellation of the Great Dipper with a bird-headed cloud formation, symbolizing 'the bursting of clouds and rain', a metaphor for orgasm. In this esoteric context, sexual intercourse was believed to produce actual rainfall. Black ink. (From a 19th-century Taoist weather-manual)

48 Diagram of movement, based on the seven-star constellation of the Great Dipper, symbolizing, as the title states, 'the intercourse between Heaven (*yang*) and Earth (*yin*)', in the footsteps method of the Great Yü (legendary emperor of the Hsia dynasty). These seven steps (the first and last footprints are not counted) also represent a ritual dance combined with sexual intercourse of man (*yang*) and woman (*yin*), at three different stages, indicated in the diagram by horizontal lines. (From an AD 1116 source, *Tao-tsang* 1210–8: 5a)

49 The waterfall – 'Mountain-peak Cloud Falls' – is made up of musical scores of hymns to the Immortals. These are recorded in the 'Sound of Jade' style of mystic calligraphy. (*Sleeping Dragon Mountain Scroll*, detail, attributed to Li Kung-lin, 1040–1106, of the Northern Sung dynasty)

50 The vertical linearity of the rock-face behind these musicians incorporates graphic

elements of the 'Sound of Jade' style of calligraphy in musical scores of hymns to the Immortals. (*Te-hua* porcelain, early 17th century, Ming dynasty)

51 Taoist musical scores, relating to the mystic 'Sound of Jade'. (Collection of hymns to the Immortals, *Tao-tsang* 602–1: 9a)

52 Calligraphic exercise entitled 'Sound'. The character is executed by the contemporary Chinese artist Chiang Yee (who lives in New York) in the 'Sound of Jade' style of mystic script. (Shown at one-man exhibition Hong Kong 1972)

53 The Taoist Cloud Script (*yin*) employed as decoration on a brush-holder of phallic or rock (*yang*) shape. (T'ien-ch'i period, 1621–7, Ming dynasty)

54 An early 4th-century version of Cloud Script which seems still to retain talismanic graphic elements: the elongated strip-format of talismans dominates this style. Cloud Script was used to emphasize the unity of *yin* (clouds, mist etc.) and *yang* (Heaven). The standard forms of the Chinese characters are printed below. (*Tao-tsang* 78: 33b–34a)

55 Text of *Primordial Tao*, an esoteric essay, written in Cloud Script characters with the standard forms of Chinese characters above. (Sung period, *Tao-tsang* 220–3: 12b–13a)

Plates 56–63

Invisible geomancy currents and their mysterious patterns form a special group among Taoist occult graphic diagrams. The purpose of these diagrams was to prevent danger and calamities, and to suggest locations which would enable one to avoid confrontation with spirits rather than to invoke them, so to that extent they differ from other talismans. The patterns included various 'scientific' observations of the invisible magnetic, wind, and underground-water currents of the Earth, relating them to the visible aspects of the location or landscape. As graphic diagrams they are powerful tools of sympathetic magic, enabling one to bring about many kinds of desirable changes. Their occult application is virtually unlimited. This is indicated by the titles of these geomancy patterns (as given in the captions below), many of which have sexual connotations.

Representational art makes full use of these forms (plate 57). These ideas were also employed with the utmost precision in the anatomical theory of yin and yang diseases in traditional Chinese herbal medicine and acupuncture. They provide the concepts for the location of acupuncture meridians and spots to be stimulated 'to evoke' – as one would invoke spirits – either yang tonification or yin sedation, according to the prescribed intensity of stimulation of the affected areas and nerves. Names given to the body's hollows, and blood and breath conveyances, frequently suggest geomantic parallels.

56 Geomancy patterns. The diagram above is entitled: 'A Beautiful Woman offering Flowers' (sexual reference is intended). The diagram below: 'The Pincers of a Centipede'. (From the geomancy manual of Chiang P'ing-chien, the *Shui-lung ching* 3: 12a, 1744 ed.)

57 The 'One', the 'Great Ultimate', *t'ai-chi*, expressed in sexual terms as the magic union of yin and yang. The lovers are in the Taoist 'Hovering Butterflies' posture, the eleventh of the Thirty Heaven and Earth Postures. (Porcelain, mid-18th century, Ch'ing dynasty)

58 Geomancy pattern of the 'Great Ultimate' (*t'ai-chi*), represented as the union of interlocked yin and yang. (From the *Shui-lung ching* 3: 11b, 1744 ed.)

59 Geomancy makes its appearance in a military handbook on explosives, dated 1662. Placed on a trigram *ch'ien* (yang), with legs apart, the female (yin) receives a phallic candle to produce an 'explosion', i.e. to produce orgasm. (From *Wu-lüeh chih* by Mao Yüan-i, 1662; recently reproduced in a Maoist article relating to guerilla

warfare, by Lin Hsien-chou in *Wen-wu* 1973, entitled: *Invention of automatic devices: bombs, land mines and limpet mines in ancient China*)

60 The composition of this scene of lovers in a garden is reminiscent of the geomancy pattern known as 'A Lake peacefully Gathering Pebbles' – a Taoist metaphor for sexual intercourse. (Blue and white porcelain sleeve vase, Transitional period, c. 1640–60)

61 Geomancy pattern known as 'A Lake peacefully Gathering Pebbles'. (From the *Shui-lung ching* 1: 53b)

62 Geomancy patterns known as 'A Boat Sailing with the Wind' (above), and 'Harbouring in a Cave with Bent Bow' (below). The title of the second has military as well as sexual connotations. (From the *Shui-lung ching* 3: 16a, 1744 ed.)

63 Geomancy patterns known as 'An Immortal's Hands plucking the Lute' (above), and 'The Left and Right Hands of an Immortal'. (From the *Shui-lung ching* 3: 9b, 1744 ed.)

Plates 64–81

The magic ingredients of Taoist occult art were provided by their calligraphic components, some pictorial, others abstract, as well as by their general design. Extensive commentaries in the *Tao-tsang* explain the components' significance, though mostly in characteristically laconic terms. For instance, in the Taoist canonical analysis of the magic components of the Jade Talisman (plate 66), the sequence of twenty diagrams reveals the order of the magic rites, and reflects the 'Journey of the Soul', guided by stars in heaven and by lanterns on earth. Charms containing characters for 'longevity', 'happiness', and 'good luck', executed in a variety of graphic styles (plates 73, 74) also form an important component group. They too are believed to work by virtue of sympathetic magic. Less common pictorial elements are human heads, legs and arms, which were supposed to confer exceptional power on composite talismans. These members are identified with the spirit figures of the popular Taoist pantheon. Some are executed with almost childish simplicity (plate 81), others skilfully incorporate magic characters of great complexity (plate 77).

64, 65 Talismans of the fifteenth and twenty-fourth of the thirty-six Generals who act as Informers of Heaven, with both pictorial and abstract calligraphic components. Extensively used as 'paper money' for bribing spirits. (From an early 12th-century work, *Tao-tsang* 463–273: 7b, 9b)

66 Analysis of the twenty components of the Jade Talisman (plate 67), from the Taoist Canon. According to the Chinese captions, these are (reading vertically and from the left): (1) the Eight Daybreaks which control the Wild Beasts; (2) the music of Emperor Shun which pacifies the subtle spirits; (3) the Nine Districts; (4) defects and melancholy; (5) Flying Creatures above the Spirits; (6) Close-netting and the Pure Region; (7) Fragrant and Beautiful; (8) the Empty Turn; (9) to pour a libation of Water; (10) the Yellow Flower[s]; (11) Period of Dark and Light; (12) the Master of the Spirits; (13) to open the Temple; (14) to prolong and yield; (15) the Cinnabar Hall; (16) the Four Directions; (17) the Six Rules; (18) the Thirteen Doors; (19) the Receiving of the Majestic Four Vital Spirits (*ch'i*); and (20) to pass by those who guard the Four Doors. This sequence seems to indicate the stages of an unknown ritual, while the magic ingredients of each diagram reveal multiperceptual contacts with the Yellow Spirit. (*Tao-tsang* 216–69: 19b–20a)

67 The Jade Talisman, addressed to the Yellow Spirit, the powerful spirit of Earth and Centre. The third of a set of five (one for each of the Five Elements). (*Tao-tsang* 216: 20a–b; based on the form attributed to Emperor Hui-tsung, 1101–26, of the Northern Sung dynasty: *Tao-tsang* 144–3: 13b–14a)

68 Script is used as magic on many objects. Here the stem of a plant is twisted into the auspicious character *shou* – 'longevity'.

(Blue and white porcelain bowl, Wan-li period, 1573–1619, Ming dynasty)

69 Sole surviving example of a secret Taoist script known as the 'Brilliant Jade Character' script. It gives a version of the first 48 (of 64) hexagrams of the *I-ching*. The script was used in talismans to refer to cycles of change, based on the trigrams of the *I-ching*. The style suggests the influence of embroidery. (In a work of AD 1115, *Tao-tsang* 463–262: 30a)

70 *Shou* – 'long life' – at the centre of a dragon-and-cloud design representing the union of Heaven and Earth. The talismanic power of the *shou* character was believed to be so powerful that an object inscribed with it would certainly prolong the owner's life. Such objects were popular as birthday presents. (Carved red and black lacquer box-lid, Chia-ching period, 1522–66)

71 Belief in the magic power of calligraphy continues today in China. Chairman Mao's portrait is flanked in procession by double *hsi* ('happiness') characters, traditional Taoist talismans. The colour-scheme, red and green, is also Taoist, symbolizing the perfect harmony of Heaven and Earth. (Hopei Province, 1968)

72 Free brushed, 'grass' calligraphic form of the character *shou* – 'long life' – executed in the manner of a Taoist magic diagram. Signed by the 85-year-old Yeh Chih with the seal of the artist. (Rubbing dated 1st day of the 1st moon of 1863. Ch'ing dynasty)

73 The One Hundred Talismanic Forms of the character *shou* – 'long life'. (After De Groot)

74 The One Hundred Talismanic Forms of the character *fu* – 'happiness'. (After De Groot)

75 Talisman to repel demons, representing the devil-catching Chung Kuei. (19th-century stone rubbing)

76 Talismanic picture of the Taoist God of Literature, K'uei-hsing, made from two brushed characters forming his name. He stands on a third character, *ao*, the name of a giant turtle said to support the Earth. (Undated stone-rubbing; painted Ma Te-chao)

77 The seven characters of this calligraphic picture read: 'Tao penetrates Heaven and Earth and has qualities beyond Form'. They also depict the Star-god of Longevity. The rubbing is of an engraving said to be based on the Ho-t'u and Lo-shu diagrams (see p. 10). (Undated composition by Yüan Shen, painted by Tung Ts'e-san and engraved by Liu Kao-kuei)

78 Lanterns arranged as the characters *ch'ih yen sheng*, meaning 'to prolong life by imperial order'. A life-preserving talisman based on festive lantern-displays. *Ch'ih* ('by imperial order') has 49 lanterns, *yen* ('to prolong') 36, and *sheng* ('life') 24. As sources of light (*yang*), lanterns were supposed to help prolong active life. (From a 13th-century work, *Tao-tsang* 1210–9: 15a)

79 Talisman for seeking employment. (From a Taoist work of unknown date, *Tao-tsang* 668–3: 28a)

80 Talisman of the Armour of Man. The figure is reinforced with constellation dots. (Third of a set of three, probably Sung or Yüan in date, c. 1300, *Tao-tsang* 853: 16b)

81 Talisman of the Heavenly Messenger, with coiled body representing the Twenty-eight Constellations to aid brightness (*yang*) and protect the body, and legs to walk in coils on Earth (*yin*) to seize and destroy evil spirits, who can only move in a straight line. (*Tao-tsang* 217–21: 7a)

Plates 82–83

In Taoist magic art the circle combines simplicity with perfection, emptiness with fullness; it harmonized the visible with the invisible, the linear with cyclic manifestations of Change and Movement. Here it represents both the mystic and philosophical power of talismans (plate 83) and 'the One', the Great Ultimate (t'ai-chi) (plate 82).

82 Diagram of the Great Ultimate (t'ai-chi). (Yüan period, Tao-tsang 159–1:3b)

83 The 'Diagram of the Talisman' (fu). (11th c., Sung period. Tao-tsang 1210–5:5b)

Meditational diagrams and talismans

1 (Facing page) One of the Eight Pure Ones shown as a Taoist priest at an altar holding a phallic (yang) audience tablet in both hands, in a floating boat-shaped craft of rolling clouds. (*Tao-tsang* 426-3b)

2 The True Jade Talisman of the Ornamental Turn of the Moon. According to the caption the Moon represents the Five Elements. (*Tao-tsang* 217-18: 5a)

3 The Beautiful Inner View of Brightness, Clearness and Splendour, depicting a meditating Taoist hermit on the right and a magic diagram on the left. The incantation to accompany the diagram may be translated as follows: 'The view spreads over Heaven [yang] and Lake [yin], Metal [West] and Water [North], in a semi-circle. To light the dark night, I and the Dark Pearl [the Moon in its last quarter] drink and drift [together]. The bright, thick liquid [of wine, yin] and its fragrance penetrate my spiritual body. After repeated true unions [with yin], I shall ride over the land and soar to the skies.' (*Tao-tsang* 218-1: 12b-13a)

4 Nature-worship séance in an open pavilion, with a band of musicians left, potted dwarf-tree and miniature rock-formation centre, and sacrificial food and wine offered by Taoist priests right. (From a Sung dynasty work, *Tao-tsang* 437-2: 15b-16a)

5

6

7

8

三才之圖

5 Magic diagram of the combination of the Five Element and Heaven and Earth diagrams. (*Tao-tsang* 217-24: 24b)

6 Magic diagram of the round Heaven and square Earth. (*Tao-tsang* 217-24: 24b)

7 South-oriented diagram of the Five Elements: Fire (and South) top, Earth centre, Water below; Metal left and Wood right. (*Tao-tsang* 217-24: 25a)

8 Black Talisman in the shape appropriate to the Element Water with Cloud Script calligraphy. (*Tao-tsang* 853-17b)

9 Talismanic forms of *pi* discs appropriate to (top to bottom) Mountain (and Heaven) in blue; Earth in yellow; Water in black. (*Tao-tsang* 543-28: 6a)

10 Diagram of the Three Sub-divisions of the Universe: Heaven, Mankind and Earth. (From the *I-hsiang t'u-shou wai-p'ien* by Chang-li of the Yüan period, *Tao-tsang* 159-1: 4a)

10

11 Diagrams of the legendary Taoist Ho-t'u associated with the Dragon-horse (right), and the Lo-shu associated with the Tortoise (left), showing magic arrangements of odd and even numbers within a circle. (From the *Ch'i-men* 5a, late 17th century)

12, 13 Diagrams of the legendary Taoist Ho-t'u (top) and Lo-shu, magic charts of odd and even numbers in rectangular arrangements according to the interpretation of Ts'ai Yüan-ting of the Sung period. (From a 1706 work by Hu Wei, the *I-t'u ming-pien* 5:9b, 9a)

12

13

14 Two magic diagrams symbolizing the universal power of Change. On the left: Heaven (top), Earth (below), Sun (left), and Moon (right). On the right: trigrams *ch'ien*, *k'un*, *li*, and *k'an*. (From a 1706 work by Hu Wei, the *I-t'u ming-pien* 3:7a)

15 The Eight Trigrams of King Wen, with South and trigram *li* (representing Sun) at top, North with trigram *k'an* (representing Moon) at bottom. (From a 1706 work by Hu Wei, the *I-t'u ming-pien* 8:6b)

16 Magic diagrams of lanterns to guide spirits, composed of constellations and trigrams. From left to right: (i) the Jade Pivot of the Nine Heavens, (ii) the Power of Fire, (iii) the

Eight Trigrams of the Nine Palaces, (iv) the Hell of the Blood Lake ('with red pebbles spread over the bridge'). (Tao-tsang 1460-5: 28b-29a)

中元罡屬人

下元罡屬地

17 Two talismans to secure the orderly influence of the Five Elements, with magic constellations relating to mankind (on the right) and Earth (on the left). Two of a set of three relating to Heaven, Mankind, and Earth. (Early 12th century, *Tao-tsang* 217-19:3b)

18 Mystic diagram showing the combined Tread-pattern of Terrestrial Regulations and the Flight-pattern of Celestial Rules, to emphasize the magic union of Earth (*yin*) and Heaven (*yang*). In sets of foot-prints, symbolic of a ritual dance, Earth is represented by a mystic spiral of three complete turns, Heaven, by the constellation of the Great Bear, which is also repeated in the centre of the terrestrial spiral. A *yin-yang* regulator diagram of universal magic power. (Late 13th century, *Tao-tsang* 1210-8:3b)

Charms for summoning spirits

19

19 Exorcist charm of the Supreme Heavenly Ruler of the South Pole, with special power to create law and order among evil spirits. (From an undated Taoist work on exorcism, *Tao-tsang* 1152-40:22b)

20 Talisman to protect the body in mountainous regions. The character *shan* – 'mountain' – forms part of the composition. This talisman is to induce the help of the Supreme Heavenly Ruler of the North Pole against baleful influence. (*Tao-tsang* 1152-38:2b)

20

21 Talisman for the Brief Spiritual Encounter Altar, to establish contact with the Spirits of Earth and Wind with the aid of the Spirits of the Five Emperors. To be burnt in front of the altar with an incantation of eight words. (*Tao-tsang* 1152-39:25a)

22 Exorcist charm of the Heavenly Messenger, who enforces law and order among the spirits and terminates the baleful influences of evil spirits. (*Tao-tsang* 1152-36:7b)

21

22

祈雨

祈晴

23

23 Exorcist charm of the Five-Thunder Messenger who has special power to regulate rain and sunshine. (*Tao-tsang* 1152-40:14b)

24 Exorcist charm of a Heavenly Messenger riding a Dragon, to be used against the evil influences of Darkness (*yin*), with a 38-word incantation. (Early 12th century, *Tao-tsang* 217-25:4a)

24

25

27 Talismans to nullify the effects of cursing. Two of a set of five, one for each of the Five Directions. The talismans combine popular images of the Directional Supreme Rulers with magic diagrams that form their bodies. The White Supreme Ruler of the West is on the right and the Black Supreme Ruler of the North on the left. (*Tao-tsang* 217-10:6a)

116

周虎

孟重

26

Preventive talismans

25 These two combined talismans bring good fortune if they are drawn on the wall when flies or bees fly into your house. The diagram is based on constellation dots. (*Tao-tsang* 668-2:11b, a section concerned with talismans for creating supernatural events)

26 A pair of magic taboo characters (in mirrored image) incorporating the 'tiger' root, and thus the mysterious spirit of the tiger. They are to be used jointly to call home the soul of one who has disappeared away from home. (*Tao-tsang* 217-17:10b)

27

28

散雲符

29

止雨符

28 Talisman to scatter clouds. (From an undated Taoist work on exorcism, *Tao-tsang* 1152-41:30a)

29 Talisman to stop rain. (*Tao-tsang* 1152-41:30b)

30 A set of five magic diagrams: (i) to stop rain, (ii) to raise wind, (iii) to raise thunder (to strike those who are guilty of secret evils), (iv) to raise hail (to punish the evil), (v) to stop fog. (From the 'Secret methods of eminent spirits of purity and mystery', *Ch'ing-wei shen-lieh pi-fa*, *Tao-tsang* 219-1:19b, a work of unknown authorship and date)

45 Good luck charm to give prolonged life; to be worn on belts. The design imitates a shamanistic belt. (From a Taoist work of unknown date, *Tao-tsang* 668-3:2a)

46

46 Charm to ease childbirth, incorporating the character *sheng* meaning 'to be born', 'life' and 'living'. (*Tao-tsang* 668-3:25b)

47

47 Charm to comfort the unborn child in the womb, incorporating constellation dots. (*Tao-tsang* 668-3:21b)

48 Talisman of the North. (Early 12th century, *Tao-tsang* 463-272:24b)

49 Talisman of the South. (*Tao-tsang* 463-272:24a)

50 Talisman of the Planet Mercury, the Star of Element Water. (*Tao-tsang* 463-271:29b)

51 Talisman of the Planet Venus, the Star of Element Metal. (*Tao-tsang* 463-271:29a)

52 Talisman of the Planet Jupiter, the Star of Element Wood. (*Tao-tsang* 463-271:28b)

Curative talismans

53 Talisman to set a fractured skull. (*Tao-tsang* 543-35:14b)

54 Charm to remove all diseases. (Early 12th-century, *Tao-tsang* 463-272: 14b)

55 Charm to set a fractured
foot. (*Tao-tsang* 463-267:5b)

56 Charm to improve vision.
(*Tao-tsang* 463-267:5b)

57 Charm against vomiting.
(*Tao-tsang* 463-267:6b)

58 Charm to remove deafness.
(*Tao-tsang* 463-267:6b)

Implements of magic

59, 60 Magic divination table. The top is decorated with dragons and phoenixes on a background covered with esoteric diagrams to guide the spirits to the centre. The design can be related to the famous Yellow Book Talisman (61). (19th century)

61 The Yellow Book Talisman. One of the most powerful magic boards for contacting spirits related to Earth. The format derives from the square zone at the centre of the ancient round bronze mirrors, considered to be of great talismanic power. (*Tao-tsang* 1367-2a-3b)

60

61

62 Banner with tiger and magic diagram. According to the Chinese caption, it belongs to 'the West, the White Mound, number 5, the 7th and 8th of the Ten Celestial Stems and the 9th and 10th of the Twelve Earthly Horary Branches and the Element Metal. Its spirit is the White Tiger and its colour is white. The centre of the banner is white and the border yellow, for Earth gives life to Metal. One cannot use red which offends Fire that destroys Metal.' (From a mid-16th-century work by Ch'i Shao-pao, *Chi-hsiao hsin-shu* 16: 5b)

63 Taoist banner of the Element Metal, one of a set of five for each of the Five Elements (Metal, Wood, Water, Fire and Earth) with their appropriate colours. (From a mid-16th-century work by Ch'i Shao-pao, *Chi-hsiao hsin-shu* 16: 9b)

64 Example of the use of Taoist Cloud Script. (From the Yüan edition of *The Western Chamber* (*Hsi-hsiang chi*), 1: 55a)

65 Taoist implements of magical power. Right to left: (i) the Pennant of the Ten Thousand Spirits of the Luminous Announcement; (ii) the Pennon of the Hundred Malignant Spirits of Trembling and Fear; (iii) the Threaded-banner of Ten Thousand Years of Age of the Nine Palaces; (iv) the Banner of the Rainbow of the Spirits of the Three Pure Ones. (Tao-tsang 1460-5-19b: 20a)

66 Right to left: (i) the Fan of the Feathers of the Nine Heavens; (ii) the Fan of the Clouds of Good Fortune of the Fragrant Silk; (iii) the Umbrella of Rosy Clouds of the Flying Spirits; (iv) the Lantern of Light of the Partly Hidden Candle. (Tao-tsang 1460-5: 21b-22a)

九霄雲翰之扇一對

鬱羅慶雲之扇一對

神飈飛霞之蓋一對

破暗燭明之燈一對

庚

67 Taoist magic sword carved out of peach-wood with rounded end, used symbolically as a sword against evil spirits and frequently employed as a writing instrument in talismanic calligraphy. The blade is decorated on one side with the figure of Lao-tzu (also known as Lao Chün or Lao Tan), commonly regarded as the originator of Taoism. He holds a scroll in one hand, and is riding under pine-trees on a water buffalo, on which, according to legend, he left China to travel towards the west. (19th century)

Note on the Tao-tsang (Taoist canon)

The first section (titles 1-313), the *Tung-chen* (Cave of Truth), contains documents of the Mao-shan Taoists, the highest ranking of all Taoist sects, with special knowledge of trances, spirit writing and meditation. The second section (314-614), the *Tung-hsüan* (Cave of Mystery), contains the powerful Five Talismans, texts of various liturgies, including the communal festival of Cosmic Renewal (*chiao*), and other talismans. The third section (615-975), the *Tung-shen* (Cave of Spirits), consists of the revelation given, at the end of the Eastern Han dynasty, to Chang Tao-ling, founder of the Heavenly Master Sect of Lung-shu-shan in Kiangsi Province. The fourth (976-1,086), fifth (1,087-1,152), and sixth (1,153-1,176) sections are described as supplements of the first, second, and third sections respectively; while the seventh section (1,177-1,412) is called *Cheng-i*, the 'Orthodox One'. A collection of later Taoist works (1,413-1,464) of various early Ming (post-Mongol) dates completes the edition. Diagrams and talismanic graphic illustrations appear throughout the whole canon. Source references in the captions of the present book are to title, chapter and page numbers (recto: a, verso: b), and are based on Wiegner's index-numbers (see Bibliography).

FOREWORD

JAMES N. WOOD

TAOISM AND THE ARTS OF CHINA is occasioned by the first major exhibition ever held on the theme of Taoism and its influence in Chinese art. This catalogue and the exhibition it accompanies have drawn upon several decades of pioneering research on Taoism by scholars of Chinese religion working in America, Europe, and Japan. Both explore the pivotal role Taoism has played in traditional China, where change has always been seen as a fundamental aspect of reality. Taoism is of primary importance in Chinese social and political history, and the exhibition has been organized in the belief that an understanding of Taoism in traditional China will enable us better to comprehend modern China. This goal seems particularly relevant as Taoism enjoys a renaissance in China today and as Asian-based religions attract increasing interest and following in the West.

Throughout the history of Taoism, works of art of the highest quality have been created for didactic and ritual purposes. *Taoism and the Arts of China* explores two complementary modes of Taoist practice: Taoism that serves the spiritual needs of the community, and Taoism that serves the spiritual needs of the individual. The over 150 works of art presented here enable us to explore key conceptual and artistic achievements in the history of Taoism.

The Art Institute deeply appreciates the many individuals and institutions whose generous loans, financial support, and intellectual guidance have made this exhibition possible. They are thanked in more detail in the Acknowledgments. Here I can acknowledge only a few. First, I would like to express my gratitude to Dr. Emily Sano, Director, Asian Art Museum of San Francisco, the only other venue for this exhibition. The partnership of this museum, given its outstanding holdings and the importance of Chinese culture in northern California, is particularly gratifying.

The idea of this pathbreaking exhibition was presented to me five years ago by Stephen Little, Pritzker Curator of Asian Art at

The Art Institute of Chicago. In order to provide a solid intellectual and historical context for the works of art presented here, Dr. Little brought together leading scholars of Chinese religion, history, and art as participants in the planning of the exhibition and as contributors to this publication. To find and arrange to borrow the most significant Taoist art objects, he crisscrossed the globe, making numerous visits to Asia and Europe, where cooperation and hospitality were granted to him and where the understandings he gained proved invaluable. Dr. Little's skills as a curator, art historian, historian, and linguist—together with his sheer indefatigability—enabled him to achieve what heretofore might have seemed impossible, and for this we thank him.

Finally, such an undertaking required major financial support, which was provided by generous grants from a number of foundations and cultural agencies. For their help in realizing this project, we are deeply grateful to the E. Rhodes and Leona B. Carpenter Foundation; the Estate of William Bronson Mitchell and Grayce Slovet Mitchell; the Henry Luce Foundation; the Freeman Family Foundation; and the W. L. S. Spencer Foundation. The federal cultural agencies, the National Endowment for the Humanities and the National Endowment for the Arts, awarded major grants to this project, providing an important endorsement of our efforts.

At a moment when new paths of communication and exchange are being forged between China and the United States, we offer this publication and the exhibition it accompanies in the hope that visitors and readers will come away with new understanding of the role the visual arts have played in Taoist belief and practice over the last two millennia, and a new appreciation for one of the world's most influential philosophical and religious traditions.

James N. Wood, *Director and President*
The Art Institute of Chicago

ACKNOWLEDGMENTS

STEPHEN LITTLE

"TAOISM AND THE ARTS OF CHINA" was an undertaking of such magnitude that it could never have been achieved without the help of many individuals and institutions. My deepest thanks go to James N. Wood, Director and President of The Art Institute of Chicago, for the enthusiastic support he has given the project from its inception. I am profoundly grateful to him for providing me the opportunity to realize this exhibition.

Two meetings of the Committee of Humanities Specialists, funded by a Planning Grant from the National Endowment for the Humanities, allowed for extensive discussion of the exhibition's conceptual structure. The exhibition owes a great deal to a distinguished group of advisors: Charles Hartman, Terry Kleeman, Lothar Ledderose, Kristofer Schipper, Nathan Sivin, Wu Hung, and Eric Zürcher. Shawn Eichman, coordinator for the exhibition at the Art Institute, wrote many of the catalogue entries. His vast knowledge of Taoism made it possible to explore aspects of Taoist art that would have remained thoroughly esoteric without his involvement.

We are also deeply grateful to many renowned scholars of Chinese culture with whom we discussed the project, and who freely shared their knowledge with us: Richard Barnhart, T. H. Barrett, Stephen R. Bokenkamp, Phyllis Brooks, Pierre-Henry de Bruyn, Suzanne Cahill, Jonathan Chaves, Patricia Ebrey, Donald J. Harper, Stanley E. Henning, Susan Huang, Kobayashi Masayoshi, Livia Kohn, Paul Kroll, John Lagerwey, Thomas Lawton, Lin Shengzhi, Oliver Moore, Julia Murray, Susan Naquin, Isabelle Robinet, Harold D. Roth, Michael Saso, Nancy Shatzman Steinhardt, Jason Steuber, Stephen Teiser, Franciscus Verellen, Ann Waltner, and Judith Zeitlin. I would like to thank Angelika Borchert, Simone Griessmeyer, Petra Roesch, and Joachim Osse, graduate students at the University of Heidelberg, and De-nin Lee, a graduate student at Stanford University, for their many contributions to the initial research that led to the catalogue.

The insights and suggestions of Roger Keyes, the late David Kidd, Liu Dan, Morimoto Yasuyoshi, and Richard Pegg all helped me enormously. Patrice Fava kindly made his films of Taoist rituals and sites in China available to me; my thanks go to him and to the Centre National pour la Recherche Scientifique, Paris, for allowing us to use footage from his films in the exhibition.

In Beijing thanks go to Wang Limei, Deputy Director of the Foreign Affairs Section of the Administrative Bureau of Museums and Archaeological Data in the Ministry of Culture; Yang Yang, Chen Xiaocheng, Lei Congyun, and Zhang Jianxian of the Department of Foreign Affairs, Art Exhibitions China; Sun Tongchuan and Wang Yi'er of the Baiyun Guan; Yang Xin, Shan Guoqiang, Kong Chen, and Shi Anchang of the Palace Museum; and Yu Qin of the China National Museum of Fine Arts. I am grateful to Chen Songchang of the Hunan Provincial Museum, Changsha; T. T. Tsui and Catalina Chor of the Tsui Art Foundation, Hong Kong; Stephen McGuinness of Plum Blossoms (International) Ltd., Hong Kong; Shan Guolin, Zhong Yinglan, and Zhou Yanchun of the Shanghai Museum; Chen Zhuo of the Tianjin Municipal Art Museum; Ba Wu of the Shanxi Provincial Museum, Taiyuan; and Zhang Tong of the the Administrative Bureau of Museums and Archaeological Data of Shaanxi Province, Xi'an. In Taipei I thank Ch'in Hsiao-i, Chang Lin-sheng, Lin Po-t'ing, and Wang Yao-t'ing of the National Palace Museum.

In Japan I am grateful, in Tokyo, to Hayashi On and Suzuki Norio of the Agency for Cultural Affairs; and Nishioka Yasuhiro and Minato Nobuyuki of the Tokyo National Museum. Also to be thanked are Yuyama Ken'ichi, Nakagawa Hisayasu, Nishigami Minoru, and Melissa M. Rinne of the Kyoto National Museum; Nobuo Miyajiri and Moriyasu Osamu of the Okayama Prefectural Museum of Art; and Mino Yutaka and Nakagawa Kenichi of the Osaka Municipal Museum of Art. I am also grateful to the abbots of the Chion-ji, Kyoto, and the Rejun-ji, Tokyo.

In England I would like to acknowledge, in London, the help of Frances Wood and Beth McKillop of the Oriental and India Office Collections at the British Library; Robert Knox, Anne Farrer, Jessica Harrison-Hall, and Carol Michaelson of the British Museum; and Rose Kerr, Verity Wilson, and Ming Wilson of the Victoria and Albert Museum. To be thanked in Paris, France, are Jacques Giès and Laure Feugère of the Musée National des Arts Asiatiques Guimet and Monique Cohen and Natalie Monet of the Bibliothèque Nationale de France. In Germany I am grateful to Adele Schlombs of the Museum für Ostasiatische Kunst, Cologne; and Bruno Richtsfeld of the Staatliches Museum für Völkerkunde, Munich. In Switzerland I thank Albert Lutz and Helmut Brinker of Museum Rietberg, Zurich. In Canada I am grateful to Klaas Ruitenbeek and Ka-bo Tsang of the Royal Ontario Museum, Toronto.

In the United States I wish to thank Hiram Woodward of the Walters Art Gallery, Baltimore; Mr. and Mrs. Wango H. C. Weng; Richard and Nancy Rosenblum; Wu Tung and Erin Bennett of the Museum of Fine Arts, Boston; Robert Mowry, Anne Rose Kitagawa, and Melissa Moy of the Arthur M. Sackler Museum, Harvard University, Cambridge; James K. M. Cheng and Chun Shum of the Harvard-Yenching Library; Bennet Bronson and Shui-mei Ho of the Field Museum, Chicago; Ellen Avril and Barbara K. Gibbs, both formerly of the Cincinnati Art Museum; Chou Ju-hsi of the Cleveland Museum of Art; George Ellis and Julia White of the Honolulu Academy of Arts; Marc Wilson and Yang Xiaoneng of the Nelson-Atkins Museum of Art, Kansas City; J. Keith Wilson, June Li, and Victoria Blyth-Hill of the Los Angeles County Museum of Art; Robert Jacobsen of the Minneapolis Institute of Arts; Laurel Kendall and Ann Porter of the American Museum of Natural History, New York; Wen Fong, Maxwell Hearn, and Judith Smith of the Metropolitan Museum of Art, New York; Howard Rogers and Arnold Chang of Kaikodo, New York; Amy Heinrich of the C. V. Starr East Asian Library, Columbia University, New York; Zhou Yuan and William Alsbaugh of the University of Chicago Library; Felice Fischer and Adriana Prozer of the Philadelphia Museum of Art; Cary Y. Liu of the Art Museum, Princeton University; Caron Smith, David Kencik, and Song Yu of the San Diego Museum of Art; Emily Sano, Michael Knight, He Li, Pauline Yao, and Hanni Forester of the Asian Art Museum of San Francisco; Mimi Neill Gates and Jay Xu of the Seattle Art Museum; and Milo Beach, Joseph Chang, Jan Stuart, and Stephen Allee of the Arthur M. Sackler Gallery, Smithsonian Institution, Washington, D.C.

Special thanks go to the members of the Art Institute's Asian Art Department for their support of this project: Mary

Albert, Ryan Gregg, Bernd Jesse, Deanna Lee, Craig McBride, Pratapaditya Pal, Elinor Pearlstein, Betty Seid, Betty Siffert, and Beth Tekell. I am deeply grateful to Edward W. Horner, Jr., Karin Victoria, Meredith Hayes, and Jennifer Harris of the Development Department, who were instrumental in securing the essential financial support for this undertaking. Denise Gardner and Julia Perkins conducted valuable audience research for this project. In addition, I extend my gratitude to Dorothy Schroeder in the Office of the Director and President; Mary Solt, Martha Sharma, and the installation crew of the Registrar's Office; Christopher Gallagher, Robert Hashimoto, Robert Lifson, Alan B. Newman, and Gregory A. Williams of the Department of Imaging; Barbara J. Hall, Suzanne R. Schnepf, and Emily P. Dunn in Conservation; Harriet Stratis and Brigitte Yeh in Prints and Drawings; Lyn DelliQuadri and her staff in Graphic Design and Communication Services; Jack Brown and his staff in the Ryerson Library; and Eileen Harakal and her staff in Public Affairs, in particular, John Hindman and Chai Lee.

I am deeply grateful to the Publications Department's Robert V. Sharp and Catherine A. Steinmann, who, assisted by Faith Brabenec Hart, edited this daunting and lengthy manuscript with deep commitment, exacting care, and tireless dedication; Sarah E. Guernsey, who expertly managed the production of this beautiful book; and Stacey A. Hendricks, who managed photography editing and assisted with production. Susan Kelly and Ed Marquand of Marquand Books, Seattle, were responsible for the superb design of the catalogue. Thanks are also due to Pat Goley of Professional Graphics, Rockford, who created outstanding separations for this catalogue; thanks go also to Cyndi Richards, who assisted him. John Vinci produced an equally outstanding installation design for the exhibition. Finally, special thanks go to Jane Clarke of the Department of Museum Education, who acted as liaison to an enthusiastic staff to develop a rich variety of interpretive programs for the exhibition.

Stephen Little, *Pritzker Curator of Asian Art*
The Art Institute of Chicago

Romanization of Chinese Words

The romanization of Chinese words in this catalogue follows the pinyin system, with the exception of the words "Tao" (pronounced "Dao," translated as "the Way"), "Taoism" (Daoism), and "Taoist" (Daoist), which are rendered in the Wade-Giles system because of the greater familiarity with this usage. Chinese names, terms, and phrases in quotations are spelled according to the pinyin system, regardless of the way in which they were originally published. Chinese characters corresponding to romanized words (with the exception of book and text titles) are provided in "Chinese Names and Terms" (pp. 384–91).

Translations

There are few standard English translations for Taoist terms. The Chinese word *zhen* (real, realized, realization, true, perfected, perfection), for example, is generally translated here as "realized" or "realization." The preferences of individual authors and the requirements of different contexts result in inevitable variations in such translations, however; the reader will find *zhenren*, for example, translated not only as "realized being" but as "true person" and "the perfected." All translations are by the respective authors of the essays or catalogue entries, unless otherwise noted.

Works Cited

Full bibliographic information for all works cited is given in the bibliography (pp. 392–405).

Dates

Dates of individuals and of Chinese dynasties and periods are provided on first mention within each text; a chronological table is included on p. 11.

THE PURPOSE OF THIS EXHIBITION is to examine the role works of art have played in the history of Taoism from the late Han (second century) to Qing (1644–1911) dynasties. Of the Three Teachings (*Sanjiao*) of ancient China—Taoism, Buddhism, and Confucianism—Taoism is the least understood in the West. Our understanding of Confucianism, a largely secular philosophy, and Buddhism, a religion originating in India, is much clearer. Unlike Buddhism, Taoism is indigenous to China. It has a history spanning more than two millennia, and its influence is clear in such diverse realms of Chinese culture as political theory, medicine, painting and calligraphy, and even Chan (Zen) Buddhism. Very little is known, however, about the relationship between Taoism and Chinese art.

The few studies of Taoist art to date stand in sharp contrast to the wealth of scholarly studies and exhibitions of Chinese Buddhist and secular art. Compounding this lack of awareness is the belief still widespread among Western art historians (and sinologists generally) that religious Taoism is nothing more than superstition and folk religion. The goal of this project, therefore, is to introduce China's primary indigenous religion to a Western audience by examining the iconography and function of works of art made in the service of Taoism. An interdisciplinary approach has been taken in the preparation of the exhibition, which draws upon architectural history, religious studies, literature, cultural history, and the history of science to convey a new understanding of how Taoists have defined the structure of the natural and divine worlds and situated humanity in the resulting matrix. The exhibition explores the beginnings of Taoist philosophy in the late Bronze Age (fifth–third centuries B.C.), the transformation of Taoism into an organized religion, the Taoist pantheon of gods who inhabit the stars and heavens, modes of ritual and visualization, the cult of the immortals, and the role of landscape as a symbol of cosmic structure and process.

This exhibition examines the way works of art function in a religious context. Like all major world religions, Taoism has undergone enormous changes in the course of its history. In analyzing the history and art history of Taoism, we must be conscious of both the changing nature of Taoism itself and the social, political, economic, and cultural changes in China that had a direct bearing on Taoism's structure and system of belief. While the focus is on Taoism in traditional China, it is hoped that the visitor will come away with the knowledge that Taoism is a living religion, practiced in Taiwan, Hong Kong, and many overseas Chinese communities, and one that is undergoing a major revival in mainland China today. Taoism answers basic human needs, such as the need to understand the world and one's place in it. In serving these needs, Chinese artists for centuries have created works of art of the highest aesthetic order for use in a Taoist context.

Tao (pronounced "dao") means a road, and is often translated as "the Way." The Tao is conceived as the void out of which all reality emerges, so vast that it cannot be described in words. Beyond time and space, it has been described as "the structure of being that underlies the universe."¹ Significantly, Taoism has no supreme being. Instead there is the Tao itself, underlying and permeating reality. At the same time, paradoxically, religious Taoism evolved many gods. The high gods of Taoism, such as the Celestial Worthy of Primordial Beginning (*Yuanshi tianzun*) and the Perfected Warrior (*Zhenwu*), Supreme Emperor of the Dark Heaven, are ultimately mere pneuma who exist to put a recognizable face on the Tao itself.

In the Taoist vision of cosmogenesis, there was first the Tao, empty and still. Then, gradually, primal energy (*yuan qi*) was spontaneously generated out of the Tao. For many cosmic eons this numinous energy swirled in a state of chaos known as

Fig. 1

Atami, Japan.

hundun. The Tao then generated the complementary forces known as *yin* and *yang*. The creative interaction of these forces directed the primal energy into patterns of movement and transformation, which in turn generated the machinations of the universe. This process is symbolically expressed in the *Daode jing* (*Tao-te-ching*: Classic of the Way [Tao] and its power), traditionally attributed to the sage Laozi:

The Way (Tao) gave rise to the one,
The one gave rise to the two,
The two gave rise to the three,
The three gave rise to all the ten thousand things.¹

Inherent in this understanding of the Tao and its workings is a vision of universal order that gave structure to people's daily lives in traditional China. All natural phenomena were understood in terms of *yin* and *yang*. The transformations of the seasons (winter being the season of *yin*, summer the season of *yang*) and the differences between genders (*yin* = female, *yang* = male) were explained by the fluctuations of these two forces. In addition, the shifting patterns of energy that characterize such phenomena as the cycles of the Five Phases (or Five Elements: wood, metal, fire, water, and earth)

were also believed to be governed by the shifting balance between *yin* and *yang*.

From the Taoist point of view, all things are made up of *qi*. Matter and energy are thus interchangeable (a basic assumption of modern nuclear physics). Taoism teaches that to be content as a human being, one must accept that change (transformation) is the absolute reality, and that all things and transformations are unified in the Tao. The concept of *qi* (vital energy or breath), for example, lies at the heart of traditional Chinese medicine, which views illness as caused by imbalances of *yin* and *yang*, resulting in blockages of the free movement of *qi* through the body. Acupuncture and other traditional remedies are designed to restore the proper movement of vital energy, thus restoring health.

A fundamental cosmological principle of ancient Chinese thought, and one adopted by religious Taoism, is that all things correspond to each other. In particular, microcosm reflects macrocosm, and vice versa. The structure of the human body, for example, was believed to reflect both the structure of the natural landscape and the structure of the universe. In religious Taoism, the human body is visualized as a landscape, its different parts populated by deities who correspond to gods that dwell in the

heavens above. This concept of divine correspondence appears throughout religious Taoism, and is one of many ideas that have remained constant over the course of its development. The Five Elements correspond to the Five Directions (the four cardinal directions and the center), the Five Sacred Peaks, and the Five Planets. The correspondences between the parts of the human body and the structures of the natural world provide the intellectual underpinnings of traditional Chinese physiognomy.¹ Another principle that emerged out of early Taoist philosophy was the importance of the cultivation of virtue (*de*), and of living in balance with the natural world. Harold Roth has translated *de* as "inner power": "This inner power can be thought of as a psychological condition of focused and balanced awareness from which the adept is able to respond spontaneously and harmoniously to whatever arises."²

These ideas, along with the importance of always being attuned to the Tao, are first articulated in the *Daode jing* (also known as the *Laozi*), the classic text attributed to the sage Laozi (Lao-tzu).³ Laozi is believed to have lived in the sixth century B.C., and the *Daode jing* is thought to have achieved its final form in the fourth or third century B.C. According to Taoist tradition, this text was first revealed to the frontier guardian Yin Xi as Laozi left China for the western regions (see fig. 1). In 1993 archaeologists excavating a late-fourth-century-B.C. tomb at Guodian, Hubei province, made a remarkable discovery: the earliest known manuscript of the *Laozi* (see fig. 2).⁴ Comprising three bundles of inscribed bamboo slips, this Warring States period manuscript is roughly one hundred and fifty years older than the versions of the *Laozi* excavated in 1973 among the silk manuscripts at Mawangdui in Changsha, Hunan province (dating to c. 168 B.C.).⁵ Like the Mawangdui manuscripts, the Guodian *Laozi* has no chapter titles. The Guodian manuscript may represent an earlier form of the text, or may consist of transcriptions from a larger book. Fifteen other texts were also discovered in the tomb at Guodian, including Confucian works and the cosmogonic text entitled *Supreme Unity Generates Water* (*Taiyi shengshui*).

The following two sections, included among the Guodian slips, are characteristic of the paradoxical language for which the Laozi is famous. One passage, found in bundle A, corresponds closely to the thirty-second chapter (*zhang*) of the received *Daode jing*:

The Tao is constant, but has no name (= fame);
Although the Uncarved Block is subtle (= small, minute),
In Heaven and Earth, all submit to it.⁶

Fig. 2
Laozi manuscript (detail). Warring States period, Chu kingdom, c. 350/300 B.C.
Ink on bamboo slips. Jingmen City Museum, Hubei.

If barons and kings would but possess themselves of it,
 The ten thousand creatures would flock to do them homage;
 Heaven and Earth would conspire to send Sweet Dew.
 Without commands (laws), men would live in peace.
 Once (the Block) is carved, there will be names,
 And so soon as there are names
 Know that it is time to stop.
 Only by knowing when it is time to stop can danger be avoided.
 To Tao all under heaven will come,
 As streams and torrents flow into a river or sea.⁹

Here the Tao represents the empty yet infinitely pregnant void out of which the world emerges. The following passage, also from bundle A, corresponds closely to part of the second chapter of the received *Daode jing*:

It is because every one under Heaven recognizes beauty as beauty,
 that the idea of ugliness exists.
 And equally if every one recognized virtue as virtue, this would
 merely create fresh conceptions of wickedness.
 For truly being (you) and non-being (wu) are born of each other,
 Difficult and easy complete each other;
 Long and short test one another;
 High and low determine one another.
 Pitch and mode give harmony to one another.
 Front and back give sequence to one another.
 Therefore the Sage relies on actionless activity (*wuwei zhi shi*),
 Carries on wordless teaching. . . .¹⁰

The Guodian *Laozi* contains twenty-four sections that correspond to sections of the eighty-one chapter *Daode jing*.¹¹

One of the most complicated aspects of Taoism is its transformation from a philosophy to a religion. The West is just beginning to become aware of the long history of religious Taoism. Even scholars who are familiar with Laozi and the *Daode jing* are generally unaware of the later history of religious Taoism from the Eastern Jin (317–420) and Six Dynasties (420–589) periods onward, or of the role of this religion in Chinese political history. That our increasingly sophisticated knowledge of Taoism is so recent a phenomenon is due in large measure to a tendency among Chinese intellectuals in the early and mid-twentieth century to equate Taoism with folk religion and superstition, both seen as obstacles to modernization and social reform. It was not until the 1920s that the Taoist Canon (*Daozang*), a rich repository of philosophical and ritual texts, became available for study through a photo-lithographic reprint of a fifteenth-century

Ming woodblock-printed edition. In contrast, the East Asian Buddhist Canon has been accessible to scholars for centuries in the form of multiple woodblock-printed versions in China, Korea, and Japan. The fact that there is still no comprehensive history of Taoism available in any Western language has only contributed to this lack of awareness. Nonetheless, Taoist studies are proliferating in the West, and the practice of religious Taoism is rebounding in mainland China.

Religious Taoism is the principal focus of this exhibition. Despite the seemingly elusive nature of Taoist art, such arts as painting, sculpture, calligraphy, and textiles have served religious Taoism from its inception. Between the late Zhou (fifth–third century B.C.) and Tang (618–906) dynasties, Taoism underwent a profound change from the relatively straightforward philosophy expressed in the *Daode jing* to a complex religion with a vast pantheon of deities and immortals (adepts), a highly structured church, and an enormous compendium of sacred texts known as the *Daozang*, consisting since the Ming dynasty (1368–1644) of some fifteen hundred scriptures. In the course of this transformation, Taoism absorbed several currents that played important roles in the intellectual and religious life of the late Bronze Age, including the belief in *yin* and *yang*; the symbolism of the Eight Trigrams from the *Yi jing*, or *Book of Changes*; the cyclical activities of the Five Phases (Elements); the worship of sacred peaks; the belief in a vast realm of star gods; and concepts of afterworlds and heavenly paradises. By the end of the Han dynasty, the sage Laozi had been deified, and from this time onward was worshipped as a god by both the emperor and common people.¹²

Scholars have traditionally seen the beginning of religious Taoism as having occurred in the late Han dynasty (second century), with the formation of the Way of the Celestial Masters (Tianshi Dao) in Sichuan province. The first Celestial Master, Zhang Daoling, had a vision of the deified Laozi in A.D. 142, in which a new conception of mankind was transmitted to the world. Two of the central aspects of Celestial Master Taoism were its codes of moral behavior and its rituals of petition, in which priests would submit formal requests to the gods (and by extension the Tao) to act benevolently for the benefit of their parish or diocese.

The term “*Daojiao*” (“Taoist teaching” or “Taoist religion”), however, was not used by Taoists to describe their tradition until the fifth century. Although many scholars would argue that religious Taoism began with Zhang Daoling’s vision of the deified Laozi, the actual point at which the Taoist religion began is still a controversial issue. Other scholars see a continuous

lineage within religious Taoism extending back to the Bronze Age traditions of the *Daode jing* and the *Zhuangzi*, the earliest texts of the Taoist tradition. Some scholars, among them Anna Seidel, have used the term "proto-Taoist" to describe the Han dynasty religion(s) that provided the immediate antecedent to religious Taoism, and such works of sacred art as talismans that were used in the service of the Han religion.¹³

The difficulty in characterizing religious Taoism before the Six Dynasties period (420–589) is illustrated by the example of the cult of Xiwangmu, the Queen Mother of the West. Many scholars consider Xiwangmu an early Taoist goddess, but it is by no means clear that early images of Xiwangmu, such as are found in abundance in northeast and southwest China in late Han (first–second century) funerary contexts, can or should be called Taoist. Xiwangmu is not mentioned in any religious Taoist text until the Six Dynasties period (fourth century), and there is no concrete evidence that she was worshipped by the Celestial Master movement of the late Han dynasty, even though, as Wu Hung has shown in his essay in this catalogue, such images in Sichuan are found in areas in which the Celestial Master sect was active in the second and third centuries. The study of Warring States and Han religion is still in its infancy, and the artistic traditions associated with the religious traditions of China in these periods are so rich and yet still so poorly understood that they would legitimately constitute the subject of a separate exhibition. The astonishing Chinese archaeological discoveries of recent years have only made this situation more complex.

If one were to trace the history of religious Taoism to its origins, one would find that Taoism is a river into which many streams have flowed. Many of these streams of thought can themselves be traced back to the Bronze Age. Among these disparate traditions are practices of self-cultivation leading to "achievement of the Tao" (*cheng Dao*), the veneration of adepts (*xian*) who attained spiritual perfection (*zhen*, literally, "realization"), the worship of such deities as Taiyi (Supreme Unity) and Xiwangmu (the Queen Mother of the West), the philosophical tradition of the *Daode jing*, the worship of local gods and sophisticated traditions of shamanism in the Warring States period (475–221 B.C.), the philosophy of the *Book of Changes*, which can itself be traced to the Western Zhou dynasty (c. 1050–771 B.C.), and the use of talismans as forms of sacred calligraphy that have the power to transform reality.¹⁴ It should be clear from the sheer variety of these traditions out of which religious Taoism emerged that any attempt to generalize about the nature of ancient Chinese religion should be tempered by the need for a

profound awareness of the structure and development of each of these streams of belief and practice. Over the long course of its development, however, fundamental aspects of Taoism remained constant.

Sections 1.2 and 1.3 of this exhibition and catalogue, entitled "Heaven and Earth: Taoist Cosmology" and "Sacred Mountains and Cults of the Immortals," respectively, explore vital concepts that predate the emergence of religious Taoism, but that formed part of the complex world out of which the later religious tradition developed from the Han dynasty onward. Among these concepts was the multivalent image of the mountain.¹⁵ The worship of sacred peaks can be traced as far back as the Shang dynasty (c. 1600–c. 1050 B.C.). Mount Song (Song Shan, the central of the Five Sacred Peaks), for example, was already worshipped as a god during the late Shang.¹⁶ Mountains were venerated in China as numinous pivots connecting the human and celestial realms. Mountains were also seen as places in the terrestrial landscape where the primordial vital energy (*qi*) that created the world was particularly strong and refined. As a consequence, mountains were places where an adept could meditate, experience visions of perfected deities of the celestial realm, and locate the herbs and minerals necessary for the preparation of elixirs that extended one's life. Sacred mountains were also sites where one could find cavern-heavens (*dongtian*), grottoes deep in the earth that functioned as boundaries of the spirit world and gateways to paradise.¹⁷ A system of thirty-six cavern-heavens and seventy-two blessed sites (*fudi*) was formulated during the Tang dynasty, and many of these sites are still venerated in China today. The system of cavern-heavens mirrored the thirty-six heavens in the celestial realm.

The image of the sacred peak coursing with vital energy is conveyed with remarkable beauty in the great incense burner, or *boshanlu*, excavated in 1968 from the tomb of the Han dynasty prince Liu Sheng (cat. no. 20). This extraordinary object points to the deep significance given to mountains during the Han dynasty and earlier, as well as by the fully formed Taoist religion of later times. This imagery also extended to the popular belief in the sacred islands of the immortals sought as early as the third century B.C. by the first emperor, Qin Shihuangdi, and in the succeeding Western Han dynasty by Emperor Wu (Han Wudi; c. 140–87 B.C.).

It is especially significant that in religious Taoism, both the human body and the ritual altar are visualized as a mountain.¹⁸ Furthermore, the inner topography of the human body is perceived as populated by gods who, as shown above, correspond to deities in the heavens. This imagery is fundamental to the

Inner Alchemy (*neidan*) tradition, and its roots can be seen as early as the *Scripture of the Yellow Court* (*Huangting jing*), a text transcribed by the famous calligrapher Wang Xizhi (307–365) in the fourth century (cat. no. 128). The structure of the human body thus mirrors the universal order inherent in the Tao. This system of divine correspondences between human microcosm and celestial macrocosm is a fundamental and continuous element in the entire tradition of religious Taoism.

The earliest art that can properly be called Taoist dates to the Eastern Jin dynasty (317–420) and the Six Dynasties period (420–589). It was in this period that the Taoist religion became fully formed. In the late fourth century, the core texts of the Shangqing (Highest Purity) tradition were revealed by *zhenren* (realized beings) from the Shangqing Heaven to the adept Yang Xi (330–c. 386) in a series of visions. Yang lived at Jurong near Nanjing, and was patronized by the Xu family, one of the leading families of the Eastern Jin dynasty. Less than a century later, the first Taoist canon was compiled by Lu Xiuqing (406–477), a scholar active during the Liu-Song dynasty (420–479). Lu divided the canon into three parts, called the Three Caverns (*Sandong*). These comprised texts of the Shangqing (Highest Purity), Lingbao (Numinous Treasure), and Sanhuang (Three Emperors) traditions, and were called, respectively, the Cavern of Perfection (*Dongzhen*), Cavern of Mystery (*Dongxuan*), and Cavern of Divinity (*Dongshen*).¹⁸ It was in this period that certain elements of Buddhist thought and liturgy were absorbed into Taoism. This is most clearly seen in the Lingbao texts compiled by Lu Xiuqing. These scriptures were said to have been originally revealed to the adept Ge Xuan (flourished 238–50) in the third century.¹⁹ Stephen Bokenkamp has written as follows on the Lingbao scriptures:

First, they were meant to represent the synthesis of all the important religious traditions of the time—most prominently, Celestial Master Taoism, Shangqing Taoism, and Buddhism. They are thus the first Taoist scriptures to incorporate and redefine Buddhist beliefs, practices, and even portions of Buddhist scripture. They do this quite openly, positing the temporal priority and spiritual superiority of their message against any charge of plagiarism. The very name of the scriptures (*ling*, “spirit-endowed,” representing the heavens, and *yang*, joined to *bao*, “jewel,” representing Earth and *yin*) refers to the claim that these scriptures are translations of spirit-texts that emerged at the origin of all things when the breaths of the Tao separated into the two principles of *yin* and *yang*, thus giving the Lingbao texts priority over texts composed later.²¹

Fig. 3
Ink rubbing of the back of a Taoist stele, depicting the Deified Laozi, Yin Xi, and Zhang [Dao]jing. Northern Wei dynasty, c. 500. Sandstone; h. 79.5 cm. The Field Museum, Chicago.

The Six Dynasties period thus witnessed the mature development of the religious Taoist pantheon, canon, ritual, and art. We know from the writings and recorded actions of the northern Celestial Master Kou Qianzhi (d. 448) and Lu Xiuqing that Taoist images (both sculptures and paintings) of the deified Laozi and the Celestial Worthy of Primordial Beginning (*Yuanshi tianzun*) were being made in the mid-fifth century, even though some spoke out against the use of images to give form to the Tao, considered ultimately formless.²² It seems clear from an examination of the earliest surviving Taoist sculptures depicting the deified Laozi that there was enormous influence from Buddhist art on early Taoist images. The earliest images that survive date from the Northern Wei dynasty (fifth century) and often depict the deified Laozi surrounded by two flanking figures, following the Buddhist format of a seated Buddha flanked on either side by a bodhisattva. The inscriptional evidence on a Northern Wei stele in the Field Museum, Chicago, collected in the Xi'an area by Berthold Laufer in 1909–10, suggests that the figures that flank the deified Laozi on these early sculptures may depict the frontier guardian (and later immortal) Yin Xi and the first Celestial Master, Zhang Daojing (see fig. 3).²³ This is significant

because Yin Xi was the first human being to receive the *Daode jing* from Laozi, and Zhang Daoling was the first human being to have a vision of the deified Laozi. It is clear from Taoist texts of the Six Dynasties period that by this time the deified Laozi was identified with the Tao itself and credited with the creation of the universe. This conception of Laozi was established by the late Han dynasty, as is documented by a stele inscription of A.D. 153, entitled the *Shengmu bei* (Stele of the Sage Mother), which reads in part:

Laozi, the Tao:
Born prior to the Shapeless,
Grown before the Great Beginning,
He lives in the prime of the Great Immaculate,
And floats freely through the Six Voids.²⁴

This view is again articulated in the famous stele inscription of A.D. 165, the *Laozi ming*:

Laozi was created from primordial chaos and lived as long as the three luminants [sun, moon, and stars]. He observed the skies and made prophecies, freely came and went to the stars. Following the course of the sun, he transformed nine times; he waxed and waned with the seasons. He regulated the three luminants and had the four numinous animals by his side.²⁵ He concentrated his thinking on the Cinnabar Field [*dantian*],²⁶ saw Great Unity [Taiyi]²⁷ in his Purple Chamber, became one with the Tao, and transformed into an immortal.²⁸

The emergence of a new pantheon of gods, incorporating such deities as Taiyi (Supreme Unity), the Queen Mother of the West (Xiawangmu), and the realized beings (*zhenren*) of the newly revealed Highest Purity Heaven, was a key element in the formation of religious Taoism. An early text that coincides with these developments is the *Xiang'er zhu*, a religious Taoist commentary to the *Daode jing* (cat. no. 34). The text survives in a Northern Wei dynasty (early sixth century) manuscript discovered at Dunhuang, and now part of the Stein Collection in the British Library, London.²⁹

The longevity and internal coherence of the Taoist liturgical tradition can be traced to the earliest forms of ritual established in the late Han and early Six Dynasties periods. Such compilations as the *Supreme Secret Essentials* (*Wushang biyao*) of the Northern Zhou dynasty (557–581) contain the fundamental forms of many Taoist rituals that are still used today.³⁰ Among other things, the basic structure of the Taoist altar (*daotan*) was established during the Six Dynasties period (see fig. 4).

On another level, the impact of Taoism on the theory and

practice of painting and calligraphy, as seen in surviving Six Dynasties period texts, is clear. The idea of the correspondence between the inner vital energy (*qi*) of what is being depicted (be it a person, animal, mountain, god, or other entity), and the spirit-resonance of the artist's response to this visual stimulus, as manifested in the movement of his brush, is articulated in the famous "Six Laws of Painting" by the scholar Xie He (active c. 500–535).³¹ There is a close correspondence between Xie He's ideas and earlier concepts of the flow of *qi*-energy through the human body.³² The first and most famous of the Six Laws reads *qiyun shengdong*, or "engender [a sense] of movement [through] spirit consonance."³³ The great painter Gu Kaizhi (c. 345–c. 406) was a follower of the Celestial Master sect; his depiction of Zhang Daoling, the first Celestial Master, at the Cloud Terrace Mountain is one of the first recorded Taoist paintings.³⁴

Similarly, early texts on calligraphy from the third and fourth centuries stress the importance of calligraphy not only as a means of communication, but also as an art that, when properly executed, has the force to transform reality itself.³⁵ Calligraphy enjoys a special position in religious Taoism. In both the Shangqing and Lingbao schools of Six Dynasties Taoism, for

Fig. 4
Diagram of a Taoist altar. From *Wushang biyao* (Supreme secret essentials; HY 1130; woodblock-printed, accordion-mounted book; Ming dynasty, 1444–45; reprint of a lost Northern Zhou dynasty [557–581] compendium). From ZTDZ, vol. 42: 456.

example, sacred scriptures (*jing*) were believed to have existed as cosmic texts even before the creation of the world. Written in "cloud-seal" script, these texts were generated "when sound first issued from the protoplasmic Brahma-ether, itself the earliest emanation of the primordial Tao."³⁴ As Isabelle Robinet has written,

They [the Taoist scriptures, or *jing*] are formed by the coagulation and the condensation of this First Breath [*yuán qì*; primordial energy]. . . . Spontaneously born from the Void, they appeared as rays of light that came before the genesis of the world.³⁵

The tradition of talismanic writing, which had appeared by at least the Han dynasty, developed into a sacred art that played a fundamental role in Taoist ritual from the Six Dynasties period onward. Several Taoist talismanic texts from Dunhuang, datable to the Tang dynasty, are included in this exhibition; these derive from both the Shangqing and Lingbao ritual traditions. In addition to the importance of their talismans, these works are noteworthy because they highlight the complex blending of Taoism and local religious traditions during the Six Dynasties and Tang periods.³⁶ It should come as no surprise that the Eastern Jin dynasty calligrapher Wang Xizhi, the greatest master of this art in Chinese history, was himself a practicing Taoist.³⁷ While his transcriptions of the *Daode jing* no longer survive (these are recorded in the *Dynastic History of the Jin* [*Jinshu*]),³⁸ his family's devotion to religious Taoism is well known. Wang Xizhi's transcription of the *Scripture of the Yellow Court*, a text that presages the Inner Alchemy tradition, does survive, in ink rubbings of the Song dynasty (960–1279; see cat. no. 128).

Despite the fact that Buddhism flourished during the Six Dynasties period, enjoying strong imperial patronage in both northern and southern China during the Northern Wei, Northern Zhou, and Liang dynasties, Taoism also flourished in this period, in large measure because from its inception it provided a useful mechanism for establishing political legitimacy. Indeed, throughout its history, Taoism was perceived by many imperial families as representing the highest degree of spiritual and political orthodoxy. Religious Taoism supplied a means by which emperors could extend their control through both the human and divine realms. This is clearly illustrated in the Ming dynasty handscroll of 1493 in the San Diego Museum of Art, the ordination certificate (a combined painting and document) of Empress Zhang, wife of the Hongzhi emperor (r. 1488–1505), made on the occasion of her ordination as a Taoist priestess (cat. no. 57). It is significant in this light, as Anna Seidel has shown, that the Chinese imperial investiture ceremony was based on an ancient

Taoist ritual.⁴¹ The empress is depicted here as a goddess, illustrating the fact that through Taoist ordination, a priest or priestess gained control over the gods. This control was transmitted through registers (*lu*; lists of gods and their attributes) and talismans. Empress Zhang's ordination came in a long tradition of imperial ordinations that extended back to the Northern Wei emperor Tai Wudi, who in the fourth century was ordained by the northern Celestial Master Kou Qianzhi.⁴² The Tang dynasty emperor Xuanzong (Minghuang; r. 712–56) also received a Taoist ordination in the form of registers and talismans; these were transmitted to him by the great Taoist master Sima Chengzhen. The *Old Dynastic Records of the Tang* (*Jiu Tangshu*) contains the following account of Xuanzong's devotion to religious Taoism:

During his reign of many years, Xuanzong showed a great respect for various techniques for achieving longevity and levitation [*changsheng qingjiu zhi shu*]. In the Datong [Great Unity] Hall [of the Xingqing Palace], [he] set up the statue of the perfected immortal [*zhenxian*, i.e., the deified Laozi]. [He would] rise at midnight to burn incense and perform the prostration ritual [*dingji*]. In famous mountains, [he] ordered eunuch officers and Taoist recluses to alchemize [*cinabars*] and to conduct the rite of *jiao*. The road was teeming [with these people]. The rites to appease the dragon [*taolou*]; literally, "casting dragons"] and to make jade offerings [were conducted on his behalf or by himself]. [He] set up Taoist monasteries [*jingshe*], gathered elixirs, [searched for] the formulae of the Perfected [*zhenjue*], and followed the traces of the immortals. [He was involved in these activities] for years.⁴³

The Tang dynasty (618–906) was thus a period in which religious Taoism flourished, in large measure owing to imperial patronage.⁴⁴ For both political and spiritual reasons, the Tang imperial house sponsored Taoism on a previously unmatched level. Laozi, whose surname (Li) was the same as that of the imperial family, was adopted as the direct ancestor of the emperors. The Tang dynasty thus connected its political fortunes to its relationship with the deified Laozi. For the first time, civil service examination candidates were tested on the *Daode jing*, and Taoist temples were ordered built in every major city in China. That so many Taoist texts have been discovered at Dunhuang, a relatively remote site on the Silk Road, is because a Taoist temple also existed at Dunhuang, a major center of Buddhism during the Tang. Several of these rare manuscripts, from the Pelliot Collection at the Bibliothèque Nationale, Paris, and the Stein Collection at the British Library, are included in this exhibition.

The new role of Laozi as imperial ancestor during the Tang is reflected in the many Taoist sculptures of the deified sage that

survive from this time. Several of these, such as the great marble image now kept in the Forest of Stelae (Beilin) Museum at Xi'an, are well over life-sized, and are clearly metropolitan works that reflect the majesty of the new imperial image. It was also during the Tang that the trinity of high gods known as the Three Purities (Sanqing) first appeared as a group. These gods, conceived as pure emanations of the Tao, were the Celestial Worthy of Primordial Beginning (Yuanshi tianzun), the Celestial Worthy of Numinous Treasure (Lingbao tianzun), and the Celestial Worthy of the Way and Its Power (Daode tianzun). The last of these was none other than the deified Laozi. The earliest dated image of this triad dates to 749, and is found in a Taoist cave at Niujiaozai, Renshou county, Sichuan province.⁴⁵

The Tang dynasty saw the compilation of a new edition of the Taoist Canon, which unfortunately does not survive. This compilation was ordered by Emperor Xuanzong. Despite the simultaneous imperial patronage of Buddhism, Taoist belief and ritual spread throughout China with a previously unmatched consistency. Just as Six Dynasties period emperors sponsored Taoist clerics, so too did the Tang emperors support religious Taoism.

Although it is known from literary evidence that Taoist art proliferated during the Tang, very little art that can be called Taoist survives from this period. Descriptions of imperial Taoist rituals, such as the ordination in 711 of two imperial princesses as Taoist nuns, convey an impression of the richness of the works of art made in the service of religious Taoism that can only be imagined today.⁴⁶ The majority of extant Taoist art works from the Tang are stone sculptures and calligraphic manuscripts. Sculptures of the deified Laozi are found in collections in China, and in museums in Japan and the West.⁴⁷ The majority of Tang Taoist calligraphic texts that survive come from Dunhuang, and are now kept in London and Paris. The bulk of these texts were conveniently published and annotated by Ofuchi Ninji in 1978, and provide a remarkable resource for the study of medieval Taoism in China.⁴⁸

While no Taoist paintings survive from the Tang dynasty, literary accounts suggest that great muralists such as Wu Daozi (eighth century) were actively engaged in the decoration of both Taoist and Buddhist temples in this period. Furthermore, the early twelfth-century Northern Song dynasty imperial painting catalogue of Emperor Huizong (the *Xuanhe huapu*) records many Tang Taoist paintings, but none survive. Such works as the *Five Planets and Twenty-eight Lunar Mansions* (Osaka Municipal Museum of Art), attributed to the Six Dynasties period artist Zhang Sengyou, were among the works in Emperor Huizong's collection; this work can only peripherally be desig-

nated as Taoist, reflecting as it does images of planetary and star gods that entered China through the vehicle of Buddhism, and that were absorbed into the Taoist pantheon during the Tang dynasty.

Another important category of Tang Taoist art comprises bronze mirrors, cast with designs that by this time had been thoroughly incorporated into Taoist cosmology. Images of sacred mountains, paradises, and the Eight Trigrams (*Bagua*) of the *Book of Changes* are commonly found on bronze mirrors of this period.⁴⁹

The occasional importance of religious Taoism for even believers in Buddhism was highlighted by the discovery in 1982 on Mount Song (Song Shan, the central of the Five Sacred Peaks; see cat. no. 137) of a gold tablet (fig. 5) commissioned by Empress Wu Zetian (r. 690–705), a devout Buddhist who established the short-lived Zhou dynasty (696–705).⁵⁰ The inscription on the tablet is addressed to Mount Song and indicates that it was made for the benefit of the empress herself. The tablet is dated to the seventh day of the seventh lunar month of 700. It is essentially an official communication from Empress Wu's terrestrial representative, the Taoist priest Hu Chao, to the celestial bureaucracy and the netherworldly Nine Departments of the nine hells, which are governed by the Three Officials (Sanguan; see cat. nos. 69–71). Hu requests that the empress's name be removed from the records of those who will be imprisoned in the hells after death, and transferred to the celestial registers of realized beings (*zhenren*). A very similar practice of "presenting golden tablets" (*toujian*) developed into a Taoist ritual during the Six Dynasties period (420–589), and a description of this ritual is preserved in a scripture from the Highest Purity (Shangqing) corpus contained in the Taoist Canon.⁵¹

Very few works of Taoist art survive from before the Song dynasty. From this time onward, however, increasing evidence survives of works of art made in the service of religious Taoism. Several of the Song emperors were devout patrons of Taoism; among them the most active were Zhenzong (r. 997–1022) and Huizong (r. 1100–25).⁵² The latter, who took for himself the title Daojun huangdi (August Emperor, Lord of the Tao), was the most famous painter among all the emperors of China. In her essay in this volume, Patricia Ebrey explores the ways in which works of art served Huizong's Taoist agenda. Huizong was a patron of the Taoist cleric Lin Lingxu, who founded a new Taoist order, the Divine Empyrean (Shenxiao) movement.⁵³

The Song emperors adopted the Yellow Emperor (Huangdi) as their imperial ancestor, just as the Tang emperors had

adopted the deified Laozi as theirs. The high quality of imperially commissioned Taoist paintings during the Song is evidenced by such surviving masterpieces as Wang Liyong's *The Transformations of Lord Lao* in the Nelson-Atkins Museum (cat. no. 35) and Liang Kai's *Liberating the Soul From the Netherworld* (cat. no. 37). It would appear from its extraordinary quality that the twelfth-century triptych of hanging scrolls depicting the Taoist Officials of Heaven, Earth, and Water (the Sanguan) in the Museum of Fine Arts, Boston (cat. nos. 69–71), was also created under imperial auspices. Emperor Huizong's painting *Cranes of Good Omen* (see Patricia Ebrey's essay in this volume, fig. 4) in the Liaoning Provincial Museum, Shenyang, is another image that blends Taoist imagery with an agenda that included political legitimization.³⁴ That other masterpieces of Song painting, such as Chen Rong's *Nine Dragons* handscroll of 1244 in the Museum of Fine Arts, Boston (fig. 6), were perceived as Taoist images is clear from the content of the artist's inscription on the work, and the attached colophons of the Yuan dynasty, which include inscriptions by Wu Quanjie (1269–1346), Ouyang Xuan (1273–1357), and the thirty-ninth Celestial Master, Zhang Sicheng (1287–1368).

Sadly, none of the Taoist temple murals of this period survive, although echoes of their magnificence can be seen in surviving Buddhist murals of the Northern Song and Jin dynasties, and particularly in the extant fourteenth-century (Yuan dynasty) murals of the Eternal Joy Temple (Yongle Gong) in Shanxi province.³⁵ We can obtain some sense of how the Taoist pantheon was visualized in the Song dynasty through such works as Wu Zongyuan's *Procession of Immortals* (cat. no. 74), a masterpiece of the eleventh century, and the great twelfth-century album of fifty leaves depicting Taoist gods in the Stephen Junkunc IV Collection.³⁶

Significant numbers of paintings of Taoist *xian*, or immortals (adepts), survive from the Song and Jin (1115–1234) dynasties. The earliest image of the popular group known as the Eight Immortals (Baxian) is found among the ceramic sculptures decorating the interior walls and ceilings of Jin dynasty tombs near Pingyang, Shanxi province; these date to the late twelfth or early thirteenth century.³⁷ The best-known early image of the Eight Immortals, however, is found among the murals of the Hall of Purified Yang (Chunyang Dian) at the Eternal Joy Temple, dating to the fourteenth century.³⁸ Several Song dynasty paintings of Taoist immortals are included in this exhibition; among them are two fan paintings of Lü Dongbin (Lü the "Cavern-guest"), a patron saint of the Complete Realization (Quanzhen) sect, which rose to prominence in the Jin and Yuan

(1260–1368) dynasties. As Farzeen Baldrian-Hussein has shown, however, veneration and worship of Lǚ Dongbin was already widespread during the Northern Song dynasty (960–1126).⁵⁹ A more generalized image of an immortal is Ma Yuan's *Immortal Riding a Dragon*, painted at the Southern Song court in the early thirteenth century (cat. no. 28). Some of the most evocative depictions of Taoist mountain paradises also date to the Song dynasty. An excellent example is the monochrome ink handscroll in the Freer Gallery of Art, Washington, D.C., traditionally attributed to Li Gonglin, and probably dating to the late eleventh or early twelfth century (fig. 7).⁶⁰

It seems clear from both historical and artistic evidence that the majority of the Song emperors patronized both Buddhism and religious Taoism, as had the Tang emperors before them (and as did the Ming emperors after them).⁶¹ In addition, the Taoist influence on the Neo-Confucian philosophers of the Song dynasty is clear, as has been pointed out by Sun K'o-k'uan and other scholars.⁶² The Song dynasty witnessed the rise of several new Taoist sects, among them the Great Law of Heaven's Heart (Tianxin dafa) sect, and the increasing popularity of Inner Alchemy (*neidan*). In this discipline, the creation of the alchemical elixir was visualized by the adept within his or her own body. This practice was promulgated by such adepts as Bai Yuchan (flourished 1209–24), and achieved widespread popularity by the end of the Song dynasty.⁶³ Images of Taoist adepts obtaining

the elixir are often found on bronze mirrors dating to the Song, Jin, and Yuan dynasties. These images are most likely allegories of Inner Alchemy (see cat. nos. 135 and 136).

An important development in the Song dynasty was the increasing absorption of local gods and deities of popular religion into the Taoist pantheon. This reflects changing attitudes among Taoists toward the gods of popular religion, since, in the Six Dynasties and Tang periods, a much clearer demarcation was drawn between Taoist deities and popular gods.⁶⁴ By petitioning the emperor, a support group (for example, a local society of merchants) could acquire official recognition for a popular god. If the petition was successful, the god would be granted a new title.⁶⁵ This pattern continued into the Yuan dynasty. Later, in the Ming dynasty, such decisions were delegated by the emperors to the Celestial Masters of the Orthodox Unity sect. An example of such a petition, dating to the late Ming and comprising a long painted and inscribed handscroll, is in the Metropolitan Museum of Art, New York (cat. no. 82). There was often an economic as well as a spiritual basis for such petitions: recognition of a local god tended to lead to national legitimation of the merchants and devotees who supported the god, leading in turn to increased opportunities for trade and economic development. Among the many popular gods who were absorbed into the religious Taoist pantheon was Guandi (Emperor Guan), originally Guan Yu, a military hero of the Three Kingdoms period in the third century

Fig. 7
Traditionally attributed to Li Gonglin, *Taoist Paradise* (detail). Northern Song dynasty, late 11th/early 12th century. Handscroll; ink on paper; 41.7 × 947.5 cm. Freer Gallery of Art, Smithsonian Institution, Washington, D.C.

(see cat. no. 83).⁶⁶ In the Song dynasty, Guan Yu became a Taoist marshal (*yuanshuai*)—a celestial guardian who protected the Taoist faith. Subsequently, in 1615, during the Ming dynasty, Marshal Guan became Emperor Guan (Guandi). These changes in title reflect the increasing national importance of a deity who began as a human hero.⁶⁷

The Jin dynasty (1115–1234), which conquered the Northern Song dynasty and ruled the north during much of the Southern Song period, witnessed the founding of the Complete Realization (Quanzhen) sect of Taoism by Wang Zhe (1113–1170).⁶⁸ This sect constituted a reform movement within Taoism. Wang stressed the equality of the Three Teachings (*Sanjiao*), giving equal emphasis to such texts as the Confucian *Classic of Filial Piety* (*Xiao jing*), the Buddhist *Heart Sutra* (*Xin jing*), and the *Daode jing*. He insisted on vegetarianism and the celibacy of monks, and cultivation of a strict moral code, and also emphasized the discipline of Inner Alchemy (*neidan*), in which the adept visualized the creation of the elixir. The fourteenth-century murals of the Hall of Redoubled Yang (*Chongyang Dian*) at the Eternal Joy Temple in Shanxi are devoted to depictions of Wang Zhe's life.⁶⁹ The Complete Realization sect has survived to the present day; its greatest temple is the White Cloud Monastery (*Baiyun Guan*) in Beijing.⁷⁰

During the succeeding Yuan dynasty (1260–1368), Taoism,

after witnessing a brief period of repression under Khubilai Khan (Shizu; r. 1260–94), enjoyed a huge resurgence (in 1281, Khubilai Khan ordered all copies of the Taoist Canon destroyed; because of this, no copies of the Song dynasty Taoist Canon have survived). Despite the fact that the Mongol imperial family chose the Tantric Buddhist deity Mahakala as its dynastic guardian, Taoism was tolerated and even supported. A key element in this was the rise of the Complete Realization sect, the reform movement that gradually spread from northern to southern China.⁷¹ From the thirteenth century onward this sect coexisted with the earlier Celestial Master sect (also known as the Zhengyi or Orthodox Unity sect), and they are still the two dominant Taoist sects in China today. The headquarters of the Complete Realization sect (the White Cloud Monastery in Beijing) functions today as the headquarters of the Taoist Association of China (*Zhongguo dao jiao xiehui*), and is a temple where ordinations of Complete Realization Taoist priests are once again carried out.

In 1287 the Mongol emperors created a new Taoist organization that superseded the earlier Zhengyi sect, and to which they delegated control over all Taoist affairs in China. This was known as the Mysterious Teaching (*Xuanjiao*) school, and existed only during the Yuan dynasty. Two of the leading priests of this school were Zhang Liusun (1248–1322) and Wu Quanjie

(1269–1346), both pupils of the thirty-sixth Celestial Master, Zhang Zongyan (1244–1292) of Dragon and Tiger Mountain (Longhu Shan) in Jiangxi. Among other accomplishments, Zhang Liusun founded the Temple of the Eastern Peak (Dongyue Miao) in Beijing, the Taoist temple dedicated to the god of Mount Tai (Tai Shan), and Wu Quanjie lived to oversee its completion. During the Cultural Revolution (1966–76), the Dongyue Miao was closed and nearly destroyed, but has recently been renovated and reopened as a museum. The temple still contains an important group of stelae, including the famous *Stele of the Taoist Religion* (*Daojiao bei*) that tells the story of the temple's founding. The text of this stele was composed and inscribed by the scholar-official Zhao Mengfu (1254–1322).

It is noteworthy that despite Zhao Mengfu's deep interest in Chan (Zen) Buddhism (he was a friend and confidant of the great Buddhist priest Zhongfeng Mingben),⁷¹ he composed several stele inscriptions for Taoist temples.⁷² This level of involvement reflects the fact that from the Six Dynasties period onward, many members of the literati class were either directly involved with or deeply knowledgeable about religious Taoism. The prevailing view that, in late imperial China, scholar-officials and literati were primarily Confucian in their philosophical orientation and devoid of interest in or involvement with religion or spirituality is challenged by many historical or literary data. As we have seen, as early as the Eastern Jin dynasty, the scholar-officials Wang Xizhi and Gu Kaizhi were followers of the Celestial Master sect. As a corollary, it is noteworthy that the Liang dynasty Taoist scholar and alchemist Tao Hongjing was renowned as a painter and calligrapher. The letters Tao exchanged with Emperor Liang Wudi are the first texts in Chinese history to discuss the connoisseurship of calligraphy.⁷⁴ In the Tang dynasty, the famous poet Li Bo (701–762), for example, was a devout believer in religious Taoism.⁷⁵ Like Emperor Xuanzong, Li Bo received a Taoist ordination. As Farzeen Baldrian-Hussein has shown, in the Northern Song dynasty, Su Shi (Su Dongpo; 1036–1101), widely perceived as a paragon of the Confucian scholar-official, while not a practicing Taoist per se, nonetheless had a surprisingly deep knowledge of religious Taoism, and practiced several techniques of Inner Alchemy (*neidan*). An indication of his knowledge of religious Taoism is seen in a stele inscription he composed in 1091 on the occasion of the rebuilding of a Taoist temple originally built by Tang Taizong (r. 976–977):

The Taoist school has its origins in [the teachings of] the Yellow Emperor and Laozi. . . . From Qin and Han times on, they began to employ the language of the *fāngshi* whence one saw the appear-

ance of techniques such as those of flying immortals who can transform themselves, the methods of Huangting [Yellow Court] and Dadong [Great Cavern] (scriptures), the appellation of [the deities] Taishang [the deified Laozi], Tianzhen [the Heavenly Perfected], Mugong [Dongwanggong] and Jinmu [Metal Mother or Xiwangmu], [the mythical periods] Yankang, Chiming, Longhan, and of the first emperors, the sacrifices to [the stellar deities], the Celestial Emperor [Tianhuang] and the Supreme One [Taiyi] who reside in the palace of Purple Tenuity of the North Pole [Ziwei Bei] and even to the special techniques of elixir medicines, registers, and talismans, all go back to the Taoist school. . . . The Way of the Yellow Emperor and of Laozi is the root, the sayings of the *fāngshi* are the branches. . . .⁷⁶

The evidence for Su Shi's practice of Taoist techniques of Inner Alchemy, visualization, and embryonic breathing is clear from letters surviving among his collected writings. Su wrote, "divine immortals and [the practice of] long life are not merely empty words."⁷⁷ In addition to the Song religious texts preserved in the Taoist Canon, our knowledge of the practice of Taoism and the worship of Chinese popular gods in the Song is supplemented by the information contained in such texts as the *Record of the Listener* (*Yijianzhi*) by the literatus Hong Mai (1123–1202).⁷⁸

During the Yuan, the highly cultured Taoist priest Wu Qianjie played an important role as an intermediary between the Mongol court in Dadu (Beijing) and the world of the literati of south-central China. Wu knew such disaffected literati as the Neo-Confucian philosopher Wu Cheng, and the painters Ni Zan and Huang Gongwang. Ni Zan (1306–1374) came from a wealthy literati family whose members were devout supporters of Taoist temples in the Wuxi-Suzhou area of Jiangsu province; Huang Gongwang (1269–1354) was a master of *fengshui* (geomancy) and a diviner. While few of Ni Zan's paintings give any concrete hint of his Taoist belief, the short handscroll entitled *The Crane Grove* (*Helin tu*) in the Chinese Art Gallery, Beijing, depicts an outdoor Taoist altar, and was painted for a Taoist practitioner named Zhou Xuanzhen (cat. no. 139). In contrast, several of Huang Gongwang's surviving landscapes are specifically Taoist in theme. These include *Cinnabar Cliffs and Jade Trees* (*Dan'ai yushu tu*) in the Palace Museum, Beijing, and *Mountains of the Immortals* (*Xianshan tu*) in the Shanghai Museum.⁷⁹ Such scenes of paradise mountains were very popular among Yuan literati painters, and appear as well among the works of Wang Meng, Lu Guang (see cat. no. 142), and Chen Ruyan (see cat. no. 144).⁸⁰ Several Taoist priests of the Yuan dynasty were also accomplished painters, including Fang Congyi (active c. 1295–1316;

Fig. 8
Murals depicting the Taoist pantheon in the Hall of the Three Purities, Yongle Gong, Ruicheng, Shanxi province. Yuan dynasty, early 14th century.

see cat. no. 143), Wu Boli (see cat. no. 141), and the Celestial Master Zhang Yucai, all of whom were associated with Longhu Shan in Jiangxi province, the headquarters of the Zhengyi sect of Taoism.⁸¹

Among the greatest monuments of Yuan dynasty Taoist art are the murals of the Eternal Joy Temple, a Complete Realization sect Taoist temple at Ruicheng in southern Shanxi province. The three main halls of this complex were built in the thirteenth century, and their walls painted with murals in the fourteenth century. The 286 Taoist gods depicted on the walls of the Hall of the Three Purities (Sanqing Dian) provide a magnificent visualization of the Taoist pantheon as it was conceived by the Complete Realization sect in the Yuan dynasty (see fig. 8). The Hall of the Three Purities murals were completed in 1325 by the Luoyang painter Ma Junxiang and his assistants.⁸² Chinese scholars have suggested that the textual source for these paintings was the thirteenth-century scripture compiled by Jin Yunzhong (flourished 1224–25) entitled *Great Law of the Highest Purity Numinous Treasure* (*Shangqing lingbao dafa*).⁸³ Originally there were statues of the Three Purities at the center of the hall, but these have disappeared. The murals focus on eight major gods, painted on an enormous scale, each accompanied by a large entourage of deities. The eight principal gods are Nanji dadi (Great Emperor of the South Pole Star), Hou tu (Earth Goddess), Yuhuang (Jade Emperor), Ziwei dadi (Purple Tenuity Emperor), Taiyi (Supreme Unity), Jinmu (Metal Mother, or Queen Mother of the West),

Mugong (Wood Sire, or Dongwanggong, Lord Duke of the East), and Gouchen (a celestial emperor representing the constellation surrounding Polaris).⁸⁴ While none of these deities is labeled, their identification is now generally agreed upon by scholars.⁸⁵ Two other main halls of the Eternal Joy Temple are no less important. The murals of the Hall of Purified Yang depict over fifty scenes from the life of the immortal Lü Dongbin, while those of the Hall of Redoubled Yang depict scenes from the life of Wang Zhe, the founder of the Complete Realization sect. Two Yuan Taoist murals in the Royal Ontario Museum, Toronto, are closely connected in style and date to the murals of the Hall of the Three Purities at the Eternal Joy Temple.⁸⁶

Among the lesser-known works of Yuan Taoist art are the eight cave-temples at Long Shan (Dragon Mountain) in Shanxi province, located southwest of Taiyuan, the provincial capital (not far from the earlier Buddhist cave temple site of Tianlong Shan). These caves, excavated along a sandstone ridge overlooking a deep valley, date to the early fourteenth century (see fig. 9). The carved figures in high relief depict the Three Purities and a variety of early Complete Realization adepts. Several heads of Taoist figures were acquired from this site by the Museum of East Asian Antiquities, Stockholm, in about 1930.⁸⁷

Contrary to the conventional belief that Taoism declined during the Ming dynasty (1368–1644), recent studies have shown that in fact religious Taoism flourished in this period.⁸⁸ Although

Zhu Yuanzhang, the first Ming emperor (Taizu; r. 1368–98), has been described as “adamantly anticlerical,”⁸⁹ he was actually open-minded toward Buddhism and Taoism, and patronized leaders of both the Orthodox Unity (Zhengyi) and Complete Realization Taoist sects. Pierre-Henry de Bruyn has shown that many of Zhu Yuanzhang’s children were in fact deeply involved with religious Taoism.⁹⁰

At the same time that Zhu Yuanzhang was pragmatically attempting to minimize the influence of organized religion, he also actively patronized those elements in organized Taoism that he saw as orthodox. He commissioned, for example, a new official liturgy for Taoist rituals. Zhu mainly supported the Orthodox Unity sect, and also stressed the unity of the Three Teachings (*Sanjiao*). This concept, namely that Confucianism, Taoism, and Buddhism were different paths to the same goal, attained increasing popularity during the Song and Jin dynasties (see fig. 10), although its roots can be traced to the Six Dynasties period. After 1368 he established the Xuanjiao Yuan, which oversaw the administration of all Taoist affairs in China. This was replaced in 1371 by the Central Taoist Registry (Daolu si). In 1379 Zhu established the Temple of Divine Music (*Shenyue Guan*), which oversaw the creation of Taoist ritual music.

Similarly, the conventional wisdom is that the Yongle emperor (Zhu Di; r. 1403–24), the fourth son of Zhu Yuanzhang, embraced and supported Tibetan Buddhism. While it is true that he was closely involved with Tibetan and Mongolian lamas of the Kagyu and Sakya orders, on whom he conferred the title Dharma King (*Fawang*).⁹¹ imperial patronage of religious Taoism proliferated during the Yongle reign. A key event here was the emperor’s adoption of the Taoist god Zhenwu (Perfected Warrior) as his personal protector, with political legitimization an overriding concern. The Yongle emperor not only was famous as a warrior and military strategist, but also usurped the throne that rightfully belonged to his older brother. In 1421 Yongle moved the Ming capital from Nanjing to Beijing and rebuilt the Forbidden City. The northernmost building in the imperial palace in Beijing today is still the Hall of Imperial Peace (*Qin’an Dian*), the imperial temple devoted to Zhenwu.⁹² Every subsequent Ming emperor announced his accession by paying homage to Zhenwu. Imperial patronage of the Zhenwu cult included the rebuilding of the god’s temples on Mount Wudang (Wudang Shan) in Hubei province, and during the Ming dynasty this god supplanted the deified Laozi as the most important god in the Taoist pantheon. So huge was Zhenwu’s cult in the Ming that one section of this exhibition is devoted to him.

Judith Berling has recently suggested that for most Chinese

Fig. 9
Interior of a Taoist cave at Dragon Mountain (Long Shan), Shanxi province. Yuan dynasty, early 14th century

Fig. 10
Ink rubbing of a stele depicting the sages of the Three Teachings (*Sanjiao*). Jin dynasty, dated 1209. Limestone; 123 x 60 cm. Shaolin Temple, Mount Song, Henan province.

during the Ming, Taoist gods participated more directly than enlightened beings of the Buddhist pantheon in the system of moral retribution, which "encompassed the seamless fabric of the divine and human realms."⁹³ Despite the machinations of *karma*, the Taoist order of moral retribution and reward worked more quickly, and was seen as being much closer to the principles of justice administered by the imperial government throughout society. From this point of view, Taoism was seen as ultimately supporting Confucian values. This view was articulated by Zhu Yuanzhang, the first Ming emperor. As Berling shows, in his essay on the "Three Teachings" (Taoism, Buddhism, and Confucianism), Zhu Yuanzhang

argued that those who criticized Buddhism and Taoism on the grounds that they harmed the nation and incited the masses were mistaken. Confucianism, he said, was the Way (Tao) of manifest virtue, while Taoism and Buddhism were the Ways of hidden virtue, secret aids of the imperial mandate to rule.⁹⁴

In fact, it was Zhu Yuanzhang who invited the forty-third Celestial Master, Zhang Yuchu (1361–1410), to the court and paid for the rebuilding of Zhang's residence on Longhu Shan (Dragon and Tiger Mountain) in Jiangxi, the headquarters of the Orthodox Unity sect. In 1391 the Taoist prelate was given authority to authenticate talismans (*fú*) throughout China. In 1406 the Yongle emperor ordered Zhang to compile a new edition of the Taoist Canon. This was not completed until 1444, during the Zhengtong reign, and is a masterpiece of Ming woodblock printing (several volumes, from the Pelliot Collection in the Bibliothèque Nationale, Paris, are included in this exhibition; see cat. nos. 52, 54, 58, 110, 112, 115, and 129). Zhang Yuchu's own writings, such as the *Ten Standards for Taoists* (*Daomen shigui*), stress the compatibility of Taoism and Confucianism. He further emphasized the proper moral conduct of Taoist priests, and wrote that such individuals would be effective models for the lay public, and "would also devote themselves to prayers and rituals on behalf of the state and community."⁹⁵ In his view, it was thus entirely fitting that the imperial government should "support the activities of orthodox Taoist temples." Under the aegis of the Yongle emperor, Zhang Yuchu established the Taoist Affairs Academy in Beijing, and supervised the Central Taoist Registry (*Daolusi*).

This evidence suggests that a pattern of imperial patronage of the Celestial Master lineage of Taoism at Longhu Shan was established at the beginning of the Ming dynasty. The historical record of imperial Ming patronage of Taoism indicates that instead of being perceived as heterodox, religious Taoism was

perceived in the eyes of the emperors as representing the highest degree of orthodoxy, ideally suited to aiding the ruler and the court in administering the state. This is important because it provides a counterpoint to the well-known imperial Ming patronage of Tibetan Buddhism, which was also politically useful for imperial propaganda.⁹⁶ Already in the early Ming, such Taoists as Zhang Sanfeng (to whom the discipline known as Taijiquan is credited) were called to court because their moral virtue reflected on the emperor. As Berling has shown, "The pattern of Ming imperial patronage of Taoist temples and rituals was repeated in virtually every reign."⁹⁷ This reached an apogee during the Jiajing reign (1522–66), when Taoism was elevated to a state orthodoxy.⁹⁸

A greater number of works of Taoist art in this exhibition date to the Ming dynasty than to any other period, reflecting the widespread devotion to religious Taoism in this period. The court painter Wu Wei (1459–1508) is known to have believed in religious Taoism. Stories about his encounters with adepts and immortals were popular well into the seventeenth century, long after his death.⁹⁹ Among his surviving Taoist paintings are *Guangchengzi* and the *Yellow Emperor* (cat. no. 36), *Female Goddess or Immortal* (cat. no. 94), *The Hermit Xu You and the Oxherd Chao Fu* (an illustration of a story from the *Zhuangzi*) in the Tokugawa Museum, Nagoya, and *The Sage of the Northern Sea* in the National Palace Museum, Taipei.¹⁰⁰ The professional painters of the Zhe School created large numbers of such works in the fifteenth and sixteenth centuries, encouraged by both imperial patronage and public demand. Several very rare examples of Taoist ritual paintings also survive from this period, including the handscroll created for the ordination of Empress Zhang as a Taoist priestess in 1493 (cat. no. 57) and a local god's petition to the Jade Emperor for an official title (cat. no. 82).

A very important resource for our understanding of the ways in which both Taoist and popular gods were visualized during the Ming dynasty are the sets of paintings created for a Buddhist ritual known as the Water and Land Ritual (*Shuilu zhao*). Several impressive sets, or partial sets, of Water and Land Ritual paintings survive from the Ming, among them sets in the Shanxi Provincial Museum, Taiyuan, and the Musée Guimet, Paris.¹⁰¹ Despite the Buddhist context in which these works were originally created, they often contain the earliest or finest depictions of Taoist gods known. For this reason, several such works are included in this exhibition (see cat. nos. 75, 76, 78–81, 84–86, 91, 97, and 107).

The Ming witnessed the continuing absorption into the Taoist pantheon of gods from Chinese popular religion, a phenomenon

that had already proliferated during the Song dynasty. A new and influential group of gods that emerged during the transition from the Yuan to the Ming were the Three Stars, known in Chinese as Fulushou; these three gods are still widely worshipped today. As a discrete group, the Three Stars—comprising the gods of Good Fortune (Fuxing), Emolument (Luxing), and Longevity (Shouxing, also known as Shoulao)—seem to have first appeared in Chinese culture and art in the early fifteenth century.¹⁰² In addition to their appearance in a Ming painting of 1454 in the exhibition (cat. no. 91), this group appears in another early Ming painting in the Nelson-Atkins Museum of Art, Kansas City (fig. 11). Here the Three Stars are shown with a larger group of celestial deities, including the Nine Luminaries or Sources of Brightness (*jiuyao*; upper right),¹⁰³ the Twenty-Eight Lunar Mansions (*Ershiba xiu*; lower left), and the twelve gods of the Chinese zodiac (*shi'er gong*; lower right). The scroll provides one of the few known depictions in Chinese painting of the Three Stars in conjunction with these other stellar gods. Interestingly, the gods of the zodiac are based on the figures of the Near Eastern zodiac, and not on the members of the Chinese zodiac. Edward Schafer has suggested that the Chinese were aware of the Western zodiac by the sixth century, and F. Richard Stephenson has shown that the symbols of the Western zodiac were first introduced into China in the Sui dynasty (581–618), probably via India.¹⁰⁴ Evidence for this is found in a text in the Buddhist canon, the *Scripture of the Great Assembly of Great Doctrinal Universality* (*Da fangdeng daji jing*), which was translated from Sanskrit into Chinese during the Sui. The forty-second chapter of this text lists the signs of the zodiac that correspond to each of the twelve lunar months: 1, Ram; 2, Bull; 3, Pair of Birds; 4, Crab; 5, Lion; 6, Celestial Woman; 7, Steelyard; 8, Scorpion; 9, Archer; 10, Makara (a mythical sea monster); 11, Water Vessel; 12, Celestial Fish.¹⁰⁵ With the exception of the sixth, seventh, and tenth months, these correspond closely to the signs of the Western zodiac.¹⁰⁶

Taoist sculpture from the Ming dynasty also survives in relatively large numbers. These include works still found in Taoist temples in China, for example, the White Cloud Monastery, Temple of the Eastern Peak, and Hall of Imperial Peace in Beijing, and others in Kaifeng, Changsha, and many other cities and towns. The majority of such sculptures are made of bronze, wood, ivory, or porcelain. Many Taoist sculptures survive in Western museums as well, where they are often unrecognized as being Taoist, and thus relegated to basement storerooms. As our knowledge of the history of religious Taoism develops and becomes more sophisticated, increasing numbers of such treasures will undoubtedly be excavated from the artistic limbo in

Fig. 11
The Three Stars, Nine Sources of Brightness, Twenty-eight Lunar Mansions, and Twelve Palaces [of the Zodiac]. Ming dynasty, 15th century. Hanging scroll; ink, colors, and gold on silk; 137.2 x 86.7 cm. The Nelson-Atkins Museum of Art, Kansas City, Missouri, Bequest of Laurence Sickman (F88-41/6).

which they now reside. A significant number of works made expressly for use in Taoist ritual also survive from the Ming, some of them works of great beauty. Those included in this exhibition include swords, ivory tablets, and priests' robes.

Taoism continued to flourish during the Qing dynasty (1644–1911), during which the emperors who ruled China were Manchu. While the Manchus openly favored Tibetan Buddhism over Taoism, Taoist ritual continued both inside and outside the court.¹⁶⁷ This is clear from such artistic evidence as the large painting by Jiao Bingzhen in the Arthur M. Sackler Gallery, Washington, D.C., depicting a ritual carried out in the court (cat. no. 44) and the Hall of Imperial Peace, the principal Taoist temple in the Forbidden City, most of the contents of which date to the Qing dynasty (and which demonstrate continuous use by the imperial family during the Qing).

Despite persecution in the twentieth century, particularly between 1949 and 1976, Taoism is rebounding with astonishing speed in contemporary China. The vitality of the artistic traditions associated with Taoism are revealed not only in the reconstructions of temples and Taoist sites, but in the recent attempts to collect and protect historical works of Taoist art, in such temples as the White Cloud Monastery and the Temple of the Eastern Peak in Beijing. Devotion to religious Taoism, widespread throughout most of the late twentieth century in Taiwan, Hong Kong, and many overseas Chinese communities, is enjoying a renaissance in China today. It is hoped that this exhibition will succeed in opening a door onto an ancient and vital tradition in Chinese art history that has all too long remained hidden.

NOTES

- Loewe 1982: 27–28.
- Stanza 42. See HY 664.
- One of the most important physiognomic classics, for example, is entitled *Complete Compilation of Divine Correspondences* (*Shenzhang quanbian*), compiled in the fourteenth century. Large portions of this book are translated and discussed in Lessa 1968. See Kohn 1986, and Smith 1991: 187–95.
- Roth 1996: 128.
- From the Han dynasty onward, the Laozi was known as the *Daode jing*.
- See Jingmen City Museum 1997. The Guodian Laozi manuscripts have recently been published in *Guodian Chu mu zhu jian* 1998: 3–10, 111–22. For a translation of the *Daode jing*, see Waley 1958. See also Allen and Williams 2000.
- The Mawangdui Laozi manuscripts, which date to the Western Han dynasty, are published in Chen 1996.
- The image of the “Uncarved Block” of wood (*pu*) occurs several times in the *Daode jing*, and symbolizes the primal unity of the Tao.
- Translation adapted from Waley 1958: 183.
- Translated in Waley 1958: 143.
- Another six sections are fragmentary, making a total of thirty sections. It is clear from their calligraphy that the texts of Guodian Laozi bundles A and B were written by the same hand, but that the text of bundle C was written by a different hand.

1. THE TAOIST TRADITION IN ANCIENT CHINA

TAOISM IS THE FOREMOST indigenous religion of China and one of the world's oldest mystical and liturgical traditions. The name Taoism comes from Tao (Dao), a word that means "road" or "way": a way to follow, a way of thought, a method, and a principle.¹ The Tao is seen as the everlasting principle at the origin of the universe. It permeates and transcends all beings; it is at the origin of all transformations. According to Chinese tradition, the Tao existed before the world was born out of the primordial chaos (*hundun*). The Tao brought forth the world, and all beings naturally belong to the Tao. Therefore, at its most fundamental level, the name Taoism does not refer to a god or a founding figure, but to a universal principle. Nonetheless, the story of Taoism is inextricably linked to the figure called Laozi (Lao-Tzu), the sage who first revealed the Way to us.

Laozi

There have been many discussions about when and where Laozi lived, and even whether he was a historical figure at all. Although what has been transmitted through the ages about Laozi is of a purely legendary nature, these legends are not without historical interest. In fact, they are often more significant than "historical facts," because they show how Taoism and Laozi were already thought of in ancient times. Seen in this way, the traditions that surround him are very significant.

Laozi is said to have been seen in this world at a time corresponding to the sixth century B.C., and the traditional dates given for his life are 604–531 B.C.² Laozi is reputed to have hailed from the southern state of Chu (for China was not yet unified into a single empire at this time), and to have been born in Hu, near present-day Luyi, in Anhui province. A later legend of his birth

tells us that Laozi's mother was a virgin who conceived him spontaneously, through the radiance of the Pole Star in the center of the sky. She carried her child in her womb for eighty-one years (a cosmic period of nine times nine) before he was born through her left armpit while she was leaning against a plum tree. At birth, the baby was of course already old, hence the name of "Old Child," which is another way of interpreting his name, in addition to "Master Lao" or "Old Master."³ After giving birth, Laozi's mother died. In fact this was a phenomenon of transsubstantiation, because mother and child were one and the same person. Alone in the world, the Old Child chose the plum tree, which had lent support to his mother, as his ancestor, and took its name (Li) as his family name.⁴

Laozi is said to have been at one time the scholar in charge of the calendar and archives at the court of the Zhou dynasty (1050–256 B.C.).⁵ In that capacity, he received a visit from Kongzi (whom we know by the name Confucius, and whose traditional dates are 551–479 B.C.). Confucius wanted to see the Old Master in order to question him about ritual, because Confucius believed that ritual decorum was the key to good governance. He thought that as long as everyone kept to his status and rank in society and acted according to the established custom, all would be in order. The story of the meeting has many versions,⁶ but the main idea is always the same: Laozi did not agree with Confucius's ideas, and told his noble visitor that naturalness, personal freedom, and happiness were more important than trying to conform to traditional standards.

After having lived in this world for a long time, the Old Master decided to leave and retire in the far-off mountains of the western regions. When he crossed, with his ox and his servant boy,⁷ the mountain pass that marked the end of the world of men, he was halted by the guardian, who asked him for his teachings.

Laozi then dictated to him the small book, consisting of some five thousand Chinese characters, that we call the *Classic of the Way [Tao] and Its Power (Daode jing)*.

The Background

Through these narratives, we may see that Laozi's lifetime was set at a moment of profound change in China. During the sixth century B.C., the former feudal order of the Zhou dynasty was gradually giving way to a new age of social and human development. Early China, like many other cultures of the Bronze Age, was immersed in ancestor worship and bloody sacrifice, and the memory of that archaic culture survives today in the ritual bronze vessels now on display in many museums which used to adorn the sacrificial altars. There was an aristocratic warrior society, centered around the king and the nobility, their clans, and their ancestors.

The end of this feudal world order was marked by several important innovations. Among these, the development of high-grade iron ore metallurgy during the seventh century B.C. signaled the end of the Bronze Age. Iron tools and other manufactured goods provided trade and economic expansion. Later in antiquity, China also exported silks and lacquerwares as far as the Near East and Rome.

This economic development created a new society of merchants and artisans, which took hold of the city-states, until then dominated by the aristocrats.⁸ This in turn caused important institutional changes. The first laws and taxes appeared in China during the second half of the sixth century B.C., to some extent limiting the privileges of the nobility. Most of the great Chinese cities of those times were concentrated in the Central Plain, especially at the crossroads of what are today the provinces of Henan, Shandong, and Anhui, where the ancient states of Song, Wei, Qi, and Chu were situated. It was in this region that Laozi was born.

There were also those who regretted that the ancient religious and social order installed by the kings of the Zhou dynasty was gradually disappearing. One of these conservatives was Confucius. In his efforts to maintain the ritual tradition, he is said to have put down the ritual texts in writing. These became the so-called Chinese Classics.⁹ We do not know to what extent these Classics are truly representative of the religion of the aristocracy, but what is certain is that the religion of the common people, with its worship of holy mountains and streams, as well as the great female deities, was systematically left out.

Laozi, on the other hand, is portrayed as a commoner. The legend of his responsibility for the calendar and archives is

intriguing, because such specialists contributed to the worldview in which mutually opposed and complementary forces, *yin* and *yang*, evolve, from the primordial chaos, into the phenomenal world of Heaven and Earth, the "ten-thousand beings." Each of these beings, each part of the creation, is shaped and nurtured by the cosmic energies (*qi*) of Heaven and Earth in endless numbers and continuous transformation. According to this cosmology—fully articulated in the early Han dynasty (second century B.C.)—all beings are related to each other through elaborate systems of correspondence. The creative (and destructive) processes are thus considered to be natural, and not linked to any divine will or destiny. This was a universe that was created and evolved spontaneously through the interplay of cosmic forces according to the universal principle of the Tao.

On the basis of this worldview, the diviners created a system of prognostication, based on a mathematical game (counting numbers of divining sticks), in order to arrive at sixty-four different symbolic combinations noted down as "hexagrams" (*gua*). This system is documented and elaborated in the classic *Book of Changes (Yi jing)*.¹⁰ The hexagrams ideally represented all the possible, and forever changing, combinations of *yin* and *yang* forces in the universe. Even in later times, when, as we shall see, it developed a pantheon of many transcendent immortals and deities, Taoism always remained a religion without a supreme being. Neither a polytheism nor a monotheism, Taoism lifts us up to a level above particular gods and ancestors, to a heaven above heaven, to the one universal principle that allows the world to find unity in its endless diversity.

It has been observed by several scholars that these developments are in some respects comparable to those of the ancient Mediterranean world. There too the ancient feudal order and the sacrificial religion gradually made place for a new society and culture in the city-states. In ancient Greece, beside the ancient "public cult" there emerged "mystery religions," which were expressions of the search for transcendence and immortality. These movements did not follow traditional class rules, and often recruited members from different levels of society. The mystery religions in turn were the fertile ground on which philosophy developed.

In China as well, a similar, newly emerging conscience marked the divide between the archaic warrior society and the new city civilization, and stood in the very center of the traditional distinction between Laozi and Confucius. Confucius is traditionally seen to have defended the ancient ritual codes by giving them a moral meaning. In reply, the Old Master asked him: But what good does that do to you personally? It is this

awakening of the individual awareness that marked a major turning point in Chinese culture. From it came the questions about individual destiny, the purpose of life, and death and immortality. On the ruins of the old order, a new search emerged that created a religion in which personal transformation occupied a place of increasing prominence, based on the Way of the Old Master.

The Tao of the Old Master

The fourth century B.C. was the golden age in China for the development of the different schools of philosophy. The recent find of fragments of the book of Laozi, the *Daode jing*, in a manuscript preserved in a tomb dating from around 300 B.C., proves that this most fundamental text was already extant in written form when the Inner Chapters of the *Zhuangzi* were composed (see below), and that the worldview it represents had already reached a certain degree of maturity (see Little essay, fig. 2). The study of these fragments in comparison with the now current edition of *Daode jing* shows that the work was written over a long period of time, with some parts being perhaps as old as the fifth century B.C.

The *Daode jing* is a collection of short paradoxical axioms, compiled without any particular order, and following no systematically developed argument. It does, however, display such profundity of insight into the human condition that it has been justly considered by later Taoism as its foremost scripture. It argues that we, as human beings but part of nature, cannot fathom the Way, but can only contemplate its manifestations. Any name we give to it cannot encompass it, because the Tao is beyond any conceivable concept. Only those who know that they do not know can, by uniting with nature and rediscovering spontaneity, through nonaction (*wuwei*), intuitively grasp the underlying truth of all that is. In grasping and holding on to this truth, they become one with it and thus "obtain the Tao."

The *Daode jing* elevates to the very acme of Taoism the paradox of knowing through not knowing, of acting through not acting, of obtaining through relinquishing. The *Daode jing* is paradoxical because it wants to liberate us from the tyranny of words and names and definitions. It stresses that there is a limit to human life and to our knowledge, and at the same time it shows that, as part of an endless universe, human life and consciousness are limitless. Knowing that we are mortal, we can be immortal in our union with the Way.

The Old Master teaches that the cosmic process of creation out of the primordial chaos is something that each human being has individually experienced through his earlier life in the womb

and his later existence in the fragmented and divided world. Later philosophers would call these two universes the Former Heaven (*Xiantian*) and the Later Heaven (*Houtian*). Right between these two universes stands the newborn child, who is therefore considered as the embodiment of the Tao at the height of its power (see *Daode jing*, chapter 55). Thus, the whole cosmic process, from the primordial chaos to creation, and the whole universe of heaven and earth are within ourselves, in our very own persons. Finding this underlying truth through nonaction opens the gate to immortality, often discussed in later Taoism in connection with the sixth chapter of the *Daode jing*, which reads:

The goddess of the valley never dies.
She is called the mysterious female.
The gate of the mysterious female,
Is called the root of heaven and earth.

How this search for the underlying truth (*zhen*) took shape in ancient China can be understood from another work, the *Zhuangzi*, the next great text of ancient Taoism. This book—or, more exactly, this collection of texts—is placed under the name of its supposed author, Master Zhuang. Zhuangzi's personal name was Zhou ("The Complete One"?), and he must have lived sometime between 370 and 280 B.C. He worked as a cleric in a lacquer garden in the land of Song, at a time when these workshops were not yet state agencies. We may note in passing that the earliest instances of artistic Chinese painting are found on lacquer. Zhuangzi certainly knew some of the sayings of the Old Master, because he quotes them. There is, moreover, a certain underlying unity of thought at the basis of the two books. In form and style, however, the two are very different. The *Daode jing* is a small book, whereas the writings placed under the aegis of Master Zhuang are far more elaborate: they consist of a succession of longer and shorter treatises, stories, anecdotes, and even poetry. The *Zhuangzi* is full of strange, amusing, and even humorous passages.

Only the first seven books, the so-called Inner Chapters, of the *Zhuangzi* date from the fourth century B.C. (around 330?), whereas the other twenty-six chapters that make up the Outer and Miscellaneous Chapters were written by the followers of Zhuangzi during the third century B.C. Besides being one of the most wonderful books ever written, the *Zhuangzi* is also a work of great philosophical depth. Zhuangzi brings the critique of knowledge—the dialectics of knowing and not-knowing—to great heights. For him, each person is a world in himself, and all kinds of people who obtain the Tao in their own way—men, women, and children; tradesmen and artisans; kings, nobility,

Fig. 1
The Queen Mother of the West (Xiwangmu) and Her Court.
Qing dynasty, 17th century. Hanging scroll; ink and colors
on silk. From *Daojiao shenxian huaji* 1995: 13.

and slaves; criminals and madmen—are described in his book. Zhuangzi does not necessarily recommend that people retire from the world and live in the wilderness, but he proposes that communion with nature can be obtained here and now, in whatever place one happens to be. Such a “wandering on the Way” can be achieved through the opening of the mind and trance meditation, as well as through other ways of discipline in daily life.¹¹ Those who achieve it are called “true persons” (*zhenren*).

Indeed, Zhuangzi taught that all arts, when brought to perfection, lead to the Tao. Some stories, such as that of Ding the Butcher, who got the Tao by the sheer perfection of his craft, and that of Chi the Robber, who surpassed Confucius in preaching morality, became very famous in later China. While these extraordinary figures may have been born out of Zhuangzi’s fertile imagination, many of them were worshipped as holy immortals and saints by those “who loved the Tao.”

Immortals

Among the saints and immortals in the *Zhuangzi*, perhaps the most important is Huangdi, the Yellow Emperor, who in ancient China was considered to be a culture hero and the inventor of human civilization. Later, as we shall see, Huangdi is often named along with the Old Master as one of the founders of the Way. Also mentioned by Zhuangzi is Pengzu, who is said to have lived eight hundred years and as such was venerated by those who practiced the arts of long life. Of all the figures presented in Zhuangzi’s book, Xiwangmu, the Queen Mother of the West, would rise to greatest prominence in later times. She, as the “Mysterious Mother,” would play an immensely important role as the queen of Mount Kunlun, the sacred mountain of immortality (fig. 1).¹² In the book of *Zhuangzi*, these ancient deities are presented as having “obtained the Tao,” and they were thus integrated in the new pantheon of immortals (*xian*). The Chinese character for *xian* can be interpreted as “mountain person” (or, with another character, as “dancing person”), and the worship of the immortals centered around mountains where they were believed to dwell. Zhuangzi is the first to tell us about these mountains and about the divine beings who live there.

In the far-away mountains of Gushe live divine humans. Their skin is cool as frost and snow; they are shy and delicate as virgins. They do not eat grains, but breathe wind and drink dew. They mount on clouds and ride winged dragons to wander beyond the four oceans. By the concentration of their spirit, they can protect people from the plague and make crops ripen.¹³

Han dynasty art forms already show these holy mountains and the immortal beings that inhabit them. Mountain-shaped incense burners, also called "hill-censers" (*boshanlu*),¹⁴ may very well have been used in the oratories (*jing*) of the adepts and may have served as visual supports for their "far-away wanderings" during meditation, their spiritual journeys to the mountain realm of the immortals. These nature beings, together with wild animals of all kinds, were often depicted on the sides of hill-censers. The fumes of the aromatic herbs that were burned inside the censer were released through the holes in the mountain, as if they were clouds that, according to Chinese imagination, were born from the mountain caves.

Such meditations on sacred mountains were matched by similar visions of an inner landscape. By "reversing the light" (*fanguang*) of the eyes, for example, the adept achieved an introspection of his own body, which was imagined as a mountain inhabited by many deities. The most important of these divine beings inside oneself was the Infant, the embryo of immortality, also called the true person (*zhenren*) of the adept. By nurturing the true person inside himself, the adept cultivated his own immortality. One day, the old child inside him would liberate itself from its mortal coil and join the other immortals in their eternal freedom and happiness.

Apart from the meditation on the outer and inner landscape, the quest for longevity also comprised many physical exercises. Adepts practiced animal dances (*wuqinx*) as well as different forms of gymnastics.¹⁵ Together with the dance movements, there were all kinds of breathing exercises, massages, herbal drugs, and even sexual practices that stimulated and enhanced the flow of energies in the body and their gradual sublimation.

Initiation

The Tao is universal, and the teachings of the Old Master are ideally meant for all, regardless of their origin, gender, status, or wealth. Yet ancient Taoism was definitely esoteric, and it would be an error to think that the Way was considered to be easy to learn and readily accessible to everyone. The *Daode jing* (chapter 70) says clearly:

My words are very easy to understand and to put into practice, but in this world nobody is capable of understanding them and nobody does put them into practice. Words have their ancestry and deeds have their author, so those who do not understand [my words] do so because they do not know me. Those who know me are few indeed, and that is why I am so valuable. The sage wears a cloak [on the outside], but inside clasps [precious] jade to his bosom.

Laozi's paradox is that the Tao cannot be taught and transmitted by words. Only a personal, intuitive, and innate knowledge of oneself (I, me) can lead one to it. This form of higher knowledge, however, is accessible only to those apt to receive it. Again, the *Daode jing* (chapter 41) states forcefully:

When superior persons learn of the Tao, they practice it with ardor.
When mediocre persons learn of the Tao, it leaves them indifferent.
When inferior persons learn of the Tao, they laugh loudly.
If they did not laugh, it would not be worthy of being the Tao.

In other words, when some ignorant people laugh at the Tao, they thereby prove its very value; only superior people can understand it and put it into practice.

This idea is stated even more clearly in the story of the woman Yü that is told in one of the older parts of the *Zhuangzi*. Yü had "learned the Tao" and, though already very old, she still looked like a young girl. When a scholar asked her if he could also learn it, she replied, "No! How could this be! You are not the right person!" When the scholar then asked her how she had obtained her knowledge, she answered, "I learned it from the child of Calligraphy, who had it from the grandchild of Recitation; Recitation had learned it from Vision, and Vision from Secret Instructions, who in turn had received it from Hard Apprenticeship . . ." The text lists in all nine allegorical names that form a fictitious genealogy of the transmission of the Tao. This tale may be seen as fanciful, but it is in fact an echo of a real practice. Already in the fourth century B.C., written texts (hence the allusions to Calligraphy and Recitation) were transmitted from master to disciple, and at each investiture the lineage of the previous masters was an essential element of the transmission. This heritage of transmission would eventually result in the central role of initiation in the religion of Taoism, even until this very day.¹⁶

The Way of the Yellow Emperor and the Old Master (Huanglao Dao)

In the last two centuries B.C., the above-mentioned elements were gradually consolidated and united in a general framework known as the Way of the Yellow Emperor and the Old Master (Huanglao Dao), since the mythical Yellow Emperor was worshipped alongside Laozi as a patron of the arts of longevity. Recent archaeological finds have greatly advanced our understanding of the Huanglao Dao and its tenets. In 1973 a series of tombs was discovered at a site called Mawangdui, near Changsha in Hunan province. The tombs date from the very beginning of the Han dynasty (second century B.C.). The first

Fig. 2
Laozi manuscript, excavated from a Western Han dynasty tomb at Mawangdui, Changsha, Hunan province, 3rd century B.C. Handscroll, ink on silk. Hunan Provincial Museum, Changsha.

tomb contained the body of a woman preserved in perfect condition in a watertight wooden coffin filled with a liquid solution of cinnabar, which had preserved the tissues of her body from decay. Many small boxes containing mineral substances used in later alchemy were also found. In addition, the tomb yielded a silk shroud painted with a beautiful representation of the ascent toward immortality.

The third tomb discovered at Mawangdui, dated 168 B.C., contained a collection of eleven silk scrolls (*boshu*), among which were two copies of Laozi's *Daode jing*, one from before the beginning of the Han dynasty (fig. 2), the other from the reign of its first emperor (who died in 195 B.C.). To each of these versions are appended other, shorter texts, which have been identified by some scholars as the remnants of a hitherto lost "Four Books of

the Yellow Emperor."¹⁷ The bulk of the writings relate, however, to tending life and the search for immortality, and concern gymnastics (there is, for example, a beautiful illustrated scroll depicting exercises), deep breathing, sexual practices, drugs, and alchemy. There were other scrolls containing Taoist talismans, though these have not been published.¹⁸ The extraordinary finds at Mawangdui have given us a magnificent testimony of the personal search for the Tao and eternal life that was characteristic of the religious practices of ancient China.

Many pre-imperial philosophers were influenced by the Huanglao Dao, the teachings of which seem to have been dominant in the final decades of the Warring States period (475–221 B.C.). It was certainly prevalent in the most important center of learning of the times, the Qixia Academy of the Ji kingdom.

Our present version of the *Daode jing* is considered to have been edited there, probably around the beginning of the third century B.C. In this version we find traces of a more political thought alongside the many ancient mystical concepts. One of these ideas was that the perfect society was that of the simple rural village: self-sufficient and without many links to the outside world. It was this ideal of local autonomy and freedom from government interference that would be recalled time and again during the peasant movements of the Chinese Middle Ages.

The *Daode jing* in its final and current version advocates a government that rules unseen, through nonaction and natural law, but that aims at keeping the people contented by filling their bellies and emptying their minds (chapter 3). Such a political program seems to run counter to the ideas in the *Zhuangzi*, though it shares similarities with another influential school of thought, that of the so-called Legalists (*fajia*). This school applied the idea of following nature to the political situation of their times, propagating the idea that people should be governed by steering their natural likes and dislikes to make them into obedient subjects. The Legalists elaborated a system of laws meting out punishments and granting rewards for every conceivable aspect of social and individual life. They are traditionally seen to have created a most efficient Tao of law, but a Tao that hindered personal exploration.

One of the most important thinkers of the Legalist school, Han Feizi, used the *Daode jing* as a guide for the politics of the unification of China, transforming the natural law of Laozi into a political system. He became the foremost counselor of the first emperor, Qin Shihuangdi (r. 221–206 B.C.). The result of all this was a very centralized bureaucratic state, governed by an all-compassing system of regulations and laws, which succeeded in creating a unified state, but one in which all forms of personal thought and practice, all independent philosophical schools, were forbidden. In keeping with the philosophy of “filling the bellies and emptying the minds,” all books not related to medicine, astronomy, or agriculture were destroyed. At the same time, Emperor Qin Shihuangdi attempted to present himself as a divine immortal. The very title he gave himself bears witness to this: “huangdi” means, literally, “the Supreme Deity of the Pole Star.” He also actively sought to enter into contact with the immortals of the sacred mountains. At one time, he sent boats with young boys and girls out on the eastern seas to search for the islands of the immortals. Thus, the religious beliefs of the common people were adopted for the emperor’s own personal and political aims.

The Empire and the Confucian Orthodoxy

The experiments of the Emperor Qin Shihuangdi ultimately did not succeed, and after his death the dynasty established by him ended in turmoil and civil war. When the new dynasty of the Han (206 B.C.–A.D. 220) emerged from the feuding factions, it did not follow the previous policy, but signaled a return to a more open, less centralized government. Under the influence of the Huanglao Dao, the emperor shared his authority with many regional governors and local representatives. The different schools of thought that had been repressed during the reign of Qin Shihuangdi were revived. The thought of the Old Master was influential at the imperial court, especially during the reign of Wendi (r. 179–157 B.C.), and the inclination toward the Huanglao Dao was perpetuated by his widow, Empress Dou (d. 135 B.C.), who actively took part in the government.

This philosophical renaissance, to which the Mawangdui manuscripts bear witness, did not last. When Emperor Wu (r. 140–87 B.C.), the sixth sovereign of the Han dynasty, ascended to the throne, he, like Qin Shihuangdi, actively sought to centralize all power in his own hands and to reform the religious and political institutions accordingly. Instead of Legalism, however, he elevated Confucianism as the official ideology. Schooling in the Confucian Classics became mandatory for all officials. These measures meant the end of the many different currents and persuasions that existed until then. Other philosophical schools such as the Mohists, the Logicians, and the Cosmologists, to name but a few among the many, ceased to exist. Nonetheless, some of their books were at least partially preserved in the imperial library, and some of their principal tenets, such as the cosmology of *yin* and *yang*, were taken over by the Confucianism of the state.

The reactionary tendencies of Emperor Wu can be explained in part by his wish to combat the influence of his grandmother Empress Dou and other women in politics. He also persecuted his relative Liu An, the Prince of Huainan, for sedition and forced him to commit suicide. Liu An was a great scholar in the arts of the Tao, and his death spelled the end of the Taoist academy that he had established at his court in South China and where immortal works such as his edition of the *Zhuangzi* and the *Summa* of Taoist science now known as the *Master of Huainan* (*Huainanzi*) were edited. At the same time Emperor Wu, like Emperor Qin Shihuangdi, profiled himself as a Taoist adept by practicing alchemy, climbing the sacred Mount Tai, and presenting written petitions to Heaven.¹⁹ This public display of religious piety was unconvincing to later generations, however, and in Taoist lore Emperor Wu has gone down as a hypocrite.²⁰

More important here is the fact that, whereas all other schools disappeared or were absorbed by the new Confucianism, the teachings of the Old Master survived, although they were officially condemned. The name of Huanglao Dao was henceforward no longer used. Instead, a new name was given, that of *Daojiao*, the school (literally, the family) of the Dao. This name not only refers to the philosophy of Laozi and Zhuangzi, but to other religious practices, including the pursuit of long life and immortality, as well.

Since the reign of Emperor Wu, throughout Chinese history, and of course within ever-changing circumstances, the traditions of Confucius and Laozi would be seen as the two poles of Chinese civilization. Their interplay took many different forms, and it is perhaps not an exaggeration to say that henceforth Chinese culture was shaped to a large extent by their interaction.

2. THE TAOIST CHURCH IN MEDIEVAL CHINA

Messianism and Apocalypse

The first manifestation of Taoism after the institution of state Confucianism under Emperor Wu came from a popular uprising. In the year 3 B.C., the inhabitants of the peninsula of Shandong left their homesteads and went in large groups to the west, in search of the great mother goddess Xiwangmu, the Queen Mother of the West, who they believed would come and install her reign on earth in order to save it from the present disaster. Carrying insignia of the goddess, they built roads and established hostels so that people could travel toward the capital, where the goddess was expected to establish her diocese (*zhi*).

The official history of the Han empire devotes but a few sentences to what must have been an important mass event. Some insights as to what kind of new era the believers expected to come can be gleaned, however, from the *Scripture of Great Peace* (or *Great Equality*; *Taiping jing*), which appeared miraculously, transmitted by an immortal, a few years before this messianic movement. It contained a description of a world where all would be equal, and recommended itself to the government. Other books with the title *Taiping jing* appeared later, one in A.D. 166; another, perhaps yet different, version was transmitted by the ecclesia of the Celestial Masters (see below). There is a work called *Taiping jing* in the Taoist Canon, which, although it certainly contains some ancient material, represents a still later and altered version.²¹ There can be no doubt, however, that the ideal of "Great Peace" to be implemented by a just and peace-loving government under the guidance of a sage king, who would respect local customs and autonomy, was common to

all these books, and that a similar hope drove the masses in search of the great mother goddess.

This movement was repressed, but during the troubled years that followed, the dynasty itself fell and was replaced by the reign of one Wang Mang (between A.D. 9 and 23), who also assumed the image of a redeemer who received his instructions directly from divine immortals. Among the measures he took towards more equality and justice, we may note the official abolition of slavery. Thus, when the Han dynasty and its Confucian orthodoxy was restored under Emperor Guangwu in A.D. 25, Taoism was by no means vanquished. This can be seen from a number of important texts that appeared in the later Han period, one of which is a collection of stories about immortals (*xian*), called the *Lixian zhuan* (Biographies of the assorted immortals). These stories confirm that each *xian* had his or her own Tao. Some were shepherds, like Chisongzi, alias Huang Chuping, the young lad who drove his sheep into the mountains and never returned. He is still venerated as the Great Immortal Huang (Wong Tai Sin) at the most popular temple in Hong Kong. Another one was a prince named Wang Ziqiao. He was so good at imitating bird songs that one day a crane came down and took him away to the blessed islands of the immortals. The *Lixian zhuan* also contains evidence that the search for the Tao of immortality brought people together at the sacred places and created groups of adepts and worshippers under the guidance of masters.²² It also talks of the many shrines that were erected in honor of the immortals, sometimes not only in one place, but in whole regions, and even nationwide. It shows that the worship of those who, by becoming one with nature, had "obtained the Tao" had become a very widespread practice and that festivals in their honor abounded.

New commentaries on the *Daode jing* also appeared. All of them stressed the fact that the political sayings of the Old Master about how to administer the nation should be understood metaphorically and applied, not to the outer, but to the inner country within the body of the practitioner. Other important Taoist works dealt with this vision of the human body as a country and explained how through meditation, one could visit this inner kingdom and establish good relationships with its inhabitants. The oldest known, and also the most famous of these books, is the *Scripture of the Yellow Court* (*Huangting jing*), a rhymed description of one's own inner kingdom (see cat. no. 128).

For many, however, the peace and happiness of the inner realm did not suffice. The government and the ruling Confucian orthodoxy had politicized the choice between two kinds of society. Frustrated in its aspirations for freedom and equality, the

country seethed with messianic and apocalyptic expectations. Those who aspired to a better world rallied around leaders who claimed to be appointed by Laozi or by the Yellow Emperor. One of these mass movements rose in A.D. 184 against the dynasty in order to hasten the advent of the new era of Great Peace that had been promised by the *Taiping jing*. Known as the Revolt of the Yellow Turbans, it was defeated, but in the process the Han dynasty exhausted its resources and could no longer maintain its authority. The country's division into different kingdoms marked the beginning of what we call the Chinese Middle Ages.

The Ecclesia of the Celestial Masters

One of the Taoist movements that appeared during the last days of the Han survived the fall of the dynasty. Known as the Way of the Celestial Masters (Tianshi Dao), it became a regular institution and wielded great influence during the entire medieval period (which is considered by historians to have lasted until the tenth century). In the year 142 Laozi appeared to a Taoist hermit named Zhang Ling, or Zhang Daoling, on a holy mountain near Chengdu, the capital of Shu (northern Sichuan). Laozi (or Laojun, "Lord Lao," as he was now often called), identified himself as "the Celestial Master" and said that he reappeared to announce the beginning of an era of Great Peace. Before this was to happen, however, the world would go asunder, but for those who followed him, there was to be another life. They would be part of a new alliance, called the Orthodox One Covenant with the Powers (i.e., of the universe; *Zhengyi mengwei*).

In this "new testament" of Laozi,²³ all animal and food sacrifices were forbidden. "The gods do not eat or drink, the masters do not receive any salary," was one of the rules of the new covenant.²⁴ This was a clear break with the religious practices of ancient China. Even if formerly Taoism had already opposed the sacrificial cults of the Zhou dynasty, the "feeding" of the gods and ancestors by offering foodstuffs to them, and also the festive banquets during which these offerings were consumed, had remained a universal practice.

The new alliance not only prohibited any form of sacrifice, but also rejected all gods and spirits who received them, and labeled them demons. In ancient China there had been Nine Heavens; the new covenant established that six among them were the abodes of the ancient deities and ancestors, and should therefore be seen as places of corruption and disease, whereas only three, the highest heavens, were filled by the pure energies of the Tao. These had never been incarnated, and therefore had not been polluted by the world. It was these Three Heavens and their deities that were to be worshipped exclusively.²⁵ The Three

Heavens each contained one cosmic energy (*qi*), called, respectively, "Mystery," "Principle," and "Origin" (*xuan, yuan, and shi*). They had three colors—blue, yellow, and white—and constituted the roots of Heaven, Earth, and Water. Each had its own virtue: Heaven (in the sense of the sky) gave forth blessings; Earth forgave sins; and Water averted calamities. Three Officials (Sanguan), pure emanations of the Tao, performed these functions, in which they were assisted by a great number of lesser officials and intermediaries.

Here we find for the first time a true Taoist pantheon, clearly belonging to the Former Heaven and thus distinct from the ephemeral gods, spirits, and ancestors of ancient China. As the name Three Officials already indicates, this pantheon was a bureaucracy. Not only were all the hypostases of the Tao seen as administrators, functionaries, officers, emissaries, etc., but also all the ritual proceedings to be observed to enter into contact with them followed an administrative protocol. Ritual services took the form of solemn audiences at the Chancellery of the Three Officials. The celebrants, dressed as clerics of the Taoist management, approached the divinities through the proper channels, with written memorials and petitions, duly marked with seals and signed with special sacred characters identifying the supplicant as an initiate. Each day of the calendar had its heavenly officers on duty, and for each request there was a corresponding department. All this had to be taken duly into account, and each ritual involved a lot of paperwork.

At the same time, this entire pantheon was also present within the human body, and adepts learned to visualize the three colored energies of the Tao, and their functionaries, and to meditate on them. The names and attributes of all these deities were transmitted on initiation, and consigned in special documents, called registers (*lu*). The names of the deities were often written in sacred symbolic characters, called talismans (*fu*). To undertake such a meditation was called "inspecting the legions of the register" (*yuelu*). Any personal illness or mishap was ascribed to a disorder or a mismanagement of the natural forces of the body, and was seen as a sin against the Tao. Hence the adepts were asked to reflect on their misconduct, confess their sins in writing, and address prayers in the form of written petitions to the Three Officials.

Zhang Daoling is credited with establishing, as the representative on earth of Celestial Master Laozi,²⁶ regular communities of Taoists. At first the homeland of the new movement, the region of Shu, was divided into twenty-four dioceses (*zhi*). These were lay communities whose members were recruited from the peasantry of this rich agricultural region.²⁷ The communities

were governed by chosen officials, twenty-four of each sex. Three times a year, on the fifteenth day of the first, seventh, and tenth moons, the communities held general assemblies (*hui*) at the headquarters of the diocese, normally on the site of a holy mountain. At these assemblies household records were updated—births, marriages, and deaths were reported—and each household contributed five pecks of rice to the common grain reserves, to be used in times of need. This latter practice, in particular, infuriated the government, as it was seen as an illegal collection of taxes. Hence the official annals castigated the Way of the Celestial Masters by calling it “The Way of the Five Pecks of Rice” (Wudoumi Dao) and their leaders were dubbed “rice thieves” (*mize*).

The Way of the Celestial Masters developed against the background of the rapid decline of the imperial power of the later Han dynasty, and when the dynasty collapsed, the religious organization represented the only authority left in the region of Shu. In fact, in spite of its esoteric aspects, the Way of the Celestial Masters bore many similarities with the traditional organization of local society. For instance, its leaders were called “libationers” (*jijiu*), a title that was used traditionally for the village elder in charge of the sacrifices at the local shrine.

The kingdom of Wei, which succeeded the Han dynasty in Northern China, recognized the Way of the Celestial Masters and ennobled its leaders. Later, during the third century, however, the new dynasty forced the organization to disband and deported the peasant population of Shu to other regions. The result of this brutal measure was the opposite of what was intended: instead of destroying the movement, it helped to disseminate it all over China.

With the Way of the Celestial Masters, Taoism became a church, or an “ecclesia” as we call it, in order to distinguish its community organization, which took the form of political assemblies of free citizens, from the Christian model. The ancient rite of initiation became an ordination, as the transmission of the holy scriptures—among which the *Daode jing* continued to occupy the highest place—now served to consecrate the officials of the ecclesia.

The initiation procedure of the ecclesia of the Celestial Masters did not limit itself to the transmission of scriptures, but comprised also the main rites of passage of a person's life. After the rites for entering the ecclesia at the age of six, boys and girls were taught to read and write and to recite the scriptures. At the age of puberty, they were trained in the arts of *yin* and *yang* and the union of cosmic energies (*heqi*). This was a very ritualized and highly mystical way of sexual intercourse, during which the

couples, following a prescribed choreography, were united while meditating, so as to participate symbolically in the creation process in a most solemn and controlled way, without committing the sin of lust. The children born from such a union were considered to have been conceived without sin and therefore to belong to a higher form of human being: they were to be spared from the impending apocalypse so that they could become the future citizens of the promised kingdom of Great Peace.

The early Celestial Masters ecclesia assembled its own texts under the title *Statutory Texts of the One and Orthodox Ecclesia* (*Zhengyi fawen*). When exactly this was done we do not know, but it is certain that this scriptural canon existed already in the Six Dynasties period, and it is thought at one time to have included no fewer than one hundred different texts. As shown by the status given to it in the later Taoist Canon, where it occupied the most fundamental place, it represents the core liturgical tradition of Taoism.

Taoist Artists

After the Way of the Celestial Masters had spread throughout the northern territory of the Wei dynasty, not only the ordinary citizens entered into the ecclesia, but many aristocratic families as well. Against the background of the disenchantment with the official Confucian ideology of the now defunct Han dynasty, Taoism began to enjoy a renaissance among the higher strata of the society. This involvement of the elite gave rise to a great philosophical, artistic, and literary movement that was once known under the name of “neo-Taoism.” On the basis of the texts of the *Daode jing*, the *Zhuangzi*, and the *Yi jing*, a new school of metaphysics known as the School of Mysteries (*Xuanxue*) arose. It discussed the ontological problems related to the concepts of being and nonbeing as put forward by the philosophers of ancient China and refined them into theories concerning the relationship between thought and language, the nature of music, and the perception of the ultimate truth (*zhen*).

New commentaries on the *Daode jing* and the *Yi jing* were written by the young genius Wang Bi (226–249). In addition, the *Zhuangzi* was reedited with a commentary by Xiang Xiu (223–300), which later was further elaborated by Guo Xiang (d. 312). These commentaries were so successful that they have remained the leading exegesis of these great works until the present day.

Well known among the scholars of the times were the so-called Seven Sages of the Bamboo Grove (*Zhulin qixian*), a group of freethinking and eccentric poets and artists. Among them Xi Kang (223–262) and Ruan Ji (210–263) are most famous; the first one as a musician, the latter as a poet. Not only in their

mystical search for longevity, but also in their veneration of the divine immortals, they showed that they were profoundly Taoist. In a short poem, Ruan Ji once wrote:

Have you not seen Wang Ziqiao,
Riding the clouds, sweeping over Dengling?²⁸
He truly possesses those arts of Long Life,
Which can bring solace to my heart.

There is an undertone of melancholy in this poem, which shows that the desire for long life and the freedom of the immortals (*xian*) was also caused by the uncertainties of the cruel and unstable times. The Wei dynasty had reverted to the kind of "legalist" policies that had been used by Emperor Qin Shihuangdi in unifying China, and that were very inhuman to say the least. Some of the members of the group of the Seven Sages, such as Xi Kang, were condemned for their unconventional behavior and executed.

Other famous artists and poets also adhered to the Way of the Celestial Masters. These were, for instance, the early landscape painter Gu Kaizhi (345–406), the great calligrapher Wang Xizhi (c. 307–365), and the landscape poet Xie Lingyun (385–433). Many of these gentry Taoists were also alchemists. We are well acquainted with the techniques and the lore of medieval Chinese alchemy, thanks to the work of the philosopher Ge Hong (283–343) (fig. 3). Ge set out to prove that the search for immortality should be taken seriously, and that alchemy was the most logical way to obtain it. Indeed, through the manipulation of mineral substances such as cinnabar and mercury, the alchemists did not aim to produce gold, but to find the clue to immortality.²⁹ Their goal consisted not only in producing a drug, but also in reenacting the cosmic process of mutations from *yin* to *yang* in the laboratory (through the production of cinnabar from mercury and vice versa) and participating ritually in this process, thus traversing eons of time.³⁰ Ge's book on Taoism, called the *Inner Chapters of the Master Who Embraces Simplicity* (*Baopuzi neipian*) was written around 310. He discussed not only alchemy, but also many other aspects of Taoism, and quoted many written sources from his own library or from that of his master. As Ge was a southerner, he was apparently not yet well acquainted, at the time he wrote his book, with the Way of the Celestial Masters.

The Revelation of the Shangqing and Lingbao scriptures

In the beginning of the fourth century, northern China was invaded by nomadic peoples from the great plains of Central Asia. After the capital Luoyang fell into the hands of the invaders and

Fig. 3

Wang Meng (c. 1301–1395). *Ge Hong Moving His Residence*. Yuan dynasty, 14th century. Hanging scroll; ink and colors on paper; 139.5 × 58 cm. Palace Museum, Beijing.

was utterly destroyed in 317, the ruling families and many of the underlings fled to the regions south of the Yangzi River, where they installed a new government (the Eastern Jin, 317–420). They brought with them their own Taoism of the Way of the Celestial Masters and of the School of Mysteries. There it was confronted with the ancient southern tradition of which Ge Hong was the great representative.

Soon the aristocracy from the north blended with their southern fellow countrymen, and so did their two forms of Taoism. The northern Tianshi Dao was orthodox and strictly organized. As we have seen, it opposed the worship of local deities and saints, sacrifices of wine and meat, trance techniques, and worship of ancestors. The southern tradition was still very close to the Taoism of ancient China and had continued its cults of the Taoist immortals. It also made ample use of shamans or spirit mediums. The cross-fertilization of the two traditions was to produce some of the greatest literary texts in the history of Taoism.

During the years 364–75, the shaman Yang Xi, attached to the aristocratic southern household of the Xu family in Jiankang (Nanjing), started to receive “visits” from a great number of Taoist immortals and saints. Most of these came from the holy places near the capital, for instance, from the Mao Shan mountain range near Danyang. Others belonged to the Tianshi Dao, such as the female official (*jijiu*) Wei Huacun. These deities dictated many texts to Yang Xi; some were poems, others messages, but there were also book-length texts. Many of the latter turned out to be new and expanded versions of older texts, such as the *Huangting jing*.¹¹ The immortals told Yang Xi that these new versions were superior to the old books, and that they came from the highest heaven of all, that of the Highest Purity (Shangqing). Therefore these texts became later known as the Shangqing scriptures. They were written in a beautiful and highly ornate style, much in keeping with the artistic tastes of the times, and they would exert their influence for many centuries. Moreover, Yang Xi noted down the words of the immortals in a special, very beautiful form of calligraphy, which, from an aesthetic point of view, caused these revelations to be held in high esteem.

The Shangqing scriptures were more than a reformulation of older Taoist practices: they also sought to place these on a higher spiritual level. The rites of sexual union as practiced in the ecclesia of the Celestial Masters were replaced by a purely spiritual union of the adept with a divine jade maiden (*yunü*) or immortal lad (*xiantang*) from heaven. Descriptions of these

spiritual alliances, with the poems the lovers exchanged during their courtship, have been preserved in the Shangqing literature. Furthermore, the idea that alchemical processes should be spiritual and not material is often alluded to in them. This change heralds the later emergence of so-called Inner Alchemy (*neidan*), which was to become so vastly popular in modern times (see below).

Some thirty years after the Shangqing revelation, other Taoists, among whom was a descendent of Ge Hong named Ge Chaofu, authored yet another group of new texts, called the Lingbao scriptures (*ling* originally is a name for “shaman”). These were not works that concerned the individual mystical practice of Taoism like the Shangqing scriptures, but were intended for collective rituals. Most of them were intended to be recited, in the way of Buddhist *sūtras*, for the salvation of all beings, and especially for the benefit of the dead. They contained material from older Taoist works—again many of which had been mentioned by Ge Hong—but in addition to this they showed strong Buddhist influence. The Lingbao rituals moreover contained important elements from the liturgy of the Celestial Masters.

The new revelations of the Shangqing and Lingbao texts therefore did not mark a new beginning in the history of Taoism, because they were very much a continuation and an elaboration of what had been before. The Xu family, which had received the Shangqing revelations, belonged to the ecclesia of the Celestial Masters, and so did, as far as we can tell, those who created, on the basis of mediumistic inspiration, the Lingbao texts. It is therefore completely wrong to speak of a “Shangqing sect” or a “Lingbao sect.” At the time, such organizations did not exist. Only much later, as we shall see, did the Shangqing and Lingbao texts become identified with lineages of patriarchs and certain holy mountains. The new revelations were important because they upgraded the literary level of the writings and the cultural level of the practice of medieval Taoism. In Chinese culture, where literature is so highly valued, this had a major impact.

As noted above, the Lingbao texts incorporated many elements from Buddhism. They borrowed from it, for example, the recitation of holy books and the performance of rituals as a means to obtain religious merit (*gongfú*). They were more easily accessible to the Chinese than the translations of the Buddhist originals and thus played an important role in the absorption of Buddhist faith within Chinese culture. Thus, from the happy confluence of the ancient Taoist traditions preserved in South

China with the liturgy of the Celestial Masters on the one hand, and with Mahayana Buddhism on the other, sprang a new synthesis that developed into one of the highest literary and artistic expressions China has known.

The Impact of Buddhism

During the first and second centuries A.D., Buddhism had slowly but surely conquered China. Like Taoism, Buddhism originated as a movement for personal salvation as a reaction against a sacrificial religion, the ancient Vedic tradition of India. Moreover, Gautama Buddha lived in a time that can roughly be compared to that of the beginning of Taoism. The new Indian faith spread rapidly in Northern India and Central Asia, but although it had reached the regions adjacent to China during the second century B.C., the Confucian orthodoxy of the Han empire did not allow its further diffusion. It was only during the declining years of the dynasty, during the second century A.D., that Buddhism began to establish a foothold.

Historical and textual research has shown that during this period of adaptation, Taoism acted as a kind of receiving structure for Buddhism. Indeed, many early translations of Buddhist scriptures used Taoist terminology in order to render Buddhist terms. Some of these texts did not so much concern Buddhist doctrine as they did techniques related to bodily exercises, apparently in order to cater to the demands of a largely Taoist audience. The relationship between the two must have seemed so close that the Buddha and Laozi were often associated in the worship of the people, and the belief took hold in fact that they were originally two different incarnations of one and the same divine being. The Buddhists may have seen Laozi as an avatar of Shakyamuni, whereas the Taoists saw the Buddha as an Indian form of the Old Master, and Buddhism as some kind of foreign Taoism. Both religions became so much intermingled as to become, in this period, virtually indistinguishable. They also exerted lasting influence on each other. This initial fraternization became the source of much confusion and controversy in later times, when the Buddhists began to dissociate themselves from Taoism and assert the superiority of the Indian faith.

Until the fourth century A.D., Buddhist presence in China was marginal. But when the tribespeople from Central Asia conquered North China, they also began to promote Buddhism in a robust way. With the official backing of the new rulers, many monks came from Central Asia to preach and propagate their faith. Many fundamental texts were translated. Buddhist rites, especially for the salvation of deceased ancestors, became very

popular. Taoism believed that salvation was immortality through fusion with nature. It did not have very elaborate ideas about an eventual afterlife and even less about judgments and punishments after death. Buddhism on the other hand preached that sinners went to many hells to be judged and to suffer endless pain, but that the souls of the deceased could be saved through the pious acts of their descendants. This met with great response in China, as can be seen from the many early statues of the Buddha and bodhisattvas that were made "for the salvation of the ancestors of seven generations." Buddhist masses for the dead were also very popular, as can be seen from numerous inscriptions and also from the influence they exerted on Taoist liturgy.

Taoism also adopted from Buddhism its iconography, and during the later part of the period of division between north and south (the Six Dynasties period, 420–589), we find more and more statues and stelae representing Laozi as Laojun (the Old Lord) or as Tianzun (the Celestial Worthy), and looking very much like their Buddhist models.

In the fourth century and the beginning of the fifth, Buddhism held the North and Taoism the South of China. But during the second half of the fifth century and even more so during the sixth century, the situation was inverted: North China gradually reverted to Taoism under the influence of Kou Qianzhi (365–448), patriarch of the ecclesia of the Celestial Masters, whereas the South became profoundly immersed in Buddhism. In the process, the separation between the two religions became unavoidable, and a conflicting situation ensued, something which the Taoists chose to ignore for a long time, but which finally erupted at the end of the sixth century. During the entire Six Dynasties period, imperial favor went sometimes to the one, sometimes to the other. Finally, it was Taoism that was chosen to be the federating national tradition for the reunification of China—a position that, after a short hiatus under the Sui (581–618), it would preserve throughout the Tang dynasty (618–906).

The Taoist Canon

We have seen that the ecclesia of the Celestial Masters had its own collection of texts. When later, in the fourth and fifth centuries, many newly revealed books appeared (not only the Shangqing and Lingbao scriptures, but many others as well), these were invariably presented as superior to the ancient works. Much confusion about their true value, however, ensued. Therefore the emperor of the Southern Liu-Song dynasty (420–479) entrusted the most eminent Taoist of his time, the

patriarch Lu Xijung (406–477), to select those texts that appeared to be true revelations and present them for inclusion in the imperial library. Lu selected some sixty that he considered the most orthodox. He divided them into three groups: the Shangqing scriptures revealed to Yang Xi, the liturgical Lingbao scriptures, and the texts of the Three Emperors (Sanhuang). The latter consisted mostly of talismans and spells for protection and exorcism.

Lu Xijung called these three divisions the Three Caverns, meaning that they gave access to the inner strata of the “mountain” of the Tao: 1) the Cavern of Truth, *Dongzhen*; 2) the Cavern of Mystery, *Dongxuan*; 3) the Cavern of Divinity, *Dongshen*. These corresponded to the three traditions, and represented three ways of Taoist practice. The Shangqing Cavern of Truth was related to the individual practice of the Tao through meditation, alchemy, etc.; the Lingbao Cavern of Mystery contained the liturgy of the Taoist communities; and the Sanhuang Cavern of the Divinity had texts that were related to the saints and the holy mountains who could give protection and ward off evil influences. At the same time, there was a hierarchy among the three. The Sanhuang represented the lowest rank, the Lingbao the middle, and the Shangqing the highest. Thus the ancient idea of graduated initiation and ordination through the transmission of texts was maintained.

Lu Xijung, however, had made a choice only among the newly revealed texts and had left the more ancient books, such as the *Daode jing* and the *Zhengyi fawen* outside of his catalogue of the Three Caverns. Later, under the short-lived Sui dynasty (581–618), his list of canonical texts (to which in the meantime other revealed texts had been added) was enlarged so as to encompass the earlier works. The division into three groups was thereby changed into seven, by creating, in addition to the Three Caverns, the so-called Four Auxiliaries. The latter contained the *Daode jing* and its commentaries, the *Taiping jing*, the ancient manuals for alchemy, and, finally, the *Zhengyi fawen*, which was considered to be fundamental and relevant for the teachings of all the six other groups.

Again, this seven-fold division reflected the hierarchy of the Taoist organization. The first grade was now that of the first ordinations within the ecclesia of the Celestial Masters; the transmission of the *Daode jing* was the next step. Then followed one by one all the other initiations, with, at the very top, the “final register” of the Shangqing scriptures. Thus, the corpus of scriptures was made to reflect the organization of the body of the faithful, the structure of the entire Taoist establishment. Under the Taoist emperor Xuanzong of the Tang dynasty, this

Taoist Canon was for the first time entirely written out in many copies, which were given by the emperor to the great temples of the land. There were a total of 3,477 scrolls.³² In the seventh year of the Tianbao era (748), Emperor Xuanzong ordered that the texts listed in the catalogue be copied out, in an unknown number of copies, and that the collections of scriptures thus made be distributed to all major Taoist centers. This then was the first true Taoist Canon.³³

Court Taoism of the High Tang

The Tang dynasty (618–906) was a great religious period. The imperial family claimed to descend from Laozi, and therefore the worship of the Old Master, who was canonized in 666 as Sovereign Ancestor of the Most High Mysterious Origin (*Tai-shang xuan-yuan huangdi*), became part of the official institutions of the empire. During the preceding Six Dynasties period, many emperors and their spouses had received Taoist initiations. Under the Tang, this became a rule and the solemn ordination rites of the emperor and the ladies of the court became national events. The emperors also founded many Taoist establishments.

Buddhism also prospered, and spread itself further, not only in China, but also in Korea and in Japan. The patronage of the emperors was an important factor in the recognition both religions received. In the beginning of the dynasty, the official policy favored Taoism. Later, the Empress Wu Zetian (r. 690–705) became very powerful, and she very much favored Buddhism. As a reaction against her rule, the following sovereigns again promoted Taoism.

The long reign of Emperor Xuanzong (r. 712–56) marks one of the pinnacles in Chinese culture and is also one of the greatest moments in the history of the Way. Xuanzong, as we have seen, proceeded to publish the Taoist Canon. He moreover founded Taoist temples in honor of his legendary ancestor Laozi in all important cities of the empire. He himself wrote commentaries to the *Daode jing*. He greatly loved Taoist ritual and composed music for it. His favorite consort, the famous Yang Guifei, was herself an ordained Taoist. Xuanzong's love of her and of Taoism in general became the talk of the land and was celebrated in many poems. Not only the members of the imperial family, but also great artists were Taoist. The court painter Wu Daozi is credited with having laid down the ground rules for Taoist liturgical painting, whereas the great poet Li Bai was a “True Person of Highest Purity” (*Shangqing zhenren*), the highest rank in the Tang liturgical organization. His great love of nature left us many magnificent poems:

You ask me why I dwell in mountains green?
I laugh and don't reply; my heart feels just at peace.
Peach blossoms with the stream float far away . . .
This is another world, not that of men.

Science and Technology

It has been said that Taoism stands out among the world religions in that it never opposed science.¹⁴ In addition, concepts like *yin* and *yang* and other tenets of Taoism have been considered by some not to be at variance with many scientific findings, notably in physics. We cannot say that Taoism actively promoted science. It did, however, exert influence on the development of some branches of science, notably on Chinese medicine. The Tang period saw great advances in the study and systematization of Chinese medicine. Some of the greatest scholars in this field, such as Sun Simiao (581–682?) and Wang Bing (active 762), were closely related to Taoism.

Technology also greatly advanced. One of the inventions made by Taoist alchemists was gunpowder. Even if this discovery may have been accidental, the potential of the "fire drug" (*huoyao*), as it was called, was readily recognized and the formula was published in alchemical manuals. Other great inventions include printing and the magnetic compass. In both instances, the influence of Taoism can be demonstrated. As for printing from engraved wooden blocks, there is a long history of Taoist engraving of seals with formulas and spells for reproduction which may have paved the way for the development of this technology. The earliest Chinese printed book on a scientific subject is the Taoist work *Xuanjie lu*, dated 850. As for the compass, it seems to have first been developed for the benefit of the practitioners of geomancy (*fengshui*), before being applied to sea travel.

Inner Alchemy

Alchemical research for the pill of immortality played, as we have seen, an important role in medieval Taoism. Many Tang emperors experimented with alchemical drugs, sometimes with fatal results. This may well have been one of the reasons that during the later Tang period, laboratory alchemy became less popular, and that other approaches were explored. One of these advanced the notion that the alchemical books should be understood, not in a literal, but in a symbolic way. When speaking about the ingredients that went into the making of the pill of immortality, one should see them not as true minerals, but as cosmic energies (*qi*) within the body. The true laboratory, the true crucible, was bodily functions and thus the great cosmological metaphor

of the alchemical process was to be understood as taking place within the microcosm of the body. Instead of manipulating dangerous, poisonous, and also very expensive substances, the adept could, through meditation and concentration, crystallize the true ingredients from his own bodily energies and refine them into spiritual forces.

This Inner Alchemy (*neidan*), as it was called in opposition to the "outer alchemy" (*waidan*) of the laboratory, also reactivated the old Taoist tradition of meditating on the inner landscape or inner country. Many old texts dealing with this technique, such as the *Scripture of the Yellow Court* (*Huangting jing*),¹⁵ became popular again. But new texts also appeared, claiming to be equally, if not more, ancient than those manuals. One of these proposed a new paradigm for the human body and its cosmic energies. Instead of an inner landscape, this work described the workings of the body in terms of the sixty-four hexagrams of the *Book of Changes* (*Yi jing*). The work was called the *Concordance of the Three according to the Book of Changes of the Zhou Dynasty* (*Zhouyi Cantongqi*).

The "three" in question stood for the three transcendent components of Heaven, Earth, and mankind, as well as the three stages of the sublimation of the energies in the body: essence (i.e., sexual energy), breath, and spirit (*jing*, *qi*, and *shen*). It proposed to regulate the "inner work" in the body according to the cosmic cycle as expressed through the hexagrams. Four hexagrams (Heaven, Earth, Water, and Fire) constituted the foundation, and the cyclical movement of *yin* and *yang* was enacted by the sixty remaining hexagrams. By meditating morning and evening on one hexagram, the complete cycle of these sixty "phases" could be accomplished in thirty days. This method of the *Zhouyi Cantongqi* became immensely influential and many scholars, including Confucians, wrote commentaries to it.

Indeed, during this period, Taoism and Confucianism had grown closer, and their erstwhile conflicts were forgotten. Both felt menaced by the growing impact of Buddhism, which during the Tang period became extremely prosperous and politically influential. Even within Buddhism itself, there were movements that attempted to reform the excesses and to obtain a better integration within Chinese culture and society. The most successful of these reform movements was Chan (Zen) Buddhism, which integrated many Taoist and Confucian ideas in its doctrine. This did not prevent the Confucians from denouncing more and more openly the "foreign" religion, its wealth, its monastic life, and its ways of worship, all of which were considered highly heterodox. At last Buddhism became the victim of a terrible persecution during the years 842–46. Although the

repressive measures were later revoked, Buddhism had received a blow from which it was never entirely to recover.

3. SAINTS, TEMPLES, AND THE UNION OF THE THREE TEACHINGS

The Rise of Local Traditions

During the ninth and tenth centuries, China underwent great changes. Some of these were due to the technological advances mentioned above. Others were the result of political developments. The Chinese empire, which had greatly increased in size, split into regional entities. During the Five Dynasties period (907–960), the country became once more divided into a number of different kingdoms. Although it is often written about as an obscure time before the advent of the glorious Song dynasty (960–1279), it was in fact an important time of transition between medieval China and what may be called premodern and modern China.

During this period, Confucianism staged a comeback. Having integrated many elements from Taoism, and also some of Chan Buddhism, the new Confucianism developed enduringly to become the nation's foremost ideological and political system. At first, the relationship between Confucianism and Taoism continued to be very close, and some founders of the new Confucian movement, such as Shao Yong (1012–1077), for instance, were perhaps themselves Taoist masters. On the Taoist side, we see that some legendary immortals from the late Tang and Five Dynasties periods, such as Lü Dongbin, are represented as having been originally Confucian scholars.

Even if the new period of division began officially only in 906, the growing regional autonomy had already begun earlier, at the start of the second half of the eighth century. For Taoism, this would have far-reaching consequences. First of all, the division of the country into a number of semiautonomous regions greatly favored the emancipation of local societies, where Taoism had, and still has, its natural habitat. In the middle of the Tang, under Emperor Xuanzong, the organization of the ecclesia of the Celestial Masters was still very much alive, especially in the regions south of the Yangzi River, the so-called Jiangnan area. It was these regions that, in the period of division, grew to be the most prosperous in terms of commerce and industry. The late Tang saw the development of the great merchant cities of Nanchang, Yueyang, Suzhou, Yangzhou, Hangzhou, etc., that were to become the centers of Chinese culture for centuries to come.

Nanchang became an important market town for the grain

trade. The neighboring holy mountain of Xi Shan housed the temple of a local Taoist saint, the divine official Xu Jingyang (see cat. no. 115). He became the patron saint of the Nanchang grain traders, who staged magnificent festivals together with large-scale Taoist rituals for the celebration of the immortal saint's birthday. Affiliated communities from as far as Sichuan in the west and Jiangsu in the east would come to participate. Already at the beginning of the Tang dynasty, imperial patronage was obtained for the worship of Xu Jingyang, and this was reinforced in later periods. Other local Taoist saints also were recognized, and even canonized by giving them official titles.

Emperor Xuanzong of the Tang dynasty had canonized Zhang Daoling, the hermit credited with the founding of the ecclesia of the Celestial Masters. This canonization did not benefit the region of Northern Sichuan, where the ecclesia originally came from, but quite another place: the Dragon and Tiger Mountain (Longhu Shan), a Taoist center situated at an important junction of the trade routes that linked the Jiangnan area to the provinces of Jiangxi, Fujian, and Guangdong. There, the local Taoists claimed, was the true place where Zhang Daoling had obtained the Tao, and where his descendants had continued to live. Readily, the emperor also recognized the patriarchs of this lineage as the legitimate holders of the title of Celestial Master, and herewith the Zhengyi (Orthodox Unity) order of Longhu Shan was created. The Zhengyi order prospered along with the commercial development of South China. The new Celestial Masters—one per generation—became more and more influential, so much so that later Western missionaries would call them "Taoist Popes." From the middle of the Tang, beginning with someone who claimed to be the twenty-third successor to Zhang Daoling, the lineage has continued until today: the sixty-fourth Celestial Master lives now in Taiwan. All this of course was fundamentally different from the ancient ecclesia of the Celestial Masters of the Middle Ages.

The Modern Temple Organization

As a result of these developments, the traditional dioceses and local communities of the Taoist ecclesia gradually transformed themselves into modern temple organizations. The new bourgeoisie of the Jiangnan area organized themselves in associations (*hui*) in honor of their local saints. These associations, which were to dominate the social and economical life of China until modern times, were headed by laymen, but remained intrinsically Taoist in nature. They served many other purposes. Often, the most important associations were vocational groups, such as the grain traders of Nanchang, and hence comparable

to Western guilds. Others were pilgrimage associations, which maintained the networks between different localities. Still others had more precise aims, such as performing deeds of merit: keeping the temple clean, reciting scriptures, caring for the old and the sick, helping the disabled and the mentally unfit, liberating animals, and even collecting old paper (any piece with writing on it was deemed sacred) and training in the martial arts so as to be able to protect the community if need arose. All this was *gongfu*, "religious merit" (a term we now associate with the Chinese martial arts of the temple associations), and because all these activities were performed as a service to the community, we call these associations "liturgical organizations."

The temple-and-market network developed greatly in the Five Dynasties period. Formerly only a few Taoist saints had been officially recognized. Now, in the many and ephemeral kingdoms that emerged, numerous local saints came into the limelight. The worship of the great saints of the Jiangnan area, such as Guangong (see cat. no. 83), the embodiment of martial virtue; Guanyin, the bodhisattva who became the great dispenser of mercy; Mazu, the fisherman's daughter who became the protectress of seafarers; Xu Jingyang, the immortal official, and many, many more became known in these times on a nationwide scale.

In the beginning of the Song period the development of these local and regional organizations was such that it could no longer be ignored by the central government. In a series of bold religious and political actions, Emperor Zhenzong of the Northern Song, after having first been sanctified as the living representative of the Tao on earth by so-called Heavenly Letters, undertook to create a network of officially sponsored Taoist temples (the Tianqing Guan, later Dongyue Miao), which allowed for a partnership between the official and private spheres, for the organization of markets, and for the collection of taxes on trade. The Taoist priests who were appointed as keepers of the sanctuaries were recognized as government officials, a dignity that, in principle, they kept until the end of the imperial period. In the Tianqing Guan, not only Huangdi, the divine ancestor of the dynasty, was worshipped, but also many other deities who belonged either to the Taoist ecclesia, such as the Three Officials and the Earth God (see cat. nos. 69–71, 85), or dynastic deities whose worship was an imperial prerogative, such as the lord of the sacred mountain Tai Shan. Soon, with imperial blessing, next to the Tianqing Guan, individual sanctuaries appeared to all these and many more saints and gods. The modern temple was born, with its lay organization that replaced the ancient dioceses of the ecclesia of the Celestial Masters.

During the Northern Song, the role of the emperor as a Taoist was maintained. Emperor Huizong (r. 1100–1125) even became himself "Lord of the Tao" (Daojun) and attempted to transform his court into a Taoist community. He is famous for his paintings on Taoist subjects, for his immense gardens in the capital of Kaifeng which were modeled after his visions of the paradises of the immortals, and for the many hymns he wrote for the great Taoist rituals. Yet we cannot speak of an "official religion" inasmuch as the temple network of which the emperor was the head existed side by side with the official Confucian bureaucracy and separated from it. This created a kind of dual state: on the one hand, the imperial administration and its Confucian officials, its army, land tax system, examination system, etc., and, on the other, the imperial household, the Taoist priesthood, the canonized local saints, and the corresponding temple network.³⁶

This dichotomy is the main theme of the famous Chinese novel *Shuihu zhuan* (translated by Pearl S. Buck as *All Men Are Brothers*).³⁷ The novel, although written in the Ming period, draws on a long tradition of storytelling. Its setting is the reign of Emperor Huizong, and it gives a striking description of Taoist society as it saw itself in opposition with the Confucian bureaucracy. The *Shuihu zhuan* has remained a bible for the local temple communities until this day.

As to the dual system of Confucianism and Taoism in these times, this is nowhere more aptly expressed than in the institution of the Temples of Tai Shan (Dongyue Miao). The worship of the holiest of holy mountains was in principle reserved for the emperor himself, but now, under his auspices, temples of Tai Shan were founded in all the urban centers. Under the Dongyue Miao came the Chenghuang City God temples, which were present in each township and there represented the Taoist spiritual authority in symmetrical complementarity with the Confucian secular powers. In other words: the City God became the counterpart of the local prefect, one reigning over the spirits, the other over the living humans. Below this level came the Earth Gods and their shrines, which represented the smallest social groups, the villages and neighborhoods. The Earth Gods were the spiritual counterparts of the village community leaders. All this was made perfectly visible through the iconography of the temple statues: the God of Tai Shan was represented as an emperor, the City God as a high official, and the Earth God as a wealthy peasant. As to all these temples, while they were administered by the officials and the citizens of each place, they always employed Taoist masters, mostly of the Zhengyi order.

So close indeed became the relationship between the imperial establishment and the local temple networks in premodern

China that the reformers at the end of the eighteenth century tended to identify one with the other.

The popularization and secularization of Taoism in pre-modern and modern China was so thorough that it became virtually indistinguishable from local society. The latter identified itself as the *she*, literally, the local Earth God, and the community or association that maintained the worship of this god, as well as that of all the other local saints and deities, was a *hui*, so this fundamental organization was the *shehui*, a word that nowadays in China is used to translate our concept of "society." There is no better example of the total integration of Taoism within Chinese grassroots culture.³⁸

At the beginning of the modern era, the interpenetration among the Three Teachings or Three Religions (*Sanjiao*) had been very strong. Among the Buddhist schools, we have seen how much Chan (Zen) Buddhism was influenced by Taoism. The other great movement, that of Pure Land Buddhism, in turn greatly influenced Song Taoist ritual practice. Confucianism owed an immense debt to both Buddhism and Taoism, which had given it the transcendent dimension it was hitherto lacking. While for many the union of the Three Teachings became more and more a reality, as Taoism grew ever more immersed in local society and popular culture, it became estranged from the other two, or, more precisely, Buddhism and Confucianism gradually distanced themselves from it. The union of the Three Teachings continued, not only during the Song but also during the Ming restoration and even during the last Manchu Qing dynasties, to be one of the cornerstones of the political discourse. In practice, however, only Taoism continued to believe in the dialogue and to promote the common cause, whereas the two other doctrines worked towards a greater differentiation. The unity of the Three Teachings was therefore a typical Taoist cause, and was only actively supported by Confucianism and Buddhism in times when Chinese culture in general was menaced, as happened, for instance, during the Mongol period and again under the influence of the Christian missionary offensive in modern China.

The New Orders: Quanzhen and Xuanjiao

With the demise of the Taoist ecclesia and the rise of the lay associations and their temple networks, the Taoist clergy entered into a long period of decadence. The medieval ordination system, which was so closely linked to the Taoist Canon, became obsolete, first, because the fundamental institution of ecclesia had ceased to exist; and second, because many new scriptures and methods had appeared that no longer fit within the old framework. The Taoist ritual—and therewith the Taoist priest-

hood itself—became more and more dependent on temple organizations, whether they were national temples sponsored by the emperor, lineage temples such as the "Celestial Master Residence" (*Tianshi fu*) of the Zhengyi order on Longhu Shan, or similar lineage temples on the other sacred mountains (such as Mao Shan), or again local temples in honor of popular saints operated by a *shehui*.

The main result of all this was that the unity of Taoism, which had prevailed under the general liturgical framework of the Tang dynasty, was lost. Many local schools sprang up, each with its own methods (*fa*). Although different in the details of their methods and rites, they nevertheless continued the basic ritual tradition of the Middle Ages, which they enhanced and expanded with more recent elements, such as Inner Alchemy, or Tantric Buddhist elements. Inevitably, these local schools competed and even quarreled with each other. This breakdown left part of Taoism, especially its higher mystical practices, without true institutional support. Inner Alchemy, which had become its main discipline, was transmitted by many masters, but without any clear lineage and initiation system.

After the fall of the Northern Song (1126) and the flight of the court to South China (the Southern Song period, with its capital at Hangzhou), the North was once again occupied by non-Chinese tribespeople. The twelfth century was a time of incessant war and turmoil. It was there, under these dire circumstances, that a great reaction set in. A former military officer, Wang Zhe, more generally known under his religious name of Wang Chongyang (1113–1170), decided after a failed career in both the military and the civil service under the Jin dynasty, to devote himself to Inner Alchemy. In the year 1159, he had a miraculous encounter with the scholar immortal Lü Dongbin, and the latter's master, the Immortal Zhongli Quan. This encounter established Wang's vocation as a preacher, and he carried out his calling in the very eastern part of Shandong province, where he established his first congregation, to which he gave the name of Quanzhen (Total Truth). Indeed, one of the aims of Wang's teachings was to bring the Three Teachings into a single great system once more.

In time, the Quanzhen order became the most important movement of spiritual renewal in premodern China. The order institutionalized Inner Alchemy as the main way to salvation. As the practice of Inner Alchemy is incompatible with heterosexual intercourse, it imposed celibacy on its communities. Although men and women continued to live together, the communities were by and large organized as Buddhist monastic *sangha*. The new movement's success was almost immediate,

and in 1190, only twenty years after the death of the founder, the order was officially recognized by the emperor of the then reigning Jin dynasty (1115–1234). But soon, the Jin dynasty came under heavy pressure from the ever victorious Mongol hordes under Chinggis (Genghis) Khan.

While Chinggis was preparing to invade China, he invited the Quanzhen patriarch Qiu Chuji to come and see him in Central Asia. Qiu, already very aged, undertook the trip with a number of his disciples, and met Chinggis at Samarkand in 1222. He duly impressed the great Khan, and obtained from him assurances that the Chinese people should be spared the all-out slaughter the Mongols perpetrated in most of the countries they conquered. Chinggis also conferred on Qiu large powers over all religious groups in China. His actions established the Quanzhen order as one of the main partners of the Mongols, who completed their conquest and destroyed the Jin in 1234. This patronage allowed the Quanzhen order to expand its activities even more. It did much for the general advancement and enhancement of Taoism, for instance by reprinting, in 1244, the entire Taoist Canon, which had nearly been lost in the incessant wars. It also continued the performance of the traditional Lingbao liturgy.

We may therefore see the Quanzhen as a reaction against the difficulties of the times and against the decadence of other Taoist traditions, but not as a reform movement. It was, first of all, an action of the elite to assert and preserve the Taoist traditions as well as Chinese culture in general. The Quanzhen masters, at the time they were influential at the Mongol court, did much to help and save not only Taoist but also Confucian scholars. Many of these in turn adhered to the Quanzhen order. Among the great painters of the Yuan dynasty, Huang Gongwang (see fig. 4) was a Quanzhen Taoist.

The impact of Quanzhen Taoism was also important on the popular level, as the new theater of the Yuan dynasty was greatly influenced by it. The origins of theater in China are very complex, but in the form it adopted in the Yuan, which was to endure ever after, it was closely linked to Taoist liturgy and temple worship. Until this century, theater has always been performed in conjunction with religious festivals on a stage in front of a local temple, the same stage being also used by the Taoist celebrants for the presentation of memorials to Heaven. The most important part of the theater performance was moreover purely ritual. The actors were for the most part laymen from the temple associations who considered it a work of great merit and honor to perform. Therefore, the use of professional actors was seen as a sinful aberration.

Fig. 4

Yuan dynasty, 14th century. Hanging scroll; ink on paper;
101.3 × 43.8 cm. Palace Museum, Beijing.

But the esteem in which the Quanzhen masters were held at the Yuan court did not endure. Much criticized by the Buddhists, they repeatedly lost in the public debates at court on the eternal controversy of the identity between Laozi and the Buddha, and thus forfeited the patronage of Khubilai Khan (r. 1260–94). In 1281 this great Khan, the builder of Beijing, in a fit of rage, ordered all Taoist books, with the exception of the *Daode jing*, to be destroyed.

The Quanzhen Masters were replaced in the imperial favor by the Celestial Masters of the Zhengyi order. The contemporary Celestial Master had readily espoused the cause of the Mongols, once it became clear that the latter, after having conquered North China, would now also extend their domination over the South (in 1275). Unwilling to submit himself to the life of the court and the cold of the Beijing winters, the southern patriarch soon retired to his holy mountain of Longhu Shan, leaving as hostage one of his disciples, named Zhang Liusun (1247–1322). Zhang was not only a good Zhengyi Taoist, but also an excellent doctor, so that he rapidly gained the confidence of the Mongols. So greatly was he favored that at one time Khubilai proposed to name him “Celestial Master” in replacement of the patriarch of the Longhu Shan. When Zhang Liusun refused, the emperor established a new order, called the “Religion of Mystery” (Xuanjiao), and put Zhang Liusun at its head. The Xuanjiao order lived only as long as the Mongol dynasty, but it was instrumental in advancing the Taoist temple organization and its lay communities. Zhang Liusun founded the great Temple of the Eastern Peak, Dongyue Miao, in Beijing (1233), which was to become the center of most of the guilds and corporations, and thus the unofficial town hall, of the capital. Many other local temples were founded by him, as well as by his equally brilliant successor, Wu Quanjie (see cat. no. 64).

Ming Taoism

When the Ming (1368–1644) dynasty emerged from the ruins of the Mongol period, the new emperor, himself a former monk, squarely placed the dynasty under the aegis of the united Three Teachings. As to Taoism, it was the Zhengyi order and its patriarch of Longhu Shan that took over the role of the Xuanjiao of the former dynasty as the most prominent representative of Taoism. It fulfilled this role with dignity and fairness. The Zhengyi order and its Celestial Masters did not attempt to unify Taoism, but worked for the advancement of all regional and local traditions. This is perfectly borne out by the Taoist Canon they edited, between the years 1408 and 1445, to replace the one destroyed by Khubilai Khan. The editors gathered together all

that legitimately could be considered Taoist without offending either the Confucianists or the Buddhists. The result was a highly eclectic collection of Taoist works, ancient as well as modern, technical as well as poetical, mystical as well as operational. It included all the important commentaries of the *Daode jing* and the *Zhuangzi* available, but also all the modern saints, including the bodhisattva Guanyin, as well as the remnants of the *Statutory Texts* of the medieval ecclesia.

The Quanzhen order was also duly represented in the Canon. After its eclipse from imperial favor, it had continued to prosper in its many monasteries situated all over the country on major holy mountains. The Zhengyi Celestial Masters did what they could to help it, for instance by restoring one of its foremost centers, the famous White Cloud Monastery (Baiyun Guan) in Beijing during the fifteenth century. From Ming times on, Quanzhen and Zhengyi became the most representative Taoist traditions, and they complemented each other perfectly. The Quanzhen, with its strict and Spartan discipline maintained and perfected the higher forms of Taoist mysticism through its practice of Inner Alchemy. The Zhengyi fostered the local communities and temple organizations and provided them with their liturgical framework and ritual specialists.

Taoism under the Ming was everywhere: in the cities as well as in the countryside, in the popular novels of the storytellers as well as in the rituals of the imperial court, in the practices of the sectarian movements as well as in the philosophy of Wang Yangming. It penetrated deeply into the local societies, gradually replacing Buddhism in many of its strongholds in southeastern and northwestern China, as the citizens of the market towns preferred to be their own masters in the local temples, and shook off the tutelage of the Buddhist clergy in favor of the services of the local “Lao Dao” (good old Taoist), who spoke the local language and whose services could be availed of for special occasions.

Not only temples and pilgrimages multiplied, but under Taoist influence, Chinese religion underwent a major transformation: feminization. As we have seen, Taoism had always generated great goddesses such as Xiawangmu, the Queen Mother of the West. It had also given to women an equal place with men in the priesthood of the medieval ecclesia. In the lay associations of the modern temple networks, as many stele inscriptions show, women played a major role. Now, during the Ming, women’s religion became at last truly emancipated. Everywhere, the worship of female saints emerged. For northern China, it was the Sovereign of the Clouds of Dawn, Bixia yuanjun, the daughter of the terrible Lord of the Eastern Peak, who won the

hearts of all women and soon of their sons and husbands as well. The great pilgrimage at the occasion of Bixia yuanjun's birthday became the major social event of the year. In Central China, it was the gentle Guanyin, now entirely Chinese and even outfitted with a Chinese hagiography, who came to offer comfort and guidance. And in South China, the Lady of the Waterfront (Linhui furen), Chen Jinggu, as well as good Mazu, the fisherman's daughter, and many others, provided women with a focus for their faith and a rallying point for their associations.

The acceptance of Taoism in Chinese society increased steadily toward the end of the Ming. Both the Jiajing and Wanli emperors, as well as the other members of the imperial household, were great supporters of the local cults. The latter ordered a Supplement to the *Daozang* of 1445 to be compiled according to his wishes. Aside from incorporating a great many scriptures concerning popular saints and deities, it also contained works by some of the most eminent rebel free thinkers of his times.

Chinese society at last was loosening up. The end of the Ming was one of the most liberal and therefore also the most creative periods in Chinese history. Economic expansion, social mobility, freedom of expression, and even sexual liberation were actively promoted. Liberty brought with it an ever greater diversity of local culture. A trend for the abolishing of the classical written language and the emancipation of the spoken language emerged, propagated by the religious organizations and the many new sectarian movements. Many religious works, such as the Buddhist and Taoist "precious scrolls," which explained the doctrines and the moral tenets to laymen, were written in the spoken language, and so were many novels that also were largely religious in nature.

Reaction and Persecution

The trend toward freedom and diversity did not meet with universal approval. Orthodox Confucian opposition was strong. The Jiajing and Wanli emperors were not just constantly criticized, but regularly abused by orthodox censors. Bixia yuanjun, the Mother (*niangniang*) of Beijing, never received any official recognition in the form of an imperial canonization, not for want of imperial patronage (for the ladies of the palace were members of the associations founded in her honor), but because of Confucian opposition. Worse, the new popular religious movements that had sprung up, and that professed the unity of the Three Teachings, were not only not recognized, but actively persecuted as heterodox and dangerous deviations. Gradually, the situation worsened. The Wanli emperor, sick of listening to the endless recriminations of the Confucian school-

masters, refused to attend the audiences at court. The new religious movements, relentlessly persecuted, rose in revolt. On the other side of the political spectrum, the Confucian literati organized their opposition in political "anti-palace" parties. At the same time, a renewed interest in the ancient Classics made the scholars rediscover the purity of the original Confucian ethics. Like the European reformation before them, critical study of the scriptures made them aware of their original meaning. Soon the critical approach gave way to fanaticism. Scholars ended up by swearing only by the Classics, and wanting to see nothing but the Classics. Thus conservative—or should we say fundamentalist?—Confucianism, which was to have such a dire impact on China's modern fate, came into being.

Many Confucian scholars who opposed the government and the society of the late Ming immigrated to Manchuria, where a new kingdom, that of the Hou Jin, had emerged. It was governed by a tribe of ethnic Tungus who called themselves Manchus, and who had assimilated a great deal of Chinese culture. The Hou Jin had opted for conservative Confucianism as its official ideology. When the monarchs of this small kingdom became by masterful political intrigue in 1644 the rulers of China, they founded the Qing dynasty and continued this policy. Immediately, Taoism became the object of restrictions and interdictions. The Zhengyi patriarch (the Celestial Master of Longhu Shan) was demoted: he was no longer allowed to come to court, and later he could not even visit the capital, as some officials told the emperor that "Taoists are vile; they should not be allowed to pollute the court with their presence." Only the Quanzhen monastic order was condoned. Quanzhen was revived in the capital, the nearly defunct White Cloud Monastery was rebuilt, and a new organization calling itself the Dragon Gate lineage (*Longmen pai*) took control. With the backing of the government, the Longmen lineage gradually extended itself all over China.

The Manchu government, always afraid of Chinese nationalism, actively repressed the local organizations. The result was strong popular resentment and the rise of secret societies (the *Tiandi hui*, later known in the West as "Triads") whose aim was to overthrow the Qing and to restore the Ming. In line with its orthodox Confucianist convictions, the government not only discouraged commerce, but also forbade overseas trade, which resulted in a great impoverishment of the state. The history of the "opening up" of China, first by diplomatic efforts—the Macartney embassy to Emperor Qianlong of 1783—and then by the opium trade and the subsequent armed conflicts, is well known. When the Western traders arrived, so did the Christian missionaries. In a nativistic reaction to the Western introduction

of opium and religion, as well as to the oppression of the Manchu state, China's poorest, the Hakka people of Guangxi, rose in revolt, in 1849, under the guidance of a messiah, Hong Xiuquan, who claimed to be Jesus' younger brother. They gave themselves the name of Taiping (Great Peace or Great Equality), which, as we have seen, was also the watchword of the earliest Taoist mass movements. However, the Taiping revolt not only fought against the Manchu rulers, but also destroyed all temples, Buddhist as well as Taoist, wherever its armies passed. This was the first great wave of iconoclasm in modern China. There were many more to come.

After the suppression of the Taiping revolt, and the war with Japan, the young Confucianist scholar Kang Youwei, also from Canton, and equally strongly influenced by a Protestant missionary, proposed in 1898 a series of reforms to the young Manchu emperor Guangxu. His action triggered the so-called Hundred Days Reforms. The first measure, and also virtually the only one that was actually adopted and made into an imperial decree, was to "destroy the temples and build schools" (*huimiao banxue*). This measure, in the troubled times of the end of the dynasty, immediately provoked the indiscriminate seizure of temple buildings and properties by corrupt officials and military strongmen. The Buddhist establishments were, in the beginning, thanks to the protection of the then still living Empress Cixi, spared, but the Taoist temples of the people, especially in the cities, were an easy prey.

During most of the twentieth century, the drive to annihilate China's own religion increased at each major turning point. The story of this feat, during a century which has seen so much mass destruction in China and elsewhere, has to wait for later historians to be written. It is enough to say that the Taoist Canon of the Ming—for obvious reasons, the Qing never cared to compile one—was almost lost. In 1920, after so many temples had been ruined or confiscated, only two incomplete copies survived. Luckily, a bibliophile association reprinted the invaluable collection in 1926. The reprint was distributed to centers for Chinese studies all over the world. From that date on, research on Taoism began. After a slow start in China, Japan, and France, Taoist studies rapidly developed from the 1960s. Today, they are flourishing everywhere, and especially in China, where the value of Taoism as an intrinsic part of Chinese culture is again recognized. The international scholarly efforts have in no small way contributed towards this recognition of the importance of Taoism as part of the world's spiritual legacy. This is a great victory for science. This catalogue and the exhibition it accompanies would not have been possible without it.

NOTES

1. The term "Tao" was only gradually adopted to designate China's mystical and religious tradition. Zhuangzi speaks of "the arts of the Tao," and later thinkers address the mysteries as "the Way of the Yellow Emperor and the Old Master" (*Huanglao zhi dao*). In fact the term "Taoism" in its two Chinese counterparts—*Daojia* (the "school of the Tao") and *Daojiao* ("the teachings of the Tao")—does not occur before imperial times. The term "school of the Tao" is the older one, and it has been adopted not only for the ancient philosophy, but for the medieval liturgical movements as well. For reasons of commodity, and in keeping with Taoist usage, I use the term "Taoism" freely also for the formative stage, in spite of the evident anachronism.
2. The only "historical" account of Laozi is by Sima Qian, in his *Shiji* (see cat. no. 1).
3. See Schipper 1993: 119–23.
4. Although the above story only appears in later sources, it is obvious that it existed already in ancient times, as Sima Qian calls Laozi "Li."
5. The Chinese term is *zhuan shi*, "the scribe by the pillar." The pillar was the great sundial of the kingdom, and the scribe appointed to its functioning was in charge of the calendar.
6. The story of the meeting between Laozi and Confucius is told twice in the annals of Sima Qian, and the *Zhuangzi* has no fewer than six accounts. Clearly, it must have been very important for the people in those times. Its general message is the rejection of the conservative feudal order, and the advancement of the individual conscience.
7. The boy was Xu Jia, who finally did not go, but stayed behind and became the ancestor of the shamans.
8. Zhuangzi, in one of the early chapters of the work, puts "noblemen and rich merchants" in one and the same category of people (*Zhuangzi*, chap. 4, par. 5).
9. As nowadays the Confucianists insist on considering the Classics as philosophy, it is perhaps not superfluous to point out that they all relate to ritual: the *Book of Songs* contains the ritual hymns (probably a selection of those used at the court of the Lu state), the *Book of Documents* has the ritual prayers, announcements, invocations, calendars and drama texts, the *Book of Rites* (now lost) the scripts of the ritual performances, the *Book of Changes* the oracle texts for the divination in relation to the sacrifice, and the *Chunqiu* annals record the events at which major sacrifices were performed. There is no reason to suppose that Confucius had a hand in the editing of any of them.
10. This is of course not to say that there is any historical relationship between Laozi and the *Yi jing*. It is, however, undeniable that the author(s) of the *Daode jing* knew the *Yi jing*.
11. This is the title of the excellent translation by Victor Mair.
12. This goddess is not mentioned in the Confucian Classics (Laozi and Pengzu are mentioned in the *Analects* of Confucius; Huangdi is mentioned several times in the Classics), which in fact do not mention a single female deity, as they are profoundly misogynist. Confucius considered that "people of low birth and women are difficult to educate." The *Book of Songs* (*Shi jing*), one of the Classics, contains a sacrificial hymn (no. 264) that is a violent attack on women, especially intelligent ones. It was therefore long thought that Xiwangmu was a creation of the emerging mystery religion (i.e., Taoism) of the Eastern Zhou period. Recent evidence from oracle-bone inscriptions shows, however, that she was venerated as early as the second millennium B.C. What must have happened is that this great mother deity, along with many other gods of early China, was ostracized by the patriarchal Confucian "classics," and survived within the religion of the common people, only to re-emerge with the advent of the Way of the Old Master.
13. Zhuangzi, chap. 1, par. 3. Instead of "Gushu" some texts have "Guye." The location of this mountain range has not been established with certainty.
14. Lu means incense burner and Boshan is an ancient name for Hua Shan, one of China's famous holy mountains.
15. Among the Mawangdui silk manuscripts, there is a magnificent document that illustrates these techniques.
16. The most important texts, such as the *Daode jing*, have long since entered the public domain and circulate freely. Many Taoist rites and practices, however, are still transmitted only by masters to initiates.

17. This identification, although now widely accepted, remains highly questionable.
18. This important aspect of Taoism is branded as "feudal superstition" in China.
19. See Bokenkamp 1996b.
20. See Schipper 1963.
21. See Kaltenmark 1979.
22. On *Lixian zhuan*, see Kaltenmark 1987; on the ancient adepts known as *fengshi*, see DeWoskin 1983.
23. For this expression, see Seidel 1969a.
24. A quote from the fifth-century Taoist text *Scripture for Initiation into the Doctrine of the Three Heavens* (*Sentien neijie jing*; HY 1196).
25. Here we find again the opposition between the universe before creation and that afterwards.
26. *Tianshi* was first the title of Laozi himself, and Zhang was his vicar. Later his descendants themselves received this title.
27. When the first communal movements appear, we see that their institutions do not fundamentally differ from the local administration *per se*.
28. The place where Wang Ziqiao had a temple erected in his honor. On the immortal Wang Ziqiao, see Holzman 1988b and Steuber 1996.
29. The recipes that were used were mainly composed of mineral substances, of which very toxic substances like cinnabar and mercury occupied the most important place. There are indications that the practitioners believed that the ingestion of the alchemical substances caused death and that their ingestion corresponded to a kind of suicide. A derivative of the great alchemical drugs, which, apart from being deadly, were also very expensive, was a kind of mineral power, largely made of ground quartz. This drug heated the body, increased sexual power, and could even cause hallucinations. In the long run, however, its use was also fatal. Users were wont to eat and drink great quantities of cold food, so as to counter the heat symptoms—hence the drug went by the name of eat-cold powder (*hanshiwen*).
30. See Sivin 1980.
31. This was the *Huangting neijie jing*. See Schipper 1975.
32. Different numbers have been advanced.
33. While in fact the *Danzang* was divulged in the Tianbao era, Xuanzong's canon is known as that of the Kaiyuan era.
34. See Needham et al. 1974.
35. The original version of this work dates from the later Han dynasty.
36. We may suppose that the income derived from this second, parallel, and, from the official viewpoint, marginal network was at times very important and could surpass the income derived from the traditional tax system.
37. Pearl S. Buck, *All Men Are Brothers* (New York: Grosset and Dunlap, 1937).
38. Nor is there an example that better illustrates the conflicts of contemporary China, inasmuch as the word *shehui* was used to coin the term socialism (*shehui zhuyi*), although this ideology aimed at destroying the "feudal superstitions" that were the very substance of the ancient "community of the Earth God."

IF IT IS SOMETIMES DIFFICULT to determine whether a particular work of art is Taoist, it is a far greater challenge to identify a Taoist building. Information drawn from Taoist texts or books, a familiarity with religious lore, and a knowledge of the iconography of key deities can assist us in our efforts, but structural signs that a building—or group of buildings—is Taoist may not be readily apparent, even to someone educated in religious doctrine or trained in the history and technology of Chinese construction. This is true for reasons that are peculiar to architecture among the Chinese arts, for Taoist architecture, first and foremost, is part of the mainstream of the Chinese building tradition. The Chinese timber frame is the most adaptable of construction systems. Fundamentally modular, its large and small pieces can be added, taken away, or moved to transform a huge room into small ones; a small, rectangular hall can be refashioned into a large U-shaped one; or the platform of a throne can be converted into an altar. Moreover, all of these changes can occur without altering a building's exterior. In general, the wooden members that form the skeletal frame of a Chinese building and the exterior elements that finish it may be distinguishable by period-style, by features associated with a geographic region, or by rank, but almost never by details specific to its religious affiliation. The invisibility of external signs of religious affiliation holds true for halls of Taoism, Buddhism, Confucianism, Judaism, and sometimes Islam in China.¹ In fact, this invisibility extends beyond religious halls, because, since ancient times, religious architecture has turned to residential construction for its first models. When their status is roughly equivalent, individual Buddhist and Taoist halls replicate not only each other but also the form of a Chinese palace, and the arrangement of buildings in a large, well-funded complex—regardless of the particular religion—imitates that of a multi-hall Chinese palace. The multifunctionality of the Chinese

timber-frame hall is unique in the universe of building traditions. On the outside, the Chinese building is, in the purest sense of the word, a façade, merely a front for what takes place inside or around it.

There are, of course, exceptions: a pagoda is found only in a Buddhist context, and a minaret is built only at a mosque. But not every Buddhist monastery has a pagoda, and it is possible to confuse a pagoda with a pavilion. The pervasive interchangeability of Chinese architecture has even permitted the construction of pagodas to serve as minarets at mosques. Still, the situation is not hopeless. Unlike paintings or sculptures that may rest for centuries in collections or storage, isolated from clues to their origins and history, it is a rare Chinese building that stands in isolation from its context. Inscriptions on stelae at a building site or records of the town, county, prefecture, or province in which it is located provide the data that inform us that a building is Taoist and often enough information to reconstruct more of its history than might ever be possible for many paintings or statues. In fact, it is unlikely that any extant structure that is or was Taoist has not been identified as such, unless it is one located in one of China's most remote regions with neither interior images nor inscription-bearing stelae.

1. DEFINITIONS

Apart from the consideration of a building's structure, one's first clue that a building or set of buildings is Taoist is its name. The most common word designating a Taoist temple-complex is *guan*, such as in the name of the most important Taoist temple in Beijing, the Baiyun Guan (White Cloud Monastery). Sometimes *guan* is translated "abbey" to distinguish it from the standard translation "monastery" for a Buddhist complex of halls and temples, known in Chinese as *si*. A Taoist temple-complex

Fig. 1
Aerial view of the Yongle Gong (Eternal Joy Temple), a Yuan dynasty (1260–1368) temple-complex in Ruicheng county, Shanxi province.

Fig. 2
Shuishen Miao (Water Spirit [or Dragon King] Temple), a Yuan dynasty temple completed by 1319, in Hongdongxian, Shanxi province.

may also have the term *gong*, "palace," appended to its name, an example of the philological borrowing that parallels the adoption of royal residential space for Taoist architecture. The name *gong* assigns status to a Taoist building site, usually status designated by the emperor. The more frequent use of *gong* is to denote a Chinese palace-complex, such as the Gugong (the Forbidden City, literally "ancient palace") in Beijing. One cannot assume a minimum acreage or an essential number of structures to distinguish *gong* from *guan*. For one thing, many fewer *gong* exist in comparison to the number of *guan*. The most famous Taoist complex is the Yongle Gong (Eternal Joy Temple) in Shanxi province (fig. 1), even though the Yongle Gong is not the largest Taoist monastery in size nor does it (or did it at its time of greatest flourishing) include more structures than some monasteries named *guan*. Buildings at the Yongle Gong and those of a palace-complex have yellow, ceramic-tile roofs. Thus, while *guan* indicates the site of a Taoist monastery, one can only be certain that a complex of buildings labeled *gong* is Taoist if one can determine that it is not a palace.

Two other terms are more ambiguous. *Miao*, widely translated as "temple," can refer to a single Taoist building, usually enclosed in its own courtyard: such is the case with Shuishen Miao (Water Spirit [or Dragon King] Temple), located in Hongdongxian in Shanxi province (fig. 2).² Yet *miao* refers also to a complex of buildings as vast as any Buddhist monastery (*si*) or Taoist monastery (*guan* or *gong*). Temple-complexes to sacred

Taoist peaks, for instance, are named *miao*, as in Beiyue Miao, the Temple to the Northern Peak (fig. 3). But the same nomenclature also refers to Confucian building groups. In Confucian construction, the range of *miao* spans the most eminent among them, Kong(zi)miao, the Temple to Confucius, including the most splendid one located near the town of the sage's birth in Shandong province, as well as Confucian temple-complexes in provincial towns and single shrines to Mencius or any other Confucian disciple. *Miao*, however, should never refer to a Buddhist complex.

Similarly vague is the suffix *ci*. It, too, can be appended to the name of one building or a group of buildings. Alone, *ci* is a shrine, sometimes called "veneration temple," for the veneration of a mortal, a folk hero, or a semi-legendary figure who has achieved near-deity status. With time, *ci* came to house images worshipped in popular religious practice; but the initial purpose of *ci* was for veneration rather than worship. Thus, like *miao*, *ci* most often are found in worlds of Confucianism and Taoism. Technically, *ci* should not house Buddhist deities. Yet a *ci* dedicated to a mortal associated with a Buddhist monastery may be present within its outermost enclosure. For groups of buildings, the most famous example of *ci* is Jin Ci, generally known as the Jin Shrines, today a huge complex of structures and landscape architecture in Shanxi province, but originally perhaps a single shrine to venerate the mother of an emperor (fig. 4).

Among groups of Taoist buildings, individual ones are most

often called *dian*, for more important halls, and *tang*, for simpler or less-distinguished halls. In this case, the distinction is apparent by structural features from roof construction to bracketing, to foundation platform and pillar bases. Both *dian* and *tang* are suffixes for names of halls at sites of any religion, at palaces, and at official bureaus. The distinctions between *dian* and *tang* have a history as old as the recorded history of Chinese architecture.³ Another universal in Chinese architecture—religious and residential—is the term *yuan*, “courtyard” or “cloister,” a reference to the fact that Chinese buildings face onto open courtyards and are enclosed inside or as part of covered arcades or walls. For religious buildings, one finds *yuan* translated as “temple,” “temple-complex,” or “monastery.”

Historically, the nomenclature of Chinese halls and building groups has not been applied with the precision one might desire. The multimillennial building history of China is set against an equally old but sometimes more evolving vernacular language. Five hundred years after a shrine was built in a village, we may find it incorporated into a major abbey of what has become a large town, or we may discover a Taoist hall or residence incorporated into or transformed for inclusion in a Buddhist monastery. Old names often persist, and written records do not always precisely reflect the changes a building has endured. Sometimes, a structure of any religious affiliation is called by the locals simply *gusi*, perhaps best translated “old temple.”

In this discussion, Taoist buildings are referred to by the Chinese names used for them today. One must keep in mind, of course, that Taoist architecture is living architecture, changing in response to social and political occurrences. Like all religious architecture, the buildings we discuss have received imperial or private patronage, sometimes both. Taoist structures have suffered imperial and Buddhist purges through history, as well as governmental purges also leveled at institutions of other religions during several decades of the twentieth century. Abbots (*fanzhang*), monks (*daoshi*), nuns, and acolytes live in *guan* and *gong* and move from one to another. Primarily and fundamentally, these are not buildings but settings for seeking the Tao (Dao), intensifying one's self-cultivation, defining a relationship with nature, or enhancing or prolonging human life. The life and vitality that may frustrate one's ability to pinpoint a building's name, identify the date of its construction, or determine the extent of its restoration or reconstruction are inherent in religious architecture and are the reasons that these same Taoist buildings exist today.

Fig. 4
Plan of Jin Ci (known as the Jin Shrines), a large complex of structures south of Taiyuan, Shanxi province.

II. TAOIST ARCHITECTURE BEFORE THE TANG DYNASTY

The origins of Taoist architecture are believed to have been coincident with the emergence of the religion. The setting for ritual or practice in the early history of Taoism was sometimes outdoors and, notably, in caves.⁴ Either location would have served for the veneration of immortals (*xian*), the practice of ascetics, or the teaching associated with the earliest Taoism. It is also thought that offerings to gods and spirits (*shen*) may have been part of Taoist practice during the first millennium A.D. If so, altars (*tan*) may have been erected for this purpose. Architectural terms found in early writings seem to confirm cave settings and extremely simple shrines or altars for Taoist ritual. The term *guan* ("abbey"), for example, evolved from two usages of the word found in writings that refer to Taoist architecture from the pre-Han dynasty through the period of Northern and Southern dynasties. The first usage, the one common today, had multiple meanings: to look or observe and to ascend or look up (toward the heavens); it also designates a multistory structure. The alternate *guan* has meanings today ranging from inn to guesthouse to public office.⁵ It is suggested that the structural *guan* was built of natural materials for such purposes as the observation of heavenly bodies, the worship of those same heavenly bodies or natural phenomena, and the observation of *qi*.⁶ During the period of the Warring States, for example, a *louguan*—*lou* meaning "a multistory structure," *guan* meaning "observatory"—stood on Mount Dongnan.

Two other architectural designations that probably refer to Taoist structures are found primarily in writings of the pre-Tang period. *Zhi*, the closest contemporary architectural definition for a place where governing occurs, were constructed in the second and third centuries A.D. as centers of Taoist worship. Their appearance is believed to have been coincident with the rise of the Wudoumi Dao ("Five Pecks of Rice") sect.⁷ The use of the term is another example of the borrowing from non-Taoist contexts for the (architectural) terminology of the faith. *Jingshi*, "chambers of quietude," were used by Taoists at the same time as *zhi*.⁸ After the appearance of Taoist monasteries, *zhi* and *jingshi* are found less often in Taoist writings. At the same time, caves for Taoist worship or rituals came to be known as *dong*, "grottoes."⁹ By the Tang dynasty (618–906), thirty-six were designated *dongtian*, "cavern-heavens." Natural settings designated as Taoist worship spaces were codified into a list at about the same time. They are known as the seventy-two *fudi*, "blessed plots." This kind of codification occurred as Taoism became a more organized reli-

gion, following the patterns of Buddhism and practices at the Chinese court.

To the extent that we can discuss Taoist architecture other than caves or natural settings prior to the Tang or Sui-Tang period, it is almost always in the context of great patrons or great masters. Han Wudi (r. 140–87 B.C.), for example, was one of the great patrons of religious architecture. His patronage was tied to his unrelenting pursuit of an elixir of immortality, or at least a means of prolonging his life. Some of the earliest settings associated with Taoism—such as the isles of the King Father of the East, Penglai, Yingzhou, and Fanghu, or Mount Kunlun in the West—are places to which Han Wudi dispatched messengers in search of life-prolonging elixirs. Han Wudi ordered the construction of Feiliangui Guan in his capital city Chang'an and additional *guan* throughout his empire.¹⁰ In the later years of the Han dynasty, the Taoist master Zhang Daoling taught Wudoumi Dao in *jingshi* or *zhi*. In 327 the great alchemist Ge Hong constructed a *guan* for his teachings, but its location was Weimingdong (grotto) on Mount Luofu, suggesting the *guan* still may have been a cave. In 530, during the reign of the Liang emperor Wudi, construction at Mount Mao (Mao Shan) included Chulin Guan and Huayangxia Guan.

The history of Buddhist architecture in the several centuries following the Han dynasty is such that one might have expected to see a surge in Taoist construction of more permanent buildings and larger temple-complexes at this time. The impetus for accelerated Taoist construction should have been the unprecedented building of Buddhist monasteries and the conversion of existing residential architecture into monasteries in Luoyang and the other capitals during the late fifth and sixth centuries. It is a well-known fact that Luoyang, established as the capital of the Northern Wei (386–534) in 493, had 1,367 monasteries, an increase of more than three hundred percent since the first decade of the fourth century when only 42 stood in the Jin capital at Luoyang.¹¹ Unfortunately, there is very little evidence for contemporary Taoist architecture in the capital.

Taoist subjects common in funerary architecture of the Han (see the essay by Wu Hung in this volume) are still found in subterranean construction during this period. A tomb excavated at Dingjiazha, eight kilometers northwest of Jiuquan in Gansu province, contains among its murals images of the Queen Mother of the West (Xiawangmu), King Father of the East (Dongwangfu), a three-legged crow in the sun, a toad in the moon, a white deer, and a host of winged animals and humans.¹² Knowing nothing of the occupant except that he was an official, and with a date of 386–441 based on which of the Sixteen Kingdoms

controlled this part of Gansu at the time when a tomb with this plan and these murals might have been made, nothing inside the tomb proves its architecture or its occupant to be Taoist. The tomb structure, two chambers of rectangular plan, one with a barrel-vaulted ceiling and the other with walls that curved from all four sides to a small square at the apex, can be found in funerary settings in any part of China or at her borders between the fourth and sixth centuries.¹³ Yet lacking scenes more explicitly associated with Confucianism such as stories of filial piety, and lacking Buddhist imagery, there is a good possibility the tomb-builder considered Taoist belief in the choice of themes for the murals. If so, then below the ground as well as above, the funerary architecture of Taoism was indistinguishable from contemporary non-Taoist construction for the same purpose.

III. TAOIST ARCHITECTURE IN THE TANG DYNASTY

Although still not as heavily patronized as Buddhist monasteries, by the Sui–Tang period Taoist architecture had a significant presence in the Chinese capitals and existed in the countryside. As at earlier times in Chinese history, the greatest patrons of large-scale Taoist temple-building were emperors and empresses, beginning with the founder of the Sui, Wendi. His capital city Daxing (Chang'an in the Tang dynasty) had headquarters for both Buddhism and Taoism, the former occupying an entire metropolitan ward on the east side of the city and the latter of smaller size on the west. It is said that at the beginning of his reign, Sui Wendi's capital had 120 Buddhist monasteries and 10 Taoist ones.¹⁴ Probably the number of Taoist abbeys grew proportionate to the number of Buddhist monasteries in the capital in Tang times. The number of Buddhist institutions in Chang'an prior to the persecution of Buddhism during the Huichang reign period (in 845) has been calculated at 156.¹⁵ Although the number of Taoist establishments has been recorded only at 16 during the Kaiyuan reign period,¹⁶ the strong presence of Taoism inside the imperial sectors of Chang'an and the suggestion that a revival of Taoism occurred concurrent with the Huichang persecutions probably means well more than 16 abbeys were in the capital in the seventh to ninth centuries.¹⁷

At least four Taoist building complexes stood inside the wall-enclosed imperial palaces of Chang'an, two at the first imperial palace site, Taiji Gong, and two at the detached-palace site, Daming Gong, where construction began during the reign of the second Tang emperor, Taizong (r. 627–49) and flourished under the third emperor, Gaozong (r. 650–83). Two of those were halls of the Three Purities (Sanqing Dian), one at each

Fig. 5
Plan of Sanqing Dian (Hall of the Three Purities), a Tang dynasty hall within the Daming Gong palace-complex at Chang'an (Xi'an), Shaanxi province.

palace complex. The Hall of the Three Purities at the Daming Gong palace-complex has been excavated.

Located in the northern part of the Daming Gong, just inside and east of the northern gate, Qingxiao Men, the Hall of the Three Purities was elevated on an enormous earthen platform. Measuring 73 meters from south to north and 47 meters east–west, the earthen-foundation platform rose 14 meters in height (fig. 5). Based on excavated remains, archaeologists have suggested that this hall was a multistory structure with a simple, hipped roof, the roof type reserved for the most eminent Chinese structures. Yet beyond this description, few details are certain. The hall could be approached from two sides. One approach, from the south center, measured 14.7 meters in length and was made up of steps. The second, on the northern part of the west side, was 44.3 meters, suggesting comparison with Tang period ramps known as *mandao* or, in spite of its northwesterly position, the magnificent Dragon Tail Way approach to Hanyuan Dian at the same palace-complex.¹⁸ Like Dragon Tail Way of the Hanyuan Dian complex, the approach to the Hall of the Three Purities was made of decorated brick and lined with a stone balustrade.

Tang Xuanzong (Minghuang) (r. 712–56) was a great patron of Taoism. In the first month of 741, he ordered the establishment of a *miao* to Xuanyuan Huangdi (Laozi) in Chang'an, Luoyang,

and each prefectural capital, as well as academies for the study of Taoism (*chongxuanxue*) in which the *Daodejing* and the writings of Zhuangzi, Liezi, and Wenzhi were taught.¹⁹ Later that year, the emperor had a dream in which Laozi instructed him to search for his portrait west of the capital and upon finding it, to hold a ceremony for him in Xingqing palace-complex. Thereupon, Datong Dian was constructed at his residential palace in the Longqing ward of Chang'an. It was the first time it can be documented that Laozi was worshipped by a Chinese emperor in a hall for that purpose in the capital city.²⁰ As mentioned above, the same Tang emperor worshipped Laozi at Mao Shan in 751. The next year, officials reported sighting Laozi above or near locations in both Chang'an and Luoyang.

In 743 the *miao* to Xuanyuan Huangdi at both Tang capitals were renamed Taiqing Gong and Taiwei Gong. The plan of Chang'an's Taiqing Gong is recorded, as is information about its paintings and statuary. The focal point of the interior was a statue of Laozi in imperial garb, flanked by statues of Xuanzong and two high-ranking officials. Upon their fall from imperial favor, the latter two were replaced by statues of Confucius and four realized beings (*zhenren*): the philosophers Zhuangzi, Liezi, Wenzhi, and Gengsangzi.

The name Taiqing has astronomical as well as Taoist connotations. Astronomy had been under the jurisdiction of the Chinese court since earliest times and palaces had been named after astronomical bodies from as long ago as records of names of palace halls exist.²¹ Thus, as was the case in the tomb at Dingjiazha, the relationship between a label of "Taoist" and more generally the realm of imperial or high-ranking China was close.

IV. TAOIST ARCHITECTURE IN THE TENTH THROUGH EARLY THIRTEENTH CENTURIES

Beginning in the dynasties that follow Tang, Taoist architecture can be studied through actual buildings. For this period, about a dozen extant buildings, most of them dated, are noteworthy. To understand the full impact of Taoism on architecture at this time, however, one still needs to refer to textual records.

While the Song dynasty ruled from Bianjing (Kaifeng) during the part of the empire's history called Northern Song (960–1126) and then from Lin'an (Hangzhou) during the shrunken Southern Song dynasty (1127–1279), North China and the lands that bordered it were controlled by the Liao (916–1125) and Jin (1115–1234) empires. Although he brought no Chinese religion with him from his birthplace in today's Chifeng county of Inner Mongolia, Abaoji (r. 907–26), the first ruler of the group who

would found the Liao dynasty, built temple-complexes of Confucianism, Buddhism, and Taoism at his capital, Shangjing, today Balinzuqi, in Inner Mongolia, in the year 918. The text is specific: Kongzimo (Confucian temples), Fosi (Buddhist monasteries), and Daoguan (Taoist abbeys) were constructed.²² The following year, Abaoji's wife Yingtian and the crown prince were instructed to worship at *si* and *miao* separately.²³ Yet it is not certain that more than one abbey existed in the capital. The dynastic history of the Liao provides only one name, Tianchang Guan, located at this capital during the reign of the second ruler, Deguang (r. 927–47).²⁴ Compared to the countless Buddhist monasteries named in the Liao history, and a temple to the dynastic ancestors at their ancestral capital Zuzhou, also in Chifeng county, the early establishment of an abbey was probably recognition of, even deference to, the Chinese religious system in general, deemed necessary by the first ruler as part of his symbolic movement toward Chinese-style rule. There is no evidence of extant Taoist architecture in Liao times nor does Taoism seem to have had a significant impact on Liao culture.

The situation in China under Jin rule (1115–1234) was completely different.²⁵ Tremendous changes occurred in Taoism at this time, three of which have particular relevance to architecture. First is the syncretism of Buddhism, Taoism, and Confucianism known as *Sanjiao heyi*, a phenomenon that was not new during the Jin period, but was more important than it had been earlier in China. Second was the emergence of new Taoist sects, of which Quanzhen Taoism had the greatest impact on building history. Third, another Tianchang Guan was constructed, this one in the Jin central capital, Zhongdu, today Beijing.

Syncretism of the three creeds and the particular impact of this syncretism on Taoism are explained in the essays by Stephen Little and Kristofer Schipper in this volume.²⁶ As for Tianchang Guan, it has been called the most important Taoist monastery in Jin China.²⁷ Rebuilt between 1167 and 1174 by imperial patronage on a monastic site that had existed since the Tang dynasty, Tianchang Guan today is Baiyun Guan (White Cloud Monastery), the major Taoist monastery in Beijing. Images including the Three Purities were housed inside one of its halls and a nearby mountain was designated for monks from Tianchang Guan to refine cinnabar pills. Performance of the *jiao* offering ceremony there in 1190 was believed to have cured the emperor's mother, whereafter the ties between this abbey and the imperial Jin household were even stronger.²⁸ Masters of all Taoist sects prevalent in the Jin dynasty who were summoned to the capital by the emperor stayed at Tianchang Guan, including the founders of the Taiyi and Quanzhen sects. Tianchang Guan

seems to have flourished under Jin rule in spite of several imperial bans on construction by the general populace of Buddhist and Taoist monasteries, for it is not certain they were upheld.²⁹

The most important existing building associated with Taoism during the centuries between the fall of the Tang and the onset of the Mongol rule, the Yuan dynasty, is the Song period Sage Mother Hall (Shengmu Dian), which stands today as the focus of the Jin Shrines (Jin Ci) about 25 kilometers south of Taiyuan in Shanxi province (figs. 4 and 6). Many exterior and interior features of Sage Mother Hall are unique.

The first of them is the approach to the hall, a cruciform-shaped, white-marble bridge. The hall itself is a seven-by-six-bay structure with an additional, open bay across the front. That bay is marked by gilt dragons that wind around the pillars. In addition to the approach and pillar decoration, other unique features of the hall (among extant Song buildings) are eight-rafter-long beams that span the entire length of the hall. These three features combine with the seven-puzuo bracketing, the second most eminent bracket-set type described in the building manual of the Song court, *Yingzao fashi* (Building standards), and the most eminent variety in an existing building, to define the importance of the Sage Mother Hall.³⁰

These details suggest that the Sage Mother Hall is an example of Song imperial architecture. In fact, like other buildings whose architectural details represent the highest-ranking structures codified by the Chinese system, the Sage Mother Hall straddles the labels Taoist and Confucian. Its history begins with a revered mortal, the mother of Prince Shuyu of the Zhou dynasty. A structure in which to pay homage to her is precisely the purpose of a shrine, *ci*. With time, the Sage Mother came to be worshipped. In the Song dynasty, when the present hall was constructed, she was enthroned with images of her female attendants, many of which remain in the hall today. The association with Confucianism, or what might better be called the Chinese bureaucratic tradition, thus is traceable to the original purpose of the hall, including the construction by a prince to pay homage to his ancestor, and to the fact that the structure of the hall is the closest known to what buildings in the Song palaces at their capital Bianjing might have looked like. The Taoist associations for this structure and site are due to the fact that the local populace came to believe the Sage Mother could aid those who worshipped her, and to the importance of natural phenomena, most importantly, water.³¹ The Taoist context is confirmed by other buildings in the Jin Ci complex. These include "grottoes" to Laozi, the Three Purities, the Three Heavens, and the Yellow Emperor; shrines to the Three Purities, the Eastern Peak,

Fig. 6
Shengmu Dian (Sage Mother Hall), a Song dynasty hall within the Jin Ci complex, south of Taiyuan, Shanxi province.

the Three Sages, and Lu Ban; pavilions to Lū Dongbin, the Three Officials, Zhenwu, and various immortals; temples (*miao*) to Caishen (the god of wealth), the Dragon King, the spirits of the mountains, the Emperor Guan, Taitai, Lingguan, and the god of the earth; and a "palace" dedicated to Wenchang (the god of literature). The site and surrounding area contain about half that number of Buddhist halls and complexes. Few are dated and most have a history long enough to include multiple construction periods. Among all the buildings and as a composite group, nothing architectural offers an obvious clue to the Buddhist, Taoist, or other purposes of any of them.

Although on mostly flat ground, Jin Ci rambles and lacks focus, much in the manner of a Taoist mountain-temple. In fact, it is more lacking in single focus than many of the temple-complexes located in mountain terrain discussed in the last section. Jin Ci developed, like many of the later Taoist monasteries on mountains, in response to local worship needs and patronage. Several building complexes constructed around courtyards at this site can be considered focal points of the whole (see fig. 4).

Another Northern Chinese temple-complex that received imperial patronage but whose focal deity places it between Taoist and Confucian contexts is the Houtu Miao, the Temple to the Earth God. First built in 1006 during the Song dynasty, its site at Fenyang was destroyed by flood in the sixteenth century. The original layout of the temple-complex is preserved on a stele of 1137 from the Jin period which, similar to another Jin period stele

Fig. 7
Line drawing of a carving on a stele of 1137 showing the plan of Houtu Miao (Temple to the Earth God), a Song dynasty temple-complex constructed in 1006, in Fenyang, Shanxi province.

of a different Taoist building complex, the Temple to the Central Peak in Dengfeng county, Henan, shows a structural group almost as large as Jin Ci, but focused along a single axial line (fig. 7).³² Today the Houtu Miao grounds are used for a kindergarten. Inside the hall are exquisite murals of Taoist divinities dated to the Ming dynasty.

Xuanmiao Guan was built in Putian, Fujian province, a decade after the Temple to the Earth God at Fenyang. Nothing is known about the original layout of the abbey. Today the Hall of the Three Purities survives with much of its early-eleventh-century appearance intact, and hails to a god named Tiandi and the Eastern and Western Peaks remain from later times.³³ The most noteworthy features of the Hall of the Three Purities (fig. 8) in Putian are its gracefully sloping exterior roof eaves and similarly exaggerated curved beams, both typical of southern Chinese architecture; and the bracket sets that project perpendicularly to the building plane along five steps. The last feature is characteristic of architecture in south China during the Northern Song dynasty. The building most similar in structure to the Hall of the Three Purities of Xuanmiao Guan is Daxiongbao Hall of the Buddhist monastery Baoguo Si, constructed three years earlier in 1013 in Yuyao county, close to Ningbo, in Zhejiang province. Both represent a style of southern Chinese architecture transmitted to Japan at the beginning of the Kamakura period (1185–1334).³⁴ Today devoid of images and used as a building for the local middle school, this structure—apart from its name—bears no signs of the Taoist associations of the hall or its monastery.

The fate of five Taoist halls in Jincheng county of Shanxi prov-

Fig. 8
Sanqing Dian (Hall of the Three Purities), the main hall at the Northern Song dynasty Xuanmiao Guan, constructed in 1016, in Putian, Fujian province.

ince is similar. The Middle Hall and the Hall of the Jade Emperor at Yuhuang Miao, both dated 1076, stand in a ruined state, their interiors used for storage.³⁵ The Main Hall of the Erxian Guan, the Two Immortals Abbey, dated c. 1107, is likewise closed from public view, but a few pictures of its altar and the Song period Taoist sculpture in it exist (see fig. 9).³⁶ Two buildings constructed between 1161 and 1189 remain at the Temple to the Eastern Peak in Jincheng, together with Buddhist structures at the same site. A destroyed building studied in the 1930s by the Society for Research in Chinese Architecture, may, as its name suggests, have had Taoist imagery inside of it: the Yuhua Gong at Yongshou Monastery in Yuci, Shanxi, had a date of 1008.³⁷

It is probably not coincidence that all but one of the buildings discussed so far are or were in Shanxi province. It has been recognized since the initial modern investigations of traditional Chinese architecture that more old buildings remain in Shanxi than in any other Chinese province.³⁸ This is true for both Buddhist and Taoist architecture. It is not certain that Shanxi was a more "religious" province than others, but the amount of architecture may have to do with the fervor of Taoists, including the rise of the Quanzhen sect in Shanxi during the Jin period, and an overall religious atmosphere that contributed to that rise. Another factor in the importance of religious architecture in Shanxi must be the presence of the sacred Buddhist mountain Wutai in the north center of the province. That mountain necessitated places for pilgrims to stay en route from every direction. At the end of the twentieth century, however, each of the buildings mentioned here and indeed almost every religious complex in the province, Buddhist or Taoist, except those on Wutai Shan, in the major cities of Datong and Taiyuan, and the Yongle Gong, all of which generate tourist revenue, have long since ceased to be religious sites. Instead, Shanxi's architecture has been locked up to prevent theft and desecration and each building, including those on the grounds of schools, bears serious signs of weathering and other damage resulting from neglect through the centuries.³⁹ Only occasionally has a temple-complex of Taoist associations beyond the main tourist route through Shanxi been maintained. One example is Zetian Shengmu Miao, the Temple to the Sage Mother Empress Wu (Zetian) in Wenshui county. One hall, dated to 1145, remains, but the images in this living temple are new.

One building, the Hall of the Three Purities at Xuanmiao Guan in Suzhou, dated 1176, represents Taoist architecture of the Southern Song (fig. 10). Like the main hall from Xuanmiao Guan built in Putian in the early eleventh century, the Hall of the Three Purities in Suzhou is an excellent example of southern

Fig. 9

Chinese structure of the period, boasting gracefully sloping roof eaves but a somewhat rigid interior structure. Today the focus of a shopping arcade, it too bears nothing but its name to suggest that it is a Taoist building.⁴⁰

Beyond these structures, the rest of the picture of Taoist architecture on the Chinese landscape during this period must be filled in through literary sources. They record at least two Song emperors to have been serious patrons of Taoist monasteries. The third Song emperor, Zhenzong (r. 998–1023), enacted a ceremony in which he received the “heavenly teachings” and ordered the construction of Abbeys to Celebrate the Heavens (Tianqing Guan) throughout the empire.⁴¹ The involvement with Taoism of Song Huizong, who styled himself a Taoist master (*daojun*), is the subject of the essay by Patricia Ebrey in this volume. Among his building projects was Yingzhen Guan, a Hall for Welcoming the Perfected.⁴² During the rule of the Southern Song, more than thirty Taoist monasteries were constructed in the capital Lin'an (Hangzhou).⁴³

Taoist construction was spread between urban and mountainous settings in Song China. Two of the most famous Song Taoist temple-complexes were Chongfu Gong on Mount Song (the central of the Five Sacred Peaks) in Henan province and Zongyang Gong (also known as Dongxiao Gong) on Mount Dadi outside the city of Lin'an. The latter is said to have been so expansive that its approach wound nine kilometers from the front gate to the main hall. The Song is also the period during which the first Bixia Ci on Mount Tai (Tai Shan), to be discussed below, was erected.

Six structures should have been present in the majority of Taoist monasteries of the Song period. First was the *shen dian*, a “spirit hall,” for sacrificial rites. Second was the *zhai guan*, a hall for vegetarian or *maigre* feasting in preparation for *xiuzhen* (cultivating perfection). In addition there would have been a scripture repository, often two-storied, for housing sacred texts; a hall for teaching or preaching the Taoist law; guest halls; and garden architecture.⁴⁴ Each had an equivalent space in contemporary Buddhist construction.

V. TAOIST ARCHITECTURE IN THE THIRTEENTH AND FOURTEENTH CENTURIES

Probably dozens of Taoist buildings survive in China from the thirteenth and fourteenth centuries, the period of the surge of Quanzhen (Complete Realization) Taoism in the north, and sects at Mount Mao (Mao Shan) and Dragon and Tiger Mountain (Longhu Shan) in the south. As buildings are studied and

as heretofore unknown inscriptions or records emerge, the list of architecture from this period grows. So far, a large percentage of halls that survive from the thirteenth and fourteenth centuries are in Shanxi, as is the case for survivals from earlier centuries.⁴⁵ Again, the history of Taoist construction and patronage of Taoist monasteries is tied to the government. Yet, unlike in the past, the rulers of all of China during the century from 1271 to 1368 were Mongols. Their interest in Taoism is as easy to document as that of early rulers including Han Wudi or the Song emperor Huizong, but the nomadic origins of this group have roused more interest in court patronage of Taoism than has been the case for most other periods of Chinese history. Imperial Mongol interest in Taoism has been viewed both as a means of imperial legitimation, serving the purpose Chinese religions had for every ruler on a Chinese throne since at least the Northern Wei dynasty, and as an aspect of the uniquely Mongol attitude toward religion. Beginning with Chinggis Khan's famous interview of the Quanzhen master Qiu Chuji at the Mongol's camp, one interpretation of the Mongol attitude toward Taoism has been that it is an example of the openness to any philosophical system that might enhance or prolong life or whose masters might be able to influence Mongol designs at universal domination. Attitudes at the Yuan court occasionally gave way to a kind of ecumenicism whereby institutions of all faiths were patronized, especially by Mongol imperial wives. Yet the same openness to religion gave way to court-sponsored debates between Buddhism and Taoism, some intense strife between the religions, and occasional warfare.⁴⁶

Buildings of superlative quality at three sites represent not only the heights of Taoist construction during the centuries of Mongol rule in China, but also the most eminent architecture to survive from these centuries in China. Each of them should be considered against the backdrop of Mongol and religious politics during the period from the rise of new sects under Jin rule through the collapse of the Chinese portion of the Mongol empire to the Ming dynasty.

Four examples of Yuan period (1260–1368) Taoist architecture in China are seen at the Yongle Gong, the Eternal Joy Temple, located in Ruicheng county at the southern tip of Shanxi province. The uniqueness of their survival was such that in 1959 these four structures were moved upriver from their original location in Yongji in order to preserve them while making way for a reservoir.⁴⁷ Yongle Gong is intimately connected to a patriarch of Quanzhen Taoism, Lü Dongbin. One of the Eight Immortals, some legends of Lü Dongbin trace his birth to the Tang dynasty in the vicinity of the original town of Yongle, where a

destruction of the Yongle Gong. The gate known as Wuji Men was completed shortly afterward. The four stood on a line, the gate farthest south and halls to the Three Purities (Sanqing), Lü Dongbin (Chunyang), and the historical founder of Quanzhen Taoism, Wang Zhe (Chongyang; 1112–1170), behind it. In subsequent dynasties a gate was added farther south and halls were built on either side of the long axial line (see fig. 1).

The Hall of the Three Purities (Sanqing Dian) is the crown of the Yongle Gong. Elevated on a white marble platform, 28.44 meters across the front and 15.28 meters in depth (seven by four bays), a huge *yuetai* ("moon terrace"), 15.6 by 12.15 meters, projects in front of it. The size of a hall itself, this large front platform is a common feature in Taoist halls of the Yuan period, and it may have provided space for ceremonies. Approach to the *yuetai* is from the sides: stepped ramps known as *tadao* lead to "ear platforms" on either side. Besides the high platform, a feature that defines the Hall of the Three Purities as a structure of high rank in the Chinese building system codified in Song times is the use of six-*puzuo* bracket sets. The *puzuo* number is an important factor associated with a building's eminence or lack of it. The Song system stipulates fundamental bracketing configurations, or *puzuo*, of which no. 8 is the highest and no. 3 is the lowest. The highest *puzuo* number extant in Yuan structures is six, the formation employed at the Hall of the Three Purities.⁴⁹ In addition to the platform and bracket sets, the simple, hipped roof and the three lanterns, or cupolas (*zaojing*), of its ceiling are marks of a distinguished structure. Features that define this hall as a Yuan structure are the presence of two struts in the form of bracket sets between the pillar-top bracketing across the front façade and the suggestion of three cantilevers, which are in fact decorative ends of bracket-arms and thus "false" cantilevers, on the corner bracket sets of the front façade and hall interior.⁵⁰

The structures of the halls to Lü Dongbin (Chunyang Dian) and Wang Zhe (Chongyang Dian) at the Yongle Gong provide equally good evidence of architecture of the Yuan period but

of slightly less eminence than the Hall of the Three Purities. Possessing the two intercolumnar bracket sets and the suggestion of three cantilevers that define Yuan period architecture, the bracket clusters of Chunyang Dian are six-*puzuo* and those of Chongyang Dian are five-*puzuo*. The numbers are in accordance with the placement of the halls in the monastery and the importance of the subject of the hall's dedication. Second after the Three Purities in the scheme was Lü Dongbin, and, after him, Wang Zhe. Befitting buildings slightly less prestigious than the main hall, but at a major monastery, are the hip-gable combination roofs that top both Chunyang Dian and Chongyang Dian and the presence of one *zaojing* in each of their ceilings. As for a feature that may define these as Taoist halls, the oversized *yuetai* approached from the sides also is present at both.

One cannot help but notice the lack of doors or windows on all sides but the front of the three Yuan period halls and the gate at the Yongle Gong. Although rare in Chinese architecture, in general, such construction is usually a sign that all possible interior wall space was needed to accomplish a painting program. Certainly that was the case at the Yongle Gong. Equal to its importance as a site of Taoist architecture is the fact that the Yongle Gong is a repository for 842 square meters of Yuan period Taoist wall painting. The names of the halls relate to the central figures of worship within.⁵¹ The Hall of the Three Purities, for example, contains murals of over two hundred members of the Taoist pantheon paying homage to statues of the Three Purities (now lost). Similarly, legends of Lü Dongbin and Wang Zhe are the subjects of the images in Chunyang Dian and Chongyang Dian, respectively (fig. 11). The legends are set against architectural backgrounds, providing the most extensive source of paintings of architecture from the period. Although like most Chinese painting of architecture, exaggeration and idealization are evident in the murals, a few details are specific to the period. These include two sets of intercolumnar bracket sets, corner bracket sets with three diagonal projections, and large *yuetai* with detailed, carved decoration.

The structure of Dening Dian, focus of the Temple to the Northern Peak complex (Beiyue Miao) in Quyang, Hebei, is as extraordinary as that of Sanqing Dian (fig. 3). Dening Dian was constructed in 1267, probably within fifteen years of Sanqing Dian and within about a decade of the initial construction of Khubilai Khan's imperial city at Dadu.⁵² Not only do the two Yuan halls share architectural components that designate structural eminence during the Yuan period including elevation on a high marble platform, six-*puzuo* bracketing, two sets of intercolumnar bracket sets, and the hipped roof, but additional features not

Fig. 11
Detail of a wall painting from Churyang Dian, the hall to Lü Dongbin, 1262, at the Yongle Gong, Ruicheng county, Shanxi province.

present at Sanqing Dian mark Dening Dian as the closest surviving structure to descriptions of buildings in the Mongol capital. Those include the double set of roof eaves, the marble balustrade and animals that cap its posts, and the heads of animals on which those posts rest.⁵³ As at three Yongle Gong halls, an oversized *yuetai* is positioned at Dening Dian's front. Also as in the three halls of the Yongle Gong, the interior walls of Dening Dian were originally covered with murals. Only a few images survive from the Yuan period, among them those of deities who bring forth rain. Nine statues, all made centuries after the Yuan dynasty, are on an altar inside the hall.

Like the Sage Mother Hall of the Jin Shrines, Dening Dian of Beiyue Miao is a Taoist structure whose architecture exemplifies the Chinese imperial tradition. The presence of spirits to whom one prays for rain among the wall paintings and, of course, the dedication of the site to the Northern Peak, are clear evidence that the label "Taoist" is appropriate. Besides ambitions of the Taoist church in the Yuan period, imperial and political motives led to the construction and placement of the Temple to the Northern Peak in Hebei. The Liao sought confirmation by the Lord of the Northern Peak at this site before launching an attack against Song China. The new Mongol rulers of China decreed the construction of Dening Dian even before the official founding of the Yuan dynasty and before the completion of the city walls of their great capital Dadu (Beijing). In Yuan times, Beiyue Miao was the one Taoist stronghold in a part of northern Shanxi

and Hebei heavily populated by major Buddhist monasteries.⁵⁴

Shuishen Miao, the Temple to the Water Spirit, or Dragon King (also known as Mingyingwang), the deity to whom interior paintings at Dening Dian were dedicated, was completed by the year 1319 (fig. 2). A standard structure with two sets of roof eaves, one of them hip-gable in form, and five-puzuo bracket sets, the Shuishen Miao has one exterior feature that may indicate its Taoist affiliation: a *yuetai* with two approaches from the side. Inside, the subjects of its exquisite wall paintings represent the heights of southern Shanxi, or Pingyang regional style, comparable to those at the Yongle Gong, including illustrations of the world of the Chinese scholar, a painting of a Tang emperor, and one of the Dragon King himself. The Dragon King Temple, although in its own enclosed courtyard, is on the grounds of the Buddhist monastery Guangsheng Si, where repairs of its Buddhist halls occurred at the same time as those of the Dragon King Temple.

Among the other extant Yuan period Taoist buildings, both the Hall of the Five Peaks (Wuyue Dian) at Wuyue Miao in Fenyang county and the Hall of the Three Purities at Wanshou Gong in Gaoping preserve Yuan period wall paintings on their interiors.⁵⁵ An isolated hall dedicated to a god named Tangdi in Bo'ai prefecture, Henan, is an excellent example of the kind of humble structure that at one time probably stood in every Chinese town and village.⁵⁶ Finally, the Yuan period offers a bit of information about Taoist tombs and perhaps about a city plan

inspired by Taoist ideals. Northwest of the original Yongle Gong in Yongji prefecture, behind the three main halls, were a shrine (*ci*) to Lü Dongbin and temples (*miao*) to two Quanzhen Taoists who had been involved in the construction of the Taoist palace, Song Defang (1183–1247) and Pan Dezhong. In addition, tombs excavated at the site are believed to belong to the three of them. None of the tombs boasts remarkable structure.⁵⁷ The presence of the shrines and tombs, however, is yet another indication that the Buddhist practice of veneration and burial of monks and laymen deeply involved in a monastery's founding, expansion, or history had its counterpart in Taoist monastery construction.

As for cities, throughout Chinese history no city can be described as Taoist, certainly not to the extent that one thinks of Northern Wei Luoyang as a Buddhist city. However, unique evidence about Shangdu (Xanadu), the capital founded by Khubilai Khan at Kaipingfu (today Duolun [Dolonnur], Inner Mongolia) in 1256, suggests that Taoist practice may have been a basis for its design. Eight great monasteries were positioned roughly at the four cardinal directions and the four corners of the Shangdu palace-city. One can interpret this plan as the realization of a mandala, such as the configuration at the focus of the Womb World Mandala, in which each monastery would represent an esoteric deity. However, a second interpretation is possible. Designed by a Chinese official in Khubilai's service, the construction program may also be a reference to the eight fundamental trigrams of the *Book of Changes* (*Yi jing*), whereby the Huayan Monastery and Qianyuan Monastery, in the northeast and northwest parts of the palace-city, would have been associated with the trigrams *gen* and *qian*, respectively.⁵⁸

VI. TAOIST ARCHITECTURE AFTER 1368

The majority of Taoist architecture we see today was constructed after the return to native Chinese rule by the Ming dynasty in 1368. Post-fourteenth-century Taoist buildings survive in every province, in their cities and towns and in the countryside. Almost every active Taoist monastery has a building history that can be documented from the Ming dynasty onward and a history that is much older.

For those outside of China, the best-known of China's active Taoist monasteries are on sacred peaks, in major cities, or in extraordinary natural settings. The architecture of Tai Shan, Wudang Shan, and Baiyun Guan are examples of this group. These or others like them such as the Temple of the Eastern Peak in Beijing have come to the attention of the non-Chinese public also because information about them is available in West-

ern languages.⁵⁹ Yet there are abbeys that remain remote whose architecture and interior wall painting are of equal or superior quality. In this final historical section, Taoist sites that represent the range of construction in living monasteries are discussed.

Tai Shan, or Mount Tai, would be on almost any list of the most significant sites of Taoist architecture in China. Located in central Shandong province, since the beginnings of Chinese imperial history Tai Shan has been Dongyue, the Eastern Peak. Burnt offerings are said to have been made at Mount Tai even earlier, since the age of the legendary emperors.⁶⁰ Legendary emperor Shun is said to have initiated the practice that came to be called inspection tours (*xunshou*) of his realm, beginning at Mount Tai in the east, the direction of the rising sun. Both Qin Shihuangdi and Han Wudi made sacrifices there. Tang Gaozong performed the *feng* and *shan* sacrifices at Tai Shan on the same tour as he made sacrifices to Confucius at a temple near the sage's birthplace in Qufu, Shandong, and to Laozi in Anhui, during 665–66.⁶¹ Besides enactment of the imperial sacrifices of *feng* and *shan*, performed by these three emperors and perhaps only three others, the last in 1008,⁶² its associations with the sacred privileges of the Chinese emperor were so strong that a Hall of Light (*Mingtang*) was constructed on Tai Shan.⁶³ Yet again one observes the unique blending of Taoism and Confucianism at a Taoist site that received imperial attention.

Contrasting Tai Shan's fundamental place in imperial ideology is the reason that probably brought emperors there in the first place: the mountain itself is a deity.⁶⁴ Tai Shan's eminence even among the sacred peaks is due to its proximity to the Eastern Sea, where the isles of Taoist immortals Penglai, Yingzhou, and Fanghu were believed to be. Furthermore, the Lord of Tai Shan is believed to control the fate of the Chinese emperor. Like most of the Taoist ceremonial sites discussed thus far, Tai Shan bridges the world of the emperor's Confucian responsibility to his state and the Taoist quest for immortality and belief that natural phenomena are sacred. Yet when one turns to architecture, little about the buildings that stand or are said to have stood on Tai Shan presents itself as identifiably Taoist. The two building-complexes most central to Tai Shan's purposes, Dai Miao and Bixia Ci, can serve as examples.

Dai Miao, or Dai Temple, is dedicated to the god of the mountain himself. Among the multitude of spirits gathered at the Eastern Park, he is the ultimate one and thus it is fitting that his temple should exhibit the most splendid architecture at the site. The building history of Dai Miao can be traced to the Eastern Han. Later construction occurred under three emperors famous as Taoist patrons, Tang Xuanzong and Song Zhenzong and Hui-

Fig. 12
Dai Miao (Dai Temple), a Qing dynasty structure on Tai Shan (Mount Tai, the Eastern Peak; also called Donggong), Shandong province.

zong. The main temple does not survive from those times, but probably it was a Tang or Song equivalent of the Qing structure we see today (fig. 12). A Qing imperial building in every respect, the main temple has more in common with the Hall of Supreme Harmony in Beijing and Dacheng Dian of the Confucian Temple in Qufu than with any other structure in China.

Bixia Ci, or Bixia Shrine, dedicated to the Sovereign of the Clouds of Dawn (Bixia yuanjun), is in a more mountainous setting. Still, it consists of four main halls enclosing the four sides of a courtyard—an excellent example of the fundamentally Chinese principle of spatial enclosure called *siheyuan*—as well as a pavilion inside that courtyard, and additional, symmetrically placed towers or pavilions. The halls and arrangement are indistinguishable from those of a Buddhist or residential courtyard. One needs to enter a hall and see an image of Bixia yuanjun to know it is a Taoist site. Like the architectural complexes, pictures of them reveal little of their Taoist affiliations. *Clearing Sky after Snow on the Purple Empyrean Palace at Mount Wudang* (cat. no.

109) is an example. The actual Purple Empyrean Palace (Zixiao Gong) at Wudang Shan dates to the fifteenth century. Nestled in a beautiful landscape is a rigidly presented architectural group. The triple-entry gate and the main hall behind are impressively similar to the actual hall, including the long approach to it and extremely high double-layer platform on which it is elevated (fig. 13). The height of the hall is noteworthy, recalling the elevation and approach to Denying Dian at the Temple to the Northern Peak in Quyang (fig. 3) and to Dai Miao. Xie Shichen wrote in his inscription that he painted from memory. Perhaps he did, but if the painter wanted to refresh his memory he could have entered any religious complex of his day. Nothing at the actual hall, except perhaps the elevation and approach, and nothing in the painting, marks the main hall of Zixiao Gong as the place where Zhenwu overcame the forces of the dark northern quadrant.⁴⁵

Guan Huai's *Taoist Temples at Dragon and Tiger Mountain* (cat. no. 151) exemplifies the generic aspect of paintings of Taoist architecture such that the plans could as easily be those of Buddhist monasteries, on the one hand, and a kind of specificity whereby this hanging scroll provides detailed information about a monastery now lost, on the other. Nothing survives of the eighteenth-century monastery in Guixi, Jiangxi, that Guan might have seen, nor do structures from the nineteenth-century renovations at the Zhengyi sect headquarters. Guan Huai's painting is the only record. In it, the painter has labeled the buildings and natural features of the plans of two eighteenth-century temple-complexes at Dragon and Tiger Mountain (Longhu Shan). The similarities between those two plans, each with a triple entry gate, second gate behind it, one or several principal halls and the back gate, to Zixiao Gong on Wudang Shan or the Bixia Ci on Tai Shan or the Yongle Gong on flat ground, are obvious. Even if the halls and gates were not so precisely set along axial lines, it is likely the roofs of specific halls in the two temple-complexes were hip-gable combination and possessed one as opposed to two sets of roof eaves. Guan Huai's image of a Taoist monastery is accurate. Finally, the high elevation and long approach to the main hall in each complex are features we continue to observe in Taoist architecture.

Taifu Guan is a Taoist monastery on less mountainous terrain, but one that retains Ming structures. Located in Shang-miao village of Fenyang county, Shanxi, the region of the Houdu Miao mentioned above and numerous other Taoist temple sites that originated in Jin times or earlier, one building at Taifu Guan survives from the Jin period. The entrance to the monastery is a three-bay ceremonial gate with glazed ceramic rooflines and ceramic-tile dragons in roundels on either side of the doorway.

Directly behind it is the three-bay-square, Jin period main hall, dedicated to Haotian. Inside, the principal image is the Jade Emperor. He is attended by three images on each side, females next to him and a pair of males beyond each of them. The garments of each sculpture are painted in extraordinary detail and the altar on which they stand is a superior example of *xiaomuzuo*, "lesser carpentry," the woodworking technique described in the twelfth-century architectural manual *Yingzao fashi*, which was taken to its greatest heights in ceilings and decoration such as this altar in Jin times.⁶⁶

The courtyard of Taifu Guan is framed according to the *siheyuan* principle of structures on four sides. Five-bay halls form the sides between the front gate and Hall of the Jade Emperor (fig. 14). The hall on the right as one enters the courtyard is dedicated to the Sage Mother (Shengmu). All the images in this hall are female, again with garments painted in great detail and with wall paintings of the daily activities of women behind them. Among the sculptures is one of a nursing mother, suggesting the function of the monastery for folk worship in the village. Also stored in the hall are palanquins that no doubt were used to carry the images in processions.

The hall on the left, by contrast, contains more formal imagery of the Taoist pantheon. Across the front altar are deities of the Five Sacred Peaks: Tai Shan in the center, with Hua Shan (west) and Heng Shan (north) to his right and Song Shan (east) and Heng Shan (south) to his left. On altars on the two side walls are deities of the four rivers, two on each.

All four structures of Taifu Guan have hip-gable combination roofs. All roofs except that of the front gate of Da Shangqing Gong appear to be hip-gable also. In Xie Shichen's painting, the roofs also seem to be of the hip-gable combination. As for the layout of each monastery, in Xie's painting the scheme is *siheyuan*, such as it is at Taifu Guan, whereas in both the Longhu Shan monasteries depicted in Guan Huai's painting only gates that break the continuous covered corridor around the monasteries are perpendicular to the main axial line. The significant conclusion to be drawn from these comparisons is that Taoist monasteries in paintings and extant Taoist monasteries from the same time period conform to the same general rules of Chinese spatial planning. This statement can be extended to painted, engraved, and described plans of Buddhist and Confucian temple-complex space.

Thus it seems likely that the plans of temple-complexes of China's other famous peaks and those in the cities that do not survive could be reconstructed from extant paintings or stele inscriptions. Mao Shan, located southwest of Nanjing in Jiangsu

Fig. 15
Location of Taoist and Buddhist palaces and monasteries (or observatories) on Azure Wall Mountain (Qingcheng Shan), Sichuan province: 1. Crane-call Monastery (or Observatory) (Heming Guan); 2. Temple of Universal Illumination (Puzhao Si); 3. Palace of Eternal Life (Changsheng Gong); 4. Palace of Establishing Good Fortune (Jianfu Gong); 5. Palace of Encircling Brilliance (Yuanjing Gong); 6. Celestial Master Cavern (Tianshi Dong); 7. Palace of Jade Purity (Yujing Gong); 8. Palace of the Perfected Warrior (Zhenwu Gong); 9. Palace of Highest Purity (Shangqing Gong); 10. Pavilion of Calling Response (Huying Ting); 11. Temple of Encircling Penetration (Yuantong Si); 12. Arranged Immortals' Monastery (or Observatory) (Luoxian Guan); 13. Temple of Great Stability (Tai'an Si); 14. Temple of the Celestial Platform (Tiantai Si); 15. Eight Trigrams Platform (Bagua Tai); 16. Temple of Duke Zhao (Zhaogong Miao).

province, is one place where such reconstruction should be possible. Named for three brothers who practiced alchemy there during the reign of Han Jingdi (r. 156–141 B.C.) and associated with Ge Hong in the third century and Tao Hongjing in the Liang dynasty (502–557), no pre-twentieth-century building survives on the three-peak mountain.⁶⁷ Probably, the various temple-complexes resembled those of Qingcheng Shan.

Indeed, more impressive than the architecture of a flat Taoist monastery like Taifu Guan or the Yongle Gong are monasteries in mountainous settings in which the spatial arrangement nevertheless conforms to the layout on flat ground. At present the mountain Qingcheng Shan houses sixteen Taoist and Buddhist monasteries.⁶⁸ Their placement is shown in figure 15. In spite of the topography, the main structures of each individual monastery are focused on a straight line. The only feature that might be considered a deviation from the rigid axis is that the building line can run north–south, east–west, or a direction between a cardinal one.⁶⁹

The Qingyang Gong in Chengdu, Sichuan province, is said to

be where Laozi attained immortality (*huasheng*). Tang Xuanzong stopped there in 751 and worshipped Laozi when he fled the Tang capital for Sichuan. Upon his return to the capital, Chang'an, Emperor Xuanzong elevated the status of the monastery to *gong* and gave tremendous sums for construction. Qingyang Gong was destroyed at the end of the Tang dynasty, rebuilt in Song times, destroyed and rebuilt in Yuan and Ming times, eventually leading to repairs under the Kangxi emperor and a visit by the Yongzheng emperor who came to worship Laozi.⁷⁰

The dedications of Taoist halls and temple-complexes at Qingyang Gong are standard: they are for service of deities worshipped since the initial construction of Taoist architecture. Lingzu Dian is a five-bay, two-story structure in which Guansheng and Wenchang are worshipped in the first story and Wangling is worshipped in the upper story. The hall dedicated to Laozi, Hunyuan Dian, is also five bays across but only one story. On either side of Laozi on the interior are images of civil and military officials. The Hall of the Eight Immortals is actually a pavilion, octagonal in plan, elevated on a square foundation

surrounded by a stone balustrade painted red-brown. Rising twenty meters, its roof is decorated with yellow, green, and purple ceramic tiles. The Hall of the Three Purities, also known as Wuji Dian, is the main hall of the monastery. Five bays across, with a single-eaved, hip-gable roof, its interior houses images of Lü Dongbin and Zhongli Quan as well as the Three Purities. Like the first hall, Doumu Dian is two-storied. The last hall, dedicated to Tang rulers, is one of three structures in a back garden. In addition, a hall for printing Taoist scriptures stands to the east of the main line of halls, and a hall for worship of Taoist sages through history stands to the west. The deities to which the halls are dedicated define the Qingyang Gong as a Quanzhen-sect monastery. Other evidence of this association is found in inscriptions in the adjacent Erxian Convent to the east. Nothing structural identifies the monastery halls as Taoist or its sect as Quanzhen.

Baiyun Guan, built along seven courtyards, is a Quanzhen-sect site too (fig. 16). Emperor Xuanzong worshipped Laozi there in the Tang dynasty, the abbey suffered destruction thereafter, and was built in 1203 during the Jin dynasty as the Taiji Gong, signifying imperial patronage. When the Quanzhen master Qiu Chuji took up residence at the Taiji Gong in the thirteenth century, repairs and new building commenced. In 1227 Khubilai Khan named it Changchun Gong. Today the headquarters of the Chinese Taoist Society, Baiyun Guan has been one of the most active urban Taoist monasteries in recent decades. Its counterpart in the Taipei suburbs—one of the largest, most popular, and most active Quanzhen monasteries in Taiwan—is Zhinan Gong (fig. 17), a towering twentieth-century megalith whose architectural details, in particular the colorful tile decoration on its roofs, are characteristic of contemporary architecture of Buddhism, Taoism, and Confucianism on Taiwan more than of anything specifically Taoist.

Are there, finally, general statements to be made about Taoist architecture? Except for their elevation on high platforms, their long approaches, and their sometimes oversized platforms in front, no exterior or interior component of a structure is identifiably Taoist. Rather, an examination of representative halls through the history of Taoism in China shows extraordinary similarity to imperial, Confucian, or Buddhist architecture of comparable status. The sectarian designation of a Taoist hall or its building complex cannot be determined by exterior signs either. Taoist architecture does not identify itself as a place for the attainment of immortality or the mixing of elixirs for that purpose. Upon entering a Taoist structure, the message of its

murals might be an enhancement to a practitioner's transformation, or a devotee might purchase an elixir mixed by a resident priest, but the same two occurrences could happen as easily and efficiently in a grotto. Certainly images offer an opportunity for personal prayer, and objects on an altar afford the possibility of ceremony, and both identify a structure as Taoist once inside.

One might be inclined to attribute the lack of visible signs of Taoism in its architecture to some kind of mysticism associated with the faith. In fact, that is not the case. Nor is it true that knowledge of associations of a site with a Taoist sage, immortal, or emperor-patron or memory of an event in Taoist history that occurred there offer greater understanding of the architecture than can be observed by a non-Taoist. Knowledge, devotion, and belief enhance the experience of a Taoist site, but not in ways unique to Taoist architecture among Chinese religious structures. Once Taoism turned to the Chinese building system of wooden pillars and lintels to replace grottoes and altars in natural settings, its buildings were and were to remain first and foremost Chinese timber-frame buildings in complexes of buildings arranged along Chinese-inspired axial lines and around Chinese-style courtyards. Whether Taoist wooden architecture learned from Buddhist, or both learned from Confucian building patterns is impossible to say. Rather, one can conclude that architecture for all purposes served by the Chinese building tradition evolved together, and one of the only ways to determine if a building complex might be Taoist is the lack of a pagoda. Even without the pagoda, the range of possibilities for that group of buildings includes some Buddhist monasteries and imperial architecture and Confucian architecture, as well as Taoist.

NOTES

1. Christianity is not on this list because a church is identified on the outside by a cross. However, churches appear in China much later than architecture of the other religions in this list. Probably the buildings of religions practiced in China during the first millennium A.D. but that died out thereafter such as Manichaeism and Zoroastrianism were no easier to distinguish on the exterior than synagogues or Confucian temples. On the shared architectural forms of the latter two, see Steinhardt 1997.
2. The word *miao* commonly refers to a place for worshipping local deities associated with popular religion. These deities are sometimes, but not always, incorporated into the Taoist pantheon, and Taoist priests will sometimes perform rites in *miao*. Consequently, *miao* are often places where Taoist and popular practices come together, rather than being exclusively Taoist places of worship.
3. The most extensive record of Chinese building practices is *Yingzao fashi* (Building standards), presented to Song Huizong's court by official Li Jie in 1103 and reissued in 1145 during the Southern Song. The distinctions between *dian*, a high-ranking hall, and *tang*, a hall, are articulated in it. To understand the differences fully, one needs to read all sections of the 34 *juan* work relevant to the Chinese timber-frame and its decoration. The terms *dian* and *tang* are first discussed in *juan* 1, one of two *juan* that comprise the section known as *zongshi*, or general terminology.
4. The first word listed in *juan* 1 is *gong* (see YZFS 1974, vol. 1: 2-4). Nowhere in the discussion of *gong* is a Taoist context suggested. The same is true in the definition of *gong* in the classical dictionary *Er ya*. None of the other names for Taoist temple-complexes is discussed in *Yingzao fashi*. Research confirms the implementation of what is written in the text in extant Buddhist buildings of the Tang through Yuan periods, even though the purpose of the text was to promulgate the official building standards. Several examples of the distinction between high and low rank are presented in the discussion of bracket sets of Taoist buildings that follow. In that discussion it will be shown, for example, that details of the architecture of the main hall of Yongle Gong follow the standards for eminent architecture such as palace buildings explained in *Yingzao fashi*. In other words, the structures of buildings of *gong* can be linked to imperial architecture even if the name *gong* cannot be proved to be a sign of imperial patronage. The bibliography on *Yingzao fashi* is long. For an introduction in English, see Clavin 1975.
5. Although Chinese Buddhists built caves and cave-temples for meditation and worship, the Buddhist employment of caves is based on the Indian model, not native Chinese building practices. The great importance of grottoes for meditation, transformation, and ritual practices in Taoism, on the other hand, seems to have developed from an indigenous tradition.

MAPPING EARLY TAOIST ART THE VISUAL CULTURE OF WUDOU MI DAO

WU HUNG

IN RECENT YEARS TAOIST ART has attracted considerable attention from scholars whose published work has begun to constitute the basis for a new field of art historical inquiry.¹ At the present stage of research, however, we can talk about this art confidently only when dealing with such Taoist icons as statues of the deified Laozi (later known as the Supreme Lord Lao, or Taishang laojun) and the Celestial Worthy of Primordial Beginning (Yuanshi tianzun), which appeared no earlier than the fifth century.² It is true that some scholars, including myself, have referred to certain images in Han dynasty art, such as those of the Queen Mother of the West (Xi wangmu) or the god Taiyi, as Taoist. But such identifications remain hypothetical. We all know that the cult of both the Queen Mother and Taiyi long predated organized Taoist religion. Although these deities were later absorbed into the Taoist pantheon, it would be *ben mo dao zhi*—"putting the cart before the horse"—if one were to identify an earlier image based on a later appropriation. Thus, although the existence of Taoist art during the Han dynasty seems beyond doubt, we still need to examine the evidence for this assertion systematically—we must trace its various regional traditions and map its intrinsic and extrinsic properties, including its visual forms, production, patronage, and function.³

In undertaking such an investigation, it is crucial to remember that the meaning and content of Taoism have undergone many changes over the course of its long history, and that images of early Taoist art must have differed markedly from later ones. Generally speaking, any definition of Taoist art must be a historical and dynamic one, taking into account the continuity of this art as well as its specific manifestations in different places and times. While it is necessary to take later Taoist conventions into consideration, such conventions do not automatically yield a historical definition of early Taoist art. To this end, it is especially important to avoid assuming an "orthodox," retrospective Taoist

position, for to do so would negate the complex history of Taoism and condemn earlier traditions as unorthodox or even un-Taoist.⁴

Let us then undertake the task of reconstructing a Taoist art tradition at its earliest developmental stage and recognize that "art," in a broad sense, includes not only individual pictorial images and objects but also symbolic or narrative "programs" of images and objects, their architectural contexts and ritual functions, their makers and patrons, production and consumption, geographical distribution and period style, and so on. Thus, the term "art," as used here, means "visual culture": the different kinds of visual forms produced by a group of people who were linked together by a shared language, shared ideas and behavior, and a common sense of identity. The visual culture I investigate in this essay belonged to a branch of early religious Taoism that developed in the present-day provinces of Sichuan and southern Shaanxi during the second and early third centuries. Referred to in historical texts as Wudoumi Dao ("Five Pecks of Rice" Taoism), Tianshi Dao (Way of the Celestial Masters), Zhengyi Dao ("Orthodox One" Taoism), or Gui Dao (Ghost Taoism), this religious tradition was identified by the later orthodox Taoist church as its origin, and the initiator of this tradition, Zhang Ling, was claimed as the founder or the first Celestial Master of this church. This identification—whose historical reliability is a complex question that lies beyond the scope of this essay—has nevertheless prompted much effort by historians of Taoism to discover textual evidence for this tradition (hereafter referred to as Wudoumi Dao).

The main goal of this essay, however, is to discover visual evidence for the same religious entity. Since textual records of Wudoumi Dao contain little description of ritual paraphernalia or pictorial images, we cannot identify certain objects and images as the visual products of this Taoist tradition simply by

matching their physical forms with texts. On the other hand, these texts do allow us to connect Wudoumi Dao with certain visual forms on other levels. One such level is geography: we can investigate the geographic distribution of certain images, objects, and architectural types, and we can relate their distribution patterns to the regional development of Wudoumi Dao as recorded in texts. By pursuing such a research project, we may literally be able to put Taoist art on a second-to-third-century map.

The basis for this study is the "regional" characteristic of early religious Taoism. The two earliest Taoist sects to appear during the late Eastern Han dynasty were both regional organizations. Zhang Jiao's Taiping Dao was active in the east. According to historical records, its several hundred thousand followers were organized into thirty-six *fang*—units distributed in Shandong, Hebei, northern Jiangsu, and eastern Henan provinces.³ Zhang Ling, on the other hand, established Wudoumi Dao in the southwest. His grandson Zhang Lu further became a local ruler of Shu for some thirty years, during which Taoism became the dominant religion in this southwest region and attracted believers from both Chinese and non-Chinese populations (*min yi xin xiang*). New immigrants to Shu adopted this religion under local pressure, as the *History of the Later Han (Hou Han shu)* records: "Even those who came from other parts of the country were afraid not to adopt it."⁴

Interestingly, these two regions of early religious Taoism, one in the east and one in the southwest, were also during exactly the same period the two main centers of Han funerary pictorial art. In both regions tombs with carved or painted scenes were built for people of different social classes and occupations. Abundant evidence demonstrates that in many of these tombs art served to realize the attainment of postmortem immortality.⁷ The developments of religious Taoism and funerary art thus show general parallels in terms of time, place, content, and function. This does not mean of course that funerary art in these two regions can simply be identified as a Taoist art. But these parallels do establish that we can, with additional evidence, define certain burials, mortuary objects, and carvings as Taoist products. In fact, if we believe even half of what has been recorded in historical texts about the popularity of Taiping Dao and Wudoumi Dao, we can assume that their numerous followers must have left material traces of their religious beliefs and practices—that the many excavated Han tombs in these two areas must include those of Taoist believers, whose religious identity may well be reflected in the design, decoration, and furnishing of their own tombs.

Of the two regions, Sichuan provides the better opportunity for a regional study of Taoist art, because after Taoism was introduced to Shu prior to the mid-second century, it developed steadily in this region for close to a century. Such stability provided a likely condition for the invention and production of religious symbols and structures, which can in turn be recovered through archaeology. In addition, we have better knowledge about the local organization of Wudoumi Dao and the chronology of Sichuan pictorial art—two factors crucial for a study of Taoist art in this area.

A common misconception among some modern scholars is that members of early Taoist sects, including those of Wudoumi Dao, were "poor peasants" or ordinary people.⁸ Yet both textual and archaeological evidence demonstrates that followers of early Taoism were not restricted to lower social strata. This is especially true of the Sichuan region, where Wudoumi Dao maintained a close relationship with the region's elite and officialdom. Furthermore, we know from historical texts that many members of the local elite were believers of early Taoism, including at least two governors of the whole region in different periods.⁹ Zhang Ling, the founder of Wudoumi Dao, served as the magistrate of Jiangzhou before he went to Sichuan. His son Zhang Heng, the next Celestial Master of the sect, was offered the title *Langzhong* (gentleman of the interior) by the government.¹⁰ But it was Zhang Lu, the third Celestial Master, who fully integrated the organization of Wudoumi Dao with the region's civil administration.

According to the *Record of the Three Kingdoms (Sanguo zhi)*, Zhang Lu replaced local officials with Taoist priests called *jijiu*, and this reform was welcomed by local people.¹¹ From the late second to the early third century, Zhang Lu became the supreme ruler in this region and expanded his power to the Hanzhong area in present-day southern Shaanxi.¹² After taking over Hanzhong, according to his biography in *Record of the Three Kingdoms*, he "assumed the title *Shi jun* [Master-ruler] and taught people Ghost Dao [i.e., Wudoumi Dao]. For some thirty years he ruled the region of Ba[jun] and Han[zhong] majestically. This was at the end of the Han. Unable to subjugate him, the central government was forced to offer him titles such as General of Subjugating Barbarians and Grand Magistrate of Han[zhong]."¹³ After the fall of the Han, Zhang Lu's subordinates proposed to honor him with the title of King of Han[zhong]; but he declined after weighing the political advantage. He was finally defeated by Cao Cao in 215, but was still left with a fief and a noble title.¹⁴ It is clear that Zhang Lu and his ministers/priests were far from being poor peasants or ordinary people, and that their culture simply cannot be identified as a "popular" one. In fact, using the

best available textual evidence, it can be said that Zhang Lu established the first Taoist regime in Chinese history. Thus, it is unthinkable that with such stability and power Wudoumi Dao did not develop its cultural and artistic production in this region. Indeed, many archaeological remains from this region, including large tombs and ritual objects, may be related to this early Taoist sect. The question that remains is how to prove this assumption by connecting archaeological materials with Wudoumi Dao.

First of all, it is possible to establish such connections because we are left with important records about the locations of the administrative centers of Wudoumi Dao. According to several texts, Zhang Ling established a series of Taoist centers called "the twenty-four zhi." Zhang Ling and his successors may have also elaborated on this system with additional "secondary centers" called *pei zhi* and *you zhi*. Most of the twenty-four zhi were distributed in a broad belt from Xichang in the south to Hanzhong in the north (fig. 1).¹⁵ The core area within this region was the Chuanxi Plain at the upper reaches of the Min and Tuo rivers, with the Wudoumi Dao headquarters, Yangping Zhi, at present-day Pengshan, northwest of Chengdu.¹⁶ It is possible that Yangping Zhi acquired this prominent position under the second Celestial Master, Zhang Heng, who practiced there and "ascended to immortality" (*sheng xian*) on Mount Yangping in 179.¹⁷

Another basis for a study of early Taoist art in this region is archaeology. A number of large-scale surveys, mainly carried out by Sichuan archaeologists over the past thirty years, have yielded important information about the geographical distribution and temporal development of three categories of regional cultural and artistic products during the Eastern Han. These include: 1) architectural forms—predominantly cliff tombs and stone sarcophagi with pictorial carvings; 2) objects—principally "money trees" and bronze mirrors; and 3) pictorial carvings, including images of divinities and others possibly related to Taoist sexual arts. These three categories of archaeological evidence provide us with the basic materials and the analytical structure of further discussion.

CLIFF TOMBS AND STONE SARCOPHAGI WITH PICTORIAL CARVINGS

During the Eastern Han and post-Han period, cliff tombs (*yamu*) were a burial form unique to Ba and Shu (including present-day Sichuan, the Zhaotong area in Yunnan, and the Zunyi area in Guizhou). According to the Sichuan archaeologist Luo Erhu, thousands of such tombs are known; the earliest dated one bears

an inscription from A.D. 65.¹⁸ Although cliff tombs are found throughout Sichuan, they are most densely distributed in the Chuanxi Plain; today the Leshan area alone preserves about ten thousand such tombs. Moreover, only the cliff tombs in the Chuanxi Plain, especially in Leshan and Pengshan, have rich pictorial carvings (see the shaded area in fig. 2).¹⁹ But even in this area, pictorial carvings appear only in a limited number of tombs. According to a survey conducted by Tang Changshou, of the ten thousand cliff tombs in Leshan only about one hundred are carved with pictorial decoration.²⁰ He further divided these hundred tombs and those in the adjacent Pengshan area into three periods: 1) the period of emergence, during the first half of the second century; 2) the period of development, from the mid-second century to the 180s; and 3) the period of flourishing, from the 180s to the early third century.²¹ Stone sarcophagi with pictorial carvings are sometimes found in tombs of the second and third periods. According to Gao Wen, all known examples of such sarcophagi are from areas along the Min, Tuo, and Fu rivers (see fig. 3). The most elaborate ones have again been found in the Chuanxi Plain.²² Summarizing the research available thus far, we reach the general observation that although cliff tombs and sarcophagi were distributed over a large region, the richly decorated examples were limited to the core area of Wudoumi Dao and to the period in which Wudoumi Dao reached its greatest prosperity in this area.

Additional archaeological evidence further links specific cliff tombs and sarcophagi in this area with practices of Wudoumi Dao. One type of evidence consists of engravings, including both images and inscriptions. A considerable number of cliff tombs in Pengshan and Leshan, for example, are carved with a *sheng* pattern above the entrance (among them, Pengshan tombs 45, 166, 169, and 530; see fig. 5). The *sheng* is the head-dress of the Queen Mother of the West and the most important symbol of this goddess. It could not be a casual act to mark a tomb with this symbol in such a way that anyone could see it before even entering the tomb. In some other cliff tombs, a composite dragon-and-tiger motif occupies the same position above the entrance (in, for example, Leshan tomb 99 and Pengshan tomb 355; see fig. 7). The relationship between *longhu* (dragon and tiger) and early Taoism is well known. It is recorded in various texts, for example, that at the moment when Zhang Ling attained immortality in Shu he saw a multitude of heavenly beings arriving with dragons and tigers.²³ The headquarters of the later Celestial Masters Taoism, possibly founded by Zhang Ling's great-grandson Zhang Sheng, was at the Dragon and Tiger Mountain (Longhu Shan) in Jiangxi.²⁴ A passage from the

"Genealogy of the Celestial Master Zhang" (*Zhang Tianshi shijia*) explains that the mountain was so named because a dragon and a tiger emerged when Zhang Ling succeeded in making the Divine Elixir of Nine Heavens (*jiutian shendan*) in this place. Indeed, "dragon" and "tiger" are chief metaphors used in Taoist writings on both internal and external alchemy; they refer specifically to lead and mercury, the two most important ingredients used in making elixirs.²⁵ In addition, Taoist deities are often described and portrayed as riding dragons and tigers or accompanied by them. All this literary and artistic evidence suggests that the *sheng* and dragon-and-tiger images carved above the entrance to a Sichuan cliff tomb may signify the religious identity of the tomb occupant. Similar symbols are abundant on stone sarcophagi from the same region and should have served the same role.

Among numerous pictorial motifs and scenes found in cliff tombs and on sarcophagi, one particular figural image may depict a Wudoumi Dao priest. Discovered in a Leshan tomb (Mahao M1), he appears as a standing figure wearing a tall hat (fig. 6). According to Tang Changshou, who found this image, "The figure wears a long robe and a tall hat of an unusual type. He holds a ceremonial staff (*jie zhang*) in his left hand and a medicine bag in his right hand. . . . This image is carved next to the door to the rear chamber—a position which indicates an intimate relationship between this image and the deceased [buried in the rear chamber]."²⁶ Tang has identified this image as a *fangshi*-necromancer, who is recorded in *Records of the Historian* (*Shiji*) and other texts as holding a *jie zhang*.²⁷ While Tang's proposal is well taken, it is possible to identify this image more specifically as a Wudoumi Dao priest called a *shi*, described in texts as a religious professional who held a special ceremonial staff (*jiu jie chang*) while praying and reciting incantations for believers.²⁸ Similar images also appear on sarcophagi, *que*-pillars in front of tombs, and mirrors from this region. On a sarcophagus from Nanxi, for example, a half-open gate represents the "heavenly gate" (*tian men*) or "the gate of the soul" (*hun men*). Outside the door is a man who kneels while holding a long staff. The subject of his veneration is inside the gate—a deity on a dragon-and-tiger throne (fig. 8). On another sarcophagus, from Changning, this figure reappears, again holding his staff. But this time he is following a deer on the way to an immortal mountain (fig. 9).²⁹ We also find this figure on the stone tower Gao Yi Que in Ya'an, again depicted outside a half-opened gate, and it appears twice on an inscribed bronze mirror likely produced in the Sichuan region, once before an "ancestor" (*xianren*) figure and once before a "divine lady" (*shen nü*).³⁰ In

all these cases, therefore, this image is represented as an intermediary between the human world and the immortal realm.

In addition to symbols and pictorial images, inscriptions also provide important evidence for the relationship between certain cliff tombs and Wudoumi Dao. Some of these inscriptions disclose the Taoist ideal of immortality. For example, an inscription in a cliff tomb near Chongqing, dated to the third month of 135, identifies the tomb as a "stone chamber which prolongs life" (*yannian shishi*) (fig. 10).³¹ Another inscription in a cliff tomb at Jianyang reads: "On the eighteenth day, the fourth month, the first year of Han'an [i.e., A.D. 142], [I come here to] meet immortal friends" (fig. 11).³² The tomb chamber was thus a meeting place with immortal friends (*xian you*), a term that may designate either supernatural figures or fellow believers in a religious sect such as Wudoumi Dao. A third and much longer inscription from Sichuan, traditionally known as the "Jijiu Zhang Pu Inscription,"

was first recorded by the Song antiquarian Hong Kuo. Zhang Pu was a Wudoumi Dao priest with the title *jijiu*. In this inscription he recorded that he and some fellow believers gathered together to transmit "subtle scriptures" (*wei jing*). Hong Kuo noted that the carving of this inscription is rough and irregular, unlike that of formal stele inscriptions.³³ Perhaps it too was a "cliff inscription" (*moya keci*) like the two previous ones.

Another possible relationship between some Sichuan cliff tombs and Wudoumi Dao is suggested by objects found in these tombs. Sichuan archaeologists have discovered, for example, a clay jar buried in the front chamber in Mahao tomb 99 at Leshan. Inside the jar were pieces of mica and other minerals.³⁴ This is not the first time such a finding has been reported: the Song poet and traveler Lu You recorded a similar discovery and identified the minerals as materials for "making golden elixirs."³⁵ Because the front chamber of a cliff tomb functioned

as an offering shrine, and because these minerals were related to Taoist alchemical practices, using such minerals as offerings seems to indicate the religious identity of the deceased.³⁶ In addition, Luo Erhu believes that a kind of "stove" found in many cliff tombs was used, either symbolically or practically, to make elixirs—a suggestion that again connects these tombs with Taoist practices.³⁷

In 1973 a bronze seal was found in a cliff tomb in Ziyang county. Some scholars have found that the style of its characters is neither *zhuan* nor *li*, but resembles certain Taoist talismanic writings.³⁸ So far six seals with such characters are known, all from Sichuan (fig. 12). The seal from Ziyang is the first example found through an archaeological excavation, and its placement in the cliff tomb seems again to point to the religion of the deceased.

"MONEY TREES" AND "MIRRORS WITH IMAGES OF IMMORTALS ON THREE LEVELS"

In addition to the evidence of Taoist practices offered by the cliff tombs and sarcophagi presented thus far, archaeological examination of a cliff tomb at Hejiashan in Mianyang has produced two "money trees" and a bronze mirror with "images of immortals on three registers" (*sanduan shenxian jing*).³⁹ Both types of object have been identified as local products of Shu, and both bear direct connections with Wudoumi Dao. The term "money tree" (*qian shu* or *yao qian shu*) is actually a later designation and a somewhat misleading one because the main decorative motifs on both the bronze tree and its clay or stone base are not coins, but deities on dragon-and-tiger thrones, immortals playing the *liu bo* game, heavenly horses, the drug-pounding hare, and musicians and dancers. Coins appear only as leaves hanging down from each branch (see fig. 13). In view of the fact that some trees are decorated with large, iconlike, divine images (see fig. 14), if we must give this object a name, a "divine tree" (*shen shu*) probably better reflects its nature.⁴⁰

According to Susan Erickson, more than eighty such objects have been reported, mostly from tombs dated to the late Eastern Han (see fig. 4).⁴¹ The Chinese scholar Xian Ming has further outlined the region in which "money trees" have most frequently been found: "Most of them are from a belt-like region, which extends north to Hanzhong in southern Shaanxi and south to Xichang and Zhaotong, passing the areas of Guangyuan, Mianyang, Santai, Guanghan, Pengxian, Chengdu, Xijian, Pengshan, and Lushan. This region therefore basically overlaps with [Wudoumi Dao's] twenty-four zhi."⁴² Xian Ming also reported that a

Fig. 13 (above left)

Fig. 14 (above right)

Line drawing of a fragment of a bronze "money tree," with an image of a divine figure.

considerable number of "money trees" and "money tree" bases have been unearthed at the locations of some of the twenty-four *zhi* of Wudoumi Dao, including three examples from Pengxian, the location of Wudoumi Dao's headquarters, Yangping Zhi.⁴³ These studies confirm, therefore, that this type of ritual object enjoyed a definite popularity in the central area of Wudoumi Dao during the flourishing period of this religion.

Images on "money trees" and "money tree" bases are largely identical with those found in cliff tombs and on sarcophagi from the same region, and they are clearly products of the same religious and artistic tradition. But the three-dimensional form of a "money tree" base gave the artist greater freedom to create original and complex sculptural images. One of the most impressive "money tree" bases, excavated from the suburbs of Chengdu, vividly represents a journey in search of immortality (fig. 15). The clay base is shaped like a columnar mountain. Men and women are climbing the mountain and appear on three levels. Those on the first level still have a long way to go; those on the third level are about to reach the top of the mountain where they will join the deity on the summit. The design of this

Fig. 15

Pottery "money tree" base from the vicinity of Chengdu, Sichuan.

base thus translates into a visual form a passage from the Taoist text the *Master of Huainan* (*Huainanzi*): "He who climbs onto the Chilly Wind peak of Kunlun will achieve deathlessness; he who climbs twice as high onto the Hanging Garden will become a spirit . . . ; he who climbs twice as high again will reach Heaven and will become god."⁴⁴ An interesting feature of this sculpture is the caves on the three levels. Punctuating the journey, each of them marks a particular stage in the search for immortality. This is the earliest example I know that represents the concept of *dongtian* (literally a "cavern-heaven"). It is also possible that the three levels of the mountain represent metaphorically the three stages of a Taoist spiritual cultivation toward immortality.

A tale cited in the Taoist encyclopedia *Seven Slips of the*

16a

16b

Figs. 16a–b
Rubbings of two examples of “mirrors with images of immortals on three registers”:
a) Seattle Art Museum (drawing by Hayashi Minao); b) Palace Museum, Beijing.

Cloudy Satchel (*Yunji qiqian*) also helps identify the religious associations of a “money tree.” It is said that a man living at Yangping Zhi adopted an orphaned boy, who was then married to an orphaned girl. One day a flood came and there was a great shortage of food. The couple then used their magic to obtain anything people needed from a tree. When asked where they learned this magic the young man answered: “I am actually an immortal in the Yangping Cave, descending to this world because I had made a small mistake. I will leave soon.”⁴⁵ Ten days later the couple disappeared. What this story implies is an intimate relationship between a divine tree and a Taoist immortal in the Yangping Cave.

In addition to “money trees,” a particular type of bronze mirror may also be identified as a product of Wudoumi Dao. This type is conventionally known as a “Mirror with Images of Immortals on Three Registers”—a designation based on the composition of the mirror’s central circular area, which is divided into three registers of equal height by two horizontal bars. The top and bottom registers are each centered on a nonfigurative image. As exemplified by one such mirror in the Seattle Art Museum (fig. 16a), the central image on the top register is a broad umbrella standing on the back of a turtle. Sev-

eral figures, including a “jade maiden” (*yunü*), stand beneath the umbrella and pay homage to it, while a much larger figure with wings on the shoulders is seated to one side. Images on the middle level always constitute a symmetrical pair. On most “three register” mirrors, including the one found in a cliff tomb at Hejiashe, Mianyang, this pair is formed by the Queen Mother of the West and the King Father of the East. In other cases this pair consists of a dragon and a tiger, as exemplified by a mirror in the collection of Beijing’s Palace Museum (fig. 16b). Figures on the lower register are centered on a loop motif in the shape of a figure 8, possibly a tree with two intertwining trunks.

Based on archaeological and stylistic evidence, Professor Huo Wei of Sichuan University has made a convincing argument for the Sichuan (Shu) origin of this type of mirror. More specifically, he has identified the Chuanxi Plain as its production center, and has associated this type of mirror with the so-called Ghost Dao, an alternative name for Wudoumi Dao.⁴⁶ His opinion can be supported by additional archaeological finds as well as by the images on a “three register” mirror. In terms of archaeological evidence, at least three mirrors of this type have been found in various locations in southern Shaanxi.⁴⁷ That Shu mirrors appeared in this region around the end of Han is logical because,

as discussed earlier, during this period Zhang Lu established his seat in Hanzhong and expanded his territory to include southern Shaanxi. In terms of decoration, images on a “three register” mirror reflect Taoist ideas and may have been designed to facilitate Taoist meditative practices.

Among the various images on a “three register” mirror, the identifications of those on the middle level—the Queen Mother of the West and the King Father of the East—are most certain. Hayashi Minao has further identified the loop motif on the lower level as *jian mu*, described in ancient texts as a divine tree at “the center of Heaven and Earth,” along which heavenly lords (*di*) moved back and forth between these two realms.⁴⁸ This identification seems to be supported by similar tree images found on other objects from Sichuan. For example, on a stone sarcophagus mentioned earlier, a tree with loop-shaped, intertwining trunks is juxtaposed with other images related to the idea of immortality (see fig. 9). A male figure under this tree seems to be bidding farewell to a female figure; in fact, he may be about to ascend to Heaven along this divine tree. Another similar tree image is found on a pottery “money tree” base from Guanghan; its intertwining branches reach Heaven and embrace the fantastic world of the Queen Mother of the West.⁴⁹ This last example leads us to speculate on a possible relationship between the mythological *jian mu* and the “money tree.” Based on the decoration of a “money tree,” I suggested above that a more precise designation for this object would be a “divine tree,” which provides a path to the world of immortals. Just as this “divine tree” is a unique subject of Sichuan Han art, *jian mu* is believed to be located in this particular area in China.

Several texts specify the location of *jian mu* as Duguang in the Southwest.⁵⁰ Huo Wei has suggested, again very convincingly, that Duguang is also known as Guangdu, a place located thirty *li* west of Chengdu according to some post-Han texts.⁵¹ I would add that this place was very close to the location of Yangping Zhi, the headquarters of Wudoumi Dao. It is possible that to strengthen its authority and mystique, Wudoumi Dao appropriated an ancient myth for its own use, and identified Yangping Zhi as “the center of Heaven and Earth.” This, in turn, implies a close relationship between Wudoumi Dao and mirrors decorated with the *jian mu* tree.

The most controversial image on a “three register” mirror is the umbrella image and the accompanying figures on the top level. Hayashi Minao believes that the winged figure next to the umbrella represents the Great Heavenly Emperor (Tianhuang dadi) at the North Pole in Heaven, and that the umbrella symbolizes the Huagai xing (“Elaborate Canopy” constellation),

which consists of a series of nine stars next to the North Pole.⁵² Hayashi’s opinion has been challenged by Higuchi Takayasu and Huo Wei. In particular, Higuchi argues that it would be illogical to depict the “canopy” stars in the center and to place the Heavenly Emperor to one side.⁵³ I agree with this criticism, and I want to propose a new identification for the umbrella image. In my view, any interpretation of this image must take these three features into consideration: 1) its placement in the most honorable position in the decorative program of a “three register” mirror; 2) its composite form as an umbrella standing on a turtle (in some cases on a Xuanwu—a combination of a turtle and a snake); and 3) its role as the subject of reverence and worship by surrounding figures. Relating these features to textual references, I propose that this image actually represents the deified Laozi in a symbolic form.

The transformation of Laozi from an individual historical figure to a cosmic deity has been the subject of much scholarly discussion.⁵⁴ A turning point in this transformation was marked by a series of events taking place in 165 and 166, when Emperor Huan built a shrine to honor Laozi in his birthplace and offered sacrifices to Laozi both in this shrine and in the imperial palace.⁵⁵ These events have been discussed in every book on early Taoism as a definite indication of Laozi’s deification. The form of the imperial sacrifice in 166, however, has drawn less attention from scholars. Here is how this ritual is described in the “Chapter on Sacrifices” (“Jisi zhi”) in the *History of the Later Han*:

[The emperor] personally offered sacrifices to Laozi in the Zhuo-long Palace. An altar covered with patterned woolen fabric was prepared, and vessels decorated with gold rims [were used]. A seat was set up [for Laozi] under an elaborate canopy (*she huagai zhi zuo*). The music played during the sacrifice was adopted from the semi-annual sacrifice to Heaven.⁵⁶ (Italics added.)

Significantly, no image or statue of Laozi is mentioned. The reason is simple: as the personification of the Dao, Laozi was considered to have neither matter nor form; he could therefore only be symbolized by an empty “seat” (*zuo*), not represented by a figurative likeness. This early Taoist convention persisted until at least the fifth century. A passage from Falin’s *In Defense of What Is Right* (*Bianzheng lun*) relates that the Taoist master Tao Hongjing “set up both Buddhist and Taoist institutions on Maoshan and paid homage in both every day. In the Buddhist halls there were sacred statues, which the Taoist temples did not have.”⁵⁷

In the context of the present discussion on an early Taoist artistic tradition in Sichuan, it is important to note that the

Xiang'er Commentary on Laozi (*Laozi Xiang'er zhu*), a Taoist text attributed to Zhang Lu, especially stresses this aniconic approach. This text identifies Laozi with the Tao and insists that the latter is formless: "The Dao is infinitely superior. It is subtle and hidden, without shape, resemblance, or image. People can only follow its teaching, but cannot comprehend it through appearance."¹⁴ From this position, the text criticizes any figurative representation of Laozi or the Tao as a "false method" (*wei ji*): "Now there is this false method in the world, which represents the Dao with concrete forms, giving it clothes and names as well as facial and bodily forms. This is all wrong, all evil and false!"¹⁵ This strong conviction probably represents an orthodox approach within Wudoumi Dao, according to which a proper representation of Laozi should only emphasize the hidden nature of the Tao.

With this in mind, we return to the umbrella image on a "three register" mirror. As mentioned earlier, this is the most honored image in the entire decorative program, and it is also a subject of worship and reverence. This image, in fact, can be called *huagai zhi zuo*—"the seat under an elaborate canopy"—for this is the phrase used in the *History of the Later Han* for the place of Laozi in the imperial sacrifice. This image can thus be identified as Laozi's seat, which in turn symbolizes the existence of this Taoist patriarch. Additional evidence for this interpretation is found in the *Baopuzi* of Ge Hong (283–343). Instructing how to use a mirror to visualize the "true form" (*zhenxing*) of Laozi, this Taoist text identifies Laozi's throne as a "divine turtle" (*shen gui*).¹⁶ It cannot be a coincidence that the "elaborate canopy" illustrated on a "three register" mirror is supported by a turtle.

IMAGES OF DIVINITY

As mentioned earlier, the *Xiang'er Commentary on Laozi* attacks figurative representations of the Tao or Laozi. It is unclear from this text whether such prohibition also extended to other gods and immortals worshipped by Wudoumi Dao followers. Archaeological evidence, however, reveals that the practice of depicting images of many deities existed in the area of Wudoumi Dao. I say "many deities" because these images, though sharing a lot of features, are distinguished from one another by some important iconographic markers. Their differences, however, have largely been ignored. As a result, divine figures sitting on dragon-and-tiger thrones in a frontal posture—a popular composition in Sichuan Han art—have been uniformly identified as the Queen Mother of the West. The question remains: Is this identification reliable?

A number of reasons prompt me to raise this question. Most importantly, examining the ever-increasing supply of archaeological materials, we begin to notice some subtle but significant differences among these so-called Queen Mother images. Scholars agree that one of the most important iconographic features of the Queen Mother is her *sheng* headdress. Images of figures wearing this headdress indeed existed in Sichuan, but a large number of deities depicted on the dragon-and-tiger throne are not wearing *sheng*. Instead they wear various caps including a *mian* (see fig. 17), a three-pointed *wang guan* (see fig. 18; also see fig. 7), a flat military cap decorated with bird features above the ears (see fig. 19), or a small vertical cap similar to those worn by later Taoists (see fig. 20). While in real life a *sheng* was worn by women, all these other caps were for men or male deities.¹⁷ It is unthinkable that a Sichuan artist could have freely altered the cap or headdress of a deity represented as the central icon in a composition. It is more likely that these images with different caps and headdresses actually represent different deities. As commonly seen in other traditions of religious art, different deities are often distinguished not by their overall shapes but by some minor features, often their headdresses. Thus, what these Sichuan images demonstrate is probably not a religion centered on the worship of the Queen Mother of the West, but a religion that began to fashion a pantheon consisting of a multitude of male and female deities. Based on textual evidence, some Taoist scholars have noted a similar effort made by Wudoumi Dao.¹⁸ For example, *Zhengyi fawen jingzhang guanpin* lists 120 deities including both civil and military types, "each with his or her own administrative duties."¹⁹ It is possible that the image of the Queen Mother of the West, which had become widespread in various parts of China since the first century, provided a basic compositional formula for depicting these new deities, while minor iconographic features were invented to differentiate them.

Furthermore, archaeological evidence reveals that within this growing pantheon of gods and goddesses in Sichuan, the Queen Mother of the West seems to have acquired a specific significance. In a number of cases, images of this goddess are combined with sexual symbols and scenes. One such example is found on a stone sarcophagus from Yingjing (fig. 21). Here, the Queen Mother, wearing a typical *sheng* headdress, is juxtaposed with a couple at an intimate moment. A similar but more explicit love scene was originally carved above the main gate of a cliff tomb at Pengshan (fig. 22). The third example is a clay "altar" found recently in a tomb at Guanghan, in a place very close to the Wudoumi Dao's headquarters, Yangping Zhi. On the front

Figs. 17–20
Rubbings from stone sarcophagi.

Fig. 21
Rubbing of the long side of a stone
sarcophagus from Yingjing, Sichuan.

side of the altar is an image of the Queen Mother of the West, wearing a *sheng* and seated on a dragon-and-tiger throne. Two figures, half human and half beast, kneel on top of the altar, both showing erect male organs. Between them, in the center of the altar, is a sculpted phallus (fig. 23).⁴⁴ In all these cases, the Queen Mother of the West seems to have been associated with a fertility cult or Taoist sexual arts, indicating the changing symbolism of this goddess toward the post-Han period. Decorating tombs, sarcophagi, and funerary objects, these divine and erotic images seem to indicate a particular path toward eternal happiness.

It is appropriate to discuss the Buddha's image in Sichuan in this section on Taoist deities, because the adoption and appropriation of these images, if viewed in its cultural and religious context, actually took place within the domain of Taoist art. As I have discussed elsewhere, most existing images of the Buddha and Buddhist symbols in Han art are located either inside tombs or within the territory of a Taoist temple. These images were used to strengthen the pursuit of immortality or to enrich the emerging pantheon of early religious Taoism.⁴⁵ The present study provides a more precise regional context for this argument.

Fig. 22
Stone relief of an "embracing couple," originally above tomb 550 at Pengshan, Sichuan.

Fig. 23
Clay altar from Guanghan, Sichuan.

Based on an increasing body of archaeological evidence, we can reach the basic understanding that, in Sichuan, images of the Buddha were used by Taoist followers for their own sake.

Although Buddha-like figures have been found in different parts of Han China, Buddha images appeared in Sichuan in much greater number and in more authentic form.⁶⁴ Yet there is no text recording the practice of Buddhism in this region during the period when these images were created. The answer to this dilemma is found in the new cultural and religious contexts of these images. No longer decorating Buddhist temples, these images were combined with Taoist symbols and used to embellish cliff tombs, bronze "money trees," and clay "money tree" bases. As discussed earlier, all these architectural forms and objects were related to the practice of Wudoumi Dao in the area. Moreover, these Buddha images have only been found in the core area of Wudoumi Dao in the Chuanxi Plain.

Two Buddha images of similar form have been found in cliff tombs at Mahao and Siziwang in Leshan. In each tomb the image appears on the back wall of the front chamber above the entrance to the burial chambers, and defines the focus of visual perception and ritual homage. The one at Mahao is better

Figs. 24a–b
A cliff tomb at Mahao, Leshan, with an image of the Buddha carved on the lintel above the entrance to the burial chamber and b) detail showing the image of the Buddha.

preserved (fig. 24). The figure is seated, with the left hand holding a portion of the gown. The right hand is raised in the gesture known as the *abhaya mudra*. The face is unfortunately damaged, but an extra protuberance or *usnisa* on top of the head—one of the Buddha's holy marks—is still visible and is ringed by a halo. All these features, as well as the heavy folds of the robe, can be traced to Indian images of the Buddha created in Mathura and Gandhara in the second century.⁶⁷ But in the Mahao tomb, this "Buddha" is juxtaposed with a sculpted dragon on the lintel.

The basic iconography of this image is shared by another Buddha figure—a three-dimensional image on a "money tree" base found in a cliff tomb at Pengshan (fig. 25).⁶⁸ The Chinese scholar Wu Zhuo has noticed that the *usnisa* on the head of the Buddha is unusually tall and is shaped almost like a small cap. He has also identified the two standing figures on either side of the Buddha as two attendants of different ethnic origins, one Chinese and one non-Chinese, and the animal motifs on the Buddha's circular base as a tiger and a dragon.⁶⁹ His observation reveals that this sculpture, rather than being a pure Buddhist image, synthesizes various Buddhist and Taoist motifs into an iconic presentation. Such religious fusion is demonstrated by additional Buddha images found recently in a cliff tomb at Hejianshan in Mianyang. Decorating fragments of a bronze "money tree," each image shows the Buddha grasping the end of his gown with his left hand and raising his right hand in the *abhaya mudra*.⁷⁰ An interesting feature of these images is the figures' moustaches, which indicate a possible Gandharan origin; but other motifs on the "money tree" are traditional Chinese symbols of immortality. It is also significant that this tomb yielded a "three register" mirror, which, as discussed earlier, was closely related to the practice of Wudoumi Dao in this area.

It is not difficult to explain how images of the Buddha could facilitate Taoist beliefs and practices. This artistic borrowing was actually part of a larger religious phenomenon that characterized the development of religious Taoism during the second and third centuries. In the Taoist scripture *Taiping jing*, for example, the story of the miraculous birth of Laozi is an outright copy of that of the Buddha. The same text twice relates that Heaven sent evil gods and Jade Beauties to test the religious conviction of Taoist believers. Both accounts are clearly based on the temptation of the Buddha by Mara and his daughters.⁷¹ Also around this time, the story of "Laozi converting the barbarians" (*Laozi huahu*) circulated widely in Taoist circles. An early version of this story relates that "Laozi went to barbarian lands and became the Buddha."⁷² It is quite certain that in the second and third cen-

Fig. 25
Clay "money tree" base from Pengshan, Sichuan.

ries, many Taoist followers believed that the Buddha was none other than Laozi or his manifestation.⁷³ It is thus not surprising that stories of the Buddha were used to create a biography for the legendary founder of religious Taoism. For the same reason, an image of the Buddha could have been thought of as an image of Laozi; the Taoist prohibition of representing Laozi may have encouraged this deliberate misunderstanding. This complex situation explains a strange Taoist argument, which identifies Laozi as the inventor of the image of the Buddha: "The barbarians do not believe in emptiness and non-being, therefore when Laozi emigrated [to the West] he had them make statues of his form, and with the help of these images he converted these barbarians."⁷⁴

CONCLUSION

To map early Taoist art means to integrate the studies of Han art and early religious Taoism in a coherent historical framework. Taking the geography of an early Taoist sect as its cue, I have tried in this essay to compare the locations of major centers of Wudoumi Dao with the distribution patterns of certain

images and objects in Sichuan art. This comparison shows that two "maps"—one of a regional religious tradition and the other of a regional art tradition—clearly overlap. A closer examination of the content, function, and context of these images and objects has further substantiated the strong Taoist characteristics of this regional art tradition.

It should be emphasized, however, that early Taoist art was an extremely complex phenomenon and consisted of many different traditions and levels of representation; this essay deals with only one of these traditions. My purpose is therefore to prompt, not to conclude, an important, but much neglected, line of inquiry in the field of Chinese art history. It is not possible for me to explain here why the study of Taoist art has largely been ignored in this field until recent years; but I hope that this essay has demonstrated the potential contribution of this study to a renewed understanding of Han art.

Many architectural structures, objects, and pictorial images discussed in this essay are familiar to students of Han art, but they have only been studied as general properties of a unified "funerary art" from the third century B.C. to the third century A.D. By contextualizing these visual forms in a local religious tradition, it is now possible for us to identify their specific meaning and to reconstruct their specific historical development. A "Taoist" study of these forms also allows us to explore the identity and intention of their makers and owners, and provides a new perspective from which to understand certain cultural interactions. A study of early Taoist art, therefore, will, I hope, not only rediscover a forgotten tradition, but also contribute to the general body of research in the field of Chinese art history. Together with a growing scholarship on the Confucian influences in Han art, this study will bring our understanding of Chinese art during this period to a new level.²⁹

NOTES

I have presented different versions of this paper in a number of conferences, including the "Daoism in East Asia" conference (Center for Japanese Studies, Kyoto, March 1999), the "Religion and Power in Ancient China" conference (Harvard University, May 1999), and the "Between Han and Tang: Religious Art and Archaeology in a Transformative Period" conference (University of Chicago, November 1999). I want to thank the organizers of these conferences and all the scholars whose comments have helped me in revising this paper.

- Two general studies of the history of Taoist art include Wang 1994 and Little 1988.
- The earliest examples of such Taoist icons or combinations of Taoist and Buddhist icons are found on the Wei Wenliang stele dated to 424 and on the Yao Bodo stele dated to 496. Studies of early Taoist art have often focused on these and other examples; see Ding 1984; Han and Yin 1987; Li 1991; Kamitsuka 1998 and Kamitsuka 1993; Pontynen 1980 and Pontynen 1983; Ishimatsu 1998; James 1989; Bokenkamp 1996–97; Abe 1996–97; and Seidel 1969a.
- For a discussion of intrinsic and extrinsic analyses of works of art, see the Introduction to Kleinbauer 1971.
- It is noteworthy that the development of Taoism is often characterized by a tendency to negate a previous developmental stage. This tendency became noticeable even during the Han: Zhang Lu's Laozi Xiang'er zhu attacked "those who followed the teachings of the Yellow Emperor, the Divine Lady, Gongzi, and Rong Cheng" as "sham Taoists"; see Rao 1991: 11. In all likelihood, this text represents a position within early Taoism, which claimed orthodoxy by separating itself from other, more "primitive" Taoist traditions. Later, when Kou Qianzhi tried to reinvent Tianshi Dao in the early fifth century, he again accused the teaching of Three Zhaos (i.e., an earlier Tianshi Dao tradition represented by Zhang Ling, Zhang Heng, and Zhang Lu) as "false Taoism."
- It is recorded that after Zhang Jiao founded Taiping Dao, "all people in Qin, Xu, You, Ji, Jing, Yang, Qiu, and Yu responded to his call. [In order to follow him] some sold or abandoned their properties. Traveling to join him they filled the roads; more than ten thousand fell ill and died before reaching their destinations"; ZZZT 50, 5: 1864.
- HMS, *Liu Yan zhuan*: 2436.
- On the concept of immortality in funerary art, see Wu 1994. For the concept of "postmortem immortality" see Loewe 1982: 114–26; Seidel 1987a: 223–37.
- This approach is especially prevalent in mainland Chinese scholarship on early religious Taoism. See, for example, Qing 1992: 65–66; Lou 1992: 69.
- One of the two, Wang Fu, was the Magistrate of Chongguan from 57 to 75 and the Governor of Yizhou from 84 to 86. He established a stele and personally wrote the inscription to honor Laozi and the Sage Mother. See *Quan Hou Han wen* (A complete collection of writings from the latter Han), *juan 32*, in QHW. The other person was Liu Yan, the Governor of Yizhou at the end of Han, who took Zhang Xiu and Zhang Lu, two main leaders of Wudoumi Dao of his time, into confidence. See HMS, *Liu Yan zhuan*: 2435–36; SGZ, *Zhang Lu zhuan*: 263–64.
- Zhang Tianshi ershi zhi tu* (A diagram of Celestial Master Zhang's twenty administrative centers), cited in Zhang Junfang's *Yunji qiqian, juan 28*, *Ershibo zhi bu*; see Jiang 1996: 158–62, esp. 158.
- SGZ, *Zhang Lu zhuan*: 263.
- During the Eastern Han, Hanzhong was part of Yizhou. Zhang Lu changed the name of Hanzhong to Hanning after he occupied this place. For the history of Hanzhong, see Li 1999: 166.
- SGZ, *Zhang Lu zhuan*: 263–64.

74. This Taoist argument is cited in the Buddhist work *Shi sanpu lun* (Examining the essay on threefold destruction), collected in T 2104: 52.52b.
75. For discussions on Confucian elements in Han art, see Powers 1991; Wu 1989, esp. 228–30.

THE WEST WALL OF the Hall of Purified Yang (Chunyang Dian) in the Eternal Joy Temple (Yongle Gong), Shanxi province, painted in 1358, depicts a set of palace buildings amidst clouds. By the gate and on the terraces, officials mix with Taoist priests. From the caption, we know that the scene depicts the Assembly of the Thousand Taoists summoned by Emperor Huizong (1082–1135, r. 1100–25) during the Song dynasty (960–1279) (fig. 1).

Further evidence of the presence of Huizong in the Taoist tradition is found in liturgical practice. In Taoist temples in Taiwan today, as the introit to a *jiao* offering ritual, the officiants, standing before the altar table, sing in unison one or two of the ten verses of the hymns composed by Huizong to accompany the “Pacing the Void” (*buxu*) ritual dance (see cat. no. 52), such as the following:

The Precious Registers show how to cultivate perfection.
The cinnabar pledges ascend to the blue heavens.
The streams and fountains bring one near the good-omened.
Arising before dawn, it is calm and peaceful.
Disaster is dispelled from the myriad things.
The third constellation is an auspicious sign.
When pacing the void, the sounds are fully comprehended.
Once again we sing the verses of the grotto mysteries.¹

In the Taoist tradition, as these two examples attest, Huizong is a celebrated figure. He is one of the three or four emperors who did the most to promote Taoism, putting him in the same class with Xuanzong (r. 712–56) in the Tang dynasty and Zhenzong (r. 998–1022) in the early Song.² Huizong's pro-Taoist actions included sponsoring the first printing of the Taoist canon, heaping honors on charismatic Taoist teachers, setting up a Taoist school curriculum, sponsoring Taoist temples throughout the country, and favoring Taoists over their long-term rivals, the Buddhists.

Fig. 1

Museum, Taipei.

Taoists were not the only learned and talented men Huizong brought to his court. Joseph Needham has compared Huizong's court to that of Rudolf II at Prague, where, five centuries later, alchemists, astrologers, prophets, artists, and Rosicrucians enjoyed the patronage of a learned and curious sovereign.¹ But even more than Rudolf II, Huizong was a practitioner himself. He was not satisfied to gather around him individuals with exceptional talents and powers, but tried his hand at a very large range of the arts and sciences of his day. He developed a distinctive style of calligraphy, still easily recognizable (the *Slender Gold* style; see fig. 2), and he mastered both the running and cursive scripts as well. He wrote hundreds of poems, over four hundred of which survive. He also wrote on music, tea, medicine, and Taoist subjects. Most amazingly, perhaps, he painted in several styles, from the sketchy, "amateur" style of the literati to the highly exacting style of court bird-and-flower painting traditions (see fig. 3).²
